THE

AMERICAN

ANNUAL CYCLOPÆDIA

AND

REGISTER OF IMPORTANT EVENTS

OF THE YEAR

1871.

379761
3.5.40

EMBRACING POLITICAL, CIVIL, MILITARY, AND SOCIAL AFFAIRS; PUBLIC DOCUMENTS; BIOGRAPHY, STATISTICS, COMMERCE, FINANCE, LITERATURE, SCIENCE, AGRICULTURE, AND MECHANICAL INDUSTRY.

VOLUME XI.

NEW YORK.
D. APPLETON AND COMPANY,
549 & 551 BROADWAY.
1875.

ENTERED, according to Act of Congress, in the year 1872 by
D. APPLETON & COMPANY,
In the Office of the Librarian of Congress, at Washington.

P R E F A C E .

THE volume of the *ANNUAL CYCLOPÆDIA* for the year 1871 presents the close of the most serious conflict in Europe, within a recent period, by a treaty of more than usual hardship to France; the rise and frightful struggle of the Paris Commune; the development of the International Societies; the seating of a king, elected by the people, on the ancient throne of Spain; the peaceful operation of a republic in France, one of the oldest of modern kingdoms; the condition and progress of Italy united under one sovereign, claiming to hold his authority by the votes of the people; the consolidation of the numerous States of Germany under the powerful house of Prussia, together with other changes brought about under the influence of popular or monarchical principles among the people of Europe. The leading public questions and the relations of the various nationalities arising from race, numbers, military power, wealth, and the combined or antagonistic interests in operation, are here set forth with fulness and completeness.

Neither was there less of interest or importance in the affairs of the United States than during previous years. The details of the census of 1870 have been more fully worked out in relation to origin, numbers, and classes of population, industrial pursuits, products of agriculture, commerce, etc., and are inserted in these pages. The rapid recovery of all sections from the effects of the late conflict; the development and establishment of the central authority in its supremacy; the changed relations of a portion of the citizens; the efforts to secure equal political rights and privileges to every one; the progress of all the States, and especially the Southern, under these new relations; the struggles of factions; the local disturbances of citizens; the rapid material improvement of the people; and the measures adopted by Congress, with the debates thereon, are herein fully presented.

The details of the internal affairs of the United States embrace the resources and expenditures of the Federal Government; the results of taxation; the

progress in the reduction of the public debt; the principles upon which the management of the finances is conducted; the banking system, with its expansions and contractions; the extension of internal trade and commerce; the financial affairs of the States; the various political conventions assembled during the year, with their platforms; the results of elections; the proceedings of State Legislatures; the extension of educational and charitable institutions; the rapid extension of the facilities of transportation by railroads, and of communication by telegraphs, and all those facts which determine the rapid progress of the people.

The Diplomatic Correspondence of the Federal Government presents all those portions relating to the recent treaty with Great Britain, and a copy of the treaty is also given.

The advance of Mechanical Industry has been no less useful than in other years, although manifested in less expensive and magnificent works.

The discoveries in the various branches of Astronomical, Chemical, and other sciences, with new applications to useful purposes, are extensively presented.

Geographical Discoveries have been actively pushed forward in various quarters of the globe, and awakened high anticipations.

The record of Literature and Literary Progress is not less interesting than in any previous year, and ample details are given of its state in each of the countries on the Continent of Europe.

The history of the religious denominations of the country, with the results of their conventions, and their branches, membership, and progress of opinions and numbers, are here given from official sources.

Brief biographical sketches of some persons distinguished during the events of the year have been added to the sketches given of deceased persons of note in every department of society.

All important documents, messages, orders, treaties, and letters from official persons, have been inserted entire.

An Index at the end of this volume contains a list of all the subjects treated in the previous volumes of the *ANNUAL CYCLOPEDIA*, with a statement of the volume and page where each may be found.

THE ANNUAL CYCLOPÆDIA.

A

AFRICA. The relations between *Egypt* and Turkey continued in an unsettled condition during 1871. In the beginning of the year new preparations were made by the Khedive for a declaration of independence, but in April he asserted his readiness to comply with the demands of the Sultan, and particularly to abandon the project of building forts on the Suez Canal. During the latter part of the year the relations appeared to be of a friendly character. The Khedive received assurances of a most friendly disposition on the part of his sovereign; at the same time, however, he was given to understand that, in future, he must not make any warlike preparations without having previously received the consent of the Sultan. The Egyptian Government had several differences with foreign powers, the most serious of which was with Spain. All of them were, however, peaceably settled.

The Bey of *Tunis* was threatened by the Turkish Government with a considerable reduction of power. After protracted negotiations, an agreement was arranged. A firman of the Sultan provides that the Bey, as regent of Tunis, remains subject to the Ottoman Empire, and abandons the right of having diplomatic intercourse with foreign powers. The tribute heretofore paid by Tunis will be discontinued, and its amount applied to the reduction of the taxes. The regency in Tunis remains hereditary in the family of the Bey, provided that it shows itself permanently worthy of this favor. The Bey engages to introduce into Tunis all the state institutions of Turkey, and to restore order in his finances.

Important news has, after a long interval, again been received from *Abyssinia*. The English Colonel Kirkham, who commands the regular troops of Prince Kassa, of Tigré, writes on July 12, 1871, from Adowah: "At last the long conflict with Gobazie (the wagshoom or chief of the Agows of Lasta, who, in 1869, caused himself to be proclaimed as Emperor

under the title of Hazie Giorghis) is at an end. We had, on July 9th, a battle, in which we took Gobazie and his whole army prisoners, and now Kassa will become Emperor of Abyssinia." Letters from Munzinger, the distinguished German traveller, to the Khedive of Egypt, fully confirmed this news. The fact that the decisive battle was fought near Adowa, the capital of Tigré, indicates that Gobazie must previously have been in the ascendancy. The subsequent successes of Kassa are partly attributed to the cannon which Lord Napier presented to him, and to the Congreve torpedoes which the brothers Powell gave to him in recognition of the services rendered by Prince Kassa to them while searching for their murdered brother. Later accounts from that country state that the whole of Central Abyssinia was in a state of rebellion, and that a number of towns had fallen into the hands of Ali Bira, the chief of Yadyoo, who had been liberated from the prison of Magdala by the English army under Lord Napier.

The Legislature of the *Cape Colony* appointed a committee of federation to examine whether the better administration of the colony, and its prosperity in general, would not be promoted by dividing the province, according to the example of Canada, into provinces, each of which would have its own legislature for local purposes. A party is beginning to form in the Cape Colony which aims at the establishment of a confederation of South-African states. In Natal a confederation of this kind is likewise the subject of a lively discussion.

Valuable works on Tunis and Tripoli have been published by H. Freiherr von Maltzahn ("Reise in die Regenschaften Tunis und Tripolis," 2 vols., Leipsic, 1870), and by A. Perry ("Carthage and Tunis, past and present," Providence, 1869). Perry was, until September, 1867, consul of the United States in Tunis. Maltzahn gives a tabular view of the population of

Tunis, the most important towns, etc., remarking that this list was drawn up from an official list furnished him by the Tunis ministry, which was, however, found to be very deficient, and was in many instances supplemented from other sources. The following are the most important towns of Tunis, according to these two sources (M. indicating Maltzahn, and P. Perry):

Bedja.....	5,000 (M.)
".....	9,000 (P.)
Biserta.....	5,000 (M.)
".....	5,500 (P.)
Djemal.....	6,000 (P.)
Jabes.....	6,000 (M.)
Jafsa.....	5,000 (M.)
Kairouan.....	12,000 (M.)
".....	15-20,000 (P.)
Kef.....	5,000 (M.)
".....	6,600 (P.)
Mahadia.....	9,000 (M.)
".....	6,000 (P.)
Monastir.....	8,000 (M. and P.)
Msaken.....	10,000 (P.)
Nefta.....	8,200 (M.)
Sfaks.....	10,000 (M.)
Ssady bu Ssady.....	5,000 (M.)
Susa.....	7,500 (M.)
".....	10,000 (P.)
Tunis.....	125,000 (M. and P.)

The city of Tunis had among its population 32,000 Jews, 13,000 Christians, the remainder being Mohammedans. Of Europeans, there were 6,000 Italians, 6,000 Maltese, 1,500 Frenchmen, Spaniards, and Germans, and 300 Greeks. According to Salaheddin-Bey, Tunis is said to have 150,000 inhabitants. A few Christians and 600 Jews were living in the town of Kef.

At the beginning of the year 1871, the Imaum of Muscat was slain in battle, and was succeeded by Synd Toskes, the victor. The new ruler possessed a naval force almost unexampled in the history of the East, the register showing an eighty-four-gun ship, two seventy-four-gun ships, and over fifty square-rigged vessels, most of them armed, and built at Bombay, after European models.

In September an insurrection of the Kabyles broke out in Morocco. The cause of the outbreak was the establishment of a Moorish custom-house on the coast. The revolted Kabyles also committed overt acts against the Spanish garrison of Melilla (a seaport town belonging to Spain). They planted a battery within range of the citadel, with the intention of bombarding it, but their guns were dismounted by the fire from the Spanish fortifications.

The reports from the diamond-fields in South Africa, though, to some extent, contradictory, continued to attract, throughout the year, a large floating population. A number of settlements were arising, and Du Toit's Pan was, in November, 1871, reported to have a population of 16,000.

In March information was received in Paris that the Arab chief Sidi Mokrani, with 40,000 troops, was within twenty-five leagues of Algiers, and had declared war against France. The leader of the insurrection was killed in May, but, on July 1st, Jules Favre, in the Na-

tional Assembly, admitted that several districts were still in the hands of the insurgents. He denied that the property of the insurgents had been confiscated. In October advices were received stating that the natives in the northern part of Constantine had risen against the French, and were in open hostility. In November the French Government announced that the restoration of tranquillity was nearly completed.

In December, it was officially announced in the Cape Colony, that in fulfilment of a recent contract of sale made to the English Crown, by the free preëmptors of the diamond fields, the territory of these fields had been annexed to the English dominions in South Africa. The tender of arbitration, wherein the governments of Germany, Holland, and the United States were to act as umpires, had arrived too late to suspend the negotiations. Mr. Brand, President of the Free States, issued a formal protest against the transfer of the diamond fields to Great Britain.

AFZELIUS, ARVID AUGUST, an eminent Swedish historian and clergyman, born in Brodatorps, Sweden, May 6, 1785; died in the rector's house at Enköping, where he had resided over half a century, September 25, 1871. The family of Afzelius is one of the most celebrated for learning in West Gothland, and five of its members have attained a cosmopolitan reputation in science, philology, and literature. Receiving a very thorough home-training, young Afzelius entered the University of Upsala in 1809, and, two years later, having gained the title of Master of Philosophy, was ordained a priest. His brilliant talents and rare oratorical powers led to his appointment in 1812 as preacher to the court of Sweden, and the following year as head court-preacher. In 1821 he was installed in the pastorate of Enköping and Narfrukyr-koforsamlings, which position he held until his death, a period of over fifty years. From the time that he entered the University of Upsala he had devoted himself to the study of Scandinavian history and folk-lore. In 1815, in company with Erik Gustav Geijer, and Rask, the Danish archæologist, he made many translations from the songs of the Icelandic Edda into the Swedish tongue, which are still greatly prized for their charming simplicity and their highly-poetic spirit. In 1816 he composed a tragedy, in six acts; but, though possessing rare poetic merit, it was not adapted to the stage, and was not successful. He also wrote several psalms, which are still in use in the Swedish Lutheran churches. But his great work, and the one which has made his name a household word, as his works are household books in almost every family of Sweden and Denmark, is his "Svenska Folkets Sagohafder," or Swedish Chronicles, universally known in those countries as the "Afzeh Chronicles," published in 1839-'43. This is a faithful description of the home-life, customs, early laws, and habits and manners of the

Norse people in all their past history. It is recognized as one of the most valuable contributions to Scandinavian history ever made.

AGRICULTURE. Our returns of the crops of 1871 must, as usual, be only an approximation, as the returns to the Agricultural Department are unusually late, and at the date of our going to press they have not yet published the statistics of 1870 in full. The material is at hand, however, for making our approximations sufficiently clear to answer all practical purposes. The year 1871 was characterized by remarkable meteorological conditions, which materially affected the crops in some sections. The spring was exceptionally late: frosts occurring in many sections in the latter part of April, and even into May, while in some parts of New England there was a frost sufficiently severe to do damage to the growing crops as late as June 24th. June had its very marked alternations of hot and cold weather; July was quite cool throughout, and the rainfall in both months in the Atlantic States was unusually heavy, while in the Northwest the beginnings of the drought, which continued so long, and eventually proved so destructive, were seen during July. August was very hot and moist on the Atlantic slope and in the central belt of Western States, while in the Northwest it was hot and dry; September was cool and dry; and October, though proportionally milder in temperature, was equally dry, and the forest and prairies of the Northwest were like tinder, and soon, over large districts, were swept by the devouring flames. The great conflagration at Chicago, on the 8th of October, also exerted its influence on the agricultural products of the year, not only in its destruction of very large quantities of grain, but in its blocking the avenues of trade, and preventing the reception and prompt shipping of large quantities of grain to the Atlantic ports.

Yet, with all these drawbacks, the crops of the year were very nearly of average amount; some of them a little in excess, and others, though not the most important, rather short.

The *Wheat* crop was not quite equal to that of 1870, the Southern wheat-fields suffering from rust, and those of the Northwest from the chinch-bug and the weevil. It is estimated in round numbers at 219,500,000 bushels, or about seven per cent. below the actual crop of last year.

Indian-corn did not yield quite so much to the acre, and was not of quite so good an average quality in consequence of the drought, and in some places early frosts; but the acreage was larger, and the aggregate crop very nearly the same as the previous year, being estimated at 1,092,000,000 against 1,094,255,000 in 1870.

The *Rye* crop in 1870 was over-estimated, the actual returns being only 15,473,600, instead of 21,125,000, as was supposed. It is always a difficult crop to estimate even approxi-

mately, as its culture is so much scattered, a few acres here, and another patch perhaps in the next county, or farther off. From the reports the crop appears to be about three per cent. less than in 1870, or not quite fifteen million bushels.

Oats were about an average crop, cut off partially or wholly in some sections, but yielding enormously in others, a yield of ninety-five bushels to the acre being reported in Lafayette County, Wisconsin, and seventy-five bushels in Muscatine County, Iowa. The aggregate may be set down at about 245,000,000 bushels.

Barley is grown in only twenty-eight States of the Union, and is not increasing largely in acreage even in those; but the crop of 1871 was about an average, and may fairly be estimated at 26,000,000 bushels.

The *Buckwheat* crop was largely over-estimated in 1870, the actual yield being under 10,000,000 bushels instead of 16,500,000. In 1871 it was something less than in 1870, and probably did not exceed 9,400,000 bushels.

The yield of *Potatoes* (*Solanum tuberosum*) is reported slightly larger than in 1870, though there was a decrease in Illinois, Indiana, Michigan, Kentucky, and Missouri. An estimate of 117,000,000 bushels would not probably be far from the truth.

The *Sweet Potato* (*Batatus edulis*) is grown in twenty-five States, and forms a very important addition to our vegetable supplies for a considerable portion of the year, and its cultivation is increasing, a much larger acreage being devoted to it in the seaboard Southern States than before the war. The tubers raised in South Carolina, Georgia, and Florida, are much sweeter and more palatable than those grown on Long Island or in the Middle States. The average yearly product is certainly not below 50,000,000 bushels (it was 42,000,000 in 1860), and the crop of 1871 was very slightly below the average. Considerable quantities of both the sweet and Irish potatoes are brought into our markets early in the season from the Bermuda Islands.

The *Hay* crop of 1870 was under-estimated, the actual product being about 24,525,000 tons. In 1871 the aftermath was cut short by the drought in the Northwest, and the same cause so diminished the pasturage that a greater amount would be required, and feeding was commenced earlier. The destructive fires in the Northwest also burned considerable quantities in Michigan and Wisconsin. The crop probably reached 22,300,000 tons.

The production of *Rice*, which, in 1850 and the ten years which followed, reached its highest point, an average production of over 200,000,000 pounds, and which in 1865 had almost ceased to be reckoned among our agricultural products, is again increasing and extending, not only in its old region, in South Carolina and Georgia, but in Louisiana, where 20,000,000 pounds were grown in 1869. In

1870, 73,635,001 pounds were raised in the United States, and 43,123,939 pounds imported. The returns of the crop of 1871 are not yet published, but there is good reason to believe that within a very few years we shall not only grow our own rice (which is much superior to the East-India grain), but be able to export very largely.

The *Tobacco* crop was largely over-estimated in 1870, the actual production being only 250,628,000 pounds, instead of 310,000,000 pounds as was predicted. The sections producing the seed-leaf variety report an unusually large crop, Missouri and California an average one, while Maryland, Virginia, North Carolina, and Kentucky, which usually produce somewhat more than half of the entire crop, report an average falling off of about eleven per cent. from last year's production. The estimate of 240,000,000 pounds, for the entire crop, cannot be far from the truth.

Sugar from the sugar-cane was not very successfully produced in 1871. A much larger crop was planted, and there may be 145,000 hogsheds made, but this will probably be the outside. *Sorghum* is not grown any thing like as largely east of the Mississippi as it was a few years ago, the sugar-cane, molasses, and syrups, having taken the place of sorghum-syrup, or reduced it to so low a price that its production was not profitable; but west of the Mississippi, especially in Wisconsin, Minnesota, Iowa, Kansas, and Nebraska, its cultivation is largely on the increase. The syrup is so much a domestic production with the farmers that, like the maple-sugar, the amount produced in any given year can only be determined by the machinery of the census.

The *Beet-Sugar* interest is again assuming a considerable magnitude. After the failure of the extensive and costly works at Chatsworth, Illinois, owing to the presence of magnesian salts in the soil and the water, it was thought that the culture of the Silesian beet for sugar here would never prove a success; but it has been undertaken, by Germans familiar with all the processes, and the difficulties to be overcome, in Freeport, Illinois, Black Hawk, Wisconsin, and at Alvarado and Sacramento, California. Though these establishments are all in their infancy, they are all doing well; about three million pounds of sugar were made in 1871, and more than twice that quantity will probably be produced in 1872.

Flax is now largely raised, mainly for the seed, in several of the Western States. The amount grown in 1871 was a little more than in 1870.

Peas and *Beans*, generally profitable crops on the light sandy loams of the Atlantic slope, were not raised in as large quantities as usual in 1871, the falling off from the production of 1870 being from six to eight per cent. Of *Fruits*, *Grapes* were, taking the entire country through, more plentiful than usual. Of no fruit is the acreage increasing so rapidly as

this, and though in the Eastern and some of the Middle States the yield, per vine, was much less than usual, and the quality generally inferior, yet the quantity thrown on the market was enormous, and the wine production much larger than ever before.

Of other fruits the report is not so favorable. It was decidedly *not* an *Apple* year. In some sections, especially throughout the Atlantic States, the apple crop was almost a complete failure, and in Kentucky, Tennessee, Missouri, Kansas, and still farther West, the fruit was either scant in quantity or poor in quality. In the Northwest, on the contrary, apples were very abundant, of fair quality, but rotted badly. *Pears* were better, but these were at least ten per cent. less in quantity than the previous year, and commanded very high prices. *Plums* were very scarce, and brought high prices.

The production of new fibrous plants for textile purposes is still continued, and while the ramie-plant is successfully cultivated in some parts of the South, and its prepared fibre brings a high price (\$260 or \$270 per ton) in the English market, yet, until some machine is invented to perform the difficult work of separating the fibre from the stalk, it will not be a very popular crop. Attention has been paid to the raising of jute during the past two or three years, and with good success, in the Gulf States. In the manufacture of gunny-cloth as well as for paper-fibre and other purposes, there is an abundant market for all the jute which can be grown, though, competing as it does with the very low-priced Hindoo labor, both in the cultivation and preparation of this fibre for market, it is yet somewhat doubtful whether it will prove a very profitable crop. It cannot be raised successfully in the States north of Tennessee. The attempts made to introduce improved species or varieties of the cotton-plant from Egypt and China have proved unsuccessful. The Egyptian plant grows finely and produces a very fine, silky cotton (too fine for the ordinary cotton-gins to clean without injury), but it is very late, and yields much less than the ordinary varieties, hardly one-third as much to the acre, the experimenters say. The Chinese cotton has no good points adapting it to American culture. Among other fibres which have been brought into prominence within the past year for paper-stock, for cordage, etc., are the leaves of the palmetto, and the fibrous bark of the baobab or *Adansonia digitala*. The latter has become an article of commerce in the English market, where it commands \$70 to \$75 per ton.

The attempts to introduce new and more productive varieties of the cereals has been attended with considerable success. It seems to be pretty well settled that some of the newly-introduced varieties of wheat and oats do yield a larger amount of grain to the acre, and the grain is of better quality, than the older varieties, which have to some extent deteriorated.

rated by long cultivation. The experiments made by Mr. J. I. Carter, the Superintendent of the Eastern Experimental Farms in Chester County, Pennsylvania, are very interesting on this point. He experimented with sixty-nine varieties of wheat under as nearly as possible the same circumstances of soil, fertilization, temperature, and cultivation, and in the annexed table are given the time of cutting, weight of straw, and yield of grain per acre, of each variety.

It will be seen that, contrary to the general impression, neither the White Touzelle, nor the Diehl, nor the Tappahannock, the three most vaunted varieties, was among the most prolific in its production, the former ranking fifteenth in the amount of its yield of grain, and tenth in its production of straw, and the two latter ranking thirty-sixth and thirty-seventh in their yield of grain, while, in the straw-product, the Diehl ranked fortieth, and the Tappahannock twenty-seventh. The most remarkably-productive varieties were: the *Old White Chaff Mediterranean*, a bearded variety which yielded 37.86 bushels to the acre with 4,704 pounds of straw, a total yield of 3½ tons to the acre; *Rogers's*, a smooth variety, yielding 37.80 bushels of grain, but only 3,844 pounds of straw, or a total of not quite three tons to the acre; the *Witter*, having both smooth and bearded heads, and yielding 36.53 bushels of grain and 3,792 pounds of straw; the *White Chaff Mediterranean*, a recent importation, bearded, with 36.13 bushels of grain and 4,536 pounds of straw. From these high figures there was a regular gradation from 31.66 bushels down to 4.80, a variety from the Cape of Good Hope. These experiments seem to have been made under such circumstances as to vary very little from the ordinary conditions of wheat-raising, and are on this account the more valuable. Very little dependence can be placed on the relation of those experiments, which, from the product of a small quantity of wheat on a square rod of ground carefully prepared for the crop, assure us of a yield of fifty or seventy-five bushels to the acre; these results will not be realized in ordinary grain-growing, and they only delude the purchaser. The "Fultz" wheat, not among those tested by Mr. Carter, is a variety originating in Pennsylvania, which seems to give promise of being more than usually prolific, and the grain is of excellent quality. On the reclaimed tule-lands in the islands of the Sacramento River, the first crops of wheat and barley have been enormous, and subsequent crops, though not quite so large, were yet far beyond those produced elsewhere. We have authentic records of first crops of wheat on these islands, extending over many acres, with an average yield of from sixty-nine to seventy-three bushels to the acre, and of subsequent crops of from fifty-eight to sixty bushels.

The new varieties of *oats*, some twelve or

fifteen in number, have also been experimented upon with the result that the *Excelsior* and *Schonen* varieties seem to give the largest yield.

NOTE.—S., smooth; B., bearded; S. B., short beards; S. and B., both smooth and bearded heads.

The *Cotton* crop it was thought in September and October would prove to be very small,

and after the unexpectedly large yield of 1870, which footed up 4,400,000 bales, it was not unreasonable to think that a very light crop would be raised; during those two months the reports were extremely unfavorable, and it was thought improbable that more than from 2,800,000 to 3,000,000 bales would be produced. But the continuous mild and fair weather of November and December was so favorable to late picking that it was generally conceded that the crop would reach 3,400,000 bales, and possibly 3,500,000. This is a great falling off from the crop of 1870, but it is a result which is so much better than was feared that it is a cause for congratulation.

The attempts to introduce *tea-culture* into California are likely to prove successful, the climate and conditions of the western slope of the Sierras and of the Coast Range being favorable to it. Large importations of the tea-nuts have been made during the past year, and the tea-plantations, under the care of the Japanese and Americans, are doing well. It requires about five years of growth before the shrubs become sufficiently matured to yield the best quality of leaves for tea. From a letter of Hon. W. G. Howard, now of San Antonio, Texas, but for many years engaged in the tea-culture in Assam and elsewhere, in British India, and who is now engaged in introducing it into Texas, it would seem that the cultivation of the tea-plant is not so difficult a process as has generally been supposed. He says, in a communication to the United States Agricultural Department:

The culture of the plant and the manufacture of the tea are much simpler and easier processes than most persons think. Of the hardy nature of the plant you have abundant evidence in those planted out in the gardens at Washington. And from my own experience in many climates of India, from Aracan to the Himalaya Mountains, neither frost nor snow, drought nor rain, sunshine nor shadow, materially injures the "tea-plant." Nor is it subject to the visitation of any worm, bug, or disease.

When I first went to India, all knowledge with respect to tea was very scant and limited, and every thing had to be done by hand; but afterward, when the capital invested in tea had increased to enormous proportions—indeed, many millions of pounds sterling—the cost of manufacture was much reduced. When I left India the only manual labor was the picking of the leaves, which was best done by women and children. It is true that a man here would cost \$20 or \$25 per month, against \$2.50 per month there; but, when you take into consideration the great lack of economy in the management there, the difference would not amount to so much. In India all tools and lead have to be brought from England, and transported on men's backs for many miles; the constant rebuilding of houses, rendered necessary by the white ant and fire, every year or two; the enormous cost of management, which amounts to more than one-half the actual amount spent in the year; the physical inability of the Bengalee coolies to do much labor; the difficulty of procuring labor, and the unhealthy climate, all combine to bring the cost per acre to as much as it would be in America.

The tea, once planted, only requires to be kept free from weeds, which can be done here with the plough, the same as with Indian-corn, and at the same cost. In India they have neither horses nor ploughs, and all

weeding must be done with the hoe in the hands of a lazy and weak coolie. After the tea is pretty well grown, say four or five years old, its own shade pretty much keeps the ground clean.

Should our Government once take hold of the subject, and demonstrate that tea can be grown, and to a profit, the demand for seed alone would soon pay all cost. The yield of seed is, on an average, four *maunds* (a *maund* is 80 pounds) to the acre, and I sold in one year from my garden 4,000 *maunds*, at 200 rupees per *maund*, and could have sold 40,000 *maunds* at the same figure.

The chemist of the Agricultural Department at Washington recently made an analysis of the *yaupon*, or Carolina tea (*Ilex cassine*), with a view to ascertain whether it possessed, in any considerable degree, the properties which are characteristic of the Asiatic tea, which belongs to the *Ilex* or Holly family, and also of comparing it with its congener, the *Ilex Paraguayensis* (*maté*, or Paraguay tea), so extensively used in South America. The specimens analyzed by the chemist seems not to have been in its best condition, and thus is hardly conclusive of the real value of the *yaupon*. It is well known that the practically valuable chemical principles of both tea and coffee are tannin, caffeine or theine, and a volatile aromatic oil which, though present in small quantity, yet gives the characteristic odor or aroma to both. Of tannin, black tea contains an average of 2.04 per cent., green tea from 14 to 17.68, and coffee about 10 per cent., while the *yaupon* has 2.41 per cent. Of caffeine or theine, black tea and the ordinary grades of green tea contain about 0.56 per cent.; the best qualities of green tea as high as 6 per cent., and coffee 1 per cent.; while the *yaupon* has but 0.12 per cent., and *maté* only 0.13 per cent. Of the volatile oil, *yaupon* has hardly a trace, only 0.01 per cent.; while black tea has 0.63, and green tea 0.88. The coffee aroma is so volatile that it escapes in the analyzing process. The conclusions to which the chemist comes are, that the *yaupon* is about equal to the Paraguay tea, and far below the Asiatic teas, in valuable properties. He proposes to analyze some of the other species of *Ilex*, and also, perhaps the *Ledum*, or Labrador tea, and other shrubs which have been used as substitutes for tea, though it is doubtful whether any theine will be found in them. In California, and in Texas, the culture of the *olive* and the *almond* has been introduced, and both are found hardy in those climates. The olive will probably become one of the staple fruits of Southern California, as its fruit there is equal if not superior to that grown in Southern Italy, Greece, and Syria. The culture of the *fig* in the same section has already become important, and drums of native figs of the best quality are found in the San Francisco market in larger quantity each successive year. The cultivation of the *pomegranate* has also commenced there.

The statistics in regard to crops, domestic animals, etc., in each State, in 1870, will be found under the head of the several States.

ALABAMA. The political affairs of Alabama during the year have been comparatively quiet. The excitement attending the inauguration of Governor Lindsay, and the practical transfer of authority from Republican to Democratic hands, had subsided before the close of 1870. The Legislature, which adjourned on the 14th of December, assembled again on the 18th of January, 1871, and proceeded with the business of the session. Meantime, an event had occurred seriously affecting the credit of the State. In 1867 the Legislature had passed an act authorizing the Governor to indorse the bonds of certain railroads which were in course of construction, to the amount of \$12,000 for each mile of road completed. Among the lines benefited by this act was the Alabama & Chattanooga, which extended from Chattanooga, in Tennessee, to Meridian, Mississippi, a distance of 295 miles. This road had passed into the hands of a company made up of Northern men, and at the session of 1869-'70 they induced the Legislature to pass new acts, not only raising the amount of bonds subject to the indorsement of the State to \$16,000 per mile, but authorizing an issue of \$2,000,000 in State bonds for the benefit of the road. Bonds had been issued by the company and indorsed by Governor Smith, in 1870, to the amount of \$4,000,000, and the \$2,000,000 of State bonds had also been issued. According to the terms of the various acts granting this aid, it was provided that the company should "deposit with the Auditor of the State of Alabama, at least fifteen days before the interest is due, from time to time, upon the bonds indorsed as aforesaid, an amount sufficient to pay such interest, including exchange and necessary commissions, or satisfactory evidence that such interest has been paid or provided for; and if said company fail to deposit said interest as aforesaid, or to furnish evidence as aforesaid, it shall be the duty of the Auditor to report that fact to the Governor." The law goes on to declare that "the Auditor is authorized, and it is made his duty, to draw from the Treasury any sum of money necessary to meet the interest on any bonds indorsed by the State, whenever said interest is not provided for by the company, and to pay such interest when due;" and "the Auditor shall report thereon to the General Assembly from time to time, and, in case the exigency requires, the Governor is hereby authorized and directed to negotiate temporary loans for said purpose." The interest on these bonds was due on the 1st of January and the 1st of July. On the 31st of December Governor Lindsay was notified that the Alabama & Chattanooga Railroad Company had failed to provide for the interest accruing on the 1st of January. Mr. Stanton, the superintendent of the road, claimed that, owing to injudicious suggestions in some of the public prints that these obligations ought to be repudiated by the State on account of alleged corruption in securing the

passage of the laws incurring them, he was not able to raise money to pay the interest, and he therefore called upon the Governor to make the payment. This Governor Lindsay refused to do, unless authorized and required to do so by special act of the Legislature. Meantime the coupons of the bonds went to protest, and much alarm was created in financial circles lest the State of Alabama should refuse to meet her obligations altogether. Soon after the reassembling of the Legislature in January, Governor Lindsay transmitted a message to that body, setting forth the facts in the case, and recommending that a joint committee of the two Houses be formed "to inquire into this whole matter before any final action is taken thereon." "I do not desire the State of Alabama," he said, "to manifest even a reluctance to meet her just and honest liabilities, but I do insist upon her right and her duty, both to herself and those who claim to be her creditors, to institute this investigation before she pledges her future. There is one course which can be adopted with safety and justice alike to the State and bondholder: that is, the enactment of a law providing for the transfer, to the holders of the indorsed and the two million bonds, of all the rights, liens, securities, mortgages, assets, and property secured by statute or in any other way vested in the State of Alabama by said road, and to pass such laws as will enable said bondholders to prosecute the rights to which they are subrogated under such transfer, provided they will release the State of Alabama from all liability on said bonds."

The Legislature took the matter up at once, and the final result of their action was, the passage of a law providing that "the Governor be authorized and required to inquire into and ascertain the amount of bonds issued and loaned to the Alabama & Chattanooga Railroad Company, and of the bonds of said company indorsed by the State; and, when such amount is ascertained, the Governor shall make provision by temporary loan, or from money in the State Treasury not otherwise appropriated, to pay the interest upon said bonds, whenever the coupons attached thereto shall be presented to him, or to any agent he may appoint for that purpose: *Provided, however,* That no interest shall be paid upon any of said bonds not proved to have been held on January 1, 1871, by innocent and *bona-fide* purchasers: *And, provided further,* That no interest shall be paid upon any of said bonds in the hands of the said railroad company, any incorporator or agent thereof, or merely hypotheccated by them, it being the object and intent of this enactment to pay interest only to innocent and *bona-fide* purchasers of valid claims against the State." And also, "That, whenever the Governor shall have paid any of said interest, he may proceed under any of the statutes providing a summary remedy in such case, or according to any forms of law which he may

deem best and safest for the interest of the State, to recover the amount so paid from the Alabama & Chattanooga Railroad Company."

The Governor immediately went to New York, where the bonds had been negotiated, and made the required investigations. He found that 4,000 bonds, of \$1,000 each, indorsed by the State, were "regular, legal and valid," and provided for the payment of the interest thereon, as well as that on the \$2,000,000 of State bonds. He ascertained, however, that a large number of bonds had been prematurely issued and indorsed by his predecessor, Governor Smith, and the interest on such he refused to pay. This was soon provided for by the officers of the railroad company themselves. This prompt action restored confidence in the credit of the State, but it remained for the Commonwealth to indemnify herself for the expense which she had incurred.

The total cost of the construction of the Alabama & Chattanooga Railroad had been \$9,274,557, while it was mortgaged to the extent of \$13,000,000, the State holding a first mortgage on the entire road and all its rolling-stock, fixtures, etc. On the 31st of May the company was declared an involuntary bankrupt by the United States District Court sitting at Montgomery, on the petition of one of its creditors, the State not appearing as a party to the action. The decree was, however, reversed by the Circuit Court in June, on the ground that the adjudication was made "in default of the debtor and upon a fatally defective petition." While the bankrupt suit was pending, the Governor made strenuous efforts to induce the company to convey the road to the State, believing, as he said, that, "by such a voluntary conveyance, prolonged and complicated litigation would be avoided, and the interest of the State and that of all other creditors better subserved." In the hope of carrying out an arrangement of this kind, Governor Lindsay and his counsel, General J. H. Clanton, went to New York, where the officers of the company were then located. Failing, however, in their mission, they returned to Alabama, and the Governor proceeded to seize the road and its property, authorizing his private secretary, Colonel Gindrat, to take possession as the agent of the State. Every possible obstacle and embarrassment was interposed by the officers of the company and it was necessary to institute legal proceedings in the States of Tennessee, Georgia, and Mississippi, in order to get possession of the portion of the road located in those States. In Tennessee and Mississippi the desired decrees were readily granted, and Colonel Gindrat was appointed receiver of the property; but Georgia had also indorsed bonds for the company, and Governor Bullock seized the portion of the line running through that State, and refused to give it up, although the Supreme Court granted an injunction against the company, and ap-

pointed a receiver on behalf of Alabama, instructing the receiver "to negotiate with the Governor of Georgia in regard to the possession and running of said road through this State, as well as with other parties in charge of and controlling other portions of said road situated in other States," for the running of said road through its entire length, from Meridian to Chattanooga; "it being the true intent and meaning of the judgment of this court not to interfere with the possession of said road by the Governor of this State under the provisions of the act of 1869 and 1870, without his consent, but that the receiver appointed by the court may negotiate with the Governor for such consent, so as to enable him, as such receiver, to secure the running of said road through its entire length from Meridian to Chattanooga for the benefit of all the creditors of said insolvent railroad company."

After the resignation of Bullock, Governor Conley acceded to the demands of Alabama, and the entire road was run by Colonel Gindrat on behalf of the State. Meantime the bankruptcy proceedings had been renewed on a new petition, and on the 10th of November the company was declared bankrupt by Judge Busted, and the 27th of the same month was appointed for the meeting of creditors to elect an assignee.

The Legislature of 1870-'71 continued in session until the 10th of March, but none of its acts are of general importance, and nothing was done possessing any political significance. Resolutions were introduced favoring a removal of the national capital to a more central location, but was never acted upon. A resolution directing an investigation into alleged outrages in certain counties was tabled.

On the whole, the condition of society throughout the State has been peaceful. There were occasional reports of violence and outrages attributed to what is known as the "Klux Klan." In his charge to the grand-jury in May, Judge Busted, of the United States District Court, said: "I am informed by the attorney for the United States that he has reason to believe and does believe that in the middle district of this State there have been several gross violations of the law of Congress commonly known as the 'Enforcement Act,' and that it is his intention to submit these alleged infractions to your body for consideration and action. It is to be hoped that the representations made to the District Attorney are either not founded in fact, or so exaggerated, as that, when you hear the evidence in the cases, they may wear a less criminal aspect than is supposed. If, however, the truth of the matters shall appear as alleged, your duty is as plain as your oath of office is solemnly imperative. That oath, taken in the hearing of your fellow-men, and containing an appeal to God, requires you not to 'leave any one unprotected for fear, favor, affection, hope of reward or gain, but to present all things

truly as they shall come to your knowledge, to the best of your understanding.' The good name and fame of the State of Alabama are inseparably connected with the fidelity of her people to the laws. No man, whoever he be, whatever his pretensions, is honest or patriotic, who, in the remotest degree, by look, word, or deed, aids, countenances, or encourages the ill-behavior which is declared against. It is a high crime, at this delicate juncture in our political circumstances, to bring about a necessity for applying to these communities the stringent correctives contained in the act of May, 1870, and in other recent legislation of Congress. The true, the peaceable, the only constitutional means of getting rid of an obnoxious law is to procure its legislative repeal. This, under a republican form of government, is sure to occur whenever the majority of the people are persuaded that it should be repealed. Until that time, the minority must content itself with the use of moral suasion, and instructing the public mind, with the view of producing the desired change in the public sentiment."

There appears no record of any indictments for these alleged violations of the act of Congress. A sub-committee of the congressional "Ku-klux committee" visited the State, and spent some time, during the summer and fall, in making investigations. A large number of witnesses were examined, and gave very conflicting testimony. Many persons, represented to be gentlemen of high character and undoubted veracity, testified that the condition of the State was in general very peaceable, and the citizens were inclined to obey the laws. Colonel Lowe, formerly a Confederate officer, on being asked about the Ku-klux Klan and the Loyal League, said the former was the offset of the latter. He never was a member of either, but thought one the cause, and the other the effect. The League arrayed bad whites and negroes against the best elements of society. The country was disturbed, and civil law feebly executed; and the Ku-klux proposed to repress crime and preserve law and order in the interest of society. He believed neither organization now existed in North Alabama. The country never was in a quieter or more peaceable condition than since the last election, when the people had regained, in a great degree, the control of their State government.

Captain L. W. Day, who had been an officer in the Federal army, and was at the time a United States Commissioner and clerk of the District Court, bore testimony to the generally peaceable and law-abiding character of the people, and expressed his belief that leading Democrats in the State were opposed to all lawless proceedings. Another gentleman testified that he was a Republican and in favor of law and order, that he had been three times foreman of the grand-jury in Colbert County, and had had the amplest opportunity and the

fullest coöperation of his conjurors in the investigation of crime, that he believed that the general sentiment of the people is opposed to lawlessness, that he was satisfied no Ku-klux organization now existed, and that the occasional outrages were perpetrated by a few men banded together to gratify their private malice or for mere personal objects, and not for political purposes.

Captain Daniel Coleman, Solicitor of Limestone County, was examined particularly with reference to the condition of affairs in his county. He said that there had been a good deal of crime in that county, but that it had not a political aspect; that men had banded together and operated in disguise to gratify their personal malice, to achieve private objects, or for horse-stealing, or other purposes of plunder, but that the balance-sheet showed a decided balance in favor of a conservative, law-abiding, peaceful public sentiment; that the most vigorous efforts had been made by the civil authorities of the county, supported by public sentiment, to bring offenders to justice; that a number of offenders had been arrested and indicted, and would be prosecuted with energy; and a mass meeting of citizens had been held at Athens, and had denounced lawlessness, and pledged its support to the civil authorities.

Evidence of a contrary purport to this was given mainly by negroes, and related to individual cases of violence, having no obvious connection with political affairs. Governor Lindsay and Judge Busted, while at Washington, declared emphatically that there was no more disorder or opposition to law there than in any one of the New-England States. The people, they said, "were peaceably employed in developing their material interests, and simply desire to be allowed to pursue them without interference. There is no political agitation of any kind. The colored population is contented, and labor has resumed its natural order, with entire harmony between the employers and the employed."

The finances of the State, notwithstanding the trouble growing out of its somewhat extravagant indorsement of railroad bonds, are in a promising condition. The public debt is stated by the Auditor as \$8,761,917.37, which indicates an increase of \$283,906.62. The Governor, however, declares that it is only \$5,442,300, "the University and other funds, what is known as the Patton certificates, and accounts unsettled, or Auditor's warrants unpaid," not constituting, "in any accepted signification of the term, public debt." The receipts of the Treasury during the year amounted to \$1,422,494.67, which is \$229,359.24 in excess of the estimate of disbursements made at the beginning of the year. The actual disbursements, however, amounted to \$1,640,116.99. The discrepancy between the estimates and the actual payments is explained as owing to the protracted session of the Legislature, special

appropriations, school appropriations, and the revised code and premature payments to county superintendents, all of which involves the payment of \$332,620.05, not taken into consideration in making the estimate. The rate of taxation was reduced by the last Legislature from 75 to 50 cents on the hundred dollars of the valuation of property.

The aggregate taxation of the State amounts to about \$2,489,916 or 2.05 per capita for the entire population. This is very small compared to that of some other States. In Vermont, for instance, the taxation is \$5.29 per capita; in Massachusetts, \$14.35; in Ohio, \$8.72; and in New York, \$11.55. In Mobile the aggregate taxation is \$13.07 for each inhabitant, and in Montgomery, \$13.83. There are in the State 4,501,703 acres of improved and 13,618,390 acres of unimproved land, the aggregate value of which is \$81,109,102.03, and the annual taxation \$607,979.52. The total value of town property is \$36,005,780.50, and the tax upon it is \$268,865.89.

The cost of the school-system for the year was \$727,200.53, of which \$211,217.79 remained unpaid at the end of the fiscal year, and became chargeable upon the revenue for 1871-'72.

The following are the common-school statistics for the year:

WHITE SCHOOLS.	
Number of pupils enrolled—male.....	45,396
Number of pupils enrolled—female.....	41,580
Total.....	86,976
Average number in attendance.....	66,358
Number of primary schools.....	544
Number of intermediate schools.....	792
Number of grammar-schools.....	812
Number of high-schools.....	251
Total number of schools.....	2,309
Number of teachers—male.....	1,573
Number of teachers—female.....	924
Total number of teachers.....	2,479
Average rate of pay of teachers per month.....	\$42.15
Average number of months and days taught, 3 months 8½ days.	
Increased school-term since last year, 19½ days.	
COLORED SCHOOLS.	
Number of pupils enrolled—male.....	27,512
Number of pupils enrolled—female.....	26,824
Total.....	54,336
Average number in attendance.....	41,308
Number of primary schools.....	751
Number of intermediate schools.....	143
Number of grammar-schools.....	26
Number of high-schools.....	2
Total number of schools.....	922
Number of teachers—male.....	745
Number of teachers—female.....	238
Total number of teachers.....	973
Average rate of pay of teachers per month.....	\$43.06½
Average number of months and days taught, 3 months 4½ days.	
Increased attendance since last year.....	25,211
Increased school term since last year, 16½ days.	
ALL SCHOOLS IN 1871.	
Total number of pupils enrolled—male.....	72,908
Total number of pupils enrolled—female.....	68,404
Total enrolment.....	141,312

Total average attendance—male.....	55,239
Total average attendance—female.....	52,427
Total average attendance.....	107,666
Total increased attendance since last year.....	55,660
Total number of primary schools.....	1,295
Total number of intermediate schools.....	935
Total number of grammar-schools.....	838
Total number of high-schools.....	253
Total number of schools.....	3,321
Number of male teachers.....	2,313
Number of female teachers.....	1,152
Total number of teachers.....	3,470

These statistics show that, while the increase in the school fund available for tuition in 1871 over that available in 1870 was only 17½ per cent., the increase in school attendance was over 106 per cent.

The University of Alabama, which is located near the town of Tuscaloosa, was reorganized during the year. A board of regents was appointed, and Commodore Matthew F. Maury, of the University of Virginia, was chosen president. After accepting the position, and delivering his inaugural address in a hopeful tone, Commander Maury resigned on account of some dissatisfaction with the means and appliances afforded the institution. General George P. Harrison, the commandant and professor of military engineering, also resigned, stating his reasons as follows:

"The depressed financial condition of the university, the utter disregard which has been shown the military department in the appropriation of those funds that were available, the plan of cadet or student (soldier or civilian) as the applicant may elect, the free-and-easy plan of an open-course university (the faculty equally responsible), with no president or superintendent to command and direct, and the failure to make any provision for arms, accoutrements, and uniforms, all convince me that, under present circumstances, the military department of the university can only be run on a 'wooden gun' system, which would neither be creditable to the State of Alabama nor myself."

Notwithstanding these drawbacks, the university opened on the 4th of October, with a competent corps of instructors, and about 70 students. Major Murfee had been chosen commandant, but there was no president, the faculty acting as a body of management of the institution, and Prof. N. T. Lupton presiding as their chairman and official head. The old buildings were burned during the war, but their place has been filled by a stately structure, including under one roof the halls for lectures and recitations, etc., and the dormitories of the students. Although the requirements for admission are very low, the students are allowed, after matriculation, to select the branches they will pursue. The institution receives \$24,000 a year from the State, and each student or cadet pays \$200 a year for tuition and board. Alabama received during the year her quota of the land-scrip granted by Congress to aid in the establishment of agri-

cultural colleges in the several States. The land, amounting to 240,000 acres, has been sold at 90 cents an acre, yielding the sum of \$216,000. It is thought that the Agricultural College will be established in connection with the university. There is an institution for the instruction of the deaf, dumb, and blind, at Talladega, in which there were 55 pupils at the date of the last report.

The industrial resources of Alabama are still but imperfectly developed. Her natural capacities for the production of wealth and the maintenance of commerce are very great, and, since the close of the war, much has been done to prepare the way for their development. With the aid of the State funds, railroads have been constructed in all directions, about two hundred miles on different lines having been completed during the past year. Among those finished since 1870 are the Alabama & Chattanooga, and the Montgomery & Eufaula, which connects the capital with the eastern districts of the State. The South and North road has been opened to Elyton, thereby connecting the mineral region with the southern ports. When the railroads now in course of construction are completed, the aggregate number of miles within the State will be nearly three thousand.

The 1,496 miles of railroad now completed, including main and side tracks, have an aggregate assessed value of \$25,943,052.59. The following are the different lines:

NAME.	Miles.	Value.
Alabama & Chattanooga.....	250	\$6,120,993 00
Memphis & Charleston.....	194	2,719,800 00
Mobile & Girard.....	84	1,076,760 00
Mobile & Ohio.....	84	1,474,553 00
Mobile & Montgomery.....	171	2,862,580 00
Montgomery & Eufaula.....	57	824,289 60
Nashville & Decatur.....	29	386,435 00
Nashville & Chattanooga.....	26	480,434 00
Savannah & Memphis.....	21	263,900 00

Savannah & Memphis.....	20	320,000
State bonds for railroad purposes:		
Alabama & Chattanooga.....		2,000,000
Montgomery & Eufaula.....		800,000
Total.....		\$15,420,000

The mineral region of Alabama, which occupies the northeastern portion of the State, is very rich, but little has been done as yet to utilize its treasures. There are three coal-fields: the Warrior, having an extent of about three thousand square miles; the Cahawba, seven hundred square miles; and the Tennessee, about three hundred square miles. The coal is mostly of a bituminous character. Near the coal-fields are rich deposits of iron-ore. Several iron-works are in operation, among them the following: the Briarfield works, 50 miles north of Selma; Shelby works, near Columbiana; Salt Creek Furnace, 15 miles from Talladega; Oxford Furnace, near Oxford; Choccolocca Furnace; Rouns Valley Furnaces, 32 miles northeast of Tuscaloosa; Irondale works, on the railroad from Montgomery to Decatur, about eight miles from Elyton; and Red Mountain works, at Grace's Gap.

The manufacturing interests of the State are progressing slowly. Several cotton-factories have been built in the region just north of the cotton-growing belt, which crosses the State with an average breadth of about 75 miles, and lies to the north of the timber districts. These are said to be in a flourishing condition, and rapidly extending their capacity. Agriculture is still, however, the leading department of industry in the State. The second annual fair of the Alabama Agricultural and Mechanical Association was held at Pickett's Springs, commencing on the 31st of October. There was a very liberal premium-list, and the display of the productions of the farm and workshop was very promising for the future welfare of the State.

There was no general election in the State in 1871. The election for county and local officers occurred in November, and indicated a very nearly equal division between the two parties. The county of Mobile, the most populous, chose the Democratic candidates by over 2,600 majority; while that of Montgomery, the next in importance, was carried by the Republicans, almost without opposition.

The Republican State Committee held a meeting at Montgomery, on the 26th of November, for the purpose of uniting the party on a common platform, and securing harmony in its ranks, in order that its influence might be unimpaired in the campaign of 1872. The meeting was attended by many leading Republicans, besides the members of the committee, and the following resolutions were adopted as a basis of action for the party:

Resolved, That the administration of President Grant meets with our hearty approval, and we point with just pride to its grand results in the faithful collection and disbursement of the public revenue, the immense reduction of the public debt, the wise and humane settlement of our differences with Great Britain, and the vigorous and successful enforcement of the Ku-klux act of Congress.

Resolved, That we rejoice in the glorious and overwhelming triumph of Republican principles, as shown in the recent elections, which we recognize as clearly indicating the fixed determination of the American

people that the recent amendments to the Constitution of the United States, guaranteeing equal rights to all men, shall be neither repealed nor nullified, and that the whole power of the General Government shall be used, if necessary, to prevent and punish all unlawful proscription and persecution of citizens, whether by individuals, or organizations, for the sake of political opinion or action.

Resolved, That unless this wicked and cruel persecution, still persisted in in some portions of this State on account of political opinion, shall immediately cease, we shall unhesitatingly ask of the President of the United States that he shall promptly exercise the whole power given him by the Constitution and laws for its suppression, and for the swift punishment of the criminals.

Resolved, That the Republican party is the party of equal rights, of obedience to the Constitution and to law, of peace and good-will to all men, and finds its truest platform in the words of the Master—"Do unto others as ye would that others should do unto you."

Resolved, That we pledge ourselves anew to the success of our great principles, and to the work of educating, at the public expense, all classes of the children of our State; of restoring fraternal feeling among all the citizens of our great country.

Resolved, That, condemning the violent and intolerant tone of the regular Democratic party of the South, and its useless and mischievous warfare against fixed facts, and seeking as we do the ends of justice, peace, education, and prosperity for all, we cordially invite the cooperation of all good men seeking the general welfare.

Resolved, That the people have the right to demand from their chosen officers good and honest government, and that we sternly rebuke and denounce all corruption and unfaithfulness in public officers, and pledge our best efforts to secure the selection for all offices of men whose well-known character shall afford safe guarantees for honesty and competency.

Resolved, That the late elections in this State, in the evidence of Republican unity and growth where the voters were free to act independently, and of general Democratic discord and disintegration, give us the sure promise of complete triumph in the State next year, and enable us to give to our friends throughout the country the assurance that the electoral vote of Alabama, though not needed, may be relied upon for the nominees of the Republican party for President and Vice-President in 1872.

Resolved, That a copy of these resolutions be forwarded by the chairman to the President of the United States, and to the Republican papers in this and other States.

The Legislature of 1871-'72 met at the capital on the 20th of November, and remained in session until the 19th of December, when it adjourned to the 10th of January, a resolution having been previously adopted, extending the session beyond the period of thirty days, to which it is regularly limited. Several measures were set on foot to secure an amendment of the Constitution, but none of these were carried through before the recess. One resolution proposed seven amendments to be submitted to a vote of the people. The most important of these affected the right of suffrage, and the maintenance of a system of public education. The former consisted of the following to take the place of sections 3 and 4 of article 7 in the present instrument:

The following persons shall not be entitled to vote, nor to hold office in this State:

1. Those who, during the late war between the States, inflicted, or caused to be inflicted, any cruel

or unusual punishment not justifiable under the laws of civilized warfare, upon any soldier, sailor, or citizen.

2. Those who have been convicted of treason, embezzlement of public funds, malfeasance in office, or felonies.

3. Those who are idiots, or insane. And no person shall be eligible to any office in the State, who is disqualified under the fourteenth amendment of the Federal Constitution, until said disabilities are removed.

On the subject of education, a substitute for article 11 was proposed. This places the control of the schools in the hands of a Superintendent of Public Instruction, district superintendents, and township trustees, all to be elected by the people. It proposes to take the school legislation away from the Board of Education, and intrust it to the Legislature, which "shall designate, in advance, such days as they may deem best (during the session of the General Assembly) for the consideration of measures relating to the educational interests of the State; on which days the State Superintendent shall be entitled to a seat in the House, then considering educational measures, and shall have and may exercise all of the rights and privileges of a member of such House, but shall have no vote. The Senate and House of Representatives shall not, upon the same day, consider matters connected with the educational interests of the State."

Funds for education are to be raised in accordance with the following sections:

SECTION 6. The proceeds of all lands that have been or may be granted by the United States to the State for educational purposes; of the swamp-lands; and of all lands, or other property given by individuals, or appropriated by the State for like purposes; and of all estates of deceased persons who have died without leaving a will or heir; and all moneys which may be paid as an equivalent for exemption from military duty, shall be and remain a perpetual fund, which may be increased, but not diminished, and the interest and income of which, together with the rents of all such lands as may remain unsold, and such other means as the General Assembly may provide, shall be inviolably appropriated to educational purposes, and to no other purpose whatever.

SEC. 7. In addition to the amount accruing from the above sources, there shall be collected, for educational purposes alone, from every male inhabitant of the State, between the ages of twenty-one and sixty years, a poll-tax of one dollar and fifty cents: *Provided*, That the poll-taxes, collected within a township, shall be appropriated exclusively to the support of the public schools within the township paying the same.

SEC. 8. The General Assembly shall have power, when deemed best for the interests of the State, to levy a special tax upon the people of the State, to be devoted exclusively to the support of the public schools: *Provided*, That authority may be conferred by law upon a county to levy and collect a special tax, for educational purposes, within its limits.

SEC. 9. The General Assembly shall levy a specific annual tax upon all railroads, navigation, banking and insurance corporations, and upon all insurance, and foreign bank, and exchange agencies, and upon the profits of foreign bank bills issued in this State by any corporation, partnership or persons, which shall be exclusively devoted to the maintenance of the common schools.

No final vote was taken on these proposi-

tions before the adjournment, and the same was the case with a set of resolutions proposing to call a convention to revise and amend the constitution of the State.

A bill to prevent illegal voting, which provides for the trial and punishment of all persons voting more than once at the same election, or perpetrating any other fraud on the ballot-box, was referred to a special joint committee of the two Houses, and had not been reported on at the time of adjournment. A bill to secure the free exercise of the elective franchise by all qualified voters in the State, providing that "it shall be unlawful to become a member of any secret organization, having for its object the undue influencing of any election held under the laws of this State, and that any person having membership with or participation in the unlawful designs of such secret organization shall be deemed guilty of a misdemeanor, and, if convicted thereof, shall be fined not less than \$100 nor more than \$1,000," was indefinitely postponed in the House, by a vote of 42 to 40.

The subject of the Alabama & Chattanooga Railroad was taken up, and measures were pending over the recess looking to a complete investigation of the affairs of the road and the interests of the State therein. Meantime an act was passed, empowering the Governor "to provide for the future payment of the interest due on the bonds" indorsed or issued by the State for the benefit of the road under the conditions mentioned in the act of March 8th, "whenever the same may become due, and a claim upon the State, by reason of the failure of the Alabama & Chattanooga Railroad Company to meet the same, or until otherwise provided for by law."

An act was passed to "relieve and regulate the finances of the State." This authorizes the issue of bonds for one million dollars, "or such amount thereof as may be necessary to meet any deficiency in the Treasury," the interest not to exceed eight per cent., payable semi-annually, and the bonds to be payable in twenty years, and renewable at the pleasure of the State. The Governor may place these bonds in the market from time to time, and sell such "an amount thereof as shall be required to meet outstanding warrants on the Treasury—such appropriations as may be made by the General Assembly; the interest on our foreign bonded debt, not incurred on account of any railroad company, and the temporary loan (one due on December 1, 1871, and the other falling due February 1, 1872), heretofore negotiated by the Governor for the purpose of paying interest on bonds of the Alabama & Chattanooga Railroad Company, and bonds loaned by the State to said company. Such bonds to be sold through the fiscal agents of the State." The same act authorizes the issue of the "remaining certificates or receipts by the State" authorized by a law of 1867, the whole amount, however, not to exceed \$400,000. The

fiscal agents are required to give bonds "for the faithful performance of their duties, and to account for all moneys and securities of the State which may come into their possession or control."

An act was also passed, providing for the establishment of a normal school for the education of white female teachers, to be located by commissioners named in the act; and another, providing for normal schools for the education of colored male and female teachers at Montgomery, Huntsville, Marion, and Sparta.

Other important measures awaited the re-assembling of the Legislature in January, 1872.

According to official authority, there are 4,982,340 acres of improved land in the State, 8,034,700 of woodland, and 1,456,570 of other unimproved land. The cash value of farms is \$67,502,433; of farming implements and machinery, \$3,256,101; of all live-stock, \$26,077,267; of home manufactures, \$1,083,720; of slaughtered animals, \$4,556,467; estimated value of all farm products, including betterments and additions to stock, \$66,532,810; true valuation of real and personal estate, \$201,855,841. The total amount of wages paid to agricultural laborers, during the year, including value of board, was \$11,791,191. The number of horses is 78,962; of mules and asses, 75,644; of milch-cows, 165,663; of working-oxen, 57,237; of other cattle, 248,943; of sheep, 234,607; of swine, 701,346. The productions for the year were 1,049,960 bushels of wheat, 18,594 of rye, 16,660,488 of corn, 767,732 of oats, 152,456 of peas and beans, 157,446 of Irish, and 1,806,264 of sweet potatoes; 222,943 pounds of rice, 151,557 of tobacco, 370,773 of wool, 3,178,638 of butter, 21,068 of wax, 307,706 of honey; 10,553 tons of hay, 166,009 gallons of cane and 261,986 of sorghum molasses; and 423,312 bales of cotton.

The number of manufacturing establishments in the State is 2,231; capital, \$5,713,607; steam-engines, 291, with 7,640 horse-power; water-wheels, 736, with 11,098 horse-power; employing 7,294 males above 16 years, 665 females above 16, and 390 youth; wages paid during the year, \$2,211,638; value of materials used, \$7,643,784; of products, \$13,220,655. Of the manufactories, the most important are, 613 flour and meal mills, with a capital of \$1,191,856; 33 establishments for ginning cotton, capital \$14,575; 10 for the manufacture of cotton goods, capital \$900,000; 3 of cotton thread and yarn, capital \$31,000; 20 for the manufacture and working of iron in various forms, capital \$555,100; 143 for the manufacture of leather, capital \$207,769; 13 of machinery, capital \$393,870; 284 saw-mills, capital \$744,005.

The deaths during the year were 10,771, of which 3,373 were from general diseases; 1,180 from affections of the nervous, 2,085 of the respiratory, and 1,399 of the digestive system.

The whole number of children attending

school during the same period was 77,139, of whom 31,098 were white males, 30,226 white females, 7,502 colored males, and 8,313 colored females.

The number of persons, 10 years old and upward, who cannot read, is 349,771; who cannot write, 383,012, of whom 870 are foreign. Of

those who cannot write, 7,429 are white males, 31,001 white females, 91,017 colored males, and 98,344 colored females, above the age of 21.

The following table gives the population of the State for the year 1870, together with the assessed value of all property, State taxation and debt:

COUNTIES.	POPULATION.					Total assessed value of all Property.	Taxation not National.	Public Debt, c'ty, town, city, etc.

ALFORD, Very Rev. HENRY, D. D., Dean of Canterbury, an English clergyman, poet, biblical critic and philologist, born in London in 1810; died at the deanery, Canterbury, January 12, 1871. He was educated at Ilminster Grammar-School, Somerset, and Trinity College, Cambridge, where he took the usual degrees.

In 1834 he became Fellow of Trinity College. He had published in 1831 a volume of "Poems and Poetical Fragments," which was followed in 1835 by "The School of the Heart and Other Poems," of which repeated editions have been called for. From 1835 to 1853 Mr. Alford was Vicar of Wymeswold, in Leicestershire. In

1841 he published a critical work, "Chapters on the Poets of Greece," and the same year was Hulsean Lecturer to the University of Cambridge, his subject being "The Divine Revelation of Redemption." He was appointed Examiner in Logic and Moral Philosophy to the University of London in 1841, and held the office till 1857. From 1853 to 1857 he resided in London, and was officiating minister at the Quebec-Street Chapel, where he enjoyed a high reputation for eloquence. On the death of Dean Lyall, in 1857, Lord Palmerston appointed him Dean of Canterbury, and in that office he remained till his death. For at least ten years before becoming Dean of Canterbury, Mr. (now Dr.) Alford had been turning his attention in the direction of philology and biblical criticism. His researches on the improvement and correction of the Greek text of the New Testament were very thorough and deliberate. In 1849 he published the first volume of his commentary on the Greek Testament, and the fourth and last in 1861. It has gone through several improved editions, embodying the latest discoveries of Tischendorf, Tregelles, and others. The sixth edition of the first volume had been published before his death. Besides the edition with the Greek text, he published the Commentary for English readers, substituting a revision of the authorized version for the original, both in the text and the comments. He also issued a Greek Testament, in one volume, with very brief notes for schools, and a separate edition of his English New Testament (1869). He had made arrangements for a similar Commentary on the Old Testament, with the aid of other scholars; but this will probably be relinquished. The Commentary, or, as it is generally called, "Alford's Greek Testament," contains a corrected Greek text, with a pretty full critical apparatus on the principles of modern criticism since Lachmann. The explanatory notes are brief, condensed, judicious, critical, and pervaded by a Christian and devout spirit. He has mastered and digested the immense material and brought it within reasonable limits and into readable shape for the theological student. He has made free and judicious use of the best German critics and commentators, especially De Wette, Meyer, Lücke, Tholuck, Olshausen, and Stier. Of Dr. Alford's other literary labors we may speak more briefly. He had published two or three volumes of sermons; a fourth edition of his complete poetical works (in 1863); a hymn-book entitled "The Year of Praise" (1867); a Prayer-book entitled "The Year of Prayer" (1868); and a little book thrown off in a hurry, and not quite so carefully written as it should have been, called "The Queen's English." This was sharply reviewed by Mr. Moon, in "The Dean's English," and the dean retorted in "Mr. Moon's English." He was also the founder and for some years editor of *The Contemporary Review*.

ALSACE AND LORRAINE. As was ex-

pected at the end of 1870,* one of the principal conditions on which the Government of Germany insisted in concluding peace with France was the cession of Alsace and the German-speaking portion of Lorraine. In Article I. of the preliminary peace concluded at Versailles on February 26, 1871, the new demarcation-line was determined upon as follows:

France relinquishes all its rights and claims, in favor of the German Empire, on that territory which lies east of the following boundary: The line of demarcation commences on the northwestern boundary of the canton Cattenom toward the grand-duchy of Luxemburg; follows in a southern direction the western boundaries of the cantons Cattenom and Thionville; intersects the canton Briey in running along the western boundaries of the communes Montois-la-Montagne and Roncourt, as well as the eastern boundaries of the communes Marie-aux-Chênes, Saint-Ail, and Habonville; touches the frontier of the canton Gorze, which it intersects on the boundaries of the communes Vionville, Bounières, and Onville; follows the southern boundary of the arrondissement Metz, the western boundary of the arrondissement Château Salins, to the commune Pettoncourt, whose western and southern boundary it encloses; and then follows the crest of the mountains lying between the Seille and Moncel to the boundary of the arrondissement Saarburg south of Garde. Then the line of demarcation coincides with the boundary of this arrondissement up to the commune Tauconville, whose northern boundary it touches. Thence it follows the crest of the mountains between the sources of the Sarre Blanche and of the Vezouze to the boundary of the canton Shirmeck; passes along the western boundary of this canton, encloses the communes Saales, Bourg-Bruche, Calroy-la-Roche, Plaine, Rancrupt, Saulxures and St.-Blaise-la-Roche in the canton Saales; and then coincides with the western boundary of the departments Haut-Rhin and Bas-Rhin up to the canton Belfort. It leaves the southern boundary of this canton near Vouvenans, intersects the canton Delle at the southern boundary of the communes Bourgnone and Froide-Fontaine, and reaches the Swiss frontier, in passing along the eastern boundary of the communes Jonchery and Delle. The boundary-line as designated has, however, been changed as follows, with consent of the contracting powers: In the former department of the Moselle the villages Marie-aux-Chênes, near St.-Privat-la-Montagne, and Vionville, to the west of Rezonville, are ceded to Germany. On the other hand, the city and fortress of Belfort, with a *rayon* to be determined upon, remain with France.

Article I. of the permanent treaty of peace, signed on May 10, 1871, contains the following:

The distance from the city of Belfort to the boundary-line, as was originally proposed at the negotiation of Versailles, and is designated on the map annexed to the ratified documents of the preliminaries of the 26th of February, is regarded as decisive for the *rayon* which, according to the respective clause of the first article of the preliminaries of peace, shall remain with France, with the city and fortress of Belfort. The German Government is willing to enlarge this *rayon* in such a manner that it shall include the cantons of Belfort, Delle, and Giromagny, as well as the western part of the canton Fontaine, westward of a line from the point where the Rhine-Rhône Canal leaves the canton Delle, in the south

* See the preceding volume of the AMERICAN ANNUAL CYCLOPEDIA for statistics of the two General Governments of "Alsace and Lorraine," organized in 1870 by the German Government, as well as the population of all the towns containing upward of 5,000 inhabitants.

from Montreux Château to the northern boundary of the canton between Bourg and Félon, where this line reaches the eastern boundary of the canton Giromagny. The German Government will, however, only cede the above-mentioned territory on the condition that the French Republic on its part give its consent to a rectification of the frontiers along the western boundaries of the cantons Cattenom and Thionville, which leaves to Germany the territory on the east of a line, which, starting from the boundary of Luxembourg between Hussigny and Redingen, leaving the villages Thil and Villerupt with France and passing along between Erronville and Aumetz, between Beuvillers and Boulange, between Trieux and Lommeringen, reaches the old boundary-line between Avril and Moyeuve.

The additional Article III. to the same treaty also modifies the boundary in the south of Belfort. It reads as follows:

The cession of territory near Belfort, which the German Government, in Article I. of the present treaty, offers in exchange for the rectification of the frontier west of Thionville, is enlarged by the territory of the following villages: Rougemont, Leval, Petite-Fontaine, Romagny, Félon, La Chapelle-sous-Rougemont, Augeot, Vauthiermont, La Rivière, La Grange, Keppe, Fontaine, Frais, Foussmagne, Cunelières, Montreux-Château, Bretagne, Chavannes-les-Grands, Chavanatte, and Surauc. The road from Giromagny to Remiremont which leads over the *Ballon d'Alsace* will remain with France in its whole extent, and, as far as it lies outside of the canton Giromagny, will serve as boundary.

The five departments of Northeastern France which were affected by the cession of territory have the following number of inhabitants:

I. Department Bas-Rhin.....	588,970
II. Department Haut-Rhin.....	530,285
III. Department Vosges.....	418,998
IV. Department Meurthe.....	428,387
V. Department Moselle.....	452,157

The territory of the new German province of Alsace and Lorraine is composed of the following five parts:

I. The entire department Bas-Rhin.	
II. Of the department Haut-Rhin is ceded to Germany:	
1. Of the arrondissement Belfort.....	76,265
2. Of the arrondissement Colmar.....	217,693
3. Of the arrondissement Mülhausen.....	179,347

Total of the Department Haut-Rhin..... 473,305

III. Of the department Vosges is ceded to Germany:	
Of the arrondissement St. Die.....	21,637

IV. Of the department Meurthe is ceded to Germany:	
1. Of the arrondissement Saargburg.....	64,737
2. Of the arrondissement Saarburg.....	55,363

Total of the Department Meurthe..... 120,100

V. Of the department Moselle is ceded to Germany:	
1. Of the arrondissement Metz.....	160,701
2. Of the arrondissement Briey.....	10,585
3. Of the arrondissement Diedenhofen.....	90,591
4. Of the arrondissement Saargemünd.....	131,876

Total of the Department Moselle..... 393,753

In May, the Federal Council of Germany submitted to the Reichstag a bill for incorporating Alsace and Lorraine into the German Empire. They were not to be annexed to any particular German state, but to constitute a province of the empire, immediately subject to the Imperial Government and the Federal authorities. The reason for making this arrangement, which took many by surprise, was thus explained by Prince Bismarck in a speech made in the German Diet on May 25th:

It is first necessary to reconnoitre the country. What we now have to give the Alsatians is the right of German citizenship, the privilege of free intercourse in Germany in commercial and social relations. We must come to a conclusion respecting the form in which we will give them this citizenship. Thereby it can only be a question whether Alsace shall be annexed to one of the existing states of the Union, or whether it shall be a direct province of the empire, until it shall have become domesticated in the family. It has only earnestly come in question whether Alsace shall be given to Prussia, or whether it shall be an imperial province. I have expressed myself unconditionally for the latter alternative, as I regard it as more easy for the Alsatians to become friendly to the name of "German" than to that of "Prussian." It is our task to strengthen particularly in Alsace. The more they regard themselves as Alsatians, the more they will be inclined to give up the French. I feel the necessity of ascertaining the disposition of the Alsatians when this act goes into operation; and, as far as I feel myself called upon to advise his Majesty the Emperor, the first decree will be to carry out the municipal elections, and the second to elect General Councils. Thus we would have Assemblies which would give us more information respecting the necessities of the situation than our officials could. I have not the least hesitation about submitting to election the choice of municipal authorities. It is not to be avoided that an official who comes a stranger to the country occasions dissatis-

faction, which is by no means consistent with the intentions of the Government. There would be mutual denunciations and suspicions. I much less fear the municipal authorities, when elected by the parishes, than our own officials. If I should be deceived in this hope, it is an advantage of an energetic Government that it can promptly repair trifling errors. How far we are able to go in leaving the country to govern itself, I will not here decide. Under every circumstance we will go as far as is consistent with the security of the country. This is a task which is new to my previous sphere of action; and it is so difficult that I do not approach it without hesitation. The task that I created for myself on assuming charge of the Prussian ministry, to restore the German Empire in some form, has been accomplished, and I regard my political obligations to my Fatherland in a certain degree as finished; and if I, at my age, am not terrified at the task, it is because of my interest in the welfare of the inhabitants of Alsace. I regard myself as their advocate

Prince Bismarck declared himself opposed to the two provisions which the committee of the Diet had added to the bill, as proposed by the Federal Council, especially the one shortening the dictatorial power of the Imperial Government. The vote was taken on June 3d. Clause 1, which incorporates Alsace and Lorraine with Germany as a direct province of the empire, was agreed to with only two dissenting voices. On clause 2, which provides that the dictatorial power shall continue until the 1st of January, 1873, Prince Bismarck stated that the difference between his views and those of the Parliament consisted in his considering that the wishes and requirements of the country were not sufficiently taken into account in the decisions arrived at by the Parliament. It was possible, perhaps, that even before 1873 he might be in a position to propose that the Alsatians should take part in parliamentary legislation; he might also admit them before that date to the Federal Council. He persisted in the wish for a longer term of dictatorial power, because he believed that the Government would, for a time, treat Alsace in a more generous manner than Parliament. He pointed out the peculiarities of the country, which it would be necessary to handle with care, mentioning as instances the positions of lawyers and bailiffs, whose offices had hitherto been acquired by purchase, and who would therefore have to be indemnified, if the present arrangements were modified. Such labors as these modifications would render necessary were not suitable for the action of Parliament; otherwise, the duration of a session would be illimitable. At a later stage of the discussion, Prince Bismarck stated, in order to avoid any misunderstanding, that the participation of Alsace in the deliberations of the Parliament would not be identical with the introduction of the imperial constitution in Alsace, but would rather be a sort of preparatory course. In the bill it was provided that some portions of the constitution might be put in force before the validity of the bill ceased, and this might be done with regard to electoral rights without thereby restricting legislation for Alsace

to a parliamentary form. Clause 2 was then adopted, as proposed by the committee. After a short debate, the remaining paragraphs, and subsequently the whole bill, were adopted.

In October, a treaty was concluded between France and Germany, by which the Government of France granted for the articles of export from Alsace-Lorraine, into France, exemptions from or reductions of duty to the end of the year 1872. In return, similar favors were granted by Germany to a few articles of export from France into Alsace-Lorraine to the same date. One article of the treaty provides for the restoration of three villages to France.

Municipal elections were held in Alsace and Lorraine at the close of July. In a few places they were declared void, in consequence of the small vote. The German Government brought no pressure to bear upon the electors, the immense majority of whom were unquestionably sympathizing with France. Many of the inhabitants emigrated to France, Switzerland, or the United States of America. Many others, availing themselves of that clause of the constitution which leaves to the people of the annexed provinces the choice of adopting the French or the German nationality, preferred to remain in Alsace as Frenchmen. As they openly betrayed their entire sympathy with the "Ligue Alsacienne et Lorraine de la Délivrance," which had been organized in Paris, to prepare the way for the recovery of the two lost provinces, the German Government warned this class of Alsatians that as foreigners they were only tolerated, and that, in case of emergency, the German Government must reserve to itself full liberty of action with regard to them. The French Government yielded, however, to the remonstrances of Germany, and dissolved the "Ligue Alsacienne" as being incompatible with the principles of international law. The society accordingly changed its name into "Société Alsace-France-Lorraine," and, dropping all political paragraphs of their statutes, assumed the character merely of a philanthropic society.

The administration of the new German province will be gradually assimilated to that of the remainder of Germany. The University of Strasbourg will be reorganized, and the Government intends to make it one of the prominent universities of the German Empire, hoping that a German university will exercise a great influence in favor of a revival of German sentiments among the mass of the people. The gymnasias, normal and primary schools, will soon be reconstructed under the German system. Compulsory education has already been introduced. As regards the two languages of the new province, the *Strassburger Zeitung*, of August 27th, contains the following official communication: "It is, of course, understood that instruction in the German language will at once be obligatory in all the schools, and that, in every class, at least six

hours a week will be devoted to it, so as to enable the pupils to pass the examinations. The lowest class of every institution must conduct the entire instruction, with the exception of the French, to which six hours will be given, in the German language. For the following years it is intended to divide, in the higher classes of the learned institutions, the several branches among the two languages, using the German language for the instruction in Latin, Greek, history, and geography."

AMERICA. The year 1871 has been eventful in history, in witnessing the settlement, by peaceful arbitration, of the long-standing disputes between the United States and England. The most important of these disputes is to be adjusted by a tribunal at Geneva, for which each of the contracting parties, as well as the King of Italy, the President of the Swiss Confederation, and the Emperor of Brazil, appointed one member. The Emperor of Germany, in compliance with the joint wish of the two Governments, consented to act as the arbitrator of the disputed water-boundary between the United States and Great Britain. The outrages committed in Corea against an American surveying-party led to an armed expedition against that country, in which several forts were destroyed, after which the expedition returned, as it was found impracticable to obtain any further result. The most important events in the internal history of the United States were the organization of a Territorial Government for the District of Columbia, and the adoption of stringent measures for the suppression of polygamy among the Mormons. In October, the President, in pursuance of an act of Congress, commonly known as the Ku-klux law, issued a proclamation suspending the privilege of the writ of *habeas corpus* in nine counties of South Carolina, on the ground that unlawful combinations of men endeavored to deprive the emancipated class of the substantial benefit of freedom, and to prevent the free political action of those citizens who did not sympathize with themselves. The national debt of the United States was during the year reduced to the extent of \$86,057,126; but the prosperity of the country, on the other hand, greatly suffered by terrible fires, especially in the city of Chicago, and in the woods of Wisconsin, Michigan, and Minnesota.

Under the presidency of a commissioner of the United States, a conference was held at Washington between the plenipotentiaries of Spain and the allied South American republics, which resulted in an armistice, with a reasonable assurance of a permanent peace.

The Empire of Brazil has taken the initiatory steps toward the abolition of slavery; but in the West India colonies of Spain the reforms in this direction which were promised by the Spanish Government have not been carried out, the laws and regulations for the apparent abolition of slavery in Cuba and Porto Rico retaining most of the laborers in life-long bond-

age. In Brazil another important reform has been inaugurated by the introduction of compulsory education.

The republics of Spanish America have been in a more disturbed condition than usual. Almost every one, with the exception of Chili, has been a prey to civil war, and in several the disturbances continued during the greater part of the year. In Ecuador, Bolivia, Guatemala, and Salvador, the regular government was overthrown by a successful revolution. Venezuela and Colombia appear to be bankrupt, as they are unable to meet the financial responsibilities which they incurred by formal treaties. Real progress is made in Chili and in the Argentine Republic, where the cause of education is advancing.

The struggle of the Cubans for their independence continued throughout the year, though there appears to be no hope for their immediate success. Unheard-of atrocities were committed by the Spaniards in their attempts to suppress the insurrectionary movements, and all demonstrations in their favor. The Government of the United States found it necessary to instruct the naval commanders in Cuban waters to spare no effort in case it should become necessary to protect the lives and property of *bona-fide* American citizens, and to maintain the dignity of the flag.

In accordance with a resolution passed by Congress, President Grant, in January, appointed three commissioners to visit San Domingo and report upon the condition of affairs on the island. In April the President sent to Congress the report of the commissioners, which is highly favorable to the annexation of the republic to the United States. While the ruling party in San Domingo continued to show a great anxiety for having the annexation scheme carried out, public opinion in Hayti strongly declared itself against the measure. (See PUBLIC DOCUMENTS.)

ANDERSON, ROBERT, Brigadier and Brevet Major-General, U. S. A., born at "Soldiers' Retreat," near Louisville, Ky., June 14, 1805; died at Nice, France, October 26, 1871. His father was a colonel in the Revolutionary army, and his mother a cousin of Chief-Justice Marshall. He graduated from the Military Academy at West Point as brevet second-lieutenant of First Artillery, but was transferred to the Second Artillery as full second-lieutenant the same year. After spending a few months at Santa Fé de Bogota as private secretary of the United States minister there, he returned, and was ordered to the artillery-school for practice at Fortress Monroe, Va., where he remained until 1828, being then placed on ordnance duty, upon which he continued until 1832. Though only a second-lieutenant in the regular army, he received, May 9, 1832, the honorary appointment of assistant inspector-general with the rank of colonel of Illinois Volunteers, in the "Black Hawk War," and as such was engaged in the battle of "Bad Axe" under Gen-

eral Atkinson. The war against the Sac Indians having terminated, he passed the following three years in the performance of garrison and ordnance duties, and the succeeding two at the Military Academy in giving instructions in the department of artillery. In 1837-'38 he served in the Florida War, was engaged in several sharp actions with the Seminoles, and for his gallantry and successful conduct during these hostilities was brevetted captain April 2, 1838, the date of his capture of forty-five Indians near Fort Lauderdale. From May 9 to July 7, 1838, he was aide-de-camp to Major-General Scott during the emigration of the Cherokees to the west of the Mississippi, and at the latter date, on the reorganization of the staff of the army, was made assistant adjutant-general, continuing on duty with General Scott at New York, the headquarters of the Eastern Department, until July, 1841, when he became a member of a board of officers to examine his own translation from the French of "Instruction for Field Artillery—Horse and Foot," which he had prepared for the service of the United States and published in 1840. This work he supplemented in 1860, with a translation of "Evolution of Field-Batteries." He was promoted October 23, 1841, to a captaincy of artillery, preferring which he accepted his line and relinquished his staff appointment. Until 1847 he was engaged on board and garrison duties, and then joined his old commander in his great campaign in Mexico, continuing with him from the siege of Vera Cruz until disabled by a severe wound received September 8, 1847, in assaulting the enemy's works at Molino del Rey, where, for his bravery, he was brevetted a major. After recovering from his wound he was placed on garrison and artillery board duty until July 11, 1853, when he became governor of the branch military asylum at Harrodsburg, in his native State, an institution of which he was the founder. After holding this appointment until November 1, 1854, he was put on various board and inspection duties until the autumn of 1860, in the mean time, October 5, 1857, being promoted major of the First Artillery. Holding this rank, he was selected by General Scott, with whom he had always been a favorite, to command the United States troops in Charleston harbor, where there was already a speck of war appearing above the horizon. General Scott selected Major Anderson for this position, from his full confidence in his integrity, though knowing him to be extensively connected with the South both by birth and marriage. Owing to the directions of John B. Floyd, Buchanan's Secretary of War, Anderson was not allowed a battalion, but only two skeleton companies (80 officers and men in all), and November 20, 1860, made his headquarters at Fort Moultrie, appealing constantly, but in vain, to the Government for reinforcements and supplies. Deeming Fort Moultrie untenable, under the threatened assault of the secessionists, he

transferred his entire command to Fort Sumter, during the night of December 26th, taking with him all the provisions, munitions, etc., that could be conveniently transported. The removal was effected by means of two schooners, which made several trips during the night, passing directly by the harbor guard-boat Nina, and affecting no concealment. The news of this movement roused the nation to the consciousness of approaching hostilities. The secessionists assailed the major as guilty of a "gross breach of faith," while in the loyal States it was hailed as an act of judicious patriotism. The firm attitude and unflinching loyalty of Anderson during the succeeding days soon brought matters to a crisis. He gave formal notice to Gov. Pickens, of South Carolina, that he was determined to replenish his nearly exhausted supply of provisions. This the secessionists were determined not to tolerate, and General Beauregard, who had telegraphed Major Anderson's decision to Montgomery, received orders thence to demand the prompt surrender of the fort, and, in case of refusal, to reduce it. The demand was accordingly made at 2 p. m. on April 11th, and courteously declined. General Beauregard at 11 p. m. again addressed Major Anderson, asking him to state at what time he would evacuate Fort Sumter, if unmolested, and was answered that he would do so at noon on the fifteenth, should he not have received "controlling instructions" from the national Government, or additional supplies. This answer was deemed unsatisfactory, and, at 3.20 a. m. of the 12th, Major Anderson was duly informed that fire would be opened on Fort Sumter in one hour. What followed is best told in the brief report which Major Anderson sent to the Government:

STEAMSHIP BALTIMORE, OFF SANDY HOOK, }
April 18, 1861. }

The Hon. S. Cameron, Secretary of War:

SIR: Having defended Fort Sumter for thirty-four hours, until the quarters were entirely burned, the main gates destroyed, the gorge-wall seriously injured, the magazine surrounded by flames, and its door closed from the effects of the heat, four barrels and three cartridges of powder only being available, and no provisions but pork remaining, I accepted terms of evacuation offered by General Beauregard (being the same offered by him on the 11th instant, prior to the commencement of hostilities), and marched out of the fort on Sunday afternoon, the 14th instant, with colors flying and drums beating, bringing away company and private property, and saluting my flag with fifty guns.

ROBERT ANDERSON, Major First Artillery.

The day after leaving Fort Sumter, Anderson, with his little tried band of seventy men, sailed for New York, where he was most enthusiastically received, the city authorities marking their approbation of his services by conferring upon him the freedom of the city. In 1865 he was permitted to hoist the Union flag again over the ruins of Fort Sumter.

President Lincoln, in recognition of Anderson's services, appointed him, May 15, 1861, a brigadier-general in the Regular Army, and

placed him in command of the Department of Kentucky, and subsequently of that of the Cumberland, which his shattered health compelled him to relinquish in the following October. From this time till his retirement from active service, October 27, 1863, he performed no duty except for a short period in command of Fort Adams, Newport harbor, Rhode Island. However, to entitle him to full pay, the Government generously gave him a nominal position on the staff of the general commanding the Eastern Department, which continued until terminated by army regulations and law. On February 3, 1865, he was brevetted a major-general, "for gallant and meritorious service in the harbor of Charleston, S. C., in the defence of Fort Sumter."

In 1870 he went abroad, first to Dresden, then to Tours, and finally to Nice, hoping for relief in the mild, congenial climate of Southern France; but his health was so broken by his long service and severe wound in the army, and his constitution so shattered by the hardships and anxiety he had endured at Fort Sumter, that death in his sixty-seventh year at last came to end his sufferings.

ANDREW, Right Rev. JAMES OSGOOD, D. D., the senior bishop of the Methodist Episcopal Church South, born in Georgia in 1794; died in Mobile, Ala., March 2, 1871. He joined the South Carolina Conference in 1812 or 1813, received deacon's orders in 1814, and full ordination in 1816. After passing through the usual course of promotion in the Methodist Church, being for several years a presiding elder, etc., he was ordained bishop by the General Conference which met in Philadelphia in 1832. He had, meantime, married a lady who owned slaves; but, though this fact was known at the time of his ordination as bishop, and the declarations of Wesley on the subject were very explicit, yet no action was taken in regard to his disqualification till the conference which met in New York in 1844. Even then the action seems not to have been formal or regular, in the nature of an impeachment, but, after a long and somewhat heated discussion, a resolution was passed requesting him to desist from exercising the functions of a bishop until he should cease to be a slaveholder. Thereupon, the representatives of thirteen Southern conferences presented a protest against the action of the General Convention, and expressed their conviction that the further exercise of jurisdiction over them by the General Convention would be prejudicial to the interests of the Church in the Southern States. This led to the complete organization, in May, 1845, of the "Methodist Episcopal Church South," of which Bishop Andrew became one of the first bishops, and over it he presided till his death. Bishop Andrew was an able preacher, a man of genial and kindly temper, not fond of strife or controversy. He has left very few published writings, principally sermons and addresses, but till the failure of his health was

a very active and devoted superintendent of the Church.

ANGLICAN CHURCHES.* According to the statements in the *Kalendar of the English Church* for 1871, the number of church-sittings in the dioceses of the Province of Canterbury is 4,442,414; aggregate of Episcopal income, £119,500; number of deaneries, 455; of benefices, 10,452; of curates, 4,927. The number of church-sittings in the dioceses of the Province of York is 1,323,016; the aggregate income, £37,700; number of deaneries, 110; of benefices, 2,385; of curates, 1,112.

The dioceses in India and the Colonies are classified geographically in the *Kalendar of the English Church*, as follows:

East Indies.—Bombay, Calcutta, Colombo, Labuan, Madras; five dioceses. Total number of clergy, 441; income of bishops, about £12,260.

West Indies.—Antigua, Barbadoes, Jamaica, Nassau; four dioceses. Number of clergy, 248; income of bishops, £8,625.

South America.—Guiana; one diocese. Number of clergy, 33; income of bishop, £2,000.

South Africa.—Cape Town, Grahamstown, St. Helena, Natal, Mauritius, Central Africa (missionary), Orange River State (missionary); seven dioceses. Number of clergy, 135; income of bishops, £5,145.

West Africa.—Sierra Leone, Niger (missionary); two dioceses. Number of clergy, 49; income of bishops, £1,282.

Australia.—Adelaide, Brisbane, Goulburn, Melbourne, Newcastle, Perth, Sydney, Tasmania; eight dioceses. Number of clergy, 362; income of bishops, £7,938.

Canada and North America.—Frederickton, Huron, Montreal, Newfoundland, Nova Scotia, Ontario, Quebec, Rupert's Land, Toronto; nine dioceses. Number of clergy, 550; income of bishops, £9,428.

British Columbia; one diocese. Number of clergy, 15; income of bishop, £620.

New Zealand.—Christ Church, Nelson, Auckland, Wellington, Whai-a-pua; five dioceses. Number of clergy, 66; income of bishops, £2,420.

Other dioceses are: *Melanesia* (Pacific Ocean); income of bishop, £500. *Honolulu* (vacant); clergy, 3; income, £500. *Victoria* (Hong-Kong); clergy, 19; income, £1,000. *Gibraltar*, clergy, 41; income, £1,100. *Jerusalem* (missionary); clergy, 15; income, £800.

The general total aggregates, 47 dioceses; 1,977 clergy; income, £53,718.

A decision involving points of doctrine was rendered by the Lord-Chancellor on the 11th of February, on appeal, in the case of the Rev. Charles Voysey, who had been condemned and sentenced to deprivation by the Chancery Court of York, for doctrines held to be erroneous, which he had set forth in a book entitled "The Sling and Stone." It was charged, un-

* For an account of the Anglican Church in the United States, see PROTESTANT EPISCOPAL CHURCH.

der several specifications, that Mr. Voysey had controverted in this book the doctrines of the Atonement of Christ, Original Sin, of Justification by Faith, of the Incarnation and Godhead of the Son, and that he had depraved the Scriptures by denying their genuineness as revelations of the knowledge of God. All the charges but the last were sustained. The Lord-Chancellor, in summing up the charges and the evidence, remarked that the Court had not been unmindful of the latitude allowed by the Articles of Religion, and tolerated in the decisions of previous ecclesiastical courts. "But," he added, "the appellant will, we think, himself feel how impossible it is that any society whatever of worshippers can be held together without some fundamental points of agreement, or can together worship a Being in whom they have no common faith." After allowing what was considered a reasonable time for Mr. Voysey to recant his heresies, the sentence of deprivation was made final.

The ritualistic controversy was carried on during the year with undiminished activity. The decision in the Mackonochie case, which is quoted in a previous volume of the *ANNUAL CYCLOPEDIA*, had the effect of widening the breach between the bulk of the High-Church party and the Ritualists. The subject of leaving the Church was broached by some. The question, to what extent the decisions of the Judicial Committee in spiritual matters should be held binding *in foro conscientia*, was freely discussed. Many of the ritualistic party have given their aid to the movement for the disestablishment of the Church. Early in the year a petition was forwarded to the Convocation of Canterbury, signed by nine hundred clergymen, begging to be protected against this decision. The excitement was greatly increased by another judgment, which was rendered by the Judicial Committee of the Privy Council, on the 23d of February, in the case of Hebbert against Purchas. This case came up on appeal from a previous decision of the dean of arches, who had pronounced the so-called Eucharistic garments lawful. The higher court decided that the clergyman must not wear a tunic, alb, or chasuble, in performing divine service; that he must not mix water with the wine for the communion, neither at the altar nor in the vestry before the time of service; that pure wheaten bread must be used, and not wafers; and that the clergyman, while standing at the communion-table, must stand at the north side, looking south, and not east. Strong efforts were made by Mr. Purchas and his friends to have this decision reconsidered or revoked. Application was made to the Queen to suspend action upon it until a rehearing could be had, and the case was brought again before the Privy Council, who decided, April 26th, that their action was final. A number of ritualistic clergyman resolved not to abide by this decision.

The Upper House of the Convocation of Can-

terbury, at their meeting in June, adopted the following declaration on the Vatican Council, and directed it to be sent to all bishops in communion with the Church of England:

That the request of the Lower House in their message to this House on the 15th of February last, with regard to the Vatican Council, be complied with, and that a declaration on that subject be put forth in the following terms:

That the Vatican Council has no just right to be termed an Œcumenical or General Council, and that none of its decrees have any claim for acceptance as canons of a General Council.

That the dogma of Papal Infallibility now set forth by the Vatican Council is contrary to Holy Scripture, and to the judgment of the ancient Church universal.

That there is one true Catholic and Apostolic Church, founded by our Lord and Saviour Jesus Christ; that of this true Catholic and Apostolic Church the Church of England and the Churches in communion with her are living members; and that the Church of England earnestly desires to maintain firmly the Catholic faith as set forth by the Œcumenical Councils of the universal Church, and to be united upon those principles of doctrine and discipline in the bonds of brotherly love with all Churches in Christendom.

That the assumption of supremacy by the Bishop of Rome in convening the late Vatican Council contravenes canons of the universal Church.

Among the scholars who were invited to assist the committee of the Convention of Canterbury in the revision of the English Bible, was Mr. Vance Smith, a Unitarian. He partook of the communion with the other members of the committee at their opening meeting. This act of participation was objected to by many of the clergy, who regarded as a scandal that a Socinian should be recognized in this manner. At the February meeting of the convocation, the following resolution was proposed by the Bishop of Winchester, and carried:

Resolved, That in the judgment of this House it is not expedient that any person who denies the Godhead of our Lord Jesus Christ should be invited to assist in a revision of the Scriptures, and further, that it is in the judgment of this House expedient that any such person now in either company should cease to act therewith.

The Lower House responded with expressions of sympathy with the regret of the Upper House that one who rejected the Nicene Creed had been admitted to the communion at Westminster Abbey, but recommended that the resolutions under which the committee were acting continue unaltered, and that the committee be not interfered with. By the determination of the committee, Mr. Vance Smith retained his position as one of their number.

The disestablishment of the Episcopal Church in Ireland took effect on January 1, 1871, when all church property became vested in commissioners, all ecclesiastical law was abolished, and the right of the bishops to sit in the House of Lords ceased.

The following is a condensed abstract of the constitution of the disestablished Irish Church, which was drawn up by the General Convention in two sessions, held at Dublin in 1870. The Convention was composed of two houses

—that of the bishops and archbishops, and that of the clerical and lay delegates. In the latter house the principle of voting by orders was allowed. The bishops, as a separate order, also had the power of voting separately when they desired it; but there was this limitation to the power of their veto—that it could not stop a measure sanctioned by majorities of both the other orders, unless seven of the episcopal bench (there are twelve bishops in all, including the two archbishops) were present and concurred in a dissentient vote.

Declaration.—The statutes drawn up by this Convention are preceded by a solemn preamble and Declaration. The Declaration runs in the name of “the archbishops and bishops of this the ancient Catholic and Apostolic Church of Ireland, together with the representatives of the clergy and laity of the same in General Convention assembled,” and is as follows:

1. “The Church of Ireland doth, as heretofore, accept and unfeignedly believe all the canonical Scriptures of the Old and New Testaments, as given by inspiration of God, and containing all things necessary for salvation; and doth continue to profess the faith of Christ as professed by the primitive Church.”

2. “The Church of Ireland will continue to minister the doctrine, and sacraments, and the discipline of Christ as the Lord hath commanded, and will maintain inviolate the three orders of bishops, priests or presbyters, and deacons in the sacred ministry.”

3. “The Church of Ireland, as a Reformed and Protestant Church, doth hereby reaffirm its constant witness against all those innovations in doctrine and worship, whereby the primitive faith hath been from time to time overlaid and defaced, and which at the Reformation this Church did disown and reject.”

4. “The Church of Ireland doth receive and approve” the Book of Common Prayer and the Thirty-nine Articles; and “will continue to use the same, subject to such alterations only as may be made therein from time to time by the lawful authority of the Church.”

5. “The Church of Ireland will maintain communion with the sister Church of England, and with all other Christian Churches agreeing in the principles of this Declaration; and will set forward, as far as in it lieth, quietness, peace, and love, among all Christian people.”

6. “The Church of Ireland, deriving its authority from Christ, who is the Head over all things to the Church, doth declare that a General Synod of the Church of Ireland, consisting of the archbishops and bishops, and of representatives of the clergy and laity, shall have chief legislative power therein, and such administrative power as may be necessary for the Church, and consistent with its episcopal constitution.”

The first statute, accordingly, relates to

The General Synod.—The General Synod consists of two Houses: the House of Bishops and the House of Representatives. The House of Representatives consists of 208 clergymen and 416 laymen, selected by the clergy and laity in the Diocesan Synods. The number of clergy sent from each diocese is in proportion to the number in the diocese. The number of laity is determined by a scheme which takes into consideration both the number of parishes and the Church population of the whole diocese. Any clergyman of the Church in priest's orders may be elected a clerical representative, whether he resides

in the diocese or not. Any layman, aged twenty-one, who is a member and communicant of the Church, and who makes a solemn declaration to that effect, is eligible as a lay representative. He need not be a subscriber to the funds of the Church. A clergyman not having a cure of souls, but being an owner of property in the diocese, may be elected as a representative of the laity therein. Both clerical and lay representatives are elected for three years.

The House of Bishops sits and deliberates along with the House of Representatives, but has the power of withdrawing for separate deliberation. The Bishops may let a measure pass without voting on it. When they do vote they vote as a separate order, and the clergy and laity have the same right which they had in the Convention, of calling for a vote by orders. Each order thus has a veto, but the veto of the Bishops is not unlimited, though the limitation is practically very slight. A measure vetoed by the bishops may be brought forward again in a year, and then, if reaffirmed by majorities of two-thirds of each of the other orders, it passes, unless two-thirds of the Bench of Bishops vote against it. *If two-thirds of the whole Bench of Bishops are present and vote against it, their veto holds good.*

The General Synod is to meet in Dublin annually. It has, as stated in the Declaration, chief legislative power in the Church, and can “alter, amend, or abrogate” any of the canons, “or make new canons.” The ordinary course of proceeding is by a first and second reading, a discussion in committee, and a third reading, and one clear day must elapse after the bill is reported before the third reading. This is the ordinary course, but there is an important exception. No modification or alteration can be made in the “Articles, doctrines, rites, rubrics, or formularies” of the Church, except after a resolution passed in full Synod, stating the nature of the proposed change. This resolution must be passed by majorities of *at least two-thirds of each order of representatives*. It must be communicated to all the Diocesan Synods at their next meetings, and no bill on the subject can be introduced into the General Synod until one year has elapsed after the communication of the resolution to the Diocesan Synods.

This extra course of procedure is not necessary in the case of such smaller changes as may have been “rendered necessary by the passing of the Irish Church Act,” as, for instance, expressions in the State Prayers that are no longer suitable. And any recommendation unanimously made by the English Ritual Commission may be adopted without the delay of a year, but must have the majorities of two-thirds in their favor.

The Representative Church Body is a smaller body than the General Synod, representing the whole Church. It is incorporated by Act of Parliament to hold property on behalf of the Church, which it administers subject to the control of the General Synod. It also acts generally as a standing committee of the General Synod. This body consists of sixty members, namely, the twelve bishops, one clergyman and two laymen elected from each diocese, and twelve other coöpted members. The latter are added in order to secure the appointment of some men whose assistance would be most valuable, but who might not be selected by any particular diocese.

The Diocese, Diocesan Synod, and Council.—There are at present twelve bishops in the Church of Ireland. Each of these, with the exception of the Bishop of Meath, presides over a union of dioceses. These unions were made by the Act of 1834, which reduced the number of bishops from twenty-two to twelve. Many of them are too large or otherwise inconvenient for episcopal superintendence and united diocesan action; and the diocese of Meath, containing two counties and part of a third, lies so inconveniently with respect to railway communication, that its Synod is held in two parts, one meeting at Navan in the county Meath, and the other at Mullin-

gar in Westmeath, and on one occasion, when it was necessary to hold one meeting for the whole diocese, it was held out of the diocese, in Dublin. The statutes of the Convention make provision for the division and rearrangement of the existing diocesan districts, and funds are already being raised for the endowment of additional bishoprics.

In each diocese there is a Diocesan Synod, in some cases for the whole union, in others for each of the component dioceses. The Synod consists of the bishop or his commissary as president, all the beneficed or licensed clergy of the diocese, and lay representatives from each parish, who may be in the proportion of two to one of the clergy, but not more. The lay representatives are chosen triennially at the Easter vestries. They must be of full age, members of the Church, and communicants, the only proof of the latter two qualifications being a solemn declaration made by the representative himself.

In the Diocesan Synod, again, as in the general synod, either order has the right of calling for a separate vote, and no measure can be passed without a clear majority of both. The Bishop has a veto, but subject to an appeal to the General Synod, if the resolution from which he dissents is reaffirmed after a year by majorities of two-thirds of both orders. He has also the power of taking "any reasonable time, not exceeding one month," to decide whether he will use his veto or not. And he may, if he wishes it, refer the matter in question at once to the General Synod for decision.

The Diocesan Synod deals with matters that concern the diocese only, and it cannot make any regulation inconsistent with any law of the whole Church, or decision of the General Synod, to which there is an appeal from its decisions. It elects a standing committee called the Diocesan Council, consisting of clergymen and laymen, with the Bishop *ex-officio* chairman, to which it can delegate any of its powers that may be necessary.

The Parish, Vestry, and Select Vestry.—At the vestry meeting all male members of the Church of full age, who have signed a solemn declaration of church-membership and have been registered as members of the vestry, are entitled to vote. It is not required that a vestryman should be a communicant, nor is it required by the statutes of the General Convention that he should be a subscriber to the Church funds, but each Diocesan Synod has the power of making this a condition in its own diocese. A member of the Church may claim to register as a vestryman in any particular parish: (1) as being resident in the parish; (2) as having attended divine service in the church for six months next preceding the time of registration; (3) as holding property in the parish. The register is amended once a year; names cannot be put on at other times; and disputes are referred to the Diocesan Council, whose decision is final.

The vestry meets ordinarily once a year, and elects: (1) lay representatives to the Diocesan Synods; (2) the people's churchwarden (the clergyman retains the right of electing minister's churchwarden, as under the old law); (3) the parochial nominators, whose part in the appointment of clergymen to cures we shall speak of presently; (4) any number of its members, not exceeding ten, to form, with the clergymen and churchwardens, the select vestry.

The select vestry has the control of all parochial charities and church funds, provides requisites for divine service, keeps the church and parish buildings in repair, and appoints and pays church and parish officers and servants. The clergyman is chairman at all meetings both of the general and select vestry, with an ordinary and casting vote. In the absence of the clergyman the chair is taken by one of the churchwardens, with a like right of voting.

The Appointment of Ministers.—In the appointment of clergy there are two interests to be served—the interest of the Church at large, and the interest of the particular cure to which the appointment is to

be made. The method of appointment adopted has been designed to secure the representation of both of these interests. The Diocesan Synod elects from itself three diocesan nominators, two clergymen, and one layman, and each parish elects three parochial nominators. The qualifications for a parochial nominator are the same as those for a lay representative to the Diocesan Synod. No clergyman holding a cure of souls, or licensed curate, is eligible. When a vacancy occurs, the diocesan nominators and the parochial nominators of the vacant parish form a board, at which the Bishop presides with an ordinary and a casting vote. This board nominates a clergyman to the vacant cure. The Bishop may afterward refuse to institute the clergyman so nominated, giving his reasons in writing; but there is an appeal against this refusal to the Court of the General Synod. The diocesan nominators are elected annually, the parochial nominators triennially, and, should the time for electing the latter come round during the vacancy of a cure, or after the clergyman has given notice of his intention to resign, the nominators who were in office at the time of the vacancy occurring, or of the notice being given, and not those newly elected to the office, are to act. And the outgoing diocesan nominators are to finish any business that may have been before them at the time of the election of their successors. Arrangements may be made with benefactors as to the patronage of benefices, but all such arrangements must receive the sanction of (1) the Bishop; (2) the Diocesan Council; (3) at least four of the Board of Nominators besides the Bishop, including two of the parochial nominators, and (4) the vestry. And no right of patronage can be acquired while the cure is vacant.

The Election of Bishops.—The Diocesan Synod of the vacant See is summoned by the Archbishop of the province or other person having the right to summon it; and if the Synod can fix on any one clergyman in priest's orders, by a clear majority of two-thirds of both orders separately, the name so selected is transmitted to the Bench of Bishops, who, if satisfied of the fitness of the person appointed, shall proceed to give effect to the nomination. If the Synod cannot fix upon one name by so decided a majority, then two or three names must be sent up to the Bishops, who select one of them. If no name be returned after three months, the appointment lapses to the Bench of Bishops. The See of Armagh presented a difficulty which the Convention took a long time to settle. The occupant of the See of Armagh has been, since the time of St. Patrick, Primate of all Ireland; therefore either Armagh must lose the right of electing its own Bishop, or else it alone must elect the Primate of all Ireland. The matter was settled for the present as follows: The Synod of Armagh is to select four of the existing Bishops, from which four the Bench of Bishops choose one to be Archbishop of Armagh and Primate. To fill the See thus left vacant, Armagh selects one Presbyter and the vacant See another, and the Bishops decide between the two. If the two Dioceses fix on the same Presbyter, and the Bishops are satisfied of his fitness, he is appointed.

Cathedrals, Deans, and Archdeacons.—All permanent arrangements with respect to cathedrals and their staffs are deferred for the present, until something more definite is known about the future financial position of the Church. The appointment of Archdeacon is to be made by the Bishop, as heretofore, but is not to be connected with any particular benefice in the diocese.

Ecclesiastical Courts.—The statutes provide for Diocesan Courts and "the Court of the General Synod." In the Diocesan Court the Bishop, assisted by his Chancellor as assessor, with one clergyman and one layman, sit as judges of questions of fact, and sentence is given by the Bishop. The clergyman and layman who sit with the Bishop are taken in rotation from lists of three, which are chosen for five

years by the clergy and synodsmen of the diocese. When the Bishop wishes to act as accuser, his Chancellor takes his place on the Bench; but in such a case, if the charge is one involving doctrine, questions of fact only are decided by the Diocesan Court, and sentence is given by the Court of the General Synod. Charges may also be preferred by the Diocesan Council or by private members of the Church who have signified in writing their submission to the General Synod of the Church. But charges involving doctrine, if not promoted by the Bishop or Diocesan Council, must be brought by four male communicants of full age, who reside in the diocese, or are personally injured or aggrieved by the act complained of. There is an appeal from the sentence of a Diocesan Court to the Court of the General Synod, which consists of one of the Archbishops, who sit in turn, one Bishop, chosen by the Archbishops, and three laymen. The laymen are taken by ballot from a list chosen by the General Synod, which list contains only the names of persons who are, or have been, Judges in some of the superior civil courts. Any charge against an archbishop or bishop comes before the Court of the General Synod, and, if it involve doctrine, must be preferred by an archbishop or bishop, or by six male communicants; and no sentence of deposition, deprivation, or removal against an archbishop or bishop can be passed without the consent of the two prelates on the Bench. The same consent is required to any sentence of deposition from the ministry.

Sustentation Fund.—*Commutation.*—The Convention and Representative Body have also passed resolutions on the subject of finance, with a view to the formation of a General Sustentation Fund for the future support of the ministry. To understand their resolutions on this subject we must recollect the position in which the Irish Church has been left by the Act of Disestablishment. The Church is completely disendowed, but the life-interests of the present clergy are preserved to them. The property of the Church is taken by the "Irish Church Temporalities Commissioners," who will pay to every clergyman during his life an annuity equal to his present income, the clergyman being bound to perform his present duty as long as his health permits. There is, moreover, a provision in the act enabling the Temporalities Commissioners, with the consent of all parties concerned, to hand over a capital sum equal to the estimated life-interest of any clergyman in his annuity to the Representative Body, who thereupon become responsible for the payment of the annuity. And when three-fourths of the clergy in any diocese "commute"—that is, accept this change of paymasters—12 per cent. will be added to the whole capital sum paid over on account of that diocese. This bonus is added to compensate the Church for the risk and expense incurred in the management of so large a sum of money. Commutation would be no direct gain to the Church, but the Representative Body see so many advantages to be indirectly derived from it that they have determined to accept it in every diocese where the three-fourths of the clergy agree to it. There are at present more clergy in the Church than will be required to do the work efficiently under the new system. Some of these will wish to "compound"—that is, to receive in hand part of the commutation capital, leaving the remainder to the Church, the clergyman being freed from the obligation to duty. Thus a clear sum will be secured at once toward the future endowment of the Church, and the clergyman will be at liberty to seek another field of labor. * * * The principal advantage expected from commutation undoubtedly is, that, by the scheme proposed by the Representative Body, a definite object is set before the members of the Church to commence subscribing at once toward its support, and not to wait until the deaths of the present clergy. * * * If all the clergy commuted, the whole commutation capital, including the twelve per cent. bonus,

would amount to about five and three-quarter millions, which, at four per cent., would yield £230,000 per annum—about half the sum required to pay the annuities of the clergy. As yet the annual subscriptions promised, and acknowledged in the published lists, amount, perhaps, to between £30,000 and £40,000. To the Guarantee Fund, for which the Representative Body asked for one million, donations to the amount of from £300,000 to £400,000 have been promised. Many donations and subscriptions, but especially small subscriptions, have also been promised to the local treasurers, which have not yet been announced to the central body.

The first meeting of the Synod of the Irish Church was held on the 13th of April. In accordance with a resolution passed to that effect, copies of the Bible and Prayer-book in Irish were placed on the table along with the English Bible and Prayer-book. Archdeacon Stopford brought up the report of the Judicature Committee, who had prepared a new set of canons, a number of which were designed for the repression of ritualistic practices.

In accordance with a compromise suggested by the Duke of Abercorn, a committee had been appointed, at the head of which was William Brooke, Q. C., Master in Chancery, "to consider whether, without making any such alterations in the Liturgy or Formularies of our Church as would involve or imply a change in her doctrines, any measures can be suggested calculated to check the introduction and spread of novel doctrines and practices opposed to the principles of our Reformed Church," who brought in a report in which were suggested changes going to the root of Sacerdotalism. It recommended that a new question and answer be added to the Catechism, declaring that in the Lord's Supper the body and blood of the Lord Jesus Christ are taken and received only after a heavenly and spiritual manner; that a declaration be added to the Communion service, that "no adoration whatever is to be done to any presence of Christ, or of Christ's flesh and blood, supposed to be in the elements after or by virtue of their consecration;" that the form of absolution be omitted in the visitation of the sick; that the words in the ordination service, "whosoever sins ye remit, they are remitted," etc., be struck out; and that the form, "Receive the Holy Ghost," etc., be changed to a prayer; and that the word *priest*, wherever it occurs in the book of common prayer, be defined as equivalent to *presbyter*. A set of canons were also submitted by the committee, condemning and prohibiting in detail each and all of the symbolic practices which the ritualists are seeking to incorporate in the services of the Church. In connection with the introduction of this report, a number of the members of the committee, constituting the minority, sent in statements of their objections to it. A motion, declaring that no revision of the Prayer-book was desirable except so far as the disestablishment act and the new situation of the Church had

made necessary, was defeated by a vote (380 to 139), which showed a large majority of the synod in favor of the revision. A similar result appeared when the vote was taken on the first proposition of the report of Master Brooke's committee—that declaring the presence of the body and blood of Christ in the Eucharistic elements to be “only after a heavenly and spiritual manner.” It was as follows: yeas, clergy, 117; laity, 271—total, 389; nays, clergy, 77; laity, 35—total, 114. The proposition, however, was not carried, for it failed to receive the concurrence of two-thirds of each order, voting by orders, as required by the constitution. A motion to repeal this “two-thirds rule” was supported by a majority of the Synod, but it failed to receive the requisite two-thirds vote of the clergy. A canon was adopted to the effect that no minister, or other person, during the time of divine service, should make the sign of the cross save where prescribed in the rubric; nor should he bow to, or do any other act of obeisance to, the Lord's Table; nor should any bell be rung during divine service. A rubric was passed prescribing the ornaments that might be worn by the minister. The subject of revision was finally postponed, and referred to the bishops, and a committee of twenty-two clergymen and eighteen laymen, representative members of the Synod, who are expected to report in 1872.

A discussion took place in the English Church, in the early part of the year, in reference to the appointment of a Bishop for Madagascar. The Society for the Propagation of the Gospel, representing the High-Church party, proposed to appoint one. The proposition was opposed by some of the bishops, and by the Church Missionary Society, on the ground that it would be a violation of the comity of missions. It is the understanding among the missionary societies that none of them shall enter upon ground which is occupied by another society. Madagascar has been Christianized mainly through the efforts of the London Missionary Society (Congregational), who have large congregations in various parts of the island, particularly at the capital, while the Anglican societies have but three missionaries on the whole island, and no missionaries or converts at the capital, where the bishop would have to reside. The Church Missionary Society threatened to withdraw its missionaries if the bishop were sent over; the movement met but little encouragement from the Government and bishops; the primate refused to sanction the appointment; finally, the person designated as bishop declined to go. The matter remains in suspense.

A new system of ecclesiastical polity has been adopted by the Australian branch of the Church of England. An assembly has been constituted, with representatives of the two orders, who may vote separately. The bishop, as an ecclesiastical governor, acts by the advice of a responsible cabinet; archdiaconal

councils and church committees act upon ordinary and financial matters. The laity are constituted the chief power in the Church; they sit as part of a board, which is “a sort of diocesan privy council;” they are consulted on appointments to cures, act as assessors on trials for ecclesiastical offences, and have a voice in the appointment of bishops.

The movement for the disestablishment of the Church of England, which has seemed to gather force among certain parties, has led to the organization of a “Church Defence Institution.” The Archbishop of Canterbury is president, and several of the bishops are among the vice-presidents. It will direct movements to influence public opinion in favor of the continuance of the establishment.

Efforts have been prosecuted during the year to bring the clergy and the laity of the respective dioceses into closer relations with each other, by means of diocesan conferences, or synods. The Bishop of Ely has been one of the foremost and most active promoters of these movements. In his address at the opening of his diocesan conference, which was held at Cambridge on the 24th of October, he said that he had first planned and worked for the association of the two orders nearly eight years ago, under the feeling that the isolation of the clergy one from another, and of all from the laity, was one of the greatest practical evils in the system of the English Church. He began by inviting the rural deans to call together the chapters of the deaneries once a year for intercourse and consultation; he then invited the archdeacons and rural deans to meet with him at the cathedral; then he proposed that lay representatives should meet with them, forming a clerical and lay conference. The Diocesan Conference, which met on the same day at Chester, discussed, among other questions, “the best means of sustaining and promoting mutual good-will among the various classes of society.” Conferences were also held in several other dioceses. A similar body, styling itself a *synod*, met at Salisbury on the 14th, 15th, and 16th of November. It discussed a large number of topics, chiefly of local interest, and effected a permanent organization, adopting a set of standing orders, or constitution. These bodies are, of course, purely voluntary, and are not capable of binding action. They are regarded with diversity of opinion, and have been subjected to severe criticism in the papers and in discussion.

The annual Church Congress differs from the Diocesan Conference in that it is general in its character—standing for the Church at large—and is open to all, whereas the representatives to the Diocesan Conference are chosen by the local assemblies. The Congress of 1871 was held at Nottingham, and was presided over by the Bishop of Lincoln. More than two thousand persons attended it. The number of papers read was very great. The discussion

took a wide range, and every variety of opinion prevailing in the Church was represented. Free discussion was the object sought. In this respect the result of the meeting was satisfactory to those who were interested in it.

ARGENTINE CONFEDERATION,* a Republic of South America. President, from 1868 to 1874, Domingo F. Sarmiento; Vice-President, Dr. A. Alsina. Aggregate area of the fourteen provinces, 603,000 square miles; population in 1869, 1,736,922. Adding to this the territory of the Gran Chaco Argentino, of Patagonia, and the Pampas Argentinas, all of which are claimed by the Argentine Confederation, the area would amount to 1,322,000 square miles; and the population, inclusive of an army of 6,220 men, to 1,833,212. Population of the capital, Buenos Ayres, 177,787, of whom 88,126 were foreigners. The governors of the fourteen provinces in 1871 were as follows:

Buenos Ayres.....	Dr. E. Castro.
Catamarca.....	F. Galindos.
Cordova.....	S. A. Alvarez.
Corrientes.....	S. Baivienne.
Entre Rios.....	E. Dupontal.
Juguy.....	P. S. Portal.
Mendoza.....	P. Gordillo.
La Rioja.....	N. Villanueva.
Salta.....	Zorrilla.
San Juan.....	N. Videla.
San Luis.....	J. R. Lucera y Sosa.
San Fe.....	Dr. S. de Triando.
Santiago del Estero.....	M. Taboada.
Tucuman.....	Dr. Frias.

The importance of foreign immigration is fully estimated, and the number of immigrants is steadily increasing. During the last twenty-two years it has been as follows: Yearly average, 1858-'62, 5,613 persons; 1863-'67, 14,000; 1868, 29,284; 1869, 37,934; 1870, 39,667.

Among the immigrants who arrived in 1870, there were 15,584 who came *via* Montevideo; 14,045 were Italians, 3,388 Spaniards, 2,395 Frenchmen, 499 Swiss, 453 Englishmen, 147 Germans, 320 of other, and 2,836 of unknown nationalities. The number of immigrants who in the course of the year 1870 landed in ports of the interior being estimated at 2,400, the aggregate of all the immigrants would amount to 41,000 persons.

The budget for 1870-1871 estimates revenues and expenditures as follows:

Regular Revenues.	Pesos fuertes.
Import duties.....	11,674,000
Export duties.....	1,618,000
Storage, postal service, stamp tax, miscellaneous.....	670,000
Interest on 17,000 shares of the Central Railroad.....	116,620
Total.....	14,078,620
Regular Expenditures.	Pesos fuertes.
Department of the Interior.....	1,404,632
Foreign Affairs.....	110,360
Finances.....	1,335,508
Public debt.....	7,325,012
Justice and Instruction.....	785,027
War and Navy.....	3,728,396
Total.....	14,486,995

* For a biography of President Sarmiento, detailed accounts of the area, of population and capital of each province, and of the army and navy, and full statistics of the agricultural colonies, see *ANNUAL CYCLOPEDIA* for 1870.

The consolidated debt, on December 31, 1868, consisted of: foreign debt, 23,916,762 pesos fuertes; consolidated national fund at 6 per cent. interest, and 1 per cent. amortization, 11,740,706; consolidated national funds at 6 per cent. interest, and 2½ per cent. amortization, 2,268,243.

On the 3d of April, 1871, the republic contracted a loan in London with Murrieta & Co., for 30,000,000 silver dollars, at 8½ per cent., which is intended for the building of railways, the construction of a port at Buenos Ayres, and for the redemption of an old loan with the Provincial Bank. On the 10th of June, 1871, Wauklyn & Co., of Buenos Ayres, offered the Federal Government a new loan, by pledging themselves to take 6,000,000 pesos fuertes of national funds at 70 per cent. Each of the fourteen provinces also has its own budget. The budget of the most important province, Buenos Ayres, amounts yearly to 2,000,000 pesos.

The imports and exports at the port of Buenos Ayres, in 1869, to and from the United States, and other countries of America and Europe, were as follows (value expressed in pesos fuertes at \$1.02):

COUNTRIES.	1869.	
	Imports.	Exports.
France.....	\$10,600,000	\$8,670,000
England.....	9,750,000	2,560,000
Belgium.....	900,000	7,650,000
Italy.....	1,870,000	1,470,000
Spain.....	1,820,000	590,000
Germany.....	1,250,000	70,000
Netherlands.....	920,000	60,000
United States.....	2,000,000	3,680,000
Brazil.....	3,330,000	250,000
Uruguay.....	1,350,000	110,000
Chili.....	730,000	230,000
Argentina.....	1,970,000
Other countries.....	820,000	920,000
Total, 1869.....	\$37,450,000	\$27,320,000
Total, 1868.....	38,640,000	25,010,000
Total, 1867.....	33,370,000	28,080,000
PRODUCTS OF EXPORTATION.	1869.	
	1868.	1869.
Hides.....	\$7,200,000	\$7,100,000
Skins, chiefly sheepskins..	2,200,000	2,300,000
Wool.....	9,200,000	9,500,000
Horse-hair.....	300,000	500,000
Tallow.....	4,300,000	6,500,000
Salt meat.....	800,000	800,000
Ostrich-feathers.....	100,000	100,000
Miscellaneous.....	1,100,000	600,000
Total.....	\$25,200,000	\$27,300,000

The exports at all the custom-houses of the republic were announced, in 1865, at 26,490,000 pesos fuertes. To the above products must also be added, cattle, horses, mules, etc. (1,400,000 pesos fuertes), and copper, silver, and gold (600,000 pesos fuertes).

The movement of shipping at the port of Buenos Ayres was, in 1869, as follows:

YEARS.	SAILING-VESELS.		LADEN.		Steamers.
	Total.	Tons.	Total.	Tons.	
Entered, 1869.	1,393	413,752	1,337	401,070	1,158
Entered, 1868.	1,196	342,016	1,193	341,280	1,083
Cleared, 1869.	1,285	410,590	970	306,325	1,158
Cleared, 1868.	1,306	349,647	916	264,123	1,083

On the 1st of July, 1871, according to the President's message, there were 531 millas of railroads (1 milla=1.85 kilometre) in operation, 244 millas in process of building, and 1,954 millas were under contract.

According to the same message there are at present 1,288 millas of telegraphs in operation, while 2,630 millas were to be laid next year.

At the beginning of the year, the rebel leader, Lopez Jordan, was at the head of an army numbering from 14,000 to 15,000 men, of all arms. General Arredonda, who had been placed in command of the national forces, had achieved a few partial successes. Lopez not only held the province of Entre Rios under his control, but was making incursions into the bordering provinces of Santa Fé and Corrientes. In April his forces were thoroughly routed by those of the national Government, and the province of Entre Rios pacified. The only province then remaining under the rule of rebel chiefs was Santiago.

In March and April, the city of Buenos Ayres and the vicinity suffered terribly from the ravages of the yellow fever. For several weeks business was entirely suspended. Of foreign nationalities, the Italian suffered the most fatally; the Germans and English were less afflicted. The Germans and the Swiss established aid societies, in order to assist their suffering countrymen. The city authorities made the most praiseworthy exertions to supply the most needy with necessaries. Only a number of native physicians cowardly fled from the city. Immediately on the outbreak of the epidemic, a committee of prominent men, representing all nationalities, was formed to assist the Government and the faithful physicians. They appointed and paid physicians to visit the poor in their houses, and directed all druggists gratuitously to supply those bearing a certificate from the committee with the needed medicine. They furnished a number of beds, paid out large amounts of money for the sick, appointed more than two thousand nurses, and established eating-houses, from which the sick and the convalescent, with their families, could receive wholesome food. At the head of the committee was Dr. José Perez, grand-master of the Argentine Freemasons; he soon fell a victim to his philanthropic zeal. The committee of immigration and the national Government immediately after the outbreak of the epidemic caused the immigrants, at public expense, to be sent to the ports of the interior, which were not infected. President Sarmiento, in his message to the Argentine Congress, remarked with regard to the epidemic: "The capital in the course of time has become more and more powerful, as is proved by the increase of its commerce; but attention has not to an equal degree been directed to those works, without which a large city cannot remain healthy and prosperous. Thus the danger came upon us

unexpectedly, and our terrible experience will lead to the most stringent measures for purifying and airing the city, and perhaps the unhealthy parts will be built anew." Among these buildings will be the new port, which it is thought can be safely and conveniently constructed, at an expense of two million pounds sterling, within six years. Official returns of the mortality caused by the epidemic up to May 11th placed the total number of victims at 13,403, a figure much under the estimate which had been made by the press and the public.

The transatlantic telegraph about the middle of the year was completed to San Luis, and the snow-cable across the Cordillera was begun. There is now telegraphic communication extending through the most remote provinces of the republic, and it was generally hoped that, by the end of the year 1871, there would be connection with Chili and the Pacific. At the same time, an overland line was about to be laid down from the river Plate to Yaguaron (Rio Grande), and, as the wires already extended southward from Rio Janeiro to Port Alegre, the republic would soon be in momentary communication with the Brazilian capital. A concession to lay a line from Rio Janeiro to Para (near the mouth of the Amazons) was granted to Mr. Lamas, of Buenos Ayres, by the Brazilian Government.

President Sarmiento, in September, vetoed a resolution of Congress, to transfer the capital of the confederation to Villa Maria. In his message to Congress, he urged that, in order to protect arms, munitions, etc., against internal enemies, it would be necessary to fortify Villa Maria. If, in such a case, the communication of Villa Maria with Rosario or Buenos Ayres should cease, the Government would be lost, as arms and munitions were not manufactured in the country, but imported from abroad. Consequently, in order to prevent this, the towns of Rosario, Cordoba, and Rio Cuarto, would also have to be fortified. To the expenses for fortifying these four places, there would, moreover, be added the expense for a number of new buildings—as a capitol for Congress, buildings for the President, the ministers, for the press of the Government, a prison, a post-office, barracks, etc. Besides, the region around Villa Maria was unwholesome. Therefore, Buenos Ayres must, for the present, be the capital. The resolution having been returned to Congress, the Senate again gave to it the two-thirds majority which is required to carry it over the President's veto; but, the House giving a tie-vote, the project has failed for the present.

The following is an extract from the report of Minister Avellaneda, showing the progress of education in the Argentine Republic:

The department of public instruction has been very busy during the past year in establishing new schools, granting subsidies, improving every branch of popular education, and losing no opportunity to enlighten and instruct all classes of the people, especially in the more remote provinces, where the lamp of learn-

ing shed but a flickering and uncertain light amid a dense fog of ignorance.

The provinces coöperate in the good work. San Juan gained the prize of \$10,000 for having one-tenth of its population attending schools, and devotes the money to the establishment of upper schools. Entre Rios spent the entire subsidy from the Federal Government in new colleges. Salta is building a splendid structure of this kind, and Tucuman has voted three times its usual sum for educational purposes. Corrientes has subscribed \$4,000 to bring out school-furniture and books from the United States. Rioja has arisen from a lethargy of generations, and everywhere the spirit of Sarmiento is calling into life schools and an incipient thirst for improvement.

The number of children attending school in the republic is, according to the census, 89,500, but, according to the returns of the various schools, 77,000 children will be much nearer the truth. Hence the minister calculates that at present 350,000 children do not attend school. He adds that two-thirds of the 40,000 immigrants arriving cannot read.

The statistical returns of education in the various provinces are:

Buenos Ayres city.....	15,781	Tucuman.....	2,900
Buenos Ayres camp.....	13,656	Mendoza.....	2,833
San Juan.....	6,873	Catamarca.....	2,500
Corrientes.....	5,720	Salta.....	2,475
Cordoba.....	5,261	Rioja.....	2,239
Santa Fé.....	5,000	Jujuy.....	2,000
Santiago del Estero.....	4,601	San Luis.....	1,784
Entre Rios.....	3,691		
Total.....			77,213

This number includes 1,884 youths in the 14 national colleges, being an increase of more than 80 per cent. on the returns for last year. In 1867 Rioja was destitute of schools, while at present it has, besides a high-school with 217 students, over 2,000 children in course of instruction.

The Government attaches great importance to normal schools for the training of teachers. The first will shortly be opened in Parana, under the direction of Mrs. George Stearns, from the United States, with a salary of \$2,400, and a female teacher at \$1,000 per annum. The new national college at Corrientes, under Dr. Fitzsimmons, has already 156 students, and receives a subsidy of \$2,000.

Night schools have been opened in Buenos Ayres, Salta, and Santiago del Estero, each with an attendance of about 100 to 200 adults. Libraries will also in a short time be opened in the upper provinces for the use of the public at \$1,500 each. Kindergartens also are introduced, the first being opened at Buenos Ayres. The observatory at Cordoba will soon be opened under the direction of Dr. Gould, who is shortly expected, with his staff, from the United States. Congress has also authorized the minister to send abroad for 20 first-class professors for the University of Cordoba and the national colleges; eight are expected from Germany.

The new subsidies granted during the year amount to \$90,660, viz.:

Rioja.....	\$19,080	Jujuy.....	\$3,000
Entre Rios.....	13,500	Mendoza.....	2,100
San Juan.....	12,500	Salta.....	2,100
Corrientes.....	12,500	Catamarca.....	2,500
San Luis.....	4,650	Santiago del Estero.....	1,500
Tucuman.....	4,500	Swiss Colonies.....	1,100
Santa Fé.....	4,500	Miscellaneous.....	2,000
Buenos Ayres.....	4,200		

ARKANSAS. The Arkansas Legislature assembled on the first Monday of January, and had rather a stormy session of nearly three months. Governor Clayton was accused of using his personal and official influence, and even resorting to fraud and corruption, in the election of the preceding November, for the purpose of securing a majority of members who would vote for him as Senator in Congress for the

full term of six years, commencing on the 4th of March. The Governor's message at the opening of the session was very moderate in tone, and contained many popular suggestions, favoring a short and busy session, retrenchment of expenses, reduction of the number of offices, etc. On the 10th of January he was elected to the United States Senate by a vote of 78 out of a total number of 107, on a joint ballot of the two Houses, but soon after a spirit of opposition to his plans and purposes was developed. He was himself strongly opposed to the Lieutenant-Governor, J. M. Johnson, as his successor in the Executive office, and was apparently determined to prevent his accession to that position. It was said that, prior to his own election as Senator, he had professed to withdraw his opposition, and had afterward renewed it. However that may have been, his friends soon made an effort to have the Lieutenant-Governor impeached. Owing to alleged frauds in Pulaski County, there had been two claimants for the seat in the Senate for that district: Mr. Riley, a friend of the Governor, who had received the certificate of election, and Mr. Brooks, who claimed to have received a greater number of legal votes. Mr. Brooks had appeared first, and was sworn in by the Lieutenant-Governor, in spite of the protests of some of the supporters of the claims of Riley. Subsequently Riley appeared, and the seat was awarded to him in accordance with a report of the Committee on Elections. The action of the Lieutenant-Governor in swearing in Mr. Brooks was made the basis of the articles of impeachment which were prepared against him. The specifications were:

1. That Lieutenant-Governor Johnson did, on the 26th of January, 1871, wilfully, corruptly, and wrongfully swear in as a Senator Joseph Brooks, thereby becoming guilty of a high misdemeanor.

2. That he did wilfully, corruptly, etc., swear in Mr. Brooks, before his qualification as a Senator had been passed upon by the Senate.

3. That he did wilfully, wrongfully, corruptly, etc., refuse to entertain an appeal from his decision, when objections were raised to the swearing in of Mr. Brooks.

4. That he did wilfully, etc., swear in Mr. Brooks, contrary to law, usage, and right, and is therefore guilty of a high crime and misdemeanor.

This movement did not meet with much favor, being regarded merely as a pretext to get rid of Mr. Johnson, and prevent his becoming Governor, and the motion to impeach was, after some warm discussion, indefinitely postponed by a decisive vote. Application was then made to the Supreme Court for a writ of *quo warranto* to oust the Lieutenant-Governor from office, on the ground that he had not taken the oath of office within fifteen days after being notified of his election (in 1868), as was required by law. While this application was pending before the court, two of the

judges, for some unexplained reason, resigned, and their places were supplied by appointment of the Governor. The writ of *quo warranto* was granted, requiring Mr. Johnson to show by what authority he held the office of Lieutenant-Governor. He shortly made answer, declaring that he was notified of his election on the 1st of May, 1868, and not on the 1st of April, as had been alleged, and that he "within fifteen days from and after the time said notice of his election aforesaid was officially served upon him, to wit, on the 5th day of May, A. D. 1868, at the city of Little Rock aforesaid, and before he entered on the discharge of the duties of said office of Lieutenant-Governor of said State of Arkansas, took the oath of office prescribed in section 17 of article 15 of said constitution, and which oath of office was then and there administered to him, the said respondent, by the Hon. T. D. W. Yonley, chancellor of the separate Chancery Court of the county of Pulaski, in said State, and thereupon afterward, and on the same day and year last aforesaid, at said city of Little Rock, he, this respondent, entered upon the discharge of the duties of said office of Lieutenant-Governor, and has ever since then continued to, and now does, have, hold, use, exercise, and enjoy the same, and all and singular the rights, franchises, privileges, and immunities thereof, as he may and of right lawfully do."

At about the same time a bill was introduced in the Senate by Mr. Mallory, who was the Governor's personal choice as his own successor, to the following effect:

SECTION 1. That the office of all officers elected at the election held on the 13th of March, A. D. 1868, and succeeding days, provided for by the schedule to the constitution of this State, and all offices filled by appointment of the Governor, where the officers filling such offices have not qualified and entered upon the discharge of the duties of their offices within fifteen days after they have been duly notified of their election or appointment, shall be deemed, and they are hereby declared vacant; and no such officer, who shall have failed to qualify and enter upon the discharge of his duties, as prescribed by this act, shall hereafter exercise the functions or discharge the duties of such office.

SEC. 2. *Be it further enacted*, That the provisions of this act shall extend to all officers hereafter to be elected or appointed in this State.

SEC. 3. *Be it further enacted*, That this act shall take effect and be in force from and after its passage, and all acts or parts of acts in conflict with this act are hereby repealed.

This act was never passed, owing, perhaps, to the turn which events afterward took; but it serves to show in some measure the *animus* of the proceedings against the Lieutenant-Governor and the concert of action between the Governor and his friends in the Legislature.

While the case of Lieutenant-Governor Johnson was still pending before the Supreme Court, a movement was set on foot in the House of Representatives for the impeachment of both Governor Clayton and Chief-Justice McClure. The opponents of the Governor had

increased to a majority in that body, and on the 16th of February the following was proposed by Mr. Padgett, as he said, for the purposes of justifying charges which had been made by himself and others:

Whereas, Powell Clayton, Governor of the State of Arkansas, has been guilty of malfeasance in office, and high crimes and misdemeanors, in this:

1. That he has conspired with the members of the Supreme Court of the State of Arkansas to maliciously and unlawfully deprive Lieutenant-Governor James M. Johnson of his said office of Lieutenant-Governor, to which he was duly and lawfully elected by the people of the State of Arkansas, and for which he qualified according to the constitution and laws of said State.

2. That he has unlawfully removed an officer of the county of Clark, in said State of Arkansas, to wit: N. H. Lock, County and Probate Judge of said county, from his said office, to which said office he, the said Lock, was duly and constitutionally elected by the people of said county.

3. That he directed, encouraged, and aided in frauds in the elections of senator and three representatives to the General Assembly from the thirteenth district of the State of Arkansas, composed of the counties of Hot Spring, Montgomery, Polk, and Scott, in said State of Arkansas.

4. That he has accepted pecuniary considerations for issuing bonds or obligations of the State of Arkansas to and in favor of the Memphis & Little Rock Railroad Company, in utter violation of law and disregard of his official duty as Governor of the State of Arkansas; also, that he has accepted pecuniary considerations for issuing bonds or obligations of the State of Arkansas to and in favor of the Little Rock & Fort Smith Railroad Company, in utter violation of law and disregard of his official duty as Governor of the State of Arkansas.

5. That, as Governor of the State of Arkansas, he has issued bonds or obligations of said State to the Mississippi, Ouachita & Red River Railroad Company, when said company was notoriously not entitled to the same, under the act of the General Assembly of the State of Arkansas, approved July 21, 1868.

6. That he has been guilty of other misconduct and malfeasance in office, and other high crimes and misdemeanors.

Therefore, I move:

1. That the said Powell Clayton, Governor of the State of Arkansas, be and he is hereby impeached of misconduct and malfeasance in office, and high crimes and misdemeanors, and that the said Powell Clayton be and is hereby suspended from exercising the functions of Governor of the State of Arkansas, in conformity to and with the constitution thereof.

2. That D. J. Smith, of Columbia County; F. M. Thompson, of Columbia County; B. B. Battle, of Hempstead County; A. Mason, of Calhoun County; E. A. Fulton, of Drew County; W. B. Padgett, of Independence County; and R. A. Howard, of Pulaski County, members of the House, be and they are hereby appointed managers on the part of the House of Representatives of the State of Arkansas, to prepare articles of impeachment against the said Powell Clayton, as Governor of the State of Arkansas, with full power to examine witnesses and otherwise conduct the trial of impeachment in the name and on behalf of all the people of the State of Arkansas.

3. That said managers be instructed to go immediately to the Senate, and at the bar thereof, in the name of the House of Representatives, and of all the people of the State of Arkansas, to announce the impeachment of Powell Clayton, Governor of the State of Arkansas, for misconduct and maladministration of his office as such Governor, and acquaint the Senate that the House of Representatives will, in due time, exhibit particular articles of impeachment against him, and make good the same, and that the

managers do demand that the Senate take order for the appearance of said Powell Clayton to answer to said impeachment.

The previous question was ordered, and the motion adopted by a vote of 42 to 38. On the following day the following message was received from Governor Clayton:

EXECUTIVE DEPARTMENT, STATE OF ARKANSAS, }
LITTLE ROCK, February 16, 1871. }

MR. SPEAKER: I am unofficially informed that your honorable body has drawn up and approved articles of impeachment against me from the exercise of the functions and powers of said office. It has come to me from various sources that in pursuance of said resolution forcible and revolutionary means will be resorted to, to suspend me, before your honorable body has laid said articles of impeachment before the Senate, and notice has been given me according to law. I am advised by competent and able legal gentlemen that the constitution does not confer the power of suspension from office on your body. Section 389 of the Criminal Code declares an impeachment to be a "prosecution by the House of Representatives before the Senate." I am also advised that the impeachment does not work a suspension until I am notified in accordance with section 393 of said code. In order to avoid confusion on the subject, I deem it to be my duty to say that, whenever said impeachment shall be perfected and due notice served, I will readily surrender, pending the trial of said articles of impeachment, the office, with its franchise and powers, to the person for the time being entitled thereto, under the constitution and laws of the State of Arkansas.

POWELL CLAYTON, Governor.

A motion was immediately made that the House refuse to receive the message "as coming from Powell Clayton, Governor of Arkansas," which was adopted by a vote of 42 to 32. On the next day, February 18th, Mr. Padgett again rose to a question of privilege, and offered the following:

Whereas, John McClure, a justice of the Supreme Court of Arkansas, is guilty of high crimes and misdemeanors:

1. In that he has engaged in a conspiracy with Governor Powell Clayton and others to unlawfully and maliciously deprive Lieutenant-Governor James M. Johnson of his office of said Lieutenant-Governor, to which he was duly elected by the people of Arkansas and qualified according to law.

2. In that he has bargained for pay and bribes to influence his actions and decisions as a justice of said Supreme Court, at divers times and on various occasions, all contrary to law and the constitution of the State of Arkansas.

3. In that he has, as chief justice of the Supreme Court of Arkansas, issued a writ of *mandamus*, without authority, and in violation of law and the constitution of the State of Arkansas, upon Lieutenant-Governor James M. Johnson, now acting Governor of the State of Arkansas, by reason of Governor Powell Clayton having been impeached by the House of Representatives, and said Powell Clayton suffering under said disabilities, and pretending to restrain said Lieutenant-Governor James M. Johnson from performing the functions of said office, thus presenting a remarkable and unwarrantable case of one coördinate department of government attempting to restrain another by a writ of *mandamus*, all with an unlawful and corrupt design to retard the operation of the State government, and a contempt of this House—

Therefore, I move:

1. That John McClure, chief justice of the Supreme Court of the State of Arkansas, be and is hereby im-

peached of high crimes and misdemeanors in office, and he is hereby suspended from exercising further the functions of his office, as provided by the constitution of the State of Arkansas.

2. That D. J. Smith, of Columbia County; F. M. Thompson, of Columbia County; E. A. Fulton, of Drew County; B. B. Battle, of Hempstead County; W. B. Padgett, of Independence County; and R. A. Howard, of Pulaski County, be appointed managers to prepare and report articles of impeachment against John McClure, chief justice of the Supreme Court of the State of Arkansas, with power to send for persons, papers, and records, and to take testimony under oath, and prosecute the same before the bar of the Senate.

3. That said managers be directed to go to the Senate immediately, and at the bar thereof, in the name of the House of Representatives and all the people of the State of Arkansas, announce the impeachment of John McClure, chief justice of the Supreme Court of the State of Arkansas, of high crimes and misdemeanors in office, and acquaint the Senate that the House of Representatives will in due time exhibit particular articles of impeachment against him, and make good the same; and that the managers do demand that the Senate take order for the appearance of the said John McClure to answer to said impeachment.

The previous question was ordered, and the motion adopted by a vote of 44 to 30. Several of those who voted against the motion explained their motives. One of these explanations will serve to show how the proceedings were regarded by those who were opposed to them. It was made by Mr. Chamberlin, in the following terms:

MR. SPEAKER: Being ignorant as to what the action of Judge McClure has been, the only intimation of its illegality being the declaration of the member from Independence, and believing this movement of impeachment to have originated with certain defeated candidates for office for the purpose of making political capital, and believing such impeachment calculated to injure the best interests of the State and to retard its material prosperity; and believing, further, that the people of this State will condemn the wasting of so much time by this House, in the discussion of matters which are only calculated to benefit the aforesaid defeated candidates, to the neglect of other and more important matters—while the people are urging the passage of wise laws and the repeal of those of a contrary nature—I believe we are doing them a great injustice in sitting here day after day, week after week, and month after month, wasting that time and those energies which should be wholly and solely devoted to the public good.

A majority of the Senate was friendly to Governor Clayton, and when the impeachment managers presented themselves to give notice of the proceedings against him, so large a number of members had absented themselves that there was no quorum present. The same proved to be the case for several successive days; and when at last a quorum was obtained, a set of rules was adopted to govern the impeachment trial, which would seriously embarrass the proceedings. Among other things, it was provided that counsel on each side should have only thirty minutes for argument, and that any matter could be ruled out by a vote of the majority. Under these circumstances, the managers refused to prosecute the case, and at their own request were relieved from further duty in the matter. A new

board of managers was appointed, who appeared at the bar of the Senate on the 2d of March, and gave the following notice:

MR. PRESIDENT: In obedience to the order of the House of Representatives, we appear before you, and, in the name of all the people of the State of Arkansas, we do impeach Powell Clayton, Governor of the State of Arkansas, of high crimes and misdemeanors in office; and we further inform the Senate that the House of Representatives will, in due time, exhibit particular articles of impeachment against him, and make good the same; and in their name we demand that the Senate take order for the appearance of the said Powell Clayton to answer said impeachment.

A resolution was immediately adopted to the effect that the Senate would "take proper order thereon, of which due notice shall be given to the House of Representatives." Meantime the case of Lieutenant-Governor Johnson before the Supreme Court had been decided in favor of the legal right of that official to the position which he held. The result of this decision would be, that, if Governor Clayton accepted the position of United States Senator, Mr. Johnson would become Governor, a result which the former seemed determined to prevent. Although elected to the Senate on the 10th of January, the Governor had not yet signified whether he would accept or not, and, when asked by a vote of the House to do so, had declined, saying in his reply:

When the time arrives when I can qualify as United States Senator, I shall be governed in my action by what I deem to be the right, and for the best interests of the State. One thing your body can implicitly rely upon is, that I shall not decline the position to which I have been elected unless I shall be convinced that the interests of the whole people would be best subserved by a retention of the executive chair.

On the 4th of March, after the decision of the Supreme Court in the case of Johnson, he sent the following message to both Houses of the Legislature, declining the seat in the Federal Senate, and giving his reasons for so doing:

EXECUTIVE DEPARTMENT, STATE OF ARKANSAS, }
LITTLE ROCK, March 4, 1871. }

On the 10th of January, 1871, it was ascertained that I was elected, by the General Assembly, United States Senator by a vote of ninety-four to nine, on joint ballot. I not only received the united support of my own party, but many of the opposition members voted for me. This large and almost unanimous vote, to myself and the outside world, could not be construed otherwise than as an indorsement of my official action, and I may here state that I felt highly complimented by it.

At the time of my election by the General Assembly, the Republican members of the Legislature seemed to be thoroughly united, and I had reason to hope that the Lieutenant-Governor would pursue such a course as would commend himself to the confidence of the Republican members. By subsequent events, I have been forced to the unwilling conviction that many of the members who then supported me were actuated more by a desire to place a person in the Executive chair who would carry out a policy adverse to the wishes of a large majority of the Republican party, than to have me represent the State in the United States Senate. In other words, many of the members who supported me deemed the control of

the State government of more importance to the consummation of their wishes than representation in the Senate of the United States.

At the time referred to, both branches of the General Assembly were under the control of the Republican party; but since that time a coalition seems to have been formed of a few Republicans, under the leadership of the Lieutenant-Governor, and the entire conservative element of both Houses. I can but regard this coalition as being anti-Republican, and having for its object the overthrow of the present State government on the one part, and the gratification of private malice and revenge on the other. With this conviction, I cannot, by any act of mine, be instrumental in placing in the Executive chair the leader of this coalition. Were I to consult the promptings of a selfish ambition, rather than the perpetuation of the principles of the party which has honored me with its confidence and that saved the State to the Union, I should accept the position to which I was elected by your votes.

Feeling that such a course would not only be a betrayal of the confidence reposed in me, but a desertion of principles, a sense of duty impels me to decline the position tendered. When I remember that to establish these great principles the best blood of the nation has been shed, and hundreds of thousands of patriots have laid down their lives upon the altar of their country, I can well afford to lay aside my personal aspirations to aid in the perpetuation of the principles in the support of which so many lives have been sacrificed and such vast treasures expended.

In pursuing this course, I may give offence to some whose personal ambition may have been thwarted, but I am more than recompensed in this respect by the belief that the men who stood by the flag in the hour of its greatest peril and those who have since aided in bringing order out of the chaos in which the State was found at the close of the war, and who desire the restoration of peace and security for life and property, will heartily approve and indorse my action. It must now be apparent to the most casual observer, that the object for which the coalition was formed cannot be accomplished, and it is, therefore, hoped that the communication of my declination will allay the public mind and permit the attention of the General Assembly to be turned toward the objects of legislation recommended in my message at the beginning of the session, and which are much needed by the people.

I cannot let the present opportunity pass without thanking those friends who voted for me for the expression of confidence, and the high compliment paid me by their votes, and I can assure them that I highly appreciate their action, and shall ever remember it with pride and pleasure.

I am, very respectfully, your obedient servant,
POWELL CLAYTON.

The tone of the message was resented by certain members of the Senate, and several voted against its publication. One of these gave the following reasons for his vote:

1. Because the communication just received from the Chief Executive casts unjust and slanderous imputations upon the conduct and character of the Lieutenant-Governor of this State.

2. Because it casts base, unjust, and slanderous imputations upon the motives that have actuated and controlled a majority of the members of the General Assembly of this State in their actions.

3. Because it contains a base, foul, and infamous slander upon the people of the State of Arkansas.

4. Because I believe it should be beneath the dignity and sense of honor of this body to receive and consider such a slanderous communication.

In sending to this body his declination, I think he should have couched it in appropriate language; therefore, I am opposed to its publication.

The message was, however, received and ordered to be printed, and at the same time the following resolution was adopted:

Resolved, That it is the sense of this body that the action of his Excellency Governor Powell Clayton, in voluntarily declining the exalted position to which he was elected by almost a unanimous vote of this State, entitles him to the admiration and hearty gratitude of all loyal and patriotic people, not only in this State, but the United States; and that his magnanimity and nobleness of character in thus acting surpass any thing of which ancient or modern history gives us any account.

In the House it was simply ordered that the message be published with the report of the impeachment managers which had been submitted the same day. This report was to the effect that the committee had made every effort to obtain information to enable them to prepare articles of impeachment, but had "failed to obtain any facts as data that would warrant them in attempting to prepare particular articles of impeachment against his Excellency Governor Powell Clayton." The report closes as follows:

The committee entered upon the discharge of the duties imposed upon them with a full determination that to the best of their ability they would vindicate the rights of the people; but, while they are ready and willing to vindicate the people's rights, they are unwilling to prosecute this case further, when they have no grounds to believe that they can, from any proof within the knowledge or reach of the committee, prosecute this case to a successful termination.

In view of the facts above stated, and the further fact that the people demand at our hands such relief as we are able to give by legislation, the committee would respectfully recommend the adoption of the following resolution:

Resolved, That further proceedings in the impeachment of Powell Clayton be dispensed with, and that the action of this House, heretofore taken, be set aside and cancelled; that the Senate be informed of the action of this House in the premises, by the Clerk of the House, and that the committee, as the board of managers, be discharged.

The report was adopted and ordered to be printed, by a vote of 49 to 18, fourteen members being absent or not voting. At a later period in the session the proceedings against Judge McClure were dismissed.

All hostile movements being thus at an end, peaceable measures were adopted for securing the objects originally aimed at by the Governor. He induced Mr. Johnson to accept the position of Secretary of State, and thus vacate the office of Lieutenant-Governor. Mr. A. O. Hadley, a friend of Governor Clayton, was then chosen President of the Senate, and thus made successor to the Executive chair in case of vacancy. Matters being thus arranged, Clayton was again elected to the Senate of the United States on the 14th of March. The two Houses voted separately, the Senate giving Clayton 18 votes to 7 for other candidates, and the House giving him 42, to 34 for others. On the 18th of March he turned over the books and papers of his office to Mr. Hadley, and proceeded to Washington to take his seat in Congress.

Besides the time taken up with this affair in the Legislature, a good deal more was consumed in the consideration of contested election cases and the investigation of alleged frauds. The result was generally in favor of the sitting members, although there appeared to be some evidence that illegal registration and voting had occurred to some extent, especially in the counties of Pulaski and Hot Spring. The general legislation of the session was small in amount, though some of it was of considerable importance. Petitions were received almost daily, asking for the removal of political disabilities. The constitution gives to the General Assembly the power to remove the disabilities imposed in that instrument, *provided*, "the General Assembly shall have no power to remove the disabilities of any person embraced in the aforesaid subdivisions who, after the adoption of this constitution by this convention, persists in opposing the acts of Congress and reconstruction thereunder." This proviso caused much hesitation and discussion, but several bills were passed affording relief in individual cases, and finally, toward the close of the session, a bill was passed containing several hundred names of persons whose disabilities were thereby removed. Several resolutions had also been introduced in favor of memorializing Congress for a removal of the disabilities imposed by the fourteenth amendment of the Federal Constitution. These were referred to a committee from which two reports were made, one merely instructing the Senators and Representatives of the State in Congress to vote for a bill for the removal of disabilities, and the other submitting the following resolution:

Whereas, Comity and friendly relations exist between us and the other States of the Union, and our relations with the Federal Government are harmonious and satisfactory; law and order, peace and security, reign throughout our borders, and under the benign influence of our free institutions, and the faithful enforcement of the laws, old feuds are rapidly dying out, old animosities are being forgotten, and old prejudices eradicated; therefore—

Be it resolved by the General Assembly of the State of Arkansas, That this General Assembly doth respectfully ask the Congressmen of the United States to remove all political disabilities from the citizens of this State, imposed upon them by the fourteenth amendment to the Constitution of the United States; and that our Senators and Representatives be requested to use all laudable efforts to carry this resolution into effect.

This passed in the lower House by a vote of 51 to 9, twenty-two members being absent or not voting.

An amendment of the State constitution on the subject of the elective franchise was also proposed, a bill for the purpose passing both Houses by a decided majority. In order to become part of the constitution, it must be passed by both Houses of the next Legislature, and be ratified by a vote of the people. If adopted, it is to be known as article eight, and is as follows:

SECTION 1. The following class of persons shall not be permitted to register, vote, or hold office, in this State:

Persons who may have been convicted before any court of this State, or of the United States, or of any other State, of any crime punishable by law with death, or confinement in the penitentiary: *Provided*, That any person disfranchised under this section, who may be pardoned, or his sentence commuted, such pardon or commutation of sentence shall remove all disabilities imposed by this section.

Paupers, idiots, and insane persons.

SEC. 2. Every male person who has attained the age of twenty-one years, and who is a citizen of the United States, or who has legally declared his intention to become a citizen thereof, who shall have resided in this State six months, and in the county in which he offered his vote ten days next preceding the election, shall be deemed a qualified elector, and entitled to vote, if registered, unless disqualified by some one of the clauses of section one of this article.

SEC. 3. In all elections by the people, the electors shall vote by ballot. The secrecy of the ballot shall be preserved inviolate, and the General Assembly shall provide suitable laws for that purpose.

On the day of an election held by the people, no elector shall be subject to arrest on any civil process.

The General Assembly shall pass adequate laws to prevent the sale of intoxicating liquors on the day on which any election by the people may be held.

A new registration act was also adopted, after much discussion and a good deal of amending. It provides that all elections for State or Federal officers shall occur on the Tuesday after the first Monday in November of the even-numbered years. The county courts in each year in which an election occurs are required to revise the formation of election districts, and designate a place in each where the balloting shall take place. The county assessor, in the month of August of these years, is to attend one day in each election district, "for the purpose of adding to the registration list the names of such persons as he may find to be qualified voters, whose names do not already appear" on the said list, five days' notice being given of the time and place of registration. The Governor may set aside the registration and order a new one in any county if he has satisfactory evidence that the first was "falsely or fraudulently made." The assessor has authority to examine every person under oath who applies for registration, regarding his qualification, and may refuse to enter his name if he finds him disqualified to vote.

Any person so refused, if he feels aggrieved, can apply to a judge of the Circuit Court for a *mandamus*, directing his registration. The assessor has power to furnish a certificate to any person whose name has been registered, showing that the person therein named is entitled to vote at subsequent elections. On the third Tuesday before the election, and for five subsequent days, the assessor is required to attend at the court-house of the county to revise and complete the lists. Two copies of the registry are to be made, one for the judge of election for State officers and one for the judge of election for Presidential electors and members of Congress. These judges, with alternates and the clerks of election, are to be ap-

pointed by the assessor. In case neither the judge nor his alternate appears at the polling-place, the electors may choose a judge of election. The further powers of the assessors are defined in the following sections:

SECTION 17. Each assessor, while discharging the duties imposed by this act, shall have and exercise the power of the Circuit Court, for the preservation of order at and around the place of registration, and may summon and compel the attendance of witnesses for the purpose of ascertaining the qualifications of persons applying for registration, and may issue subpoenas, attachments, and commitments to the sheriff, or any constable, whose duty it shall be to serve such process as if issued by such court, and shall receive the same fees therefor as may be allowed by law for similar services.

SEC. 18. Any person offering or threatening violence to the assessor while engaged in the duty of registering, or disturbing or resisting him in any way from the performance of his duty, or who shall, by intimidation, bribery, imposition, deceit, or fraud, or by any other improper or illegal influence, prevent or hinder persons from going to the place of registration, or from registering, shall be deemed guilty of a felony, and on conviction thereof shall be punished by confinement in the penitentiary not less than two years nor more than five years, at the discretion of the court.

Any registered voter, removing from one county to another, may be registered in the latter, on presenting his registration certificate to the assessor. Provision is made for the punishment of false swearing with regard to one's qualifications to vote. The judges and clerks of election are required to take an oath that they are not disfranchised, that they will honestly and faithfully support the Constitution and laws of the United States, and of the State of Arkansas, and will perform their duties to the best of their knowledge and ability, studiously endeavoring to "prevent fraud and deceit in conducting the election." Separate registration lists and ballot-boxes, provided by the county court, are to be used for State and Federal officers. The judges of election have power to preserve order, and punish disorderly persons by fine or imprisonment. The following provision is made regarding the sale of intoxicating liquors:

SECTION 23. During the holding of any election, under the provisions of this act, all public bar-rooms, saloons, or other places where intoxicating or malt liquors are sold by retail, shall be closed from five o'clock A. M. of the day of the election until ten o'clock P. M. of the day of the election; and, if any person shall sell or give away any intoxicating or malt liquor, between the hours above mentioned on the day on which an election is held, such person shall be deemed guilty of a misdemeanor, and, on conviction thereof, shall be fined not less than three hundred dollars, nor more than five hundred dollars, and shall be imprisoned in the county jail for not less than sixty days.

The following are the provisions regarding the conduct of the election:

SECTION 31. It shall be the duty of the judge of election, immediately before the proclamation is made of the opening of the polls, to open the ballot-box in the presence of the people then assembled, and turn it upside down, so as to empty it of any thing it may contain, and then lock it; and it shall not again be opened until the polls are closed.

Sec. 32. Any person who shall furnish an elector with a ticket or ballot, who cannot read, informing him that it contains a name or names different from those which are written or printed thereon, or who shall fraudulently change the ballot of any elector, by which such elector shall be prevented from voting for such candidate or candidates as he intended, shall, upon conviction thereof, be fined in any sum not less than two hundred dollars, nor more than five hundred dollars.

Sec. 33. Any person who shall cause, by menace, threats, or violence, or other means, any elector to cast his vote against his will or inclination, or shall, by threats, violence, menace, or otherwise, prevent any legal voter from voting at any election authorized by the constitution and laws of this State, shall be deemed guilty of a felony, and, on conviction thereof, shall be imprisoned in the penitentiary not more than three years, nor less than one year.

Sec. 34. All persons, who present a certificate of registration, and whose names appear on the list of voters furnished the judge of election, shall be entitled to vote at any and all elections authorized by the constitution and laws of this State, and no challenge shall be allowed to debar such person from voting. The clerks of elections shall enter the names of electors on the poll-books in the order in which they present their ballots. The judge of the election, after the elector has voted, shall write the word "voted" on the registration certificate, date the same, and sign his name thereto.

Sec. 35. The clerks of election, after the ballots shall have been counted, shall make out an abstract and attach the same to the poll-book, showing the whole number of votes cast for each person voted for, and the office for which the vote was cast. The abstract shall be certified by the judge and attested by the clerks, and, before dispersing, one of the poll-books shall be put under cover, and it shall be delivered to the county clerk by the judge of election, within three days after the closing of the polls. The other poll-book shall remain in the hands of the judge of election.

Five days after the election, the county clerks are to open and compare the several returns, and make an abstract of them, which shall be forwarded within two days to the Secretary of State. An abstract of votes given for Governor is also to be forwarded to the Speaker of the House of Representatives, and an abstract of those given for presidential electors to be forwarded to the Governor. The Secretary of State is to open all the returns of votes for members of Congress on the last Monday in December, in the presence of the Governor, and cast up and arrange the votes from the several counties, and the Governor is to make proclamation of the result, and furnish the successful candidates with certificates of election. The Secretary of State is to make a roll of the members of each House of the Legislature as elected, and the returns of the vote for Governor are to be opened in presence of both Houses of the General Assembly, at the beginning of the session, and the result is then and there to be published. The following is an additional provision regarding persons whom the assessors have refused to register:

SECTION 45. In all cases where a person has applied for registration, and has been refused, and no determination has been made of the application for *mandamus*, to compel the assessor to place the name of such person on the registration list, and such ag-

grieved person desires to vote at any election under the provisions of the "enforcement act" of Congress, such person shall be entitled to vote at all elections protected by said enforcement act, by presenting to the judge of election a written or printed affidavit, taken before some officer authorized by law to administer oaths, containing the elector's oath as prescribed in section five of Article VIII. of the constitution of the State of Arkansas. The judge of election shall retain said affidavit, and the clerks of election shall note the word "affidavit" after the name of every person voting under the provisions of this section.

There was a vigorous opposition to the bill in the House of Representatives. One speaker characterized it as an outrage. "If there is a law on the statute-books more damnable than another," he said, "it is the present registration law, and the one you propose to pass is tenfold worse than that. The Governor, under this law, can control every election he sees proper."

The act, however, passed the House by a vote of 37 to 24.

Several acts were passed relating to the finances of the State. Among these was a new law for regulating the assessment and collection of taxes, and an act authorizing the issue of 300 bonds of \$1,000 each, bearing seven per cent. interest, to provide for the payment of interest on the State debt. An act was also passed authorizing the Treasurer, when Auditor's warrants are presented, and there is no money to pay them, to issue certificates on bank-note paper in sums of one, two, five, and ten dollars, bearing eight per cent. interest, the same to be receivable for all taxes, except interest on the public debt. There was some vigorous opposition to this act, one of the members giving the following reasons for voting against it:

1. Because the chief object of the bill is to create a medium of exchange within the State, which will operate as, and have the effect of, a currency.

2. Because there is no substantial basis upon which currency may be safely issued.

3. Because the issuing of such certificates will have the effect of inflating the currency within the State, in proportion as the same are issued, and will have the further effect of depreciating the credit of the State in like proportion.

4. Because it is unreasonable to require the people to pay interest on a debt which has been created in a great measure by the mismanagement of their servants, when these servants are the parties to be most directly benefited by the issuance of such certificates.

5. Because additional expense will be necessarily caused the State to carry out the provisions of said bill, without attaining a corresponding benefit.

Other acts of some importance were passed, as follows: placing the penitentiary under the management of a State superintendent; exempting from taxation for five years all capital employed in manufactures and mining; providing for the incorporation of institutions of learning; for the location, organization, and maintenance of the Arkansas Industrial University, with a normal department; authorizing the appointment of a State geologist; providing for a digest of the statutes; a code of

practice in civil cases; providing for the building and repairing of public levees by the issue of seven per cent., fifty-year bonds, to an amount not exceeding \$3,000,000; and an act providing for the election, by the General Assembly, of one State director in each railroad company for every \$200,000 of its stock owned in the State. Three new counties were also created, as follows: Nevada, out of portions of Hempstead, Ouachita, and Columbia, with a temporary county-seat at Mount Moriah; Sarber, out of portions of Yell, Johnson, Franklin, and Scott, with a temporary county-seat at Reveille; and Lincoln, out of portions of Drew, Desha, Arkansas, Bradley, and Jefferson, with a temporary county-seat at Cane-Creek Church. The Legislature adjourned on the 25th of March, having been in session two months and twenty-three days, cost the State \$140,000, and passed seventy-three acts.

The charges of fraud and corruption in the conduct of the election in November, 1870, were taken up by the United States District Court, at its session in April, and a large number of indictments were found by the grand-jury, including one against ex-Governor Clayton, for issuing a certificate of election, as member of Congress from the Third District, to General Edwards, when, as was alleged, he did not receive a majority of the legal votes. The charges that were made against registrars, judges of election, and other officers, included registration of persons not entitled to vote, and even of persons who had no existence, receiving votes on the names thus fraudulently registered, exclusion of persons from registration who had a right to vote, false counting of the ballots, false returns of the results, etc. These charges were never substantiated, but, as the circumstances of their dismissal were rather peculiar, it may be worth while to note some of the facts regarding the election of 1870. In the first place, the entire vote numbered 53,800, or over 13,000 less than the registered vote of 1867, when large numbers were disfranchised by the reconstruction acts. In Benton County, which has a population of 13,831, mostly white, there were but 854 persons registered; while in Hempstead County, which has 13,768 inhabitants, about one-half colored, there were 2,604 voters on the lists. In Boone County, whose population of 7,032 is mostly white, there were but 312 names registered; while in Chicot County, which has 7,214 inhabitants, composed largely of colored people, the vote was 2,561, or one for every three persons in the county. Similar incongruities were noted in other quarters, and specific accusations of fraud were produced before the grand-jury. Soon after the indictments already mentioned had been found, the United States marshal, General Catterson, and the District Attorney, Mr. Whipple, who had been instrumental in instituting legal proceedings against those charged with frauds in the election, were removed by the President, on the

application of Senator Clayton, and officials friendly to the latter were put in their places. The trials were then very generally abandoned, and that of Clayton himself, which came off in October, resulted in his acquittal.

The general condition of society in the State during the year was as peaceable as could reasonably be expected. There were many local disorders which were often attributed to the so-called Ku-klux Klan; but, although Senator Clayton declared at Washington that there were 20,000 Ku-klux in the State, fully armed and organized, investigation generally resulted in a refutation of the stories. For instance: there were reports of Ku-klux outrages in Sebastian County, and the people at once held a mass-meeting, and chose a committee to investigate the matter. A large number of witnesses were examined, and the result showed that the disturbances had been greatly exaggerated, and were local and personal in their nature, having no reference whatever to the pretended Ku-klux order. In Woodruff County, from which the wildest reports proceeded, the judge of the Circuit Court directed the grand-jury to "go for, dig up, and root out" all the Ku-klux in the county. After investigation, the jury reported as follows:

The grand-jury in and for said county having been specially instructed by the court to "go for, dig up, and root out" the Ku-klux and other secret organizations banded together for unlawful purposes, respectfully report that, in pursuance of said instructions, they have labored diligently to that end through the entire term. They have examined witnesses from every township in the county, being careful to select reliable, truthful men, of different shades of political opinion, black as well as white, in order that they may not be misled in the investigation by the testimony of interested or prejudiced witnesses; and the jurors report that they have failed to elicit from any single witness any information of the existence in the county of such organization, or any thing that might lead to such information, and are fully satisfied, upon patient and thorough investigation, that none such exists in the county. The jury are further convinced, from information received in the course of the above investigation, that there does not exist in the county any spirit of lawlessness or opposition to the law, further than is occasionally manifested in every community by individual offences against law originating in personal or private grievances. They have especially directed their attention to this point, and no case that has come before them could be traced to any other cause; and the jury, having performed the duty with which they were charged by the court, respectfully ask that this, their report, be spread upon the records.

About the 18th of December, a quarrel between a white man and a negro, at Lake Village, in Chicot County, resulted in the killing of the latter. Three white men concerned in the affair were arrested and shut up in jail, from which they were taken by a mob of negroes and hanged. The matter caused a great deal of excitement for a time, and there were reports that the whites in Chicot County were obliged to flee for their lives, the infuriated negroes creating almost a reign of terror, but before the end of the year quiet and security seemed to be restored.

Although there was no general election in the State this year, considerable activity was displayed by the political parties, especially by the Democrats, in organizing their forces for the campaign in 1872. On the 23d of March the Democratic and Conservative members of the Legislature held a meeting and appointed a State Central Committee, and a separate committee for each of the three congressional districts, and issued an address to the people of the State. The opening paragraph of the address was as follows: "In view of the dangerous and alarming condition of our public affairs, and the pressing necessity realized by all good and patriotic citizens for a combined and organized effort on the part of the conservative elements to rescue the country from threatened and impending ruin and destruction, we, the Democratic and Conservative members of the General Assembly, have deemed it advisable, in the absence of any existing State organization, to inaugurate a movement looking to a speedy and thorough organization of the party, to prepare for the great campaign and battle of 1872." It then recites the history and effects of what it calls the "pernicious system of radical misrule," and calls upon the people to organize a strong opposition to it.

The question of holding a general convention was a good deal canvassed in the public prints, but the State Central Committee, at a meeting held on the 10th of July, decided that it would not be expedient to hold one before the call was issued for a National Democratic Convention. The committee adopted resolutions at the same meeting, commending the platform of the Democracy of Ohio as a model, and calling upon the people "to give the most liberal support to the different Democratic and Conservative organs in the State, to the end that the freest information may be diffused among the people, and our party papers, notwithstanding the proscriptive legislation which debars them from all official patronage, be enabled to continue a vigorous warfare against radicalism."

The following was also adopted:

Resolved, That this convention of the Democratic-Conservative Central and District Committees of the State, representing the Democratic and Conservative masses of Arkansas, are opposed to all secret political organizations, as being destructive to the best interests of society; that we recommend to the people of Arkansas a most careful consideration and protection of the rights of all citizens, irrespective of race, color, or previous condition, but that, while conceding all lawful rights to those opposed to us in politics, we shall most earnestly demand and contend for our own rights by all lawful and legitimate means within our reach.

An address to the people of the State was prepared, and afterward published, arraigning the action of the Republican party in the State, and setting forth a plan for a complete organization of the opposition in every county. The address concluded with the following appeal:

In conclusion, we would admonish and exhort our friends all over the State to be not only zealous in all

good works, but wise, prudent, and discreet in all their acts and conduct. The wrongs and oppressions of this reckless, extravagant, and corrupt radical administration are felt equally and alike by all, whether they be white or black, Democratic or Republican. We must try to commend the justice of our cause and the claims of our party to the favorable consideration of every man who desires a just, honest, and economical government; and cordially invite the cooperation of all, without regard to past political affinities or party affiliations, who are willing to unite with us on the broad platform of equal rights, equal protection, and a due regard for the best interests of all the people. Let us try and demonstrate to the colored men that we are not inimical, either to their rights or their interests—that we desire to protect them, as well as ourselves, against the enormities of a rapacious government and a corrupt party; that we neither intend nor desire to deprive them of any of the political rights now secured to them by the laws of the land—that we *could not* force them back into slavery if we *would*, nor deprive them of the right to vote if we *could*. It is true, that we cannot expect to gain the votes of many colored men, whatever we may do or say, but, by pursuing this just and magnanimous course, we will win to our support many moderate and conservative *white* republicans, and especially those of the old native Union element of the State, who are even now ready and waiting to fall into our ranks and fight under our banners, as soon as we proclaim, in good faith, our acceptance of the *accomplished facts of the war*, which are the destruction of slavery, the perpetuity of the Union, and the equality of all men before the law. But, above all things, let us be united among ourselves. "A house divided against itself cannot stand." Let us preserve peace and harmony, and let fraternal good-will reign in our own camp and in our own ranks. Let no personal bickerings, no factious feuds, no envious or jealousies, mar the harmony of our private, social, and political relations, but let us be one in spirit, one in fellowship, one in faith, and know no rivalries among ourselves but that noble rivalry, or rather emulation, of who can best work and best agree.

Mass-meetings and conventions were subsequently held in all the counties, to effect an organization of the Democratic forces, in accordance with the plan of the State Committee. The sentiments of the address above quoted were very generally indorsed, and the people pledged themselves in advance to support the platform and candidates of the National Democratic Convention.

The Republican party was already fully organized, but mass-meetings were held in several counties. The prevailing sentiments at these assemblies are set forth in the following platform, adopted in Bradley County:

Resolved, 1. That, recognizing the great and noble achievements of the Republican party during the last ten years, whereby our country has been saved from anarchy and ruin, the rebellion has been crushed, four millions of slaves made freemen, and endowed with the rights of citizens, civil government established over one-half the nation, the rights of citizens everywhere enforced, the national credit and honor maintained at home and abroad, and peace and prosperity brought to every door, we feel a pride in the record of our party, and hereby renew our pledge of fealty and devotion to it in the future.

2. That we look not only with approbation, but with pride, upon the wise and statesmanlike Administration of President Grant, and we thank him and the noble Republicans who stood by him for the vindication and honest execution of the laws of the land

3. That we renew our assurance of confidence and support to the State administration, and trust that the laws may be so modelled and executed that every officer shall be amenable to the people for the faithful discharge of his duty, and that economy and honesty may mark every branch of the service under Republican control.

4. That we favor free schools and the education of the masses, for we thereby secure the permanence of republican institutions and transmit the inheritance of free government to posterity.

5. That, desiring unity, harmony, and success, we cordially invite all who wish our country to be free, prosperous, and happy, to unite with us in our efforts to secure success, laying aside all questions as to individuals, and uniting all energies for the triumph of Republican principles.

6. That we condemn all efforts to disrupt the party, by assaults on and abuse of leading Republican officials of the State, by those professing to be Republicans, and we demand that they take their positions either with us or with the Democracy, where they belong.

There was, however, a discontented section of the party, which had considerable strength. This was made up of the Republican opponents of Clayton and his administration in the State, who were popularly denominated "Brindle-tails."

An interesting decision was rendered by the United States Circuit Court, in the Eastern District of Arkansas, in March, which settles the question of liability on contracts, for which slaves formed the consideration on either side. The points determined are stated with sufficient clearness in the following syllabus of the case:

1. The institution of slavery, under the Constitution of the United States, was purely local in its character, and confined to the several States where it existed, and was the creature of positive law, and this is true of all its incidents.

2. The Constitution of the United States did not regard slaves as property, but as persons; and it did not establish slavery or give any sanction to it, save in the single respect of the return of fugitives from service.

3. A remedy on a contract, which is against sound morals, natural justice, and right, may exist by virtue of the positive law under which the contract was made; but such remedy can only be enforced so long as that law remains in effect. As such remedy derives all its support from the statute, it cannot for any purpose survive its repeal.

4. The new constitution of Arkansas, declaring that "all contracts for the sale and purchase of slaves were null and void," is not in conflict with the clause of the Constitution of the United States prohibiting any State from passing any law impairing the obligation of contracts, which clause does not operate so as to perpetuate the institution of slavery or any of its

incidents, these being matters over which the States had unlimited control.

5. The thirteenth amendment to the Constitution of the United States *ipso facto* destroyed the institution of slavery and all of its incidents, and put an end to all remedies growing out of sales of slaves.

6. In view of the thirteenth and fourteenth amendments to the Constitution of the United States, the court holds that a remedy on a contract for the sale of slaves is contrary to the spirit of their provisions, against public policy, and cannot be maintained.

In the course of his opinion, Judge Caldwell laid down the following principle:

The fundamental ground on which emancipation proceeded was, that the right of the slave to his freedom was paramount to the claim of his master to treat him as property; that slavery was founded in force and violence, and contrary to natural right; that no vested right of property could arise out of a relation thus created, and which was an ever-new and active violation of the law of Nature and the inalienable rights of man every moment that it subsisted. The last clause of section 4, of article 14, declares that "neither the United States, nor any State, shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims, shall be held illegal and void." This clause was inserted, not to discharge the United States and the several States from any legal obligation to pay for slaves emancipated, for no such obligation had been incurred. It is a limitation on the discretionary power of the legislative departments of both governments to appropriate money for such purpose, independently of any legal obligation, and to prevent the agitation and disturbance that would result from leaving the question in that situation. The very language of the Constitution itself is conclusive on the question.

The State debt of Arkansas amounts to \$19,398,000, classified as follows:

Funded debt.....	\$4,430,000
State aid railroad bonds (only \$3,600,000 issued).....	11,400,000
Levee bonds (about \$1,600,000 issued).....	3,000,000
Ten-year bonds to supply casual deficits.....	300,000
Floating debt.....	268,000
Total.....	\$19,398,000

Omitting the bonds in aid of railroads, and for the construction of levees, which have not yet been issued, the debt will stand at about \$10,000,000. The debt of the State in January, 1867, was \$3,252,401.50. The act authorizing the loan of the State credit to railroads was passed in 1868, and granted \$15,000 per mile to roads having no land-grant, and \$10,000 per mile to those having such grants, to the extent of 850 miles in all. Up to July last this had been awarded as follows:

	Length of miles.	Awarded.	Issued.	Completed.
Memphis & Little Rock.....	120	\$1,200,000	\$1,200,000	131
Little Rock & Fort Smith.....	150	1,500,000	900,000	50
Little Rock, Pine Bluff & New Orleans.....	160	2,400,000	750,000	..
Memphis, Osachita & Red River.....	170	2,550,000	450,000	20
Central.....	150	2,250,000	300,000	..
Kansas City & Fort Smith.....	100	1,500,000	none.	nonc.
Total.....	850	\$11,400,000	\$3,600,000	201

These bonds have thirty years to run, and bear six per cent. interest, which is paid by the roads. With this assistance, much progress

has been made in developing the railroad system of the State. Among the important lines in course of construction are the Cairo & Ful-

ton, from Cairo, Ill., to Fulton, Ark., which is to be completed by January, 1874; the Missouri, Kansas, & Texas, from St. Louis to Galveston, already completed to Red River; and those already mentioned as receiving aid from the State. No less than 86 railroad companies have been incorporated since July 28, 1868, under the general incorporation laws.

In 1860 the taxable property of Arkansas was set down at \$120,475,236. On this a State tax was raised, amounting to \$204,160.56. In 1865 the property was valued at \$38,723,449, and on this a tax of \$387,234.49 was raised. In 1868 the taxable property was reported at \$68,699,716, and on this \$2,342,047.77 was paid in taxes. The last report placed the property at \$69,320,426, and the tax at \$743,627.70.

The educational interests of the State are gradually improving. The Agricultural College has been located at Fayetteville, Washington County; and a movement is on foot for founding a State Female College at Little Rock. Prof. William F. Roberts has been appointed State geologist, in pursuance of an act of the last Legislature and has begun a survey of the State, with a view to ascertaining its mineral resources. The fourth annual fair of the Arkansas State Agricultural and Mechanical Association was held in the early part of October, and gave evidence of a growing interest and success in the industrial pursuits of the State.

The hot and medicinal springs of Arkansas are attracting considerable attention by the benefits derived by invalids from their use. They are 54 in number, and are located about 60 miles southwest of Little Rock. Their temperature varies from 100° to 150° Fahr. They are classified as arsenic, alum, iron, and magnesia springs, but contain various other mineral substances besides those by which they are designated. Many remarkable cures are reported as the result of systematic bathing in these waters.

According to official authority, there are in the State 1,714,466 acres of improved land, 3,791,873 of woodland, and 1,601,254 of other unimproved land. The cash value of farms is \$36,457,476; of farming implements and machinery, \$2,112,020; total amount of wages paid during the year, including value of board, \$3,907,188. The number of horses is 83,952; of mules and asses, 33,381; of milch-cows, 119,607; of working-oxen, 31,673; of other cattle, 179,431; of sheep, 149,592; of swine, 772,662; value of all live-stock, \$15,795,971. The productions were—683,691 bushels of wheat, 23,422 of rye, 12,208,044 of corn, 486,425 of oats, 46,477 of peas and beans, 399,927 of Irish and 859,842 of sweet potatoes, 73,021 pounds of rice, 529,110 of tobacco, 203,275 of wool, 2,531,011 of butter, 12,047 of wax, 261,824 of honey; 221,546 bales of cotton, 6,806 tons of hay, and 60,272 gallons of cane and 138,859 of sorghum molasses; value of home manufactures, \$723,979; of slaughtered ani-

mals, \$3,466,152; estimated value of all farm products, including betterments and additions to stock, \$36,524,608.

The following are more full details of the census of 1870:

COUNTIES.	Aggregate.	White.	Colored.	Native.	Foreign

Total for State	484,471	362,115	122,169	479,445	5,026

The number of manufacturing establishments in the State is 1,364; capital, \$2,137,738; steam-engines, 300, with 6,980 horse-power; water-wheels, 134, with 1,599 horse-power; employing 4,133 males above 16, 48 females above 16, and 271 youth; wages paid during the year, \$754,950; value of materials used, \$4,823,651; of products, \$7,699,676. Of the manufactories, the most important are, 283 establishments for ginning cotton, with a capital of \$344,825; 35 for the manufacture of leather, capital \$32,100; 212 saw-mills, capital \$694,400; 13 wool-carding establishments,

capital \$32,500; 272 flour and meal mills, capital \$477,151.

The whole number of children attending school during the year was 62,572, of whom 30,188 were white males, 26,650 white females, 2,930 colored males, and 2,854 colored females.

The number of persons, 10 years old and upward, who cannot read, is 111,799; who cannot write, 133,339, of whom 296 are foreign. Of those who cannot write, 13,610 are white males, 21,770 white females, 23,681 colored males, and 22,689 colored females, above 21.

The deaths during the year were 6,119, of which 2,096 were from general diseases; 639 from affections of the nervous, 1,476 of the respiratory, and 602 of the digestive system.

The assessed value of real estate is \$53-, 102,804; of personal estate, \$31,426,539; true valuation of real and personal estate, \$156-, 394,691; total taxation, not national, \$2,866-, 890; public debt, county, town, city, etc., \$691,595.

ARMY OF THE UNITED STATES. In accordance with the provisions of the act of Congress of July 15, 1870, the army of the United States has been reduced to a peace-footing, and now numbers only 30,000 men. The following is the present table of organization:

Enlisted men of engineers.....	301
Enlisted men of ordnance.....	475
Ordnance servants at posts.....	200
Military Academy band.....	24
Sixty enlisted men per company for 55 companies artillery.....	3,300
Eighty-four enlisted men per battery for 5 batteries light artillery.....	420
Eighty-four enlisted men per company for 120 companies cavalry.....	10,030
Sixty enlisted men per company for 250 companies infantry.....	15,000
Non-commissioned staff of regiments.....	200
Total.....	30,000

The retired list is limited to 300 officers. At the Military Academy at West Point there are 229 cadets.

The expense of supporting the military establishment during the year ending June 30, 1871, was about \$40,000,000, including \$3-, 945,000 expended upon river and harbor improvements. This shows a reduction from the cost of the army for the preceding year of \$17,655,675.40. For the fiscal year 1871-'72, \$36,530,776 have been appropriated, of which \$4,407,500 is to be devoted to river and harbor improvements, and the estimated expense for 1872-'73 is \$32,415,472. Sales of clothing belonging to the army yielded the sum of \$1,875,728.74, from June 30, 1870, to December 1, 1871, and during the last fiscal year small arms and ordnance stores were sold to the amount of \$10,000,000.

The several national cemeteries cover an area of 1,800 acres, acquired at a cost of \$170,000. They now contain 317,950 graves, 2,255 of which were added during the year. There is a cemetery owned by the United States near the city of Mexico, which has been put in order during the year, the enclosure having

previously become somewhat dilapidated. It is proposed that this ground be hereafter classed with the other national cemeteries and cared for in the same way.

The last surviving pensioner of the Government who served in the Revolutionary War has passed away, but there are still 634 widows of Revolutionary soldiers who receive pensions. There have been 3,078 applications for bounty-land during the year, of which 711 were rejected. The numbers of warrants for bounty-land issued for 11 years are as follows: In 1861, 5,341; 1862, 1,636; 1863, 602; 1864, 1,812; 1865, 1,161; 1866, 406; 1867, 954; 1868, 1,077; 1869, 1,650; 1870, 1,758; 1871, 2,598.

The following statement shows the nature of the injuries received by those who are at present invalid pensioners:

Injury to the head.....	5,155
do. " neck.....	680
do. " chest.....	3,730
do. " abdomen.....	5,735
do. " spine.....	871
do. " shoulder.....	3,383
do. " arm.....	11,953
do. " hand.....	8,173
do. " thigh.....	8,104
do. " leg.....	10,918
do. " foot.....	1,962
For single wounds.....	63,731
For two or more wounds.....	4,022
The proportion of wounds of the head to the whole number is as.....	1 to 13.14
Neck.....	1 to 99.62
Chest.....	1 to 13.17
Abdomen.....	1 to 11.81
Spine.....	1 to 77.77
Shoulder.....	1 to 20.02
Arm.....	1 to 5.67
Hand.....	1 to 8.29
Thigh.....	1 to 8.35
Leg.....	1 to 6.21
Foot.....	1 to 34.53

The whole number of amputations is to the number of injuries as 1 to 10.16.

The proportion of amputations of one hand is as.....	1 to 58.17
The proportion of amputations of both hands.....	1 to 1745.20
The proportion of amputations of one arm.....	1 to 2.05
The proportion of amputations of both arms.....	1 to 272.69
The proportion of amputations of one leg.....	1 to 2.13
The proportion of amputations of both legs.....	1 to 242.39
The proportion of amputations of one foot.....	1 to 73.94
The proportion of amputations of both feet.....	1 to 798.32
The proportion of amputations of leg and arm.....	1 to 545.37

Those pensioned for disabilities caused by disease are classified as follows:

The proportion of diseases of the brain and nerves to the whole number is as.....	1 to 10.32
Digestive system.....	1 to 4.44
Respiratory system.....	1 to 6.75
Genito-urinary system.....	1 to 23.37
Circulatory system.....	1 to 11.20
Fibrous, bony, and muscular system.....	1 to 7.04
Absorbent and excretory system.....	1 to 6.25
From miscellaneous causes.....	1 to 21.40

Under the head of chronic rheumatism 1,385 cases are shown. These constitute about 9 per cent. of all the disabilities. The number of cases of phthisis is 1,045, or about 6 per cent. of all. These four disabilities, chronic diarrhoea, disease of eye, chronic rheumatism, and phthisis, aggregate 7,457 cases, or about 50 per cent. of the entire number of disabilities. The whole number of pensioners paid on account of

hernia is 3,183. This is to the whole number paid for injuries as 1 to 23.29, or 4.29 per cent.

A permanent military post has been established at Fort Snelling, in Minnesota.

The operations of the army during the year have been confined chiefly to making surveys and observations, protecting settlers against the depredations of Indians, or assisting Government officials in the South in enforcing the laws. The battalion of engineers has been reduced to 554 enlisted men. They are concentrated now at Willett's Point and West Point, New York. Considerable progress has been made in river and harbor improvements, the construction of light-houses, and surveys on the lakes and the sea-coast. A commission to make investigations concerning the Sutro Tunnel and the mines of the Comstock lode was authorized by act of Congress on the 4th of April, and Lieutenant-Colonels H. G. Wright and John G. Foster, and Prof. Wesley Newcomb, were subsequently appointed thereon. Their work was completed before the end of the year, but no report of the results had been rendered. A geological survey is also in progress along what is called the central route to the Pacific. The observations and reports at various signal-stations, for the benefit of commerce, have been conducted with success. In the month of October the display of cautionary signals announcing the probable approach of storms was commenced at twenty different ports on the lakes, the Atlantic coast, and the Gulf of Mexico. The signals are so arranged as to be displayed at any hour of the day or night on receipt of warnings by telegraph from the Signal Service Bureau at Washington.

About one-sixth of the military force of the nation has been retained in the Southern States to assist in carrying out the act of Congress of April 20, 1871, known as the "Enforcement Act." After the passage of this law, orders were issued from the War Department to the following effect:

That, whenever occasion shall arise, the regular force of the United States, stationed in the vicinity of any locality where offences described by the aforesaid act, approved April 20, 1871, may be committed, shall, in strict accordance with the provisions of said act, be employed by their commanding officers in assisting the authorized civil authorities of the United States in making arrests of persons accused under the said act; and in preventing the rescue of persons arrested for such cause; in breaking up and dispersing bands of marauders and of armed organizations against the peace and quiet or the lawful pursuits of the citizens in any State.

The military forces were occasionally called upon by the United States marshals to aid in making arrests and protecting tribunals before which alleged offenders against the enforcement act were tried.

The Indians were comparatively peaceable during the year, with the exception of those belonging to the Apache tribe in Arizona. These committed many outrages upon the inhabitants

of the Territory, and upon travellers passing through. Many instances were reported of attacks on dwellings and parties of laborers. Property was stolen or destroyed, cattle driven off, and in many cases men, women, and children killed. The Department of Arizona belongs to the Division of the Pacific, which is under the command of General Schofield, with his headquarters at San Francisco. In the early part of the year, General Stoneman had the immediate command of the department, with a small force of troops, but he succeeded indifferently in protecting the people from the attacks of Indians, and much fault was found with his concentrating his troops at one or two posts, and abandoning others that were regarded by the people as essential to their security. On one occasion the people became so exasperated at the continued atrocities of the Apaches, and the failure of the military to punish them, that they took the matter into their own hands and wreaked a terrible vengeance upon the offenders. A few hundred Apaches had been gathered near Camp Grant, where they were fed by the officers, on condition of desisting from warfare upon the whites. Some of the Indians appear to have been guilty of depredations and outrages notwithstanding their promises, and a party of white men, with the assistance of 100 Papago Indians, set out on the 28th of April and traced them to their camp. On the 30th the pursuing party fell upon the camp and killed 85 men and women, and carried away 28 children as prisoners. This matter was subsequently investigated by a grand-jury of the Federal court, and a number of indictments were found against persons engaged in the attack on the Indian encampment. In their report the jury make the following statements:

We find that the hostile bands of Indians in this Territory are led by many different chiefs who have generally adopted the policy of Cochise, making the points where the Indians are fed the base of their supplies for ammunition, guns, and recruits for their raids, as each hostile chief usually draws warriors from other bands when he makes an important raid upon the citizens, or the neighboring State of Sonora, where they are continually making their depredations. We find that the habit of beastly drunkenness has generally prevailed with few marked exceptions among the officers commanding at Camp Grant, Camp Goodwin, and Camp Apache, where the Apache Indians have been fed; that the rations issued at these camps to the Indians have frequently been insufficient for their support, and unjustly distributed, sometimes bones being issued instead of meat; that one quartermaster of the United States said he made a surplus of twelve thousand pounds of corn in issuing rations to the Indians of Camp Goodwin. We find that a commanding officer, while commanding at Camp Apache, gave liquor to the Apache Indians, and got beastly drunk with them from whiskey belonging to the Hospital Department of the United States Government; also, that another officer of the United States Army gave liquor to the said Indians at said camp; that officers of the United States Army at those camps where the Indians are fed, are in the habit of using their official position to break the chastity of the Indian women. That the present regulations of Camp Grant, with the Apache Indians on

the reservation, are such, that the whole body of Indians on said reservation might leave the reservation, and be gone many days, without the knowledge of the commanding officer. In conclusion of the labors of this United States grand-jury, we would say that five hundred of our neighbors, friends, and fellow-citizens, have fallen by the murdering hand of the Apache Indian, clothing in the garb of mourning the family circle in many of the hamlets, towns, and cities of all the States of our country. This blood cries from the ground to the American people for justice—justice to all men.

In June General Crook took command in the Territory, and at once adopted the plan of enlisting friendly Indians in the service against the hostile Apaches. This was generally approved by the people, and promised to be very effective in suppressing and punishing outrages, as the enlisted Indians knew the haunts of the Apaches, and were familiar with their modes of warfare. Soon after General Crook had put this plan into operation, and had secured the aid of a prominent chief named Miguel, Mr. Vincent Colyer, one of the Indian Peace Commissioners arrived in the Territory and forbade the carrying out of the plan. Mr. Colyer met the Apache chiefs, and by making presents, and promising the aid and protection of the Government, obtained promises that they would cease from making war, or committing depredations upon the whites. The action of Mr. Colyer, who seems to have avoided consultation with the authorities of the Territory, greatly displeased the people, and resulted in very little practical benefit, as the outrages upon the persons and property of citizens were quite as frequent after his visit as before. Among these was an attack upon a stage going from Prescott to Tucson. It occurred near Wickenburg, on the evening of November 5th, and several persons were killed, including Mr. Frederick W. Loring, of Boston. On the general subject of dealing with the Indians in the Territory of Arizona, Governor Safford wrote as follows on the 31st of October: "The people of Arizona want peace, they care not how it is obtained; but they know, by years of experience, that to feed Indians and let them roam over large reservations, only places them in a secure position to raid upon the settlers, and return to the reservation for safety and rest. With one of the richest Territories, every one feels discouraged. At least five hundred men have been killed, and a large number of them were horribly tortured, and those who are left, after fighting for years to hold the country, find themselves in poverty and are looked upon as barbarians. General Crook struck the key-note when he enlisted Indians against Indians. It threw consternation among them such as was never seen before, and, had he been allowed to pursue this policy, it would have taken but a few months to conquer a lasting peace. But Mr. Colyer countermanded this order, and millions will have to be expended, and hundreds of lives lost, before the end will be reached. I believe the Indians are invaluable in fighting Indians,

and by their use a speedy, permanent peace can be conquered. Then is it not the part of humanity that they should be used? If it is a crime to undertake to settle and develop our new countries, then the sooner it is known and declared the better. If not, then such a man as Colyer ought never to be sent, with his deep-seated prejudices against the white settlers, to arrange the difficulty."

In the latter part of November a petition was forwarded to the President, signed by a large number of citizens of Arizona, expressing their earnest desire for peace, and their belief that it was to be attained through the policy of General Crook rather than that of Vincent Colyer. Orders were subsequently given to General Schofield, the purport of which is reproduced in his instructions to the officers in Arizona for the government of the Indians. These were as follows:

All roving bands of Indians for which reservations have been set apart by the Indian Commissioner, under the authority of the President of the United States, will be required to go at once upon their reservations, and not to leave them again upon any pretext whatever.

So long as they remain upon their reservations, in due subordination to the Government, they will be fully protected and provided for; otherwise they will be regarded as hostile, and punished accordingly.

The reservations heretofore set apart will be publicly declared in General Orders from headquarters of the Department of Arizona, and an officer of the army will be designated by the department commander to act as Indian Agent for each reservation.

All male Indians (old enough to go upon the war-path) will be enrolled, and their names will be recorded in a book, kept for that purpose, with a full and accurate descriptive list of each person. Each Indian will be furnished with a copy of his descriptive list, and will be required to carry it always with him.

The numbers of women and children belonging to each head of family will also be recorded opposite his name in the descriptive book.

The presence on the reservation of every male adult will be verified once a day, or oftener if found necessary, to prevent the possibility of any leaving the reservation and returning without the knowledge of the officer in charge. Care will be taken to inform the Indians that this precaution is intended to insure the protection of the innocent and punishment of the guilty, and that it is to their interest to assist in the detection of guilty individuals, so that the whole tribe may not suffer for the crimes of a few.

And, as far as possible, the Indians will be held responsible only for their own individual acts. Punishment will not be inflicted upon a tribe for the acts of individuals, unless they are guilty of complicity with the criminals, by harboring them or otherwise. But when any enrolled Indian is found absent from his reservation without permission, all his family will be arrested and kept in close custody until he has been captured and punished according to his deserts.

Every Indian found off his reservation without permission, after a time to be fixed by the department commander, will be regarded and treated as hostile; and any Indian who shall so leave his reservation shall be presumed to have done so for hostile purposes, and upon his return to the reservation shall be arrested and punished accordingly. No Indian will be given permission to leave his reservation except upon such conditions as the department commander may prescribe.

No persons except those in the United States ser-

vice will be allowed upon any Indian reservation without the permission of the officer in charge.

Citizens desiring to enter or cross a reservation for any legitimate purpose will, when it is deemed practicable and proper, be permitted to do so, but will always be escorted by a sufficient detachment of troops to prevent any collision with the Indians.

The ration for issue to adult Indians will consist of one pound of meat and one pound of breadstuff, two quarts of salt to each hundred rations, and four pounds of soap to a hundred rations once a week. Rations in half of the above proportions will be issued to children under twelve years of age. Beef will be issued on the hoof. An officer will always be present to witness and direct the slaughtering of beef, and the distribution of food among the separate bands and families, and will certify to the commanding officer that it is fairly done.

The utmost care will be taken to see that rations are issued only for the number of Indians actually present, and that no opportunity is afforded for the barter of provisions for arms, ammunition, whiskey, or any thing whatever.

Active operations will be kept up against the hostile Apaches of Arizona, and pressed with all practicable vigor until they submit to the authority of the Government, cease from hostilities, and remain upon their reservations. After a reasonable time has been given for all the Apaches to avail themselves of the liberal terms offered by the Government, the department commander will, in his discretion, make use of the friendly Indians to hunt out and destroy those who remain obstinately hostile.

Full authority is conferred upon the department commander to adopt such measures as may be necessary to carry out these instructions, and to give full effect to the policy of the Government.

By order of Major-General SCHOFIELD.

J. C. KELTON, Assistant Adjutant-General.

There are now within the jurisdiction of the United States about 321,000 Indians, of whom 75,000 inhabit Alaska and 3,663 are scattered throughout the States of Florida, North Carolina, Indiana, Iowa, and Texas, and maintain no tribal relations. The remaining Indian population, numbering 242,371, is distributed as follows:

Washington Territory.....	15,487	Montana.....	18,835
Oregon.....	24,508	Wyoming.....	2,400
California.....	7,353	Nebraska.....	6,410
Arizona.....	5,066	Kansas.....	6,052
Nevada.....	6,000	Indian Territory.....	53,472
Utah.....	12,800	Minnesota.....	3,677
New Mexico.....	18,640	Wisconsin.....	6,355
Colorado.....	7,200	Michigan.....	8,099
Dakota.....	27,815	New York.....	4,804
Idaho.....	4,469	Total.....	242,371

The Indians under the jurisdiction of the United States are now located on reservations of land amounting in the aggregate to 228,473 square miles, or 137,846,971 acres. Deducting from this statement the Indian Territory south of Kansas, and there remains a population of 172,000, occupying reservations of land amounting to 96,155,785 acres, or 558 acres to each individual. In the Indian Territory the population consists of several semi-civilized tribes, who have framed a constitution for a sort of confederated government. The Choctaws number 17,000, and have 48 schools, attended by 1,460 pupils; the Cherokees number 17,000, and have 48 schools, with 1,920 pupils; there are 13,000 Creeks, with 30 schools; and 2,500 Seminoles, with 4 schools, and 225

pupils. The constitution framed by these tribes has not received the approval of Congress.

ASIA. The history of Asia for the year 1871 is of more than ordinary importance. The transformation of the Empire of Japan, which only a few years ago was wholly secluded from the other portions of the world, into a thoroughly-civilized country, is progressing with a rapidity which challenges universal admiration. The abolition of the tycoonate has been followed by the complete overthrow of the power of the daimios, and thus the landmarks of the ancient constitution have been completely swept away. The Government continues to invite distinguished foreigners, especially Americans, into the country, and intrusts to them the most influential positions, in order to hasten the political regeneration. A number of students have been sent to the United States, to Germany, England, and France, to be there thoroughly educated. The Mikado has even gone so far as to give a formal audience to the American ambassador, and to have presented to him an American admiral, with his officers, and other distinguished Americans. A railroad has been built between Yokohama and Yeddo, and, by the completion of a telegraph between Nagasaki and Osaka, Japan will soon be in telegraphic communication with Europe. But, while thus favoring the intercourse with foreign countries, the Government and people showed a marked hostility to Christian missionaries.

China is following the example of Japan, and has determined to send young men to the United States and England to be educated in the schools of those countries. The French claims for indemnity for the Tien-Tsin massacres were paid, but the feeling against foreigners, and especially against Christian missionaries, continued to be very bitter. The empire has been comparatively free from internal disturbances.

While in the southern part of Chinese Toorkistan, which is called by the Chinese Thian-shan-nan-lu, Yakook Klousbegi has maintained his rule,* the northern part, or Thian-shan-pelu, in which the united Calmucks, Tarandshis, and Soongarians, had made themselves independent of Chinese rule, has been, at the request of the Chinese Government, invaded by Russian troops, which, in May, conquered Kultsha, the capital of the Tarandshis. The Russian accounts state that the general commanding in Kultsha was receiving numerous deputations of Calmucks, Kirgheez, and Tarandshis, announcing their submission to Russia, which thus has gained in Central Asia another station of incalculable political and strategical importance.

A treacherous assault made in Corea upon an American surveying-party induced Admiral Rodgers to attack the forts from which the outrage had been committed. Five forts were captured and destroyed, after which the ad-

* See ANNUAL CYCLOPEDIA for 1870.

miral, not feeling authorized to continue hostilities, except to repel and punish attacks, returned to Chefoo.

Afghanistan was the seat of a protracted civil war between the ruling prince, Shir-Ali Khan and his rebellious son, Mehemed Yakoob Khan. In May, the important city of Herat fell into the hands of the rebels. Owing, however, to the influences which the English Government of India, regarding Yakoob Khan as less devoted to British interests than his father, brought to bear upon Shir-Ali, a reconciliation was effected between father and son quite suddenly and unexpectedly, and Yakoob Khan was appointed by his father Governor of Herat. The development of affairs in Afghanistan is watched with intense anxiety both in England and Russia, and the annexation of the country to one of these two great rivals may decide the ascendancy of the victor in Central Asia. Russia, in a marked way, favors the pretensions of Abdur - Rahman Khan, the dreaded rival of Shir-Ali, and pays him a yearly subsidy.

The English Government in India is considerably alarmed at the progress of the Russians in Central Asia, and at the unruly spirit betrayed by the Mohammedans of India. The trial of the Wahabite conspirators against English rule brought to light the fact that the rigorous measures adopted by the English Government have not intimidated, but exasperated the Mohammedan fanatics, and that the Wahabites are generally teaching the principle that for a pious Mohammedan the expulsion of the English from India is more necessary than prayers, fasts, and other religious rites. When, in Calcutta, Chief-Justice Norman fell a victim to the fanaticism of a Mohammedan assassin, the English press generally expressed the fear that in the next attempt to overthrow the British rule in India, which sooner or later will come, the Mohammedans will certainly play the most prominent part. As Russia advances its railroad net-work more and more toward its possessions in Central Asia, the English Government has deemed it prudent to assume the initiative in the construction of a railroad bringing England and India into immediate connection. The completion of this railroad would be of immense commercial and strategical importance, for, while at present the passage from England to India requires nearly one month's travel, the through-railroad would reduce the time to seven days and thirteen hours.

One of the most terrible famines on record in the history of modern times devastated Persia, throwing into the lowest depth of misery and despair this wretched country, which even in ordinary years severely suffers from poverty. The famine had not fully ceased at the close of the year, and the greatest alarm was felt at the approaching winter.

The Russians, in 1871, took possession of the entire island of Saghalien, which, by a treaty

concluded in 1867, had been divided between Russia and Japan. The possession of Saghalien is of great importance to the Russians, because this island controls the coasts of Mantchooria and the mouth of the Amoor. Not satisfied with the occupation of this extensive territory, the Russians have made attempts to establish several colonies on the Japanese island of Yesso, the northern portion of which is inhabited by semi-independent tribes. Thus far, these attempts, have, however, failed. It is also reported that the Russians have acquired several new provinces west of the peninsula of Corea.

ASTRONOMICAL PHENOMENA AND PROGRESS. *The Temperature of the Sun.*—*Ericsson's Solar Pyrometer.*—During the year, Captain John Ericsson, whose invention of the solar engine is described in the *ANNUAL CYCLOPEDIA* for 1870, contributed a series of remarkable papers to the *London Engineer*, conveying the results of his original researches to determine the temperature of the sun. For this purpose he contrived a solar pyrometer of a most ingenious pattern. The instrument is composed of four principal parts: 1. The heater (with furnace attached), consisting of a cylindrical vessel placed vertically, having a spherical bottom and open top; an enlargement representing a truncated cone being formed near the middle, the ends of which are concave and spherical. 2. A conical vessel surrounded with a double casing secured to the base of the central enlargement of the heater. 3. A cylindrical vessel secured to the opposite end of the said enlargement, also surrounded with a double casing. 4. A furnace, enclosing the lower end of the heater. The spherical concavity at the base of the conical enlargement of the heater is 10 inches in diameter, with a radius of 18 inches. A thermometer is applied at the focus of this spherical concavity, the bulb being so arranged that only one half of the area is exposed to the radiant heat, the other half being surrounded by a non-radiant substance. When in operation, the heater is filled with water, which is to be maintained at a constant temperature of nearly 212° by the action of the furnace. The principle of the solar pyrometer is that of ascertaining the intensity of the heat of the sun by comparing the temperature produced by the radiant heat of a concave spherical radiator of 10 inches' diameter at a distance of 18 inches from its face with the temperature produced by the radiant heat of the sun, a sphere of (estimated) 832,584 miles in diameter at a distance of (estimated) 91,430,000 miles from its centre. It is impossible, within our present limits, to describe the details of Captain Ericsson's apparatus, but the foregoing account gives some idea of its more essential parts, and of the theory upon which the inventor proceeds. We quote:

As the principle of the instrument calls for the employment of a concave radiator of spherical cur-

ture, it will be evident that, in comparing its indication with solar radiation, we must not overlook the fact that the sun, in place of presenting a concave spherical surface, the focus of which is situated at the boundary of the earth's atmosphere, presents a convex semi-spherical face. In consequence of this—the sun being 852,584 miles in diameter—his limb will be 426,292 miles farther off than the nearest point of his face. The eccentricity of the earth's orbit being 0.01679, while the mean semi-diameter is 91,430,000 miles, it follows that, during the summer solstice, the distance from the earth to the centre of the sun will be 92,964,800 miles. Deducting the radius of the sun, we ascertain that the distances to the sun's limb and to the centre of his face are respectively 92,964,800 and 92,538,500 miles. Inverting the square of these distances, it will be found, therefore, that the intensity of radiation from the limb of the sun, compared with the central part, suffers a reduction of 0.0086. The temperature at the boundary of our atmosphere being 84.84°, it will thus be seen that the reduced intensity under consideration amounts to $0.0086 \times 84.84^\circ = 0.51^\circ$ Fahr. The observed diminution of the intensity of the radiant heat emanating from the limb of the sun being more than this, it will be seen that we may, without material error in our calculations, regard the entire surface represented by the area of the great circle of the sun as being equidistant—92,964,800 miles—from the earth.

It results from previous demonstrations that the temperature of spherical radiators, transmitting equal intensities to their foci, are inversely as the square of the sines of half of the angles which they subtend, that is, the angles formed by the axis of the radiator and the heat-rays projected from the circumference to the focus. We know from previous explanations that, owing to the great distance in connection with the diminished intensity of the rays emitted by its limb, the radiant power of the sun will be identical with that of a spherical radiator whose focus is situated at the boundary of the earth's atmosphere. Consequently, as the spherical radiator of the solar pyrometer, the temperature of which is 163.9° , transmits to its focus an intensity of 12.2° , we are enabled to calculate what temperature the sun must possess in order to transmit an intensity of 12.2° to the boundary of our atmosphere. The angle subtended by the sun is $32' 1''$; that subtended by the radiator of the pyrometer $32' 15''$, the ratio of the square of the sines of half of these angles being $1 : 3,567.7$. Accordingly, the sun, in order to produce by its radiant heat a temperature of 12.2° at the boundary of the atmosphere of the earth, must possess a temperature of 3,567.7 times greater than that of the spherical radiator of the pyrometer. This latter temperature being 163.9° , that of the sun cannot be less than $3,567.7 \times 163.9 = 584,746^\circ$, in order to transmit an intensity corresponding with a thermometric interval of 12.2° on the Fahrenheit scale. But solar intensity at the boundary of our atmosphere, as demonstrated by my actinometer observations, is 84.84° , hence

$\frac{84.84}{12.2} = 6.95$ times greater than that transmitted by the radiator of the pyrometer to its focus. The temperature of the sun, therefore, cannot be less than $6.95 \times 584,746 = 4,066,984^\circ$ Fahr.

From other considerations given at length in his papers on the subject, the author deduces that the temperature at the boundary of the solar atmosphere is $2,852,865^\circ$ Fahr. The mean of the two temperatures here given—one at the sun itself, and the other at the boundary of its atmosphere—is $3,468,429^\circ$.

Subsequently, Captain Ericsson invented another apparatus, to corroborate the experiments made with the first. In this the heat was raised to a much higher pitch than 212° —

ranging from $1,290^\circ$ Fahr. to $2,190^\circ$, but the principle of the operation is the same as that of the before-mentioned. From this he ascertained the temperature of the sun itself to be $4,451,924^\circ$ Fahr., a result differing not greatly from that obtained by the first process.

Influence of Solar Heat on the Earth's Rotary Velocity.—This difficult problem has also received the profound attention of Captain Ericsson, and, like his investigation into the solar temperature, is characterized by great originality and fertility of illustration. He undertakes to show that the sun's radiant heat develops forces capable of diminishing perceptibly the earth's rotary velocity, and that unless the retarding influences of solar heat are counteracted by some cosmical force, of which we now have no knowledge, the rotary velocity of this planet will be considerably reduced in the course of time. He speaks of two classes of agencies through which this change is made. One is animate or muscular energy, and the force generated by heat from the combustion of organic matter, both resulting indirectly from the sun's radiant heat. Under this head he refers to man's work on the earth; for example, the muscular exertions of the ancient Egyptians, in moving from a distance the millions of tons of matter contained in the pyramids, disturbed the previous balance of the rotating mass, causing a tendency to check the earth's rotary velocity and increase the length of the day. The building of great cities from materials taken from below the surface, and raised to a considerable height above it, has a similar effect. But a retarding agency of greater importance, indirectly resulting from the solar heat, is the constant moving of solid and sedimentary matter in rivers to positions nearer the equator, and hence at a greater distance than before from the axis of rotation. The author presents a series of tables of rivers in the two hemispheres flowing toward the equator, and estimates the retardation in foot-pounds per second both from the transported sediment and the water itself. We can here give only his argument as applied to the Mississippi River. He says:

The elaborate report of General Humphreys to the Bureau of Topographical Engineers, Washington, shows that the average quantity of earthy matter carried into the Gulf of Mexico, partly suspended in the water and partly pushed along the bottom of the river by the current, amounts for each twelve months to 903,100,000,000 pounds. This enormous weight of matter is contributed by numerous large branches and upward of 1,000 small tributaries. The main distance along the streams, which the sediment is carried in its course to the sea, exceeds 1,500 miles. The distance which determines the amount of force tending to check the earth's rotation is obviously shorter.

The maps of the Mississippi River basin, accompanying General Humphreys's report, show that its centre is situated $7^\circ 10'$ west of the mouth of the main river, and $11^\circ 15'$ north of the same, in latitude $40^\circ 15'$. It will be found, on inspecting the accompanying section of the earth, that, agreeable to the stated latitudes, the centre of the Mississippi basin rotates in a circle of 15,764,782 feet radius, and that its velocity

round the axis of the globe is 1,147.90 feet per second. The mouth of the river, it will also be seen, rotates in a circle of 13,246,102 feet radius, with a circumferential velocity of 1,328.89 feet per second. Comparing these velocities, we ascertain that an increased circumferential velocity of 178.99, say 179 feet per second, is imparted to the water and to the sedimentary matter which it conveys during the course from the centre of the basin to the mouth of the river. As before stated, the annual discharge of earthy matter at the mouth of the river is 903,100,000,000 of pounds. The centre of the basin, lat. $40^{\circ} 15'$, being 2,461,320 feet nearer to the axis of rotation than the mouth of the river in lat. $29^{\circ} 0'$, it will be found that the increase of rotary velocity, as already stated, is 179 feet per second—a rate acquired by a fall of 500.6 feet. The elements are thus furnished for determining with exactness the amount of retardation attending the change of position of the abraded matter during its transfer from the basin to the mouth of the river. Multiplying 903,100,000,000 by 500.6, we ascertain that the counteracting force exceeds 455,000,000,000,000 foot-pounds annually = 452×10^{14} foot-pounds in a century. The earth's present *vis viva* being $18,875,361 \times 10^{21}$ foot-pounds (to be demonstrated at the proper time), it is easy to calculate that the retardation, occasioned by the stated reacting energy called forth by the sedimentary matter which is carried to the ocean by the Mississippi, will amount to $\frac{1}{133,333}$ of a second in a century. In view of this small fraction of time, it will be well to remind the reader that the retardation of the earth's rotary velocity, inferred from the apparent acceleration of the moon's mean motion, now generally admitted by astronomers, is somewhat under twelve seconds in a century. Insignificant as this retardation appears to be, it calls for a constant reacting force of 455,000,000,000 foot-pounds per second, as will be shown in the course of our investigation. Dividing this amount by the adopted standard of a horse-power, viz., 550 foot-pounds per second, it will be found that a constant energy represented by 827,000,000 horse-power, exerted in a contrary direction to that of rotation, is necessary to check the rotary motion to the extent mentioned, viz., $\frac{1}{133,333}$ = $\frac{1}{133}$ of a revolution in the course of a century. Accordingly, 720,000 years, nearly, will elapse before one entire revolution shall have been lost, notwithstanding the existence of a constantly retarding force of 455,000,000,000 of foot-pounds per second. We can readily ascertain the aggregate of this force during the long period mentioned, if we multiply the same by the number of revolutions of the earth per annum, and the number of seconds for each revolution; thus, $455 \times 10^9 \times 865.24 \times 86,400 \times 720,000 = 103,379,867 \times 10^{17}$ foot-pounds. By dividing this amount of energy in the earth's *vis viva*, $18,875,361 \times 10^{21}$ foot-pounds, we ascertain that the stated enormous retardation overcome in the course of 720,000 years amounts to only $\frac{1}{133}$ of the present rotary *vis viva* of our planet. Probably no other mode of presenting the subject could give so clear an idea of the vastness of the mechanical energy of a sphere 8,000 miles in diameter, whose specific gravity is 24 times that of granite, revolving at a rate of one revolution in 24 hours. Returning to the retardation produced by the Mississippi, let us bear in mind that the precipitation which causes the abrasion of the solid matter and the currents by which it is conveyed is the direct result of the sun's radiant heat.

In his conclusion upon this branch of the subject, Captain Ericsson shows that the aggregate of solid matter transported from its original position by the river-systems of both hemispheres, and carried toward the equator—consequently removed to a greater distance from the axis of rotation—exerts a retarding influence of 39,894,658 foot-pounds per second.

Multiplying this amount by 86,400 seconds, we learn that, for each revolution of the earth, a retarding energy, represented by 3,446,898,451,200 foot-pounds, has to be overcome. From these facts and arguments, leaving out of the present view the tendency of rivers, by the flow of water alone, to destroy the earth's *vis viva* by friction, the author claims to have demonstrated that constancy of rotation of the earth is incompatible with solar influence.

The Solar Protuberances.—For a period of more than a year, Prof. Respighi, of Rome, has made regular spectroscopic observations of the border and protuberances of the sun, which have been studied to advantage at times other than those in which the orb is eclipsed. A translation of a paper by Prof. Respighi, giving the fruits of his labors, appears in the *American Journal of Science*. The investigator found that protuberances having the appearance of gaseous masses issuing from the sun's surface are so marked and constant, that it is necessary to conclude that they are really produced by gaseous eruptions from the sun, taking place with more or less energy, and on a varying scale of grandeur. The dimensions of the protuberances differ greatly. Among 4,000 of them watched by the professor, there were more than 700 not less than 1' high (or about 24,000 miles), and some were not less than 6', or 144,000 miles high. The development of the protuberances is ordinarily announced by bright points, or patches, standing out upon the chromosphere, from which subsequently burst forth jets more or less subtle, which rise sometimes slowly, sometimes rapidly, to considerable elevations, and then fall back in parabolic forms upon the sun, or diffuse themselves in masses often subject to rapid changes. The author has on several occasions witnessed the development, in the neighborhood of spots, of enormous protuberances, produced by the eruption of groups of very slender and very brilliant jets, which in a short time spread into great cloudy masses, either settling down upon the surface of the sun or gradually vanishing at a great height above it. Outside the zone of spots, up to about 70° in latitude of the sun, the protuberances commonly remain visible for many days, so that it is possible to follow by them the rotation of the sun. In regard to the distribution of protuberances upon the solar surface, he observes that in the circumpolar regions, within a distance of 20° from the poles, they are either not found, or occur exceptionally; and that the Northern Hemisphere is more characterized by great protuberances and gigantic eruptions than the Southern. The following are some of the more valuable results deduced from a great number of observations made upon the border of the sun's disk in the region of the spots:

In the neighborhood of the spots the chromosphere is rather low, quite regular, and intensely bright. Upon the exact locality of a spot, or rather over its

nucleus, the chromosphere is generally very low and sometimes totally wanting.

At the nucleus, either there are no eruptions, or they are confined to jets of great subtilty and little duration.

The nuclei of the spots are either totally obscure or possess very feeble luminosity.

Along the borders of the spots, jets are thrown up of extraordinary intensity and violence and of very definite configuration.

The jets adjoining the spots consist not solely of hydrogen, but also of other substances, as is shown by their respective bright lines in the spectrum.

Among these bright lines which are commonly found at the base or in the lower portions of the jets, there are frequently seen those of sodium, magnesium, iron, etc., and constantly two lines in the red, which do not correspond with those of any substance yet known.

Now and then, the eruptions in the vicinity of the spots assume gigantic proportions, and are probably the cause of the rapid changes of form and position which are observed in the spots themselves.

There are often seen, in the neighborhood of the spots, jets curved backward upon the solar disk in forms which are sensibly parabolic.

The immense jets and erupted masses near the spots expand and vanish away more rapidly than in any other region.

On the area of the spots, neither the photosphere nor the edge of the sun's disk shows any perceptible irregularity, that is, neither any perceptible prominence nor depression.

From all his spectroscopic observations the author arrives at the following conclusions among others: That the photosphere is the surface of an incandescent liquid mass, or stratum, by the weight of which various gases, and especially hydrogen, are confined and compressed in the interior of the sun at an elevated temperature, under an enormous tension, and with a density differing but little from that of the superincumbent liquid stratum. That these gaseous masses in the interior, not being in a condition of stable equilibrium, at times burst forth with great force, developing the jets which constitute the protuberances. That the nuclei of the spots consist of portions slightly projecting from the photosphere, of solid masses or islands floating upon the liquid stratum which envelops the body of the sun. The immense chains of jets or protuberances, which rise ordinarily in the region of the spots, might be the cause of those great transformations which are observed in the latter, and determine, by their resistance in the superficial strata, currents in a direction opposite to that of the solar rotation, from which would result the proper motion of the spots themselves.

Sun-Spots.—Prof. Zollner addresses to the *Astronomische Nachrichten*, of March 2d, a note on the periodicity and heliographic distribution of sun-spots. The following is its substance:

The sun-spots are slaglike by the radiation of heat on the glowing and liquid surface of the sun; the products of the cooling having again dissolved, in consequence of the disturbance of equilibrium produced by themselves in the atmosphere. When these disturbances are not only local, but generally distributed, the formation of new spots is but little favored at the times of such general motion of the atmosphere, because then the most essential condi-

tions of the surface are wanting for a severe depression of temperature by radiation, namely: the rest and clearness of the atmosphere. But, when the surface has again gradually become quiet after the dissolution of the spots, the process again recommences, and acquires in this manner a *periodic* character, in consequence of the mean relationships of the surface of the sun, which may be considered as attaining an average in long periods. The distribution of the spots in area must, according to this theory, be determined by the zones of greatest atmospheric clearness, which, as has been shown, generally coincide with the zones of the greatest abundance of spots.

A fine group of spots was observed to pass the sun's centre in the Southern Hemisphere, August 17th. The chief spot had an umbra about 16,500 miles wide, and a penumbra 82,000 miles wide, and 46,000 miles long, varying in apparent size, however, from day to day, and by the 25th of the month becoming quite small.

Mr. J. Birmingham, of Tuam, sent to *Nature* the sketch of a remarkable sun-spot seen by him May 6th and 7th. It was characterized by a reddish-brown object like a cloud, which seemed to hang over the nucleus of the umbra, dividing it in two. The observer formed the impression that it hung at a certain altitude above the spot proper, and had no motion distinct from the latter. On the 8th of the month this novel object had disappeared, and the nucleus, formerly divided, was then in one.

Mr. Stone, the newly-appointed Astronomer Royal at the Cape of Good Hope, has communicated to the Royal Society a paper comparing the curve representing the thermometric observations in that locality, taken there since 1841, with a curve giving Wolf's observations of sun-spots. He says:

The agreement between the curves appears to me so close that I cannot but believe that the same cause which leads to an excess of mean annual temperature leads equally to a dissipation of solar spots. There is on the whole a curious appearance of logging of the inverse curve of solar spots over that of temperature. At the maximum about 1856, this, however, does not appear to be the case; but, when the uncertainties of the data, both of the solar spots near the minimum, and of the mean temperature also, are taken into account, such discrepancies might perhaps fairly be expected, even if there be a physical connection between the two phenomena as results of some common cause. If there be a sensible inequality in the mean temperature with a period of about ten years, then the mean temperature resulting from the observations in the temporary observatory, which were made near a maximum, will be too high. The corresponding ordinates, therefore, will be depressed too much relatively to those corresponding to observations made in the other two observatories. I have imperfectly corrected the mean of the results for the temporary observatory on the supposition of such an inequality existing. The only result of such a correction is to modify the curve at the points of junction of the observations made in different positions. The general form is unaltered. It should be mentioned that the point about which the curves appear to differ most is near or at the change of exposure from the original observatory to the temporary shed about 1852.

I may mention, that I had not the slightest expectation, on first laying down the curves, of any sensible agreement resulting, but that I now consider the agreement too close to be a matter of chance. I should, however, rather lean to the opinion that the

connection between the variation of mean temperature and the appearance of solar spots is indirect rather than direct, that each results from some general change of solar energy * * * The problems of meteorology appear to be presented here in a simpler form than in England, and probably systematic photographic self-registering observations extended over a few years might lead to important results.

Mr. Francis H. Smith, writing to the *American Journal of Science*, states that, on the 14th of April, at the University of Virginia, he saw, with the naked eye, a large sun-spot just above and to the left of the centre of the sun's disk. The time was shortly before sunset, and, the atmosphere being quite hazy, he could gaze with impunity at the sun, which appeared of a bright-orange color. As thin horizontal streaks of darker haze passed over the disk, the spot came out with remarkable distinctness. Prof. Peters, who was with him at the time, saw it plainly. On a subsequent evening, Mr. Smith, with another observer, obtained a good view of the spot under the same circumstances of position, haze, and color. It had moved, however, in the interval, to the right of the sun's centre. He had tried in vain, earlier in the day, to see it through colored glasses. Some time after the first occasion mentioned, he examined the sun with a small refracting telescope, and thought there appeared near the indicated position a large spot, with a smaller companion, yet, in the absence of micrometric measurement, he would not have thought it large enough to be visible to the naked eye.

Auroral Theory of the Sun's Corona.—Prof. W. A. Norton contributes a second paper on this subject to the *American Journal of Science*, in which he fully discusses his theory, sustaining it principally by the results of observations made at the total eclipse of August 7, 1869, when the corona was most successfully studied. In a word, he conceives the sun to be surrounded by a permanent atmosphere, like the earth, and that the corona is nothing but a congeries of auroral streamers shooting out far beyond that atmosphere, similar to those which at times radiate many hundreds of miles into space from the upper atmosphere of the earth. Among the deductions from this theory is this important one: that a portion of the auroral matter from the sun may fall upon the earth's atmosphere, and furnish the substance of terrestrial auroras, for which no terrestrial origin has yet been detected. The zodiacal light Prof. Norton regards as only an indefinite extension of the corona. To the accumulation of solar auroral matter in our atmosphere, he is led to ascribe the periodic and irregular disturbances of the earth's magnetic condition—these disturbances being known to coincide with the increase of sun-spots, which, upon his theory, cause the auroral developments. To his paper, the author adds the following interesting note by way of disposing of various theories which do not connect the corona directly with the sun:

Some persons have conjectured that the corona

might be produced by the passage of the sun's rays through the earth's atmosphere, but it may readily be shown that this is impossible. When one reflects that the half width of the moon's shadow, in the larger eclipses, is as great as the estimated height of the atmosphere, it will be seen that, to an observer on the central line of the eclipse, the line of sight will not fall upon the illuminated portion of the atmosphere exterior to the shadow, unless inclined under a large angle to the line of direction of the centres of the sun and moon. The corona, therefore, if of terrestrial atmospheric origin, ought to present, toward the middle of the eclipse, the appearance of a halo entirely detached from the dark body of the moon, and many degrees distant from it. It ought, also, to increase in brightness from its inner border, for a considerable distance outward.

Others have imagined that the corona might be attributable to the passage of the sun's light through a lunar atmosphere; but, since some of the streamers, or rays of the corona, have been seen to extend to a distance greater than the sun's diameter, this would require the lunar atmosphere to be of vast extent; whereas, no decisive evidence has yet been obtained of the existence of any lunar atmosphere capable of producing a sensible refraction, or reflecting a perceptible amount of the sun's light to an observer on the earth.

Perhaps the more prevalent idea, at the present day, is, that the corona, with its rays and tufts of light, is a phenomenon of diffraction produced by the passage of the sun's rays along the denticulated edge of the moon. This theory has an air of plausibility, but it is entirely inadequate to account for the great extent of the coronal rays. The fringes produced by the diffraction of light in its passage near the edge of a body appear to the eye of the observer to extend but a small angular distance from the edge. This would be more strikingly true in the case of a distant body, like the moon.

The only remaining supposition is that the corona is either an envelope of some kind permanently connected with the sun, or is made up of material emanations proceeding immediately from the sun. To the large body of indirect evidence, that the corona is wholly a solar phenomenon, that has been obtained, we may now add that of direct observation, since it appears that "an examination of the photographs of totality," obtained at the eclipse of 1869, shows that as the moon advanced the corona was progressively covered.

Eclipse Photographs.—Mr. A. Brothers, of London, sends to *Nature* a note, with an illustration, descriptive of the results of his attempt to photograph the eclipse of December, 1870, at Syracuse. He says:

It will be noticed that there is more of the corona shown on the west side of the moon than on the east, north, or south. This feature is shown on all the plates, so that there can be no question that there was more coronal light on the west side of the moon than at the other points. In explanation of the great display of the outer rays (I use the term rays for want of a better—perhaps outer light would be more correct, for there is no indication of lines or rays on any of the plates), I had supposed that the east side might have been partially covered with cloud; but in conversation with Prof. Eastman I found that he was observing for the reappearance of the sun, and he was quite certain that there was no cloud at the time the photograph was taken—that is, at about thirteen seconds from the end of totality. Mr. Fryer also is equally certain that there was no cloud. The plate was exposed eight seconds. It will be noticed also that the prominences are more numerous on the side where the corona is brightest.

Various opinions have been expressed as to the quality of the light of the corona. The effect we saw

was that of moonlight, but not of the full moon, excepting the brilliant light close to the moon's limb, which is equal to the brightest moonlight, and I think its action on the sensitive plate confirms this opinion.

A point of much interest to be noticed is, that the light of the corona had been considered to be much less active than it really is; eight seconds were sufficient to produce on the plate an effect of light extending beyond the moon's limb, at least one and a half million of miles.

I leave it to others to account for the cause of the great gaps or rifts in the corona: also their identity in position with those shown in the photograph taken by the American photographers at Cadiz. The identity of one of the rifts is absolutely fixed by the two prominences between which it appears in the photographs, and this one gives the relative places of the others.

When the two photographs are compared, there is an apparent difference in the places of the rifts with respect to their angular position on the moon's circumference. How this difference arises I am not prepared to say, as I have no information as to how the American picture was taken, and there is no mark on the transparency, which has been lent to me by Prof. Young, to indicate the north point. In the engraving from my photograph the top is the north.

It is perhaps necessary to say that it is quite impossible to represent in an engraving on wood the delicate detail of the corona. The cut fairly gives the main features, but it is hard when compared with the original; the contrast should not be so great; the ground should not be perfectly black; and the effect should not be produced by lines. No woodcut has ever yet accurately represented the phenomena of the eclipsed sun.

When the photograph No. 5 is combined in the stereoscope with the one taken about one minute earlier, stereoscopic relief is produced—the corona is distinctly seen beyond the moon. It may be thought that this is merely the effect of contrast, but I believe it is really due to the change in the position of the moon. No such relief is seen when two copies of the same photograph are combined stereoscopically.

In order to see the woodcut with the best effect, it should be placed at a few feet distance from the observer, so as to lose all trace of the lines of the engraving; the effect is then very accurately given of the corona as seen by the unaided eye.

In a second contribution to *Nature*, Mr. Brothers gives outlines of the photograph taken at Syracuse, the American photograph at Cadiz, and Prof. Watson's pencil-sketch at Carlentini. These exhibit a marked agreement, as to the large rifts, between the two photographs, and a general resemblance in the same respect in the pencil-sketch. The coincidence between the outlines of the corona in the two photographs is very striking.

See also *Sun, Eclipse of*.

Supposed Changes in the Moon.—At the August meeting of the British Association, Mr. W. R. Birt reported on behalf of the Committee on Lunar Objects suspected of Change. The report states that, much attention having of late years been given to lunar objects, the purpose for which the committee had been appointed would be best carried out by confining the discussion to the observations of a small but well-known portion of the moon's surface. The area of Plato in which the spots exist measured about 2,700 square miles; as many as thirty-seven spots had been observed, but he

wished it to be particularly understood that the whole had never been seen together; the greatest number observed on any one occasion was twenty-seven, the mean or average number being not more than eight. With the aid of diagrams drawn on the black-board, he showed that the mean number seen at intervals of twelve hours of the luni-solar day varied during the progress of the day, so much so as to indicate that the number of spots visible at any given interval does not depend upon the angle at which the sun's light falls upon the floor of Plato. Some spots, he said, had been seen more frequently at about sixty hours after sunrise upon the floor of Plato than at any other portion of the luni-solar day; the positions of these spots on the floor were pointed out, and it was remarked that they were situated in the western part of the crater, and they agreed in having been more frequently observed in August, 1869, than at any other period of the observations. Other spots were observed more frequently at a later period than in August, 1869, and they had been seen more frequently at a later hour of the day, or after the sun had passed the meridian. Daylight at the moon is equal to fourteen terrestrial days and nights. These facts Mr. Birt argued were incompatible with the assumption that variations of aspect were entirely dependent upon variations of illumination, and rather pointed to the existence of activity on the moon's surface, the exact nature of which required further observations to elucidate.

In observing the moon shortly before the last quarter in August, Mr. Holden, of London, found the unilluminated portion unusually bright with earth-shine. A few prominent craters could be traced, and the whole of the dark outlines of the *Mare Serenitatis* were easily recognized. The darkest object was the *Mare Crisium*, which appeared almost black. Mr. Holden suggests that the depth of color in the *Mare Crisium* and other planes may be due to a covering of alluvial earth, to which vegetation may at times give the greenish tinge occasionally observable.

The Moon's Mass inferred from Tides.—Mr. William Ferrel, of the U. S. Coast Survey, at the April meeting of the National Academy of Sciences, presented the results of his investigation of tidal movements with reference to determining the mass of the moon. For this purpose he employed a series of observations taken for the Coast Survey during the full lunar cycle of nineteen years, and a similar series made at Brest, France, from 1812 to 1831 inclusive. The following is a synopsis of his paper:

Without going into the mathematical form of the investigation, he endeavored to show that the moon's mass must be mainly inferred from the ratio which the spring and neap tides bear to the constant or average tides. This ratio, however, does not depend entirely upon the moon's mass, but varies greatly for different ports, the heights and times of the tide be-

ing modified by local circumstances; and consequently the tides have not been hitherto considered an available means for determining the mass of the moon.

In addition to the constant, to be determined by observation, introduced into the conditions by Laplace for determining the moon's mass, Mr. Ferrel has introduced another, depending upon friction. Hence, there being three unknown quantities to be determined, including the moon's mass, he uses the condition depending upon the moon's parallax in addition to the two used by Laplace. Without the introduction of this additional constant and the additional condition for eliminating it, Laplace's conditions for the determination of the moon's mass entirely fail when applied to the Boston tides.

Laplace selected Brest, where the tide has a direct and short approach from deep water, and, neglecting the effect of friction referred to, obtained, as is well known, the value of $\frac{m}{M}$, in terms of the earth's mass, for the mass of the moon. At Brest the ratio of the half-monthly inequality to the coefficient or half range of the constant tide is about .355, that of the constant tide being about 2.25 metres, and that of the mean spring-tides about 3.05 metres. At Boston the same ratio is only about .14, the coefficient of the constant tide being 4.91 feet, and that of the mean spring-tides 5.58. From data so widely different Mr. Ferrel has deduced, by means of the introduction of the term depending upon friction, two values exhibiting a remarkable agreement, viz., from the Brest tides $\frac{m}{M}$, and from those at Boston $\frac{m}{M}$.

Lunar Action and the Earth's Shrinkage.—In a communication to the National Academy of Science, Prof. Benjamin Peirce briefly considers the relations between lunar action and the supposed shrinkage of the earth from its original bulk. The most obvious cause of this shrinkage is the cooling of the earth; but to shrink two per cent. linearly, which is the amount deduced by Mr. Lesley from the observed geological phenomena, involves a probable cooling of the whole earth of not less than 2,000° Cent., which would require that its original temperature should be higher than would be consistent with the solidity of the shrunken strata. Another source of shrinkage in different directions in different parts of the earth is to be found in the diminution of oblateness arising from the diminished velocity of rotation upon the axis. This, as Mr. Ferrel has shown, would be caused by the action of the moon in producing the tides, and Prof. Peirce inquires how great this amount can be under any circumstances. He says:

It is sufficient for the present object to regard the earth as homogeneous. Under this condition, Laplace has shown that the time of the earth's rotation could not be less than about $\frac{1}{2}$ of a day, which corresponds to a ratio of the axis of the equator to that of the pole, equal to 2.7197, and an equatorial circumference 94 per cent. greater than the present one. Such is, then, the amount of shrinking which might have taken place, if any cause could be assigned capable of producing so great a reduction of the earth's velocity. The whole surface of the earth would have been about 130 per cent. larger than at present.

But the only cause at present known which would produce a sensible reduction of the earth's velocity is the lunar action upon the tides. But, in this mutual action between the moon and the earth, the common rotation area of the earth and moon must remain unchanged. The question then arises, How great a reduction of the rotation area of the earth would have passed into that of the moon? In this inquiry

it may be assumed that the moon revolves in a circular orbit in the plane of the earth's equator.

Now, the moon's rotation area is 3.716 times the earth's. But, if, in the origin, it had revolved just in contact with this earth, its rotation area would not have been less than 0.450 times the earth's, so that it could not have absorbed a rotation area from the earth greater than 3.236 times the earth's present rotation area, and therefore the earth's rotation area could never have exceeded 4.236 times that which it has at present. But, with the maximum velocity of rotation given by Laplace, the earth's rotation area would have been $3\frac{3}{4}$ times greater than at present. It can never, therefore, have been reduced to so great an extent by the moon's action on the tides. But, since, when the oblateness is small, the rotation area is nearly proportional to the velocity, and the excess of the square of the equatorial above that of the polar axis is nearly proportional to the square of the velocity, this excess may have been originally nearly 18 times as great as at present, or about 154 per cent. of the square of the polar axis. This would correspond to a figure of the earth in which the equatorial radius would have been about 24 per cent. greater than at present; so that it is sufficient to account for the observed phenomenon.

This peculiar form of shrinkage would produce the highest mountains at the equator, and the tendency of the mountain-ranges would then be to assume the direction of the meridian. But nearer the poles the mountains would be less elevated, and would rather tend toward the direction of the parallels of latitude.

It is, next, expedient to consider the mechanical question of the loss of living force in the case of the moon's action upon the waters of the earth, and its effect upon their different motions. In this connection, there are problems worthy of the attention of geometers; such as the relative motions of bodies rotating about the same vertical axis, toward which they are drawn by weights, and acting upon each other through the friction on the axis. For one of the bodies a rotating wheel may be substituted. There is also the case of two planets revolving about a primary, and acting upon each other through some form of friction.

In this way it will be seen that the planet or satellite once formed is constantly removed from the primary, and that planets tend to approach each other. It is interesting to consider whether this may not be one of the actual problems of Nature.

Proposed Observations of Venus.—The Observing Astronomical Society of Great Britain have decided to undertake a series of systematic observations of the planet Venus during one complete revolution. They have in view the obtaining of results that shall lead to becoming better acquainted with the markings visible on the Venusian surface and a correct knowledge of their form and permanency. They remark that, in most modern astronomical works, the information about Venus is very meagre, and that, in the majority of cases, she is depicted only as a black crescent. But, in turning to ancient observations of the planet, they find a large number recorded, and many well-defined markings shown, indicating that a study of the planet is not so difficult as is generally supposed. The committee having the work in charge have divided it into three branches: 1. The formation of a sub-committee of astronomical observers (including non-members of the society) for the purpose of continually observing Venus during one com-

plete synodical revolution. 2. The collection of all ancient observations and drawings of the planet. 3. The collection of as many modern data as possible from existing observations, and from public and private records. At the conclusion of the observations of the sub-committee, the results obtained, together with the ancient and modern observations collected, will be placed in the hands of a competent astronomer for complete analysis and discussion, when the results obtained will be published.

Transits of Venus.—Prof. Asaph Hall, of the U. S. Naval Observatory, writes to the *American Journal of Science* asking the attention of American astronomers to the transit of Venus that will take place December 8, 1874. He deems it of great importance that the astronomers in this country should take early measures to act in harmony, so that their observations at the various stations shall be made with similar instruments, and on a preconcerted plan. He thinks that only by such action, and by careful, thoughtful, and deliberate preparation, can American observers obtain results comparable in accuracy with those that will be obtained by the German expedition. Therefore he suggests the following plan:

Let the National Academy and the American Association for the Advancement of Science, at their next meetings, invite the attendance of the directors of all the astronomical observatories in the country, and of all who are engaged in astronomical pursuits, theoretical or practical. Let these astronomers discuss and decide upon the stations to be occupied and the methods of observing the transit. They should appoint committees who should have charge of procuring instruments, selecting the observers, and making preparations for paying the expense of the expeditions. Besides the scientific advantages to be gained, the hearty coöperation of our astronomers, in the solution of such a problem, will bring about mutual acquaintance and recognition of each other's abilities.

The first meeting of the commission convoked by Chancellor Bismarck for considering the approaching transit of Venus was held at Berlin, October 25, 1869. This commission consists of Hansen, president, and of Argelander, Paschen, Bruhns, Förster, Auwers, and Winnecke; all experienced astronomers, except M. Paschen, appointed for his knowledge of photography. Afterward the commission invited to join in its deliberations Dove, of Berlin, on account of his knowledge of meteorology; Prof. Zollner, of Leipsic, for his knowledge of spectroscopic observations; and Otto Struve, Director of the Pulkowa Observatory. The early action of the German Government and its wisdom in putting the matter into the hands of experienced astronomers are much to be commended. We may not be able, and may not wish, to follow the methods proposed by the German astronomers, but we must have prompt, deliberate, and concerted action, if we would obtain good results.

The transits of Venus in the years 2004 and 2012 have been carefully calculated by Prof. J. R. Hind, and the results communicated to the Royal Society. He took for his basis Leverrier's tables of the sun and Venus, which are regarded as extremely accurate. According to Prof. Hind, the first external contact of the planet with the sun, in 2004, will be, as seen at Greenwich, June 7th, 17^h 9^m 56^s,

and the second external contact, or last touching-point, as Venus leaves the sun's surface, will be June 7th, 23^h 22^m 15^s. The entire transit, it will be noticed, will be visible at Greenwich. Of the transit of 2012, the ingress will not be visible at Greenwich, but the egress will take place as follows, as seen from that point: last internal contact June 5th, 16^h 44^m 23^s, and the last external contact June 5th, 17^h 2^m 15^s.

New Theory about Jupiter.—In a recent contribution, by Mr. R. A. Proctor, to the *St. Paul's Magazine*, that gentleman dissents from the prevalent views with regard to supposed resemblances between Jupiter and our planet. Nearly all that is known of the physical constitution of Jupiter is obtained from observations of the belts or streaks which encircle the planet in a direction parallel with its equator, and which resemble, in their form and arrangement, the lines of clouds which may often be seen in our sky on a fine evening after sunset. The most prominent of these belts or streaks in Jupiter are clearly visible through a telescope magnifying thirty diameters; but, to observe the finer ones which prevail farther from the planet's equator, the circumstances must be favorable, and the magnifying powers must range from 200 to 300. It has generally been considered that these phenomena are purely atmospheric, and the parallelism of the strata has been accounted for by the direction and velocity of rotation. On this theory, the equatorial regions of Jupiter are traversed by great aerial currents like our trade-winds, which form the clouds into belts, the dark bands being clouds, and the light ones, the body of the planet seen between them. On the contrary, Mr. Proctor says, there are the strongest reasons for believing that if Jupiter's belts were submitted to a series of accurate and continuous observations like the sun-spots, the generally-received notions as to their cause would be dissipated. Facts, presented by the author, lead him to the conclusion that the phenomena observed in the belts of Jupiter are not such as would appear from distant observation of the earth. The transverse breaks, rifts, and irregularities which appear in the belts, are found to have similar motions and appearances, and to conform in other ways to the spots on the sun. In 1860 an "oblique dusky streak" was seen moving across a bright belt or "zone of clouds," in a direction approaching to north and south. This rift was about 10,000 miles long and 500 miles wide, its superficial extent being greater than the whole of Europe. It remained visible for six weeks at least, when it passed to the dark side of the planet, to return again, after the Jovian night, to the illuminated hemisphere during about a hundred Jovian days. Both the sun and Jupiter have recently been the scenes of great disturbances which have given rise to similar phenomena in the two bodies.

As regards the question of change in the

appearances presented by Jupiter in connection with the periodical increase and decrease of spots on the sun, Mr. Ranyard has compared together a number of sketches of Jupiter's belts, made during the last twenty years, and thinks that he detects peculiarities of aspect among them at those times when the solar spots have been at the maximum.

Jupiter's Satellites.—These have recently received the careful attention of the distinguished astronomical observer, Dr. R. Engelmann, of Leipsic. He employed for the purpose the astro-photometer of Zöllner, in which the light of the object examined is referred to that of one or more comparison stars, by means of an artificial star produced by the flame of petroleum, adjustable for brightness and color by a Nicol prism, and a colorimeter or revolving wheel of rock-tinted crystal. Dr. Engelmann says that he found the absolute brightness of the satellites extremely variable, as all other observers had done, and, from the irregularity and occasional rapidity of the changes, it was impossible to decide, in the case of the three interior satellites, whether the periods of rotation and revolution are identical. This, however, appears to be the fact with regard to the outermost satellite. At a mean, No. 2 is relatively the most, and No. 4 the least, luminous. The micrometrical measurement of the four (taking the sun's parallax at $8''\cdot90$) gives in miles the following diameters: 2,498, 2,102, 3,551, and 2,962 miles. These values differ but little from those given by Lockyer. The "albedo," or reflecting power of the surfaces of the satellites, is between that of marl and that of white sandstone for No. 1; exceeding that of white sandstone for No. 2; varying between marl and quartzose porphyry for No. 3; and equal to that of moist arable land for No. 4.

Asteroids.—Four new asteroids were discovered during the year, bringing the known number up to 117. They range from the 9th to the 11th magnitude. The finders, numbers, and names (so far as given), of these additions to the planetary system are as follows: Prof. Luther, of Bilk, discovered the 113th, named Amalthea; Prof. Peters, of Clinton, the 114th, Cassandra; Prof. Watson, of Ann Arbor, the 115th, Sirona; Prof. Peters, the 116th, unnamed as yet; and Prof. Borelly, of Marseilles, the 117th, Lorina. The 111th asteroid, discovered by Prof. Peters, in 1870, has received the appellation of Ate; and the 112th, that of Iphigenia.

According to Leverrier, the total mass of the ring of asteroids does not exceed $\frac{1}{12500}$ th of that of Jupiter. Prof. Daniel Kirkwood remarks, in explanation of this unparalleled disproportion between two adjacent planets (regarding the mass of minor planets as one body for purposes of comparison), that it is probable that, while the solar nebula was in process of condensation, a large number of the asteroids, when in perihelio, plunged into the

solar mass and were reunited with it. The powerful mass of Jupiter would produce great eccentricity, in parts at least, of the primitive ring, and large portions of its matter, or a considerable number of minor planets in a state of vapor, may thus have been precipitated upon the sun before the latter had contracted within their perihelion distance. He suggests the same hypothesis to account for the small mass of Mars.

Comets.—Dr. Winnecke, at Carlsruhe, discovered a faint comet April 7th. Dr. Huggins subsequently examined it on two occasions, and found it a scarcely perceptible coma, with an extension in the direction of the sun. When observed by the spectroscope, he ascertained the light of the comet to consist almost entirely of three bright bands. A fair measure was obtained of the centre of the middle band, which was the brightest; giving a wave-length of about 510 millionths of a millimetre. The less refrangible band gave 545 millionths. The comet was similar in constitution to the comet examined by Dr. Huggins in 1868.

Tuttle's comet returned in November, true to the predictions of astronomers. Its motions were observed at several points in Europe and the United States. This comet has a period of about thirteen years seven months, and will reappear in August or September, 1885. It is supposed to be the one seen by the French astronomer Mechain, in 1790; and its orbit was then believed to be parabolic, but is now known to be elliptic.

Encke's comet, returning to sight in October, after its period of forty months, was the subject of interesting spectroscopic observations. On the evening of December 1st, its spectrum was quite distinct, consisting of three bright bands (Prof. Harkness, of Washington reports), the most refrangible one being very faint, the middle one by far the brightest, and the least refrangible one having an intermediate degree of brilliancy. The positions of the two brighter bands were measured, and the resulting wave-lengths of the light, expressed in millionths of a millimetre, are approximately as follows: first band, less refrangible edge, 556; brightest part, 550; more refrangible edge, 534: second band, less refrangible edge, 515; brightest part, 510.9; more refrangible edge, 499. The position of the faint band was estimated, and the resulting wave-lengths are, for the less refrangible edge, 458, and for the more refrangible edge, 448. At times, he fancied he also saw a faint, continuous spectrum, but could not satisfy himself that it really existed. Both in appearance and wave-lengths this spectrum bears such a remarkable resemblance to that of the second comet of 1868, that Prof. Harkness is strongly inclined to think their physical constitution must be identical.

The same comet was examined carefully with a double-image prism, without finding a trace of polarization.

At a November meeting of the Royal Astronomical Society, the Royal Astronomer Airy showed a sketch of the comet made by Mr. Carpenter, of Greenwich, giving the impression of a somewhat shuttlecock-shaped nebulous haze, extending on either side, and imparting a flattened appearance to the head of the comet. Dr. Huggins had made a drawing which coincided in all essential particulars with that of Mr. Carpenter. He thought that he had detected a very minute but distinctly-marked nucleus in the paraboloidal-shaped head of the shuttlecock. The whole light of the comet was very faint, but he had succeeded in obtaining its spectrum, which, as in the case of that of Comet II., 1868, consisted of three bands, apparently identical with the bands in the spectrum of the vapor of carbon. The middle band situated near "little b" was much brighter than the other two, and he was quite satisfied of its identity with the middle bands of carbon-vapor: the two outlying bands were much too faint for him to speak with confidence of their identity, but they appeared to correspond. The Astronomer Royal showed a celestial globe, on which he had fixed a small white wafer in the place occupied by the sun, and a piece of white paper cut out to represent the comet. He pointed out that its longer axis was directed almost exactly to the sun, and that its head and nucleus were turned away from the sun. This appears to be the almost universal rule with the smaller class of comets.

Comets' Tails, etc., as Electrical Phenomena.—Prof. Osborne Reynolds, of England, advances the theory that the tails of comets are merely examples on a large scale of the familiar action known as the "electric brush," which, as seen in the Geissler tubes, exhibits appearances remarkably like the former. But it is quite clear that the tail of a comet cannot be due to a discharge between two electrodes situated in the comet itself. If the tail is electrical, that fact is attributable to a discharge of electricity of one kind or another from the comet, which for the time answers to one of the electrodes only. This electricity the author supposes to be more and more set free by the inductive action of the sun as the comet approaches, and it would also be driven off by induction in a direction opposite to that of the sun, and combining with the positive electricity in the ether would form the comet's tail in a manner analogous to that in which a negative spark is given off by the lid of the electrophorus. Upon the same general hypothesis—as serving to explain all the phenomena—he accounts for the exhibition of the solar corona, and also of the auroral light. Upon the last-named point he says:

If we could observe the aurora from a point distant from the earth, it is very probable that we should find the same to be the case; but whether this would be so or not, an assumption has been made as to the cause and nature of the aurora, which will answer

just as well for the corona and comets' tails: it is, that the sun, acting by evaporation or otherwise, causes continual electric disturbance between the earth and its atmosphere, the solid earth being negatively charged and the atmosphere positively, and that the aurora is the reunion of these electricities taking place in the atmosphere.

Now, as has been already said, this assumption will serve for the comets and the sun as well as for the aurora. If there is a continual electric disturbance between the sun and the medium in which it is placed, so that the sun becomes negatively and the medium positively charged, the reunion of these electricities would form the corona. It must not be supposed that I assume the sun to be a reservoir of electricity which it is continually pouring into space. I consider that the supply of electricity in the sun is kept up by some physical action going on between the sun and the medium of space, whereby the sun becomes negatively charged, and the medium positively.

This may be well illustrated by reference to the common electrical machine; here the motion of the glass against the rubber causes the glass to become positively and the rubber negatively charged; and these electricities do not unite instantly there and then, but remain and accumulate in the respective bodies, until collected and brought together again by the conductor.

Assume, then, that the sun is in the position of the rubber, while the ether is in that of the glass: then the corona corresponds to the spark or brush which leaves the conductor.

If the corona be an electric discharge, the electricity will be continually carrying off some of the elements of the sun into space, where they will be deposited and condensed. May not this stream of matter be the cause of the existence of small meteors, and supply the place of those which continually fall into the larger bodies?

The Spectrum of Uranus.—Dr. Huggins has read before the Royal Society a paper on the spectrum of Uranus. The light from the planet is too faint to be satisfactorily examined through most telescopes, but with an equatorial refractor of 15 inches he had obtained good results. The most refrangible band in the spectrum appeared to coincide with the bright line of hydrogen, a comparison being made with the light from a tube containing rarefied hydrogen rendered luminous by an induction-spark. Dr. Huggins says that there is no strong line in the spectrum of Uranus in the position of the strongest of the lines of air, namely, the double line of nitrogen. As carbonic-acid gas might be considered, without much improbability, to be a constituent of the atmosphere of Uranus, he took measures with the same spectroscopic of the principal group of bright lines which present themselves when the induction-spark is passed through this gas. The result was to show that the bands of Uranus cannot be ascribed to the absorption of carbonic-acid gas.

The Spectroscope and the Nebular Hypothesis.—In the *American Journal of Science*, for September, appears a paper from Prof. Kirkwood, arguing that the nebular hypothesis has been greatly strengthened by the researches and discoveries of the last twenty years (or since Lord Rosse partially resolved the great nebula in Orion and thereby, as some have claimed, injured the standing of the

nebular hypothesis). The revelations of the spectroscope are regarded by Prof. Kirkwood as especially contributing to reinstate the hypothesis in the old degree of force. He sums up the case as follows:

1. The ring nebula in Lyra, the Dumb-bell nebula, the great nebula in Orion, and others which might be named, are not, as was but recently believed, extremely remote sidereal clusters; but their light undoubtedly emanates from matter in a gaseous form.

2. According to Lord Rosse and Prof. Bond the brighter parts near the trapezium (in the nebula of Orion) consist of clustering stars. If this be the true appearance of the nebula under great telescopic power, then these discrete points of light must indicate separate and probably denser portions of the gas, and that the whole nebula is to be regarded rather as a system of gaseous bodies than as an unbroken vaporous mass.

3. Progressive changes in the physical condition of certain nebula are clearly indicated by the fact that nuclei have been established which, as shown by their spectra, are not wholly gaseous, but have passed, at least partially, to the solid or liquid form.

4. The spectroscopic analysis of the light of several comets reveals a constitution similar to that of the gaseous nebula.

The spectroscope, then, has demonstrated the present existence of immense nebulous masses, such as that from which Laplace supposed the solar system to have been derived. It has shown, moreover, a progressive change in their physical structure, in accordance with the views of the same astronomer. In short, the evidence afforded by spectrum analysis in favor of the nebular hypothesis is cumulative, and of itself sufficient to give this celebrated theory a high degree of probability.

Scintillation of the Stars.—A long and interesting paper on this subject has been published by Prof. L. Respighi. It gives a *résumé* of labors extending over a period of several years. The instrument employed in the observations was a $4\frac{1}{2}$ inch equatorial, having a direct vision prism with a cylindrical lens between the prism and the ocular. The phenomena of scintillation were most distinctly marked on evenings of the greatest atmospheric humidity, and one of the deductions reached by Prof. Respighi is this: that regularity in the phenomena is a trustworthy basis for predicting the continuance of the weather. He says that the regularity and constancy, both in direction and velocity, of the motion of the spectroscopic bands with respect to the meridian, namely, from red to violet for stars in the west, and from violet to red for those in the east, show that the scintillation cannot be attributed to ascending or descending movements of the atmospheric mass, but must be due to some more general cause. Finally, he advances the opinion that the scintillation occurs in consequence of the actual subtraction of a portion of the rays by the unequal refraction of the masses of air through which they are caused to pass by the rotation of the earth, and he is thus led to reject both the explanation of Arago, according to which it is due to interference, and that of Montigny, who ascribed it to the total reflection of a portion of the rays by strata of air unequally heated.

In the case of the planets, owing to the breadth of their disks, the spectra are superposed, and the phenomena are in general not distinctly seen, as they produce ordinarily simple changes of brightness, or mere irregular oscillatory movements of the images. In observations upon the brighter planets, however, especially Venus, when near the horizon, Prof. Respighi has occasionally, under favorable circumstances, recognized the same phenomena as are displayed by the fixed stars.

The Star Eta Argds.—Mr. F. Abbott has contributed a paper to the Royal Society of Tasmania, mentioning further evidences of changes in the star Eta Argds and its surrounding nebula. Sir William Herschel was the first to note alterations in the appearances of these objects. He wrote: "Gravitation still further condensing and so absorbing the nebulous matter, each in its immediate neighborhood might ultimately become stars, and the whole nebula finally take on the state of a cluster of stars." Sir John Herschel, by his observations at the Cape of Good Hope, corroborated this opinion, which Mr. Abbott now sustains by submitting maps of his own preparation, showing many stars not put down by the Herschels. He says that the boundary of the nebula is (as might be expected, if the material is going into new stars) not so distinct as formerly and appears to be gradually fading away. Mr. Le Sueur, in a report made on the Melbourne reflector some time ago, observes that "the nebula around Eta Argds has changed largely in shape since Sir J. Herschel was at the Cape," and that the "star shines with the light of burning hydrogen" and "has consumed the nebula." Mr. Fairlie McGeorge, in charge of the Melbourne telescope, declared to the Royal Society of Victoria, March 13, 1871, that "the object (Eta Argds and the nebula) had evidently undergone great changes since Mr. Le Sueur made his sketches of it. It was now beyond a doubt that enormous physical changes were still taking place."

Parallax of Alpha Lyrae.—The parallax of the brilliant star Alpha Lyrae has been recently reestimated with great care by Dr. Brunnnow, formerly director of the observatory at Ann Arbor, Michigan, now Astronomer Royal of Ireland. The minute star near it, known as Struve's Companion, supplied the means, by comparison, of making accurate measurements of Alpha Lyrae. The parallax as found by Brunnnow is about one-fifth of a second, which would make the distance of the star from this planet about 93,000,000,000,000 of miles, or a million times farther off than the sun. Profs. Peters and Struve had previously estimated the parallax at from one-tenth to one-fourth of a second.

Isographic Chart of the Northern Heavens.—Mr. R. A. Proctor, the English astronomer, is at work on an isographic chart of the northern heavens, in which are to be included the 324,000

stars enumerated by the aid of telescopes, and recorded on Argelander's charts. His object, in charting these stars on a single sheet, is to endeavor to determine the laws of distribution among stars of the first nine or ten degrees of magnitude. Struve has already examined a portion of the same list for a somewhat similar purpose; but Mr. Proctor will be the first to study the subject as a whole, with the object mentioned in view.

Studies of the Southern Heavens.—Prof. B. A. Gould, director of the new observatory at Cordova, in the Argentine Republic, makes an interesting official report of his labors during the greater part of 1871. Before the large instruments were put up, he had directed a laborious series of observations of all the stars in the southern heavens visible to the naked eye, according to their position and degrees of brilliancy, and constructed maps representing the general aspect of the heavens in those latitudes. The charts thus obtained comprehend the entire firmament from 10° north of the equator to the south pole, and will be accompanied by a catalogue of the stars arranged by constellations. He has found the heavens of Cordova less serene and more subject to clouds than he had expected; but nevertheless about 4,500 stars have been observed, and reduced to the maps. The number visible to the naked eye between the north-pole and 30° of south latitude, according to Argelander, is only 3,256. The completion of this part of the work will be followed by a systematic study of the Southern Hemisphere with instruments, beginning at the limit to which Northern astronomers have advanced. The valuable observations taken at Cape Town, Madras, Melbourne, and Santiago, will serve as a foundation for the work. Prof. Gould speaks highly of the liberality shown by the Argentine Republic in sustaining this enterprise, and closes his report with the suggestion that the observatory can be made of especial use in developing the science of the country: first, by the telegraphic determinations of longitude; and, second, by the formation of a system of meteorological observations throughout the republic.

In a letter, written subsequently, to the editors of the *American Journal of Science*, Prof. Gould speaks with enthusiasm of the occasional wonderful transparency of the Cordova sky, by which he is enabled to see twice as many faint stars (with the naked eye) as can be seen on the most favorable nights in New England. Stars of the 7th magnitude are easily perceived, and some that are mapped as the 8th.

For constellations farther south the comparison is of course not so fair, on account of their superior altitude here; still you may form some idea of the work in hand, when I tell you that in *Orion* we have twice the number of stars given by Argelander, and that in *Canis Major*, the whole of which is visible at Bonn, though to be sure its southern boundary has only an altitude of a little more than $6\frac{1}{2}^{\circ}$, we have 200 stars, while Argelander saw but 39.

It is to be expected that, in the course of our work,

we may encounter a number of variable stars sufficient to make the number in the Southern Hemisphere approximately equal to that of those already known north of the equator. As yet, however, we have not followed through any very decided changes, although there is a considerable number of stars whose magnitudes, as observed by us, differ widely from those recorded by other astronomers, and which also appear to have varied during the period of our observation.

The star *Eta Argus* has naturally attracted a good deal of my attention. It is at present not far from the $6\frac{1}{2}$ magnitude, and recognizable with great difficulty by the naked eye. In the field of my small Tolles telescope, of 5-inch aperture and 85-inch focal length, it is a conspicuous object, and prominent by its ruddy color among the cluster of which it forms a part, against the bright nebula as a background. With this telescope, the same one which I employed for observing the total eclipse of 1860, I have been examining the whole group; and have found to my astonishment that it exhibits with distinctness a considerable number of stars, which are recorded in Sir J. Herschel's catalogue of this cluster, as being of the 14th magnitude.

The magnificence of the Milky Way in this vicinity is indescribable, surpassing the Pleiades or the *Procyon* in richness, and exhibiting numerous huge clusters, the sight of which through the Tolles telescope evokes exclamations of astonishment and delight from every beholder, young or old, whether with or without astronomical information. Keen as was my desire for a photographic equipment before leaving home, it has been a hundred-fold increased since I began the survey of this most gorgeous of all the regions of the sky. Even yet I have not abandoned some hope that the friends of astronomy at home may be disposed to provide means for some permanent photographic record of these magnificent groups and splendid double stars. The transparency of the atmosphere would greatly reduce the needful time of exposure, and it gives peculiar opportunities for the success of the photographic method in other respects.

AUBER, DANIEL FRANÇOIS ESPIRIT, the most popular of modern French musical composers, born at Caen (Calvados), France, January 29, 1782; died in Paris, May —, 1871. He early manifested a passion for music; but his father, who was a merchant, had determined to train him for business, and sent him to London in 1802, to acquire a business education. On the breaking of the Peace of Amiens, he returned to France, and soon after composed some instrumental pieces, which were favorably received by private theatrical circles. Auber had, however, the good sense to perceive that he needed a much more thorough training to enable him to come with confidence before the theatrical public, and put himself under the direction of Cherubini, one of the severest of masters. After a time he wrote two or three *Masses*, which were favorably received; but his first attempt with an opera, in 1813, proved so complete a failure that he was discouraged, and, though the financial ruin and death of his father left him in such straits that he was fain to give lessons on the piano for a livelihood, he did not make another venture till 1819, which was attended with the same ill success. Despair, however, nerved him to further effort, and in 1820 he achieved a success with the opera "*La Bayère Châtelaine*" at the *Opera Comique*.

This was followed by a long train of successful pieces, and in this peculiar walk of musical composition he was recognized as a master. Scribe had furnished the words for many of these, and the two artists worked then, as always, in perfect harmony. It was not, however, until 1828 that M. Auber ventured a higher flight in his "Mute of Portici," prepared for the Grand Opera, and which achieved a great success there. His "*Amour Sacré de la Patrie*," a duo which followed soon after, proved another "*Marseillaise*," and was the signal of the revolution in Belgium in 1830. He wrote in the next few years a great number of serious as well as many comic operas; and, though successful in both, he recognized comic opera as peculiarly his field. We have not space, were it desirable, to give a list of all his operas. He continued to write, and his operas to be popular, till he had reached his eighty-sixth year. An able French critic says of him: "He had a manner of his own, in which he had some imitators, but few or no rivals. His music is ordinarily light and facile, almost always graceful, often original. As ready as Rossini, he

has also his movement and clearness, but less distinctness, depth, and energy." He was, however, more popular than Rossini. He had been a member of the Institute of France since 1829; Director of the Conservatory of Music since 1842, and Director of Music to the Imperial Chapel. He had passed through all the grades of the Legion of Honor, and since August, 1861, had been Grand-Officer.

AUSTRALASIA. The area and population of the Australasian colonies of Great Britain were, according to the latest dates, as follows:

PROVINCES.	Square Miles.	Population.	Year of Census.
New South Wales	308,560	501,611	1871
Victoria	88,451	729,868	1871
South Australia	380,602	185,000	1871
Queensland	668,259	109,897	1869
Western Australia	975,824	24,765	1870
Northern Territory	523,531	99,328
Tasmania	26,215	99,328	1870
New Zealand	106,259	233,269	1869
Total	3,077,701	1,888,758	

The ecclesiastical statistics are as follows:

PROVINCES.	Total Population.	Protestants.	Catholics.	Jews.	Others.
New South Wales (1861)	350,890	233,006	99,193	1,759	16,802
Victoria (1861)	540,322	381,123	110,068	2,903	46,235
South Australia (1861)	136,830	121,579	7,676	49	761
Queensland (1861)	80,059
West Australia (1870)	24,758	17,450	7,121	214
Tasmania (1870)	99,328	74,242	22,091	232	2,763
New Zealand (1867)	218,668	126,421	30,413	1,347	6,058

The column headed "others" comprises, for New South Wales, 12,909 Mohammedans and pagans; for Victoria, 1,672 pagans, and 24,551 non-Christian Chinese; for Queensland, 405 Mohammedans and pagans. Among the Protestants of Tasmania are 53,047 Anglicans, 6,644 members of the Church of Scotland, 2,420 Presbyterians of the Free Church of Scotland, 3,931 Independents, 931 Baptists, 7,187 Wesleyans, and 82 members of the Society of Friends. Among the Protestants of Western Australia, 14,618 belong to the Anglican Church, 1,873 are Wesleyans, 880 Independents, 528 Presbyterians, and 51 Baptists. Among the Protestants of New South Wales, 159,958 belong to the Anglican Church, 34,692 are Presbyterians, 23,684 Wesleyans, 5,411 Congregationalists, and 9,863 other Protestants.

The descendants of natives of Great Britain and Ireland constitute by far the majority of the population. The Germans are chiefly represented in South Australia (1866, 8,119); in New Zealand (1866, 1,999); Tasmania (1870, 534). The total number of natives in Australia does not exceed 50,000 (in 1861, 5,046 in South Australia; 15,000 in Queensland; in 1871, 859 in Victoria). In New Zealand their number was 56,049, in 1860; but only 32,109 in 1869. The number of Chinese is increasing; in 1871 it amounted, in Victoria, to 17,705. The most important cities of the colonies are the following:

	Population.
* Melbourne (Victoria)	193,696 (1871)
* Sydney (New South Wales)	134,756 (1871)
* Ballarat (Victoria)	74,260 (1871)
* Sandhurst (Victoria)	34,688 (1871)
Adelaide (South Australia)	23,300 (1861)
* Geelong (Victoria)	22,618 (1871)
Brisbane (Queensland)	20,000 (1870)
* Hobart Town (Tasmania)	19,092 (1871)
* Auckland (New Zealand)	17,606 (1867)
Dunedin (New Zealand)	12,777 (1867)

The receipts, expenditures, and debts, in 1869, were as follows:

PROVINCES.	Receipts.	Expenditures.	Debts.
New South Wales	£3,663,509	£3,285,805	£9,546,090
Victoria	3,210,324	2,214,303	10,385,900
South Australia	965,834	1,148,816	1,783,700
Queensland	772,858	796,235	3,459,750
Western Australia	103,661	103,124	(none)
Tasmania	346,467	441,528	1,148,000
New Zealand	1,746,623	2,391,981	7,360,616
Total	£10,809,276	£10,361,792	£33,683,896

The English Government having declared that it will no longer support any army in the colonies, several of the latter have formed corps of volunteers, which at present number about 10,000 men. For the coast-defence, a small flotilla of iron-clads is in the course of construction; it was in 1871 represented at Melbourne by the Cerberus, which had four guns.

The imports and exports, inclusive of precious metals, was, in 1869, as follows:

* With their suburbs.

COLONIES.	Imports.	Exports.
New South Wales.....	£7,700,000	£7,500,000
Victoria.....	13,910,000	13,460,000
South Australia.....	2,750,000	2,990,000
Queensland.....	1,730,000	2,110,000
Western Australia.....	260,000	210,000
Tasmania.....	980,000	830,000
New Zealand.....	4,980,000	4,230,000
Total.....	£32,310,000	£31,400,000

In 1870, the imports and exports in Victoria and New Zealand were as follows:

	Imports.	Exports.
Victoria.....	£12,455,756	£12,470,014
New Zealand.....	4,753,895	4,012,131

The most important article of export, next to gold, is wool. The value of the amount exported was, in 1869, as follows:

New South Wales.....	£2,503,704
Victoria.....	3,363,075
South Australia.....	1,127,568
Queensland.....	1,098,174
Western Australia.....	68,400
Tasmania.....	803,209
New Zealand.....	1,371,230
Total.....	£9,885,360

The movement of shipping is shown by the following figures, representing the aggregate number of tons of the vessels entering and clearing in the several ports, exclusive of the coasting-trade:

New South Wales.....	£1,574,617
Victoria.....	1,432,235
South Australia.....	321,507
Queensland.....	288,015
Western Australia.....	728,517
Tasmania.....	226,973
New Zealand.....	498,495
Total.....	£4,500,361

The merchant navy, on January 1, 1871, consisted of—

PROVINCES.	Vessels.	Tons.
New South Wales.....	607	£4,140
Victoria.....	345	52,765
New Zealand.....	376	25,493
South Australia.....	143	17,266
Tasmania.....	172	15,961
West Australia.....	55	2,757
Queensland.....	42	1,634
Total.....	1,740	900,106

The number of post-offices, and of letters and newspapers passing through them, was, according to the latest dates, as follows:

PROVINCES.	Offices.	Letters.	Newspapers.
New South Wales (1867).....	477	6,748,356	3,897,905
South Australia (1867).....	248	2,804,418	1,924,760
Victoria (1870).....	677	11,139,283	5,287,482
New Zealand (1867).....	...	4,811,240	1,670,520
Tasmania (1869).....	10	842,414	1,208,857

At the close of 1870 the length of the railroads in operation was as follows:

Provinces.	Miles.
New South Wales.....	343
Victoria.....	271
Queensland.....	218
South Australia.....	126
Tasmania.....	43
New Zealand.....	44
Total.....	1,045

The following table shows the length of the telegraph-lines which were in operation, ac-

cording to the latest dates, as well as the number of offices and telegrams:

PROVINCES.	Lines.	Wires.	Offices.	Telegrams.

Tasmania (1869).....	120	9	13,980 ('70)
New Zealand (1868).....	1,471

AUSTRO-HUNGARIAN MONARCHY, an empire in Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, Ferdinand I., on December 2, 1848. Heir-apparent, Archduke Rudolph, born August 21, 1858. The ministry for the public affairs of the whole monarchy was at the beginning of the year composed as follows: Count Beust, Chancellor of the Empire and Minister of Foreign Affairs; Count Loyay, Minister of Finances; Baron Kuhn von Kuhnfeld, Minister of War.

The area and population of the empire, according to the census of 1869, were as follows:

PROVINCES.	Square Miles.	Population.
I. Cis-Leithan Provinces (Austria proper):		
1. Austria below the Ems.....	7,656	1,990,708
2. Austria above the Ems.....	4,433	736,557
3. Salzburg.....	2,767	158,159
4. Styria.....	5,671	1,187,990
5. Carinthia.....	4,006	387,694
6. Carniola.....	3,857	466,234
7. Goritz, Gradisca, Istria, and Trieste.....	3,085	600,525
8. Tyrol and Vorarlberg.....	11,325	885,789
9. Bohemia.....	20,064	5,140,544
10. Moravia.....	8,584	2,017,274
11. Silesia.....	1,988	513,352
12. Galicia.....	20,313	5,444,689
13. Bukowina.....	4,036	513,404
14. Dalmatia.....	4,940	456,961
Total cis-Leithan Provinces.....	115,925	20,394,980
II. Trans-Leithan Provinces:		
1. Hungary.....	82,639	11,188,502
2. Transylvania.....	21,219	2,115,024
3. Croatia and Slavonia.....	8,662	1,168,037
4. Military Frontier.....	11,524	1,037,892
Total trans-Leithan Provinces.....	124,244	15,509,455
Total Monarchy, 1869.....	240,381	35,904,435
Total Monarchy, 1857.....	32,530,002
Increase.....	3,374,433

The increase of the total population, from 1857 to 1869, is 10 per cent. The following cities had over 20,000 inhabitants, according to the census of 1869:

Vienna.....	825,165	Temesvar.....	32,754
Pesth.....	201,911	Arad.....	31,796
Prague.....	157,275	Lintz.....	30,510
Leuberg.....	87,105	Grosswardein.....	29,249
Grätz.....	80,732	Cronstadt.....	28,014

In the budget of 1871, for the whole monarchy, the estimates for expenditure and receipts were as follows:

Expenditures.	Austrian florins.
1. Common Ministry of Foreign Affairs.....	4,264,187
2. Common Ministry of War:	
(1.) For the Army.....	104,997,476
(2.) For the Navy.....	11,353,700
3. Common Ministry on Finances.....	1,783,810
4. Common Chamber of Accounts.....	102,000
Total.....	122,501,173
Receipts.	
Receipts of Ministry of War.....	5,071,159
Receipts from Customs.....	12,199,700
Receipts from Consulates.....	115,000
Payments of the Austrian Lloyd...	232,000
	17,667,859

Balance, 104,833,314 florins, of which 65,145,402 florins are to be provided by the cis-Leithan provinces, and 31,449,994 florins by the trans-Leithan provinces.

The total expenditures for 1872 are estimated at 110,647,498 florins, and the receipts at 93,438,615 florins, of which 65,145,402 florins are furnished by the cis-Leithan provinces, and 28,293,213 florins by the trans-Leithan provinces. The budget of the cis-Leithan provinces for 1871 shows a total of expenditures of 349,811,642 florins, and of receipts of 338,084,609, leaving a deficit of 11,727,033 florins.

The army, in August, 1871, consisted of 246,695 men on the peace-footing, and 820,811 on the war-footing. The navy, at the beginning of the year 1871, consisted of 47 steamers, of 95,700 tons; 20 sailing-vessels, of 13,190 tons; and 5 tenders, of 930 tons. Total, 72 vessels, and carrying 522 guns.

The imports, not including precious met-

als, of the monarchy, in 1870, amounted to 424,700,000 florins; the exports to 395,900,000. The arrivals at the port of Trieste, in 1870, were 8,054 vessels of 960,103 tons; the clearances, 8,023 vessels, of 1,012,776 tons. The merchant navy, at the beginning of the year 1871, consisted of 7,843 vessels, of 375,822 tons. The number of letters sent in 1870, by mail, was 143,898,317 in the cis-Leithan, and 31,792,143 in the trans-Leithan provinces.

The year 1870 closed with the exchange of friendly sentiments between the Chancellors of Austria and the North-German Confederation. A dispatch from Bismarck, dated December 14th, expressed the hope that Germany and the Austro-Hungarian monarchy would regard each other with sentiments of mutual friendship, and join hands for the promotion of their prosperity. This expression of friendly feelings was fully reciprocated in a note from the Austrian Chancellor, dated December 16th. In opposition to that party which demanded that Austria should insist on the Treaty of Prague, which excluded the South-German States from a union with the North-German Confederation, Von Beust took the ground that, whatever claims Austria may have a right to base upon the Peace of Prague, the great event of modern times, the unification of Germany, must be the standard by which to judge the international relations between the two great empires of Central Europe, and that an unbiassed appreciation of mutual wants will be the basis of the friendly relations which in future must rule between the powerful.

neighbors. He gives assurances that the Emperor, as well as the people of the monarchy, welcomes the united Germany with warm sympathy, and with the wish that the unity of Germany may promote the welfare of Austria. The same sentiments Count Beust emphatically repeated in a speech made on January 31st, in the sitting of the Austrian delegation at Pesth, when, in reply to the Pole, Klaczka, he denounced a policy of revenge as one that never had borne good fruit. At the same time, he strongly urged an increase of the defensive forces of the country, and thus defined the foreign policy of the Government:

Our policy will be one of prudence and reserve, and, at the same time, of most decided endeavors to maintain, strengthen, and act in accordance with the good relations which have been entered into with a great neighboring power. But who can pretend to foreshadow the exact limits which one's hopes and wishes would prefer to lay down for the great and unexpected reconstitution of things that has sprung out of recent events? Under these circumstances it does not suffice for a state that has no other aim than self-preservation to be content with the consciousness of this one idea, which is not injurious to its neighbors. Safety is only certain when this policy is seen to be, not the emanation of conscious weakness, but the expression of one's free will. If we have done nothing to oppose or impede the reconstruction of Germany; if we have met this reconstruction of the German nation with nothing but a friendly welcome; if we have endeavored to regulate our relations with another neighboring state without neglecting our own interests, but at the same time without being actuated by other than conciliatory motives; if, finally, toward a third power we have shown ourselves friendly, and full of respect for its independence, and even did not recoil before the necessity of violating sentiments which in our own country we hold in esteem, then others must and will know that we are all the more entitled to expect that in our own home we shall be let alone, and that if attacked we will at all times be ready to defend ourselves. The dearly-bought fruit of recent occurrences is the establishment of an equal perception of these facts, the consequent necessity of making demands upon the resources of the country in both portions of the empire, and the creation of the only possible patriotism, one that cements the different nationalities of Austria.

The home policy of the empire was at the beginning of the year 1871 in a most unsettled condition. The resignation of the cis-Leithan ministry, presided over by Count Potocky, took place in February, but it was not known from which party its successor would be taken. The expected reorganization of the ministry took place on February 7th, when the Emperor appointed Hohenwart Minister of the Interior, with authority to form a new cabinet. Other decrees at once followed, appointing Holzgethan, Minister of Finance; Schaeffle, Minister of Commerce; Jirecek, Minister of Public Works and Public Schools; and Baron von Scholl, Minister of War. With regard to the policy to be pursued by the new ministry, the *Official Gazette*, of Vienna, remarked that the new ministry would give fair play to all legitimate provincialism, but that there would be no more compromise with separatism at the expense of unity. It would uphold the Consti-

tution, but would propose to Parliament the enactment of laws partially extending the legislative and administrative autonomy of the empire, and introduce a bill providing for direct elections, and enlarging the rights of electors. The ministry would offer a strong opposition to all obstacles in the way of its success. At the same time the Emperor, by an autograph decree, granted full amnesty for all political and press offences committed to the 7th of February. Most of the new ministers were comparatively unknown as politicians, but it was generally understood that they would chiefly endeavor to come to a full understanding with the leaders of the Czechs and those of the clerical party. When the Reichsrath reassembled, on February 20th, a statement of their policy was submitted, from which it was apparent that its chief feature would be to initiate measures for the alleviation of unnecessary restriction upon the autonomy of the provinces. The ministry showed a decided dislike to the demonstrations of sympathy with the German Empire in the war with France; on the other hand, however, a prominent man of the liberal German party, Anton von Schmerling, was appointed president of the Herrenhaus. A bill proposed by the ministry, for enlarging the legislative initiative of the provincial diets, was rejected in the Reichsrath, by 85 against 55 votes; and on May 26th the Reichsrath, by 93 against 66 votes, adopted an address to the Emperor, in which the ministry was charged with seeking to undermine the Constitution. The Emperor, on May 30th, received a deputation presenting the address, but in stern words declared his approval of the conduct of the ministry. This failure of the Liberal Constitutional party to overthrow the ministry spread considerable discouragement in its ranks; and when a motion was made, not to grant the appropriations demanded, it was rejected (June 9th) by 77 against 67 votes. Some consolation for the threatening attitude of the cis-Leithan ministry was derived by the German liberals from the foreign policy steadfastly advocated by the Chancellor of the Empire, Count Beust. His speech, made on July 1st, in the Austrian delegation, met with a warm approval from all parties in the country except the Catholics, who are of course dissatisfied with the policy of non-intervention practised toward Italy. It produced so good an impression on the delegation, that the whole of the budget of the Foreign Department, including the item for secret-service money, was passed without question. The following are the most important passages of this speech:

Our policy for the last few years has always been free from all external influences; and it is mainly due to this circumstance that many sources of complication contained in the Treaty of Prague have been avoided, thus paving the way for a peaceful development and consolidation of affairs. Even before it had been officially constituted, the new German Empire made overtures to us in terms full

of respect and confidence, and we did not hesitate cordially to accept these overtures. The exchange of dispatches which took place on this occasion forms the basis of relations, resting on a policy of equality and mutual interest, which have been maintained ever since. I do not share the anxieties of those who expect a reversal of the edifice which has so recently been built. Far from looking back to the past in a spirit of fruitless complaint, and envious ill-will, we hope that the new state of things will follow its natural development. It is an historical error to represent the old Germanic Confederation as a guarantee of peace. The guarantee consisted in the coöperation of Austria and Prussia, and a compensation for the great changes which have occurred in the relations between those powers is given by the disappearance of the object for which they strove. We can, whenever we wish it, now place ourselves on an equal footing by the side of a friendly and strengthened Germany. In England, our new attitude toward Germany is hailed with lively satisfaction. Our relations with Russia are in a favorable state, if only because it is not easy to become the enemy of your friend's friend. Now that a bulwark of peace has been erected in Central Europe, a spirit of moderation and mutual respect must regulate her relations with the East. France will always find in Austro-Hungary a sincere friend. In Italy, she has gained, by the principle of non-intervention, a permanently friendly neighbor; and the conciliatory spirit shown by the Sublime Porte, in the question of the regulation of the Danube, shows that our amicable relations with Turkey have not changed.

The Chancellor concluded by saying that the above statement should not be regarded as an ephemeral programme, but as indicating the principles by which Austria's foreign policy is to be permanently guided.

After the adjournment of the Reichsrath, on July 11th, and the close of the sittings of the delegations on July 20th, Count Hohenwart pursued with greater eagerness than before the attempts to bring about a full understanding with the Czechs and the Poles. The latter appeared to be contented with the concessions made to them, and especially with the Polonization of the Imperial University, at Lemberg, from which most of the German professors were removed. The Czechs were not so easily gained, as they did not conceal their design to demand for Bohemia and Moravia an autonomy equal to that of Hungary. In the beginning of August, the cis-Leithan ministry took an important step to meet the wishes of the Czechs. By three imperial patents, dated August 13th, the Lower House of the Reichsrath, and the Diets of Upper and Lower Austria, Salzburg, Styria, Carinthia, Moravia, Silesia, and the Tyrol, were dissolved; new elections ordered for the Reichsrath and the Diets, and the latter convoked on September 14th. The fact that, with the exception of the Tyrol Diet, only the Diets of those provinces were dissolved in which the supporters of the actual Constitution had a majority, indicated that the Government intended to make great changes in the Constitution. The Diet of Tyrol, in which the ministry controlled a majority of the votes, was included in the measure, as it was expected that the inhabitants of the Italian portion of the province, who

are aiming at the erection of their district into an independent province of the empire, might be induced to send their delegates to the provincial Diet. The election of the new Diets took place in the first days of September, amid the greatest excitement. The German Liberal party was triumphant in Lower Austria, to which province the city of Vienna belongs (64 Liberals being elected, and only one supporter of the ministry); in Carinthia (32 Liberals, 4 Ministerialists), and Silesia (24 Liberals, 4 Ministerialists); it had likewise a two-thirds majority in the Diets of Styria and Salzburg, but the ministry carried the provinces of Upper Austria, Moravia, and Tyrol, and, in general, controlled a sufficient number of votes in all the Diets to be able, in case Bohemia should send her delegates into the Reichsrath, to control a two-thirds majority of the latter.

Important modifications of the Constitution of cis-Leithania were now looked for. When the Bohemian Diet was opened, a rescript from the Emperor was read to the members, in which his Majesty "acknowledged the rights of the Bohemian Kingdom, and promised to guarantee that acknowledgment by a coronation oath." This, the first substantial promise of redress which the Czechs had received since the commencement of their agitation, caused universal joy in Bohemia, and general consternation among the Germans. The drafts of two laws were also presented by the ministers to the Bohemian Diet; one was a law of nationality to guarantee the rights of the Czechs, and of the Germans in Bohemia; and the other was prepared to settle the distribution of offices between Czechs and Germans, and to make it imperative that all officers of the crown should speak both the German and Czechish languages. The next step was the presentation to the Emperor, by a deputation from the Prague Diet, of the fundamental laws on which the Czechs desired the *Ausgleich* should be based. This presentation caused a meeting of the Crown Council, composed of all the cis-Leithan ministers, Count Andrássy, and the three ministers common to the whole empire. The Council was summoned to meet to decide on some objections offered by Counts Beust and Andrássy to the conclusion of the Reichsrath on the basis of the fundamental laws. One objection was, that the Czechs, by desiring the abolition of the Upper House, and the substitution of a Senate in its stead, attacked the Constitution. Another, that the paragraph in the fundamental laws which acknowledged the legality of the arrangement with Hungary, made in 1867 (an acknowledgment not yet made by the Czechs), was inopportune and improper, because the arrangement, being made, could not be altered. Beust also remarked that a change of the relations between Bohemia and the empire should be left to the decision of the Reichsrath, and not to the Bohemian Diet and to the ministers. The Em-

peror, on whose peculiar weakness (apprehension for the safety of his dynasty) both Count Beust and Count Andrássy had worked to some purpose, called the Council together to decide on these points. The decision came to was, that the rescript which was to be sent to the Prague Diet, in answer to its fundamental laws, should be modified in such a manner as to correct the impression given by that part of the Bohemian address to which Beust objected. The Emperor accordingly directed Hohenwart to modify the rescript in that sense. But Hohenwart, who had long since pledged his word to the Czech leaders that the rescript should be drawn up in a manner agreed upon between them, declared his incompetence to do so without first consulting with Rieger and the other Czech leaders. He telegraphed for them to come to Vienna. They answered it was impossible for them to do so until they had been informed of the points about to be discussed, in order that they might confer with their colleagues, and come to Vienna with full powers to treat. In addition they stated explicitly that, unless the rescript was forwarded in the form agreed on, they would not elect deputies to the Reichsrath, which would prevent the Government from having a two-thirds majority. Count Chotek, Governor of Bohemia, was instructed to enlighten Rieger and his colleagues on the subject of the difficulties which had arisen through Count Beust's objections. The Czech leaders came to Vienna, but utterly refused to agree to the modification proposed in the rescript. Count Hohenwart informed the Emperor of this, and received in answer an order to alter the rescript, notwithstanding the minister then informed the Emperor that to carry out his order would bring an end to the negotiations, and suggested that Count Beust should modify his objections so that they might be admitted into the rescript without the sanction of the Czech negotiators. But the Emperor was determined, and, as a paper reports, used the expression, "*Ich befehle es*" (I order it). Count Hohenwart retired, but shortly afterwards presented himself again before the Emperor and tendered his resignation, alleging as a reason that he had pledged his word and could not break it. These occurrences passed on the 21st, 22d, and 23d of October. On the 25th, Count Hohenwart presented officially his resignation, and that of his colleagues; it was accepted. Herr von Kellersperg was intrusted with the formation of a new cabinet, the policy of which was to consist chiefly in a return to the Constitution. As this new move was looked upon as an open breach with the Czechs, and a reconciliation of the Government with the Liberal Germans, the surprise was all the greater when, suddenly, the resignation of the Chancellor, Count Beust, was announced, to whose influence the new change was chiefly attributed. He was appointed Austrian ambassador to England, and the Em-

peror conferred upon him marked honors, in recognition of his services; but it was, on the other hand, no secret that his resignation had taken place at the request of the Emperor. He was succeeded, as Minister of Foreign Affairs for the whole monarchy, by Count Andrássy, the President of the Hungarian ministry, whose programme was so much like the policy which had been steadily pursued by Count Beust, as to leave no doubt that the motives for the resignation of the Chancellor were of a personal character, and not to be found in any disapproval of his policy on the part of the Emperor. Herr von Kellersperg soon abandoned the task of forming a new cabinet, because he could not fully agree with Count Andrássy. They chiefly differed as to the attitude which ought to be observed toward the Poles. Andrássy wished to comply with most of the demands of the Poles, while Kellersperg demanded the suppression of the office of a particular minister for Galicia, which had been created under the ministry of Hohenwart. The task of reconstructing the cis-Leithan ministry was then transferred to Prince Adolf Auersperg. On November 24th, the formation of the new cabinet was completed, and on November 25th the new ministers took the oath of office. It was composed as follows: Prince Adolf Auersperg, President; Lasser, Minister of the Interior; Glaser, Minister of Justice; Stremayr, Minister of Public Instruction; Banhans, Minister of Commerce; Clumetzki, Minister of Agriculture; Unger, Minister without portfolio. A few days later, Dr. Brestel was appointed Minister of Finance. The Diets of Moravia, Carinthia, Upper Austria, Bukowina, and Vorarlberg, in all of which the opponents of the new ministry had a majority, were dissolved, and new elections ordered. The disappointed Czechs held a Federalist Congress in Prague, which consisted of 36 members who fully approved the conduct of the Czech majority of the Bohemian Diet, but at the same time revealed great and irreconcilable differences among the Slavi themselves.

The new session of the Reichsrath was opened on December 27th. On December 28th the Emperor Francis Joseph delivered the speech from the throne. After the customary formal congratulations, the speech proceeds to deal with home questions. The Emperor expressed regret that his readiness to make radical concessions had not brought internal harmony to the state. The crown, while it contemplates the existence of separate kingdoms with satisfaction, claims that its acts are in the interest of the whole empire, as well as of individual states. Great stress is laid on the enforcement of and obedience to the laws. The Government will accede to the wishes of Galicia, in so far as they are compatible with the interests of the empire. Measures are promised which will render the Reichsrath a completely representative body. Bills to re-

form election abuses, to develop the landwehr system, and to improve the pecuniary condition of Government officials and the poorer clergy, will be submitted. The prompt settlement of the educational questions is recommended. Regret is expressed at the fact that a portion of the empire remains unrepresented in the Reichsrath, where alone the attainment of an understanding is possible. The deputies are exhorted to supply the spiritual and material wants of the country. The Emperor closes by declaring that Austria, weary of internal conflicts, desires peace and order; the times were never more prosperous; the aspect of Europe and the foreign relations of the empire are favorable for the maintenance of peace and the unification of Austria. The Lower House of the Reichsrath elected Herr Hopfen President, and Herren Vidulich and Gross Vice-Presidents.

The following table shows the circulation of newspapers, in every province of Austria, in the years 1860 and 1870:

PROVINCES.	Number in 1860.	Number in 1870.
Lower Austria.....	30,851,240	54,189,034
Upper Austria.....	533,177	1,486,340
Salzburg.....	65,457	118,441
Styria.....	2,156,391	4,464,935
Carinthia.....	2,000	109,264
Carniola.....	91,509	427,880
Littoral.....	1,293,571	1,761,074
Tyrol and Vorarlberg...	876,000	1,791,394
Dalmatia.....	149,600
Bohemia.....	2,916,324	12,119,585
Moravia.....	1,110,093	2,431,223
Silesia.....	94,057	165,407
Galicia.....	1,032,181	2,569,790
Bukowina.....	3,539
Total.....	42,075,485	81,383,957

Count Karl August Hohenwart, who, on February 7, 1871, was appointed Prime Minister of cis-Leithan Austria, was born at Vienna in 1824; studied law at the Theresian Ritterakademie in Vienna; entered the service of the state in 1845; became in 1867 Stadtholder of Carinthia, and in 1868 Stadtholder of Upper Austria. The chief feature of the policy pursued by Count Hohenwart as prime minister was the attempt to satisfy the national demands of the Czechs of Bohemia and the Poles of Galicia. In order to carry out this policy, he sought to enlist in his support all the non-German nationalities of cis-Leithan Austria, as well as the Catholic party and the chief aristocracy. He resigned in November, when the Emperor of Austria declined to fulfil the large promises which had been made to the Czechic majority of the Bohemian Diet.

Prince Adolf Auersperg, who, in November, 1871, succeeded Count Hohenwart as Prime Minister of cis-Leithan Austria, was born on July 21, 1821. He entered the army at an early age, and became a major. His political career began in February, 1867, when he was elected by the class of large land proprietors member of the Bohemian Diet. A few months later he was appointed Chief Land Marshal of Bohemia, and as such presided for about three

years over the Diet, and the Provincial Committee at Prague. On March 15, 1870, he was appointed President of the Province of Salzburg, which office he held until he was appointed prime minister. He was one of the few chiefs of provinces who, during the administration of Count Hohenwart, remained in full sympathy with the German Liberal party which opposed the change of the Constitution. In opening the provincial Diet of Salzburg in September, 1871, he eulogized the people of Salzburg for their characteristic fidelity to the empire and the Constitution. The Catholic Federalistic party demand his removal from office on account of this address. He was married to Countess Johanna Festetics, born on June 15, 1830, by whom he has five children (two sons and three daughters). Most of the members of the new cabinet, of which Prince Auersperg is the chief, have served in previous ministries.

Dr. Rudolf Brestel, who has the courage to undertake the most difficult post among all the ministries of Austria—that of finance—was born at Vienna, in 1816. His chief studies in youth were philosophy and mathematics. From 1844 to 1848 he filled the office of Assistant Professor of Elementary Mathematics at the Vienna University, and became a member of the Austrian Reichsrath in 1848. He entered subsequently the profession of journalism. He has held the post of secretary at the Credit Institution for Trade and Commerce since 1856. In 1861 he was elected to the Lower Austrian Diet, and thence passed into the Reichsrath. He is known as a ready speaker, and a firm adherent of the "Constitutional" Austrian party.

Baron von Lasser, the Minister of the Interior, was previously a member of the Cabinet Schmerling.

Dr. Glaser, the Minister of Justice, is professor at the University, and deputy to the Reichsrath from the city of Vienna. When Hassner was prime minister, he was chief of a section in the ministry of Public Instruction.

Dr. von Stremayr, the Minister of Public Instruction and Worship, was a minister under Potocki, and is deputy of Styria to the Reichsrath.

Dr. Banhans was a minister under Hassner, and is deputy for Bohemia.

(For *Count Beust*, who resigned the office of Chancellor of the Empire and Minister of Foreign Affairs in November, 1871, see *BEUST*.)

Prince Carlos Wilhelm Philipp Auersperg, who, in November, 1871, was appointed President of the Herrenhaus of cis-Leithan Austria, is the elder brother of Prince Adolf, and was born on May 1, 1814, at Prague. He is the chief of the younger line of the princely house of Auersperg, and, as such, an hereditary member of the Austrian Reichsrath. He has previously been President of the Austrian Herrenhaus from 1863 to 1865. On December 30th he was appointed President of the cis-Leithan

ministry, which office he resigned in 1868. Like his brother, he is a firm adherent of the principles of the German Liberal party, and may be regarded as the leader of this party among the high aristocracy. He was married on August 18, 1851, to the Countess Ernestine Festetics, the sister of the wife of his brother Adolf.

Count Julius Andrássy, who, in November, 1871, was called by the Emperor of Austria to the portfolio of the ministry of Foreign Affairs for the whole monarchy as successor of Count von Beust (without, however, receiving the title Chancellor of the Empire), was born on May 28, 1823. The count entered public life at an early age. He figured prominently

in 1848, when he was a member of Kossuth's ministry. After the collapse of the Hungarian rebellion, he fled to foreign countries. He returned after an absence of several years' duration, in consequence of the imperial Austrian amnesty for political offences, issued in 1855. When Hungary regained her ancient Constitution, Andrássy, who belonged to the party of Deak, was elected a member of the Diet, and subsequently (February 24, 1867) appointed President of the Hungarian ministry. Two brothers of the minister, Mano and Aladar, took important parts in the military and civil events which transpired in the year 1848 in favor of a revolution within the Austrian Empire.

B

BABBAGE, CHARLES, LL. D., F. R. S., an English mathematician and philosophical mechanist, the inventor of the calculating-machine, born December 26, 1792; died in London, October 20, 1871. He was educated at Trinity College, Cambridge, where he early developed that fondness for mathematical studies which characterized him throughout his long life. In the prosecution of these studies he found that the logarithmic tables in use were extremely faulty and inaccurate, although they had been prepared at very heavy expense. This inaccuracy was partially due to the errors in the observations of the astronomers who furnished the data by which they were calculated, and partly probably to what is called the "the personal equation" of each astronomer, which induced variations slight in themselves but momentous in their results. Mr. Babbage hereupon set himself to consider whether it was not possible to substitute, for these perturbable processes of the intellect, the unerring movements of mechanism, in the preparation of logarithmic tables. For this purpose he visited the best machine and engine shops both in England and on the Continent, inspected their mechanism of wheels, levers, valves, indicators, etc., and studied their various functions and capacities, and, on his return to England in 1821, undertook to direct the construction of a "difference-engine" for the Government. Another result of his Continental tour was the preparation of his admirable treatise on "The Economy of Manufactures," which was translated into French and German, and led the way to many other works on the subject. By 1833 a portion of the machine was put together, and it was found to perform its work with all the precision that had been predicted of it. Mr. Babbage immediately prepared his "Tables of Logarithms of the Natural Numbers," from 1 to 108,000, a work which was well received in all parts of Europe, into most of the languages of which it was speedily translated. In 1828

Mr. Babbage was elected to fill the chair of the mathematical professorship at Cambridge, once occupied by Sir Isaac Newton, and he continued to discharge the duties of that office for eleven years. During this period he devoted all his leisure to the perfection of his machine, although he received no remuneration whatever for his services. In 1833, for some reason at present unexplained, the construction of the calculating-machine was suspended, and was not subsequently resumed. Mr. Babbage was a member of the chief learned societies of London and Edinburgh, and has contributed largely to their Transactions, was the author of "Translation of the Differential and Integral Calculus of La Croix," and "The Laws of Mechanical Notation" (privately printed). He also published, in 1837, "The Ninth Bridgewater Treatise;" a fragment designed at once to refute an opinion supposed to be implied in the first volume of that series, that ardent devotion to mathematical studies is unfavorable to faith, and also to give specimens of the defensive aid which the evidences of Christianity may receive from the science of numbers. In consequence, perhaps, in part, of the obstacles which beset his life-work, Prof. Babbage was inclined to take a desponding view of the state of science in England. This, first expressed in his work on the "Decline of Science," published in 1829, was still more fully declared in "The Great Exhibition," published in 1851. In November, 1832, he contested, though unsuccessfully, the representation of Finsbury in Parliament in the advanced Liberal interest. He made no subsequent attempt to enter political life. Prof. Babbage was a very voluminous writer, on scientific subjects, mostly. In 1851 he published a list of more than eighty scientific treatises, essays, and papers, published up to that time. The greater part of these were on mathematical topics; many of them on the relations of mathematics to practical life, as in logarithms, mechanics, electricity, and mag-

netism, life assurance, registration statistics, etc.; others on topics of pure mathematics, such as prisms, differential and integral calculus; the advantage of a collection of constants in nature and art, etc., etc.; a few were on scientific topics, only indirectly or not at all connected with mathematics. In 1864 he published "Passages from the Life of a Philosopher."

BADEN, a grand-duchy in South Germany. Grand-duke, Friedrich, born September 9, 1826; succeeded his father Leopold, as regent, April 24, 1852; assumed the title of Grand-duke September 5, 1856; heir-apparent, his son, Friedrich Wilhelm, born July 9, 1857. Area, 5,912 square miles; population, according to the census of 1867, 1,434,970. The public debt on January 1, 1871, amounted to 37,644,083 florins, exclusive of a railroad debt of 118,015,028 florins. The receipts for the year 1871 were estimated at 19,217,769 florins, and the expenses at 19,036,953 florins. In consequence of a military convention with Prussia, which went into operation on July 1, 1871, the troops of Baden constitute henceforth a portion of the Fourteenth German Army Corps. The President of the ministry is Dr. J. Jolly, appointed February 12, 1868.

In the beginning of July, the ministry of the grand-ducal house and of Foreign Affairs was abolished, and the affairs relating to the German Empire will henceforth be directly attended to by the state ministry.

At the new election of the members of the Diet, which was held in October, the National Liberal party obtained a complete triumph. They number in the new Second Chamber 50 votes, while the Catholic party has 10, and the Democratic only three. The First Chamber will be somewhat more conservative than its predecessor.

The opening of the Diet took place on November 21st. In a speech from the throne, the Grand-duke referred to the part which Baden had taken in the reconstruction of the German Empire. He announced several bills concerning the introduction of the German criminal laws, the settlement of the expenses of the war and the war indemnity, and the raising of the salaries of the state officers. He declared that the public exchequer was in good order, and that, notwithstanding the increase of the public expenditures, no new demands upon the tax-payers had become necessary.

BAKER, Right Rev. OSMON CLEANDER, D.D., bishop of the Methodist Episcopal Church, born in Marlow, N. H., July 30, 1812; died in Concord, N. H., December 20, 1871. His early advantages of education were good, and he entered the Wilbraham Academy, Mass., then under the charge of Rev. Wilbur Fisk, and in 1831 followed his instructor to Middletown, Conn., where he became a member of the first class in Wesleyan University. Three years later he left the university, without taking a degree, in consequence of failing

health. He soon after became a teacher in Newbury Seminary, Vermont, and at the end of five years the principal, having during that time become first a local and in 1838 a circuit preacher in the Methodist Church. In 1844 he resigned his connection with the seminary, and for the next three years was engaged in the itinerant work at Rochester and Manchester, N. H., being appointed presiding elder in 1847, and the same year chosen a professor in the General Biblical Institute at Concord, N. H. He accepted the latter position with great reluctance, but filled it with signal ability till 1852, when he was elected by the Quadrennial General Conference a bishop. Though a quiet, unassuming, scholarly man, Bishop Baker filled the episcopal office with great acceptance, proving an excellent presiding officer, and managing the confederal and other trusts confided to his care most satisfactorily. He was an able, though not an impassioned preacher, an earnest advocate of theological education, and an admirable business manager in the affairs of the Church.

BAPTISTS. I. REGULAR BAPTISTS.—The *American Baptist Year-Book* for 1871 gives the following statistics of the Regular Baptists in the United States:

STATES.	Associations.	Churches.	Ordained Ministers.	Total Members.
Alabama.....	42	1,054	519	59,109
Arkansas.....	27	539	284	30,009

Great Britain and Ireland.—The Baptist *Hand-book*, of London, for 1871, gives the following statistics for the United Kingdom: *England*, associations, 30; churches, 1,910; chapels, 2,397; members, 170,380; Sunday-school scholars, 251,085.—*Wales*, associations, 9; churches, 511; chapels, 550; members, 54,853; Sunday-school scholars, 50,626.—*Scotland*, associations, 1; churches, 110; chapels, 109; members, 7,053; Sunday-school scholars, 4,396.—*Ireland*, associations, 1; churches, 37; chapels, 37; members, 1,389; Sunday-school scholars, 1,052. Total, associations, 41; churches, 2,568; chapels, 3,093; members, 233,675; Sunday-school scholars, 307,159. The number of ministers is: In England and Wales, 1,922; in Scotland, 55; in Ireland, 25; total, 1,990, of whom 436 are without a charge.

The statistics of other countries in Europe are, according to the *American Baptist Year-Book*, as follows:

COUNTRIES.	Churches.	Members.
Denmark.....	18	1,866
France.....	9	496
Germany.....	71	13,468
Holland.....	1	95
Italy.....	1	14
Norway.....	1	133
Poland.....	1	764
Russia.....	4	1,368
Spain.....	2	100
Sweden, 10 Associations.....	203	8,148
Switzerland.....	3	299
Turkey.....	1	120

The latest report from the Swedish churches gives for Norway, 262 members; in Sweden and Norway, 216 churches, 8,686 members.

The following table gives the summary for the world, for 1870 and 1871.

COUNTRIES.	Associations.	Churches.	Ordained Ministers.	Total Members.
United States.....	799	17,445	10,818	1,419,493
British America and Mexico.....	5	632	412	45,145
Europe.....	51	2,883	2,109	260,541

Asia.....	..	434	167	21,064
Australia.....	..	133	90	4,321
West Indies.....	..	95	35	22,749
Total.....	855	21,652	13,665	1,746,415

The Northern Baptist anniversaries for 1871 were held in Chicago, Ill., in the third week in May. The American Baptist Bible and Publication Society was formed by a consolidation of the American Baptist Publication Society and the American and Foreign Bible Society, which was agreed upon in 1870. The societies had acted during the year as one; but, at the annual meeting, a communication was read on behalf of the Board of the American and Foreign Bible Society, setting forth that legal difficulties had interposed to prevent the full transfer of its effects to the consolidated society; that a bill to remove them had been passed by the New York Legislature, but was returned by the Governor without his signature; and that a bill prepared by members of the Bible Society opposed to the union had been passed, repealing the act under which the measures to form a union had been taken, thus leaving matters as they were before the effort at union was made. The board felt that they had used all the legal means in their power to consummate the union.

The consolidated society is the Bible Publication, Sunday-school, and Colporteur Society of the Baptists. Its business and benevolent departments are kept entirely distinct. The former department is self-supporting. The society has stereotyped about eleven hundred publications. The receipts for the year previous to making the last report were, in the business department, \$274,439.99, and in the missionary department, \$57,709.60, the sum (\$332,149.69) showing an increase of \$10,350.50 over the receipts of the previous year. Nineteen new publications were issued. Several hundred thousand copies of periodicals were circulated regularly, and 123,000 copies of the Bible lessons for Sunday-schools. The new Sunday-school books were thought to be of an improved character. A new hymn-book was published just before the close of the fiscal year, after four years of careful preparation. Besides the Sunday-schools which were aided and visited by agents of the society, 308 new ones were organized, with 11,000 scholars. The progress of the work among the freedmen was reported favorable, and the fact that the Christians of the South are earnestly enlisting in it was recognized with pleasure. A work is also carried on prosperously among the Germans, in America. A German pastor, of Buffalo, New York, stated that "the German Baptists are themselves doing something in this direction. They have a weekly paper with a circulation of 3,500, and a Sunday-school paper with a monthly circulation of 8,000. They also publish tracts."

The attention of the society was called to the propriety of publishing tracts in Spanish. Resolutions were passed, advising the publication of a work in tract form, "to refute the errors of Campbellism," and, of a series of tracts to present, in a condensed form, "the most important facts and events of Baptist history."

The work of the *American Baptist Home Mission Society* is now divided into three departments: the Northern, the Southern, and the Church Edifice. The Northern Department embraces all north of Virginia, Kentucky, and Arkansas, including the Indian Territory, and the Pacific coast. The Southern Department embraces the States and Territories south of Pennsylvania, Ohio, Missouri, and the Indian Territory, including the Republic of Mexico. The Church Edifice Department is distinct from each of the others, and includes the correspondence and labor of obtaining and of appropriating all church-edifice funds. Each department has its secretary. More than three hundred and sixty missionaries were employed during the year 1870-'71, of whom one hundred were in the South. The missionaries preach to people of more than eleven nationalities, in eleven different languages. The receipts of the freedman's fund were upward of \$55,000. The week-day schools and classes were attended by 2,768 persons. A special interest has been awakened in behalf of the work among the Chinese. In the Church-Edifice Department more than sixty houses of worship were erected. A sharp discussion took place during the annual meeting, between Northern and Southern delegates, in reference to the character of the work among the freedmen. A resolution was passed declaring that "the Baptists of America must now, as never before, bare their shoulders to the burdens of educating and Christianizing the freedmen of the South." Resolutions were subsequently passed deprecating the agitation, at religious anniversaries, North or South, of questions which have formerly divided sentiment, "while the great cause of division has ceased to exist."

The receipts of the *American Baptist Missionary Union* for the year were \$217,510.56. The total receipts during the twenty-five years from 1846 to 1871 were \$3,439,830.20. During this period, the fiscal year was closed with a credit balance five times, and with a debit balance twenty times. The largest gross income was for the last year. The missions of this society in Burmah are among the most important and most successful in the whole list of Protestant missionary enterprises. In the fall of 1870 the Karen missionaries, in Burmah, made an appeal to the Executive Committee to furnish the Karen young men with the means of obtaining a higher education. Accordingly, it has been determined to establish a college at Rangoon. Six pupils were graduated by the theological seminary at Rangoon. Besides that in Burmah, this society sustains missions in Southern India; at Bangkok, in Siam; in the south and east of China; in France, Germany, Sweden, Spain, Greece, and Africa. The following general summary of the missions is given in the last annual report (May, 1871):

The missions of the Union are 14—in Asia, 8; in

Europe, 5; in Africa, 1. In the Asiatic missions there are 20 stations where American missionaries reside, more than 400 out-stations, and 435 churches. The number baptized last year is 1,739; the whole number of members in the churches is 21,763. If we add to these the members of churches in Burmah not under the immediate supervision of the Union, the number reaches not less than 24,000. Number of American laborers connected with the missions in Asia, 94; of whom 43 are males and 51 are females. There are nearly 500 native assistants, of whom about 80 are ordained ministers. The statistics of the German mission have not yet reached this country, and those of the French mission are imperfect. Using the statistics of the preceding year, so far as is needful, we number five missions in Europe, and one in Africa, with a total of 1,244 stations and out-stations, 331 churches, 394 preachers and colporteurs, 2,723 baptisms, and not less than 27,000 members. Combining the statistics of the missions in Asia, Europe, and Africa, we have an aggregate of 1,664 stations and out-stations, 766 churches, 988 laborers of all classes, 4,452 baptisms, and 43,763 members.

Two Women's Missionary Societies—one in the East, and one in the West—have been organized to operate conjointly in aid of the Missionary Union. They contemplate especially the enlargement of the operations of the missions, and the promotion of their greater success among the women of the Eastern countries in which the custom of seclusion is observed.

The *Baptist Historical Society*, which was organized within the last five years, has accumulated a library of more than 5,000 volumes, 15,000 pamphlets, several hundred portraits, autographs, manuscripts, and a large quantity of minutes of associations. Its object is to gather up and preserve all matters in relation to Baptist history, ancient and contemporary.

Several general educational conventions were held by the Baptists during the year. The Southern Baptist Educational Convention was held at Marion, Alabama, April 12th. An educational convention from the New England States was held at Worcester, Massachusetts, April 26th and 27th. One for the Western States was held in Chicago, May 24th and 25th. One for the Southern States was held in Richmond, Virginia, July 4th and 5th. All of these, except the first, were held under the auspices of the Baptist Educational Commission, which was formed at the New York State Convention of 1867. They were attended by the boards and faculties, and friends of the Baptist colleges and theological seminaries, with the object of setting forward the movement in behalf of a higher education. The discussions, and the papers read, related to a large scope of topics in harmony with this object. No specific, practical object was sought or reached in any of them; but good effects were looked for in awakening a more general interest, and securing a more intelligent and effective degree of coöperation and harmony. The Northwestern Baptist Education Society was organized in Chicago in September by delegations representing ten

churches of that city. The design is to have this embrace all local organizations in aid of ministerial students, and thus secure concert of action.

According to tables of statistics published in the *National Baptist*, the Baptists have 27 colleges, universities, and theological seminaries, with 141 instructors, 1,406 students, and 124,666 volumes in their libraries. The value of the property of these institutions is \$2,583,000, and of their endowments \$2,213,483. The Baptists have seven schools for freedmen in the South, as follows: the Wayland Seminary, at Washington; Colver Institute, Richmond, Virginia; Shaw Collegiate Institute, Raleigh, North Carolina; Benedict Institute, Columbia, South Carolina; Augusta Institute, Augusta, Georgia; Leland University, New Orleans, Louisiana; Nashville Institute, Nashville, Tennessee. The property of these schools is valued at more than \$100,000, and is all clear of debt.

The *American Baptist Free Missionary Society* held its twenty-eighth annual meeting at Sampton, New Jersey, October 11th. The condition of the missions had undergone but little change since the last meeting. The financial condition of the society had improved. The Kentucky schools were discontinued on the withdrawal of Government aid and the closing of the Freedmen's Bureau. The Burman mission was reported self-sustaining; the Bassein mission had been transferred to the American Baptist Missionary Union. The mission to Japan is continued, and promises well. A plan for union with the consolidated convention (colored) has been under consideration for some time. At the present meeting of the society, the question of forming the union or of continuing the society was referred to the board, with power to perfect such arrangements for the future, not inconsistent with the principles of the society, as they might deem expedient.

The *Southern Baptist Convention* met at St. Louis, Missouri, May 4th. Delegates attended from Virginia, North Carolina, Georgia, Alabama, Mississippi, Texas, Tennessee, Missouri, Florida, Maryland, South Carolina, Louisiana, Arkansas, Kentucky, West Virginia, and China. There were also a large number of visiting delegates from several of the Northern States. The report of the Board of Foreign Missions indicated a more increased interest and progress in the work than had been expected, in consideration of the still comparatively unsettled condition of business and industry. Several new missionaries had been sent out during the year, and the working force in the mission-fields had been strengthened by the ordination of native ministers. Altogether, the working-force in the foreign field was more than doubled during the year. The missions especially named as having advanced were those at Shantung, Shanghai, and Canton, China; the African mission, and that

of Rome, where the Rev. Dr. Cote was stationed early after the occupation of the city by the Italian Government. Dr. Cote has planned an extensive work with evangelists and colporteurs through the entire length of the Italian peninsula. A mission is conducted in France under the direction of this board. The receipts for the fiscal year were \$27,254.51; the expenditures were \$24,295.84. The Board of Home and Domestic Missions reported operations among the Indians, the German and Chinese population employed on the railroads, among the colored people, and with the white population. One hundred and thirty-four missionaries are employed by the board; one hundred and fifty are employed by the boards of the State conventions; and seventeen are supported by district associations. The expenditures of the General Board in this work were \$27,000; of the State conventions, \$41,744.35; of the district associations, \$5,000. The Sunday-school Board publish a monthly and a semi-monthly paper. Their receipts were \$19,186.98. The office of the Board of Foreign Missions is in Richmond, Virginia; that of the Board of Domestic Missions is at Marion, Alabama; and that of the Sunday-school Board is at Memphis, Tennessee. Much attention was given in the discussions of the convention to the subjects of the education of the freedmen and of the Chinese laborers. The following is an exhibit of the receipts of the three boards for the year ending in 1871, as compared with those of the previous year:

BOARDS.	Receipts.	Increase.
Domestic Mission.....	\$31,223 17	\$9,673 44
Foreign Mission.....	25,749 80	3,811 27
Sunday-school.....	19,198 71	11,372 53
Total.....	\$76,171 18	\$24,857 24

The following is a tabular statement of the contributions from each State to the three boards, with the increase, or decrease, as compared with the sums reported at the session of the convention in 1870:

STATES.	Contributions.	Increase.	Decrease.
Georgia.....	\$12,841 50	\$1,553 85
Kentucky.....	9,365 02	2,170 30
Alabama.....	7,896 54	1,737 02
Tennessee.....	5,815 87	3,124 42
Mississippi.....	4,627 05	1,455 48
Missouri.....	4,323 96	2,980 19
Virginia.....	4,182 44	1,033 30
Maryland.....	4,154 27	\$1,611 07
South Carolina.....	3,675 16	1,529 08
North Carolina.....	2,179 52	804 20
Texas.....	1,319 82	767 67
Louisiana.....	1,141 35	469 48
West Virginia.....	514 52	198 23
Arkansas.....	452 71	417 31
Florida.....	122 85	32 50

The third General Conference of the German Baptists (regular), in the United States, was held in New York, commencing October 5th. The business of the body had reference to the German Baptist Publication Society, the German branch of the Rochester Theological

Seminary, the establishment of a Baptist Orphan Asylum for Germans at Louisville, Ky., and of an Old People's Home at Monee, Ill. Four hundred additions by baptism were reported. The endowment of the German professorship in the Rochester Theological Seminary is completed. Twenty German students are reported as attending this institution.

From an account given by the Rev. Thomas M. Westrup, missionary of the American Baptist Home Missionary Society for Mexico, it appears that the first Baptist Church in that republic was organized by him at Monterey, New Leon, on the 4th of July, 1870. There were, on the 1st of June, 1871, five Baptist churches in the country; that at Monterey, with 19 members; at Cadereita Jimenez, 32 members; at Santa Rosa, 26 members; at Los Ebanos, 18 members; and at Montemorelos, 15 members. Total number of members, 110. Besides Mr. Westrup there were three ministers, the Rev. Santiago Diaz, the Rev. José M. Uruaga, and the Rev. Francisco Trevino, all native Mexicans. No associations had been formed.

The receipts of the Canadian Baptist Foreign Missionary Society for 1871 were \$4,588.70, being larger than those for any previous year. The society employs two missionaries among the Telooagoos in India, whose labors have been attended with considerable success. The Home Mission Board employs 46 missionaries, supplying 122 stations. The Church-Edifice Society reports a year's income of \$1,600 and \$3,500 of assets.

The twenty-sixth annual session of the Baptist Convention of New Brunswick, Nova Scotia, and Prince Edward's Island, was held in Yarmouth, N. S., August 19th. A report was made, favoring an effort to raise an endowment fund of \$50,000 for Acadia College. A committee, to whom the subject was referred, approved the establishment of an independent foreign mission. The Board of Missions was established at St. Johns, N. B. At a meeting, held on the 20th of September, this board resolved that a union of the energies of the Baptists of the Dominion in the establishment of a Canada Baptist Foreign Missionary Society was desirable, and directed that a correspondence on that subject be opened with the brethren in Ontario.

The autumnal meetings of the Baptist Union of England were held at Northampton, September 25th to 28th. The sessions were devoted to discussions. The body took significant action in condemnation of the proposition to pay to ex-Governor Eyre, of Jamaica, money to cover his legal expenses incurred in defending himself against the charges which arose out of the insurrection of 1865. Strong resolutions were also passed against the clauses of the Elementary Education Act, which empower school boards to give religious instruction in rate-supported schools, and particularly against the twenty-fifth clause, by which rates, levied on the whole community, are applied to

pay the fees of children attending sectarian schools. The withdrawal of the grants from sectarian schools was called for. Resolutions were passed in favor of legislation for the closing of the public-houses on Sundays, and recommending the principle of permitting rate-payers, by vote, to prohibit the sale of intoxicating liquors in their respective districts. The Baptist Missionary Society reports an income of £39,339 8s. 6d. Missions: *India*—missionaries, 38; native assistants, 155; members, 2,500. *China*—missionaries, 2; native assistants, 4; churches, 3; members, 35. *Ceylon*—missionaries, 3; churches, 15. *Brittany*—missionaries, 2; members, 46. *Trinidad*—missionary, 1; churches, 7; members, 371. *Bahamas*—missionaries, 3; members, 3,000. *Hayti*, missionaries, 2. *Africa*, missionaries, 5; members, 120. *Norway*, missionaries, 4. The Calabar institution in *Jamaica* prepares students for the ministry, and school-masters.

Conference of Continental Baptists.—The eighth triennial conference of baptized Christians in Germany, Denmark, Holland, Poland, Switzerland, France, Russia, Turkey, and Africa, was held in Hamburg, July 6th to 14th, 1870. One hundred and twenty delegates and strangers were present, including visitors from England, Scotland, Wales, Sweden, and North America. Fourteen new churches applied to be received into the Conference. Calls for aid were received from Austria, the Danubian principalities, Russia, Africa, and Australia. The report was made that the "German Baptists"—a missionary having been stationed in China—have entered all quarters of the globe. An animated discussion was held, and carefully-prepared resolutions were passed, on the duty of systematic giving. The beginning was made for the accumulation of a church-building fund. More than \$1,000 were subscribed toward paying the debt on the Hamburg chapel. The statistical reports for the three years, 1867-'69 inclusive, showed 5,346 baptisms, and a total of members of 18,218, giving a net increase of 2,704.

II. FREE-WILL BAPTISTS.—The *Free-will Baptist Register* gives the following list of associations of Free Christian Baptists of America, which, in doctrine and polity, are in almost exact agreement with the Free-will Baptists: New Brunswick Conference; members, 6,000.—Nova Scotia Conference: churches, 29; members, 2,940.—Chattahoochee United Baptist Association, Georgia: churches, 13; members, 534.—American Free-will Baptist Association; churches, 19; members, 849.—Tow River Association: churches, 17; members, 731.—United Association, Indiana: churches, 25; members, 1,480.—Central Illinois Association: churches, 7; members, 319.—Southern Illinois Association: churches, 14; members, 676.—Union Association, Kentucky: churches, 14; members, 612. Union Grove Association, statistics not known.—Cumberland Association, Kentucky: church-

es, 18; members, 400.—North Carolina Conference: churches, 58; members, 3,898.—Alabama Association: churches, 7; members, 244.—Western Virginia Free Salvation Baptist Association: churches, 7; members, 352.—Arkansas Association of Baptists: churches, 7; members, 152.

The following are the statistics for the United States, as given in the *Free-will Baptist Register* for 1872:

YEARLY MEETINGS.	Number of Quarterly Meetings.	Number of Churches.	Communicants.
New Hampshire.....	9	127	9,291
Maine Western.....	4	66	4,646
Maine Central.....	5	108	6,378

Liberty Association.....	..	27	1,786
Quarterly Meetings not connected.....	7	25	549
Churches not connected.....	..	19	325
Total (35 Yearly Meetings).	153	1,413	69,583

The number of ordained preachers is 1,145; of licensed preachers, 158. An increase is shown of 27 churches and 2,677 members, and a decrease of 6 ministers. The total amount of contributions for foreign missions was \$6,095.60; of bequests, for the same purpose, \$2,942.26. The total receipts of the Home Mission Society were \$8,243.41.

The General Conference of the Free-will Baptist Churches in the United States was held at Hillsdale, Michigan, beginning on the 4th of October. The new yearly meetings of Minnesota, Southern Virginia, and Southern Illinois, were admitted to representation. The Southern Illinois yearly meeting is composed principally of colored churches, organized as the result of the missionary operations in the neighborhood of Cairo. A yearly meeting was reported partially organized in Kansas, and was represented, but without a vote. The Association of Separate Baptists of Illinois,

with 15 churches and 600 members, was also admitted, the churches being accorded the privilege of retaining their old name. This association has no denominational literature or educational institutions, but agrees in doctrinal views with the Free-Will Baptists. A corresponding messenger was present from the Free Christian Baptists of New Brunswick. Fraternal feeling has been developed by correspondence with the General Baptists of England. The Sunday-school Union reported assets \$890.97; expenses, \$245.94. The Missionary Society reported a prosperous work. Its total receipts were \$11,167.86; expenditures, \$12,029.05; the permanent fund is \$6,540.02, of which \$5,850 are invested; outstanding debt, \$2,790. During the year \$5,000 were raised in India for mission-work. The Home Mission Society have organized two yearly meetings, and assisted 38 churches and 7 quarterly meetings in 15 different States. Its resources for the year were \$14,724.48; its debt \$6,583.13, of which \$5,000 are lent and secured by mortgage. Its permanent fund, the interest of which only can be used, is \$3,255.80. A proposition to unite the Home and Foreign Missionary Societies was considered, and was indefinitely postponed. An effort was decided upon, to raise 50 cents annually per member for benevolent purposes, of which 20 cents should be applied to the cause of foreign missions, 20 cents to home missions, and the remainder to education. To the ordinary testimony of doctrine the General Conference added a declaration against Darwinism, and a congratulation that other churches are verging toward the doctrinal stand-point of the denomination, by advocating a larger liberty of thought and investigation, etc. Bates College, Lewiston, Maine, and Hillsdale College, Michigan, under the care of this denomination, are flourishing institutions. The Free Christian Baptists of New Brunswick support the Rev. J. Phillips as a missionary in India. The home-mission field is large, and many of the churches are without pastors, they have 120 churches, and only 33 preachers, with 9 or 10 licentiates. The salaries of the ministers average less than \$400. The people are represented as prejudiced against salaried ministers. The yearly Conference of Nova Scotia, embracing all the Free Baptist churches in the province, reports about 3,000 communicants. The number of Sunday-school scholars is represented as relatively large. At the meeting held in Argyle, in September, a solid peck, by measure, of silver coin, was collected for foreign missions.

III. SEVENTH-DAY BAPTISTS.—The Seventh-day Baptists have 75 churches, 82 ministers, and 7,336 members.

The fifty-seventh General Conference of the Seventh-day Baptists was held at Adams Centre, Jefferson County, New York, on the 6th of September. Letters were read from about 50 churches. At a preceding session

of the conference, a majority report had been received from a committee appointed to consider the subject, in favor of enforcing the rule of close communion. At this session, the minority of the same committee, who had not been heard before, by permission presented a report in favor of tolerating open communion. The communication, and the whole subject of communion, were then referred to a special committee, with instructions to consider the subject, prepare a discussion on both sides, and publish the same. Arrangements were made for celebrating the bi-centennial anniversary of the existence of the denomination in the United States at the next General Conference, which is to be held at Southampton, Illinois. Papers are to be read on the history of the denomination, its doctrines, its educational and other interests, and other appropriate subjects. A fund is to be raised on the basis of average contributions of one dollar from each member. There are several educational institutions under the care of this denomination. A small congregation of Seventh-day Baptists has been built up at Shanghai, China. The home-mission work is prosecuted in New Jersey, West Virginia, Ohio, Missouri, Minnesota, Kansas, and Nebraska. The Tract Society is working with considerable energy in the dissemination of the Sabbath doctrines, and the organization of churches. Its agents report a considerable degree of success, the most marked instances of which were exhibited in Illinois, in the adhesion of eight Baptist ministers to the views of this society, and the organization of several churches. The receipts of this society were \$3,487.26. It distributed during the year 407,000 pages of tracts. It has recently undertaken the establishment of a publication-house, having already secured subscriptions available for this purpose of \$11,000, which it will try to increase to \$15,000. The principal institution under the care of the Educational Society is Alfred University, at Alfred, New York. It has a faculty of 18 professors and teachers, and reported for the academic year 1870-'71 408 pupils of both sexes in all the classes, 99 being in the collegiate department, and a year's expenditure of \$9,213.47. Milton College, Milton, Wisconsin, reported 74 students in the collegiate department, 163 in the preparatory, or academic classes, and a year's expenditure of \$4,613.89. Albion Academy owns land and buildings worth \$50,000, and reports that the school has grown beyond the expectations of the trustees.

At the General Conference of Seventh-day Baptists, held in September, a representative of the General Conference of the Seventh-day Adventists gave an account of the missionary operations of that denomination, explaining that their plan of operations is to rely much upon the membership of the churches to maintain regular religious services, while the ordained preachers are engaged mostly in the

promulgation of their peculiar views, by preaching in tent-meetings and outside of the denomination proper. He estimated the number of church-members connected with that people at between four and five thousand, and thought there were some ten thousand persons who might probably be described as holding their views.

IV. TUNKERS.—The National Conference of the branch of the German Baptists known as "Tunkers" was held at Millersburg, Pa., on the 30th of May. The "Tunkers" are understood to collect no statistics, regarding them as vanities. A writer in the *Philadelphia Press*, who attended the meeting, ascertained by inquiry that "the number of churches cannot be much less than 500. There are certainly from 1,500 to 2,000 ministers and elders, while the membership is about 100,000. There are churches in nearly or quite all the Western States—even the newest, Kansas and Nebraska, having churches—and in some of the former slave States, especially Tennessee, Missouri, and North Carolina. West of the Rocky Mountains, churches have been formed in California and Oregon. The denomination is steadily extending itself in the West. Missionaries are appointed to travel over new sections of the country, and to organize churches wherever proper." They publish several periodicals and a few standard works. They call themselves "German Baptists," and "Brethren." They do not use the term "Tunkers" among themselves, but are said not to particularly object to it. They keep the seventh day as the sabbath.

V. GENERAL BAPTISTS (England).—The income of the General Baptist Missionary Society is reported £9,126 14s. 9d. The society employs six men as missionaries, seven women, and sixteen native preachers, in India.

BAVARIA, a kingdom in South Germany. King, Ludwig II., born August 25, 1845; succeeded his father, Maximilian II., on March 10, 1864; heir-apparent, his brother Otto, born April 27, 1848. Prime-Minister (1871), Count von Hegenberg-Dux; Minister of Finances, A. von Pfretzschner; Minister of War, Lieutenant-General S. Baron von Pranckh; Minister of Public Worship, J. von Lutz; Minister of the Interior and Minister of Justice, Dr. J. H. Fäustle; Minister of Commerce, State Councillor von Schubert; First President of the Chamber of the Reichsräthe (First Chamber), Baron T. Schenk von Stauffenberg; Second President, Baron von Schrenk; First President of the Chamber of Deputies, Baron von Ow; Second President, Count von Seinsheim-Grünbach. The area of Bavaria is 29,292 square miles; the population, according to the census of 1867, was 4,824,421. The population of the largest cities was as follows: Munich, 170,688; Nuremberg, 77,895; Augsburg, 50,067; Würzburg, 42,185; Ratisbon, 30,857; Bamberg, 25,972; Fürth, 22,496; Baireuth, 19,464. At the close of the year 1870, the two Cham-

bers were engaged in discussing the Federal treaty, by which the Bavarian Government had agreed to become a member of the German Empire. The First Chamber (Chamber of the Reichsräthe), on December 30th, ratified them with all votes except three, the royal princes as well as the bishops voting in favor of them. In the Lower Chamber the treaties encountered a more formidable opposition. Dr. Jörg, one of the leaders of the Patriotic party, moved that the ratification be refused, and that Bavaria demand a particular position, which, in fact, would be equivalent to the establishment of a confederation within the German Confederation. A large portion of the party refused, however, to support this motion, and several of its members even warmly advocated the ratification of the treaties, urging either the great change of opinion among the people or the express wish of the King, who, in an autograph letter, had asked the Archbishop of Munich to use his great influence in behalf of the ratification of the treaties and the entrance of Bavaria into the German Empire. When the final vote was taken on January 21st, the ratification was carried by the necessary two-thirds majority, 102 voting for and only 48 against it. As the Chambers of the other Southern States had previously ratified the treaties, this vote of the Bavarian Second Chamber completed the political unification of Germany. After the exchange of the treaties, the official law paper of Bavaria published a royal decree, of January 30th, promulgating the Federal treaties, and the electoral law for the German Empire, and thus making the Constitution of the German Empire valid for Bavaria.

In August a new ministry was formed, under the presidency of Count Hegnenberg-Dux. Its official programme embraced the honest fulfilment of all the obligations assumed with regard to the German Empire, the introduction of administrative reforms, and a conciliatory policy in home affairs. The most difficult subject which engaged the attention of the new ministry was the Old Catholic movement, which found its centre in Munich. The Old Catholics claimed to be recognized by the state as members of the established Catholic Church, while their opponents demanded that they be treated as having seceded, and as being no longer entitled to any part in the rights and privileges of the Church. The ministry soon defined its position. It refused to dismiss the theological professors of the University of Munich who were at the head of the Old Catholic movement; and when the Bavarian bishops demanded the abolition of the royal *placet*, which, according to the Bavarian Constitution, must be given to any ecclesiastical decree before it can be regarded as obligatory for the inhabitants of Bavaria, they met with an emphatic denial. In the Old Catholic Congress, held in Munich in September (see ROMAN CATHOLIC CHURCH), many of the highest officers of the state took an active part. On the opening of

the Chambers, September 27th, the Patriotic (Old Catholic) party elected its candidate, Baron von Ow, first president of the Second Chamber. The budget submitted by the Government showed that the proceeds of the Bavarian railroads amounted to the unexpectedly large sum of 21,000,000 florins; on the other hand, however, it was regretted that the cost of management, which in other states varies between 36 and 40 per cent. of the proceeds, amounts in Bavaria to 60 per cent., leaving to the state a clear profit of only 9,000,000. In reply to an inquiry, signed by 47 members of the Party of Progress, the Minister of Public Worship and Instruction, on October 14th, replied that "the state had at all times the right to make changes in the laws relating to the Church. The Church having declared a change of principles, and infallibility being a doctrine dangerous to the State, the Government had resolved to protect any and all of its citizens who could not accept the infallibility of the Pope as an article of faith. The Government would still consider such persons as Catholics, and it would oppose any encroachment by the Church upon the principles of the civil constitution." The minister also declared that "the sentiment of the King and the Council of State favored a separation of religious and political branches of the Government, and the complete independence of each."

This declaration of the ministry called forth a Papal allocution, dated October 27th, which accused the Bavarian ministers of listening to malignant insinuations, of protecting the new sectarians, of encouraging their rebellion, and of thus causing a great scandal. The Old Catholics are designated as sons of perdition, who wish to call forth a persecution of the Catholic Church by the secular powers. The Bavarian ministers, on the other hand, are praised for their pastoral zeal and admirable courage.

Count Friedrich Hegnenberg-Dux, the new Prime-Minister of Bavaria, is the present chief of a noble family which descends from an illegitimate son of Duke William IV. of Bavaria, who died in 1511. He was born in 1810, and at an early age distinguished himself in the political arena. He was one of the leaders of the moderate Liberal party, was in 1849 and again in 1853 appointed First President of the Second Chamber, remained in this position, when, in 1858, the electoral law had been changed, and became again President in 1863. He resigned his position in 1865, and for several years took no active part in political life, until in August, 1871, he was called by the King to form a new ministry.

BEKKER, ERNST IMMANUEL, Ph. D., a German philologist and professor, born in Berlin in 1785; died there, June 7, 1871. He studied linguistics at Halle, where he was the favorite pupil of the celebrated Wolf, who declared him the only man capable of carrying to completion the investigations he had begun. In

1807 he was appointed Professor of Greek Literature in the University of Berlin, and three years later he resigned in order to visit Paris and devote himself to the examination of the Greek manuscripts in the Imperial Library. He returned to Germany in 1812, and commenced the publication of *Anecdota Græca*, in three volumes, and his magnificent edition of the writings of *Plato*, in 10 volumes. Both works were completed between 1814 and 1821. Meantime he had been elected a member of the Academy of Sciences of Berlin, and had been deputed by it to make a second visit to Paris to examine the papers of Fourmont, and to prepare a *Corpus Inscriptionum Græcorum*, a work often previously attempted but never satisfactorily accomplished. After a thorough exploration of the Parisian libraries for this purpose, he and his colleague, Goeschen, went to Italy and visited successively Rome, Florence, Venice, Mont Cassin, Césina, Milan, Turin, etc. At Verona they discovered a palimpsest manuscript containing a complete copy of the "Institutes of Gaius," which Niebuhr had previously unearthed in an imperfect condition. Goeschen now returned to Berlin, but Bekker continued his explorations in England, in Holland, and in North Germany. On his return to Berlin, about 1820, he was immediately called to resume the professorship he had resigned in 1810. In the fifty years that followed his works were as numerous as they were important. He may be said with truth to have been the last of that eminent school of philologists to which Wolf and Heine, Munk and Bopp, and so many others who have died within the past four or five years, belonged. He had, in contrast with the others, devoted himself almost exclusively to one language (the Greek), and to the dialects which had sprung from it; but in his thorough mastery of every thing belonging to Greek science, literature, and philology, he had no peer either in Germany or anywhere else. Among his works, besides those already mentioned, were: "The Attic Orator," 5 vols. (1823), republished at Oxford in 7 vols.; "Thucydides," 4 vols. (1821-1824); "The Library of Photius," 2 vols. (1824); "Aristophanes," 3 vols. (London, 1825); "Scholia for the Iliad," 3 vols. (London, 1826-27); "Sextus Empiricus," 1 vol. (Berlin, 1842); and critically edited editions of all the Greek poets. He had also revised carefully the text of all the principal Greek and Latin historians, and had made a collection of the works of most of the Byzantine historians in 24 vols. under the title of *Corpus Scriptorum Historiæ Byzantinæ*. He had occupied himself of late years with an investigation of the Provençal and Venetian philosophies, and had been publishing a series of essays on the most remarkable philosophical works of the writers in these languages in the middle ages.

BELGIUM, a kingdom of Europe. King, Leopold II., born April 9, 1835; succeeded his

father, Leopold I., on December 10, 1865. Heir-apparent, the brother of the King, Count Philip of Flanders, born March 24, 1837; married April 25, 1867, to Princess Maria of Hohenzollern-Sigmaringen; has one son, Baldwin Leopold, born June 3, 1869. A new ministry was appointed on July 1, 1870, as follows: President, Minister of State and of Public Works, Count d'Anethan; Minister of Justice, Cornesse; Minister of Finances, Jacobs; Minister of War, Guillaume; Minister of the Interior, Kervyn de Lettenhove; Minister of Public Works, Wasseige (appointed September 12, 1870). Mr. Russell Jones was accredited minister resident of the United States, at Brussels, July 14, 1869, while Belgium is represented at Washington by its minister resident, Mr. M. Delfosse.

The area of Belgium is 11,373 square miles, with a population, according to the official calculation of December 31, 1869, of 5,021,336 inhabitants. Nearly the entire population of Belgium are Roman Catholics, the Protestants being estimated by Heuschling, in 1862, at 10,000, and the Jews at 2,000; the greater half of the Protestants and Jews live in the provinces of Antwerp and Brabant. According to the census of 1866, 2,406,491 inhabitants spoke the Flemish language, and 2,041,784 the French; nevertheless, the French language has thus far been the official.

The population of the large cities was, on December 31, 1869, as follows:

Brussels	171,277	Mallines	36,090
Antwerp	136,668	Verviers	31,927
Ghent	121,469	Louvain	53,751
Liege	106,442	Tournay	31,002
Bruges	47,621		

The public debt of Belgium, on May 1, 1869, amounted to 706,446,214 francs. Although heavy sums have been expended for railroads and other public works, the aggregate indebtedness of the country is steadily diminishing, as will be seen from the following statement:

LOANS.	Original Amount.	Rate of Interest per cent.	Present Amount.
Proportion of the indebtedness of the Netherlands at time of separation	16,931,200	5	16,931,200
Construction of Railroads, 1838..	220,105,632	2½	220,105,632
War Indemnity	50,850,800	3	33,332,009
Loan of the City of Brussels, 1842	7,024,000	3	
Various Loans from 1844 to 1869	6,000,000	5	6,000,000
Loan for the purchase of the Botanical Garden at Brussels...	527,411,132	4½	450,027,332
	1,000,000	4½	1,000,000
Total	829,922,764		705,874,214

The budget for 1870, as approved by the Chambers, fixed the revenue at 176,725,000 francs, and the expenditures at 176,812,837 francs. The standing army numbers, according to a decree of April 5, 1868, 100,000 men in time of war.

The exports and imports of Belgium in 1868 and 1869 were as follows (value expressed in francs):

COUNTRIES.	IMPORTS.		EXPORTS.	
	1868.	1869.	1868.	1869.
France.....	201,500,000	223,300,000	272,900,000	257,600,000
Netherlands.....	121,700,000	134,200,000	75,000,000	81,500,000
German Customs Union.....	99,700,000	102,500,000	95,900,000	108,900,000
Hanse Towns and other Countries of Central Europe.....	12,200,000	13,800,000	11,900,000	12,500,000
England.....	141,500,000	145,200,000	119,600,000	125,600,000
Russia.....	47,300,000	46,000,000	13,400,000	22,500,000
Sweden, Denmark, and other Countries of Northern Europe.....	11,100,000	15,300,000	3,200,000	2,700,000
Southern Europe.....	39,200,000	29,900,000	38,800,000	44,500,000
Total Europe.....	674,200,000	718,200,000	631,000,000	658,800,000
America.....	181,200,000	175,800,000	24,700,000	31,900,000
Asia.....	6,000,000	5,400,000	200,000
Africa.....	3,000,000	4,700,000	700,000	700,000
Total.....	864,400,000	903,600,000	656,600,000	691,600,000

The following table shows the movement of shipping in 1868 and 1869 :

YEAR.	TOTAL.		LOADED.		IN BALLAST.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
Arrived { 1869.....	5,411	1,470,322	4,696	1,317,997	775	152,325
{ 1868.....	5,204	1,326,775	4,434	1,268,734	770	58,041
Cleared { 1869.....	5,326	1,456,965	2,816	781,475	2,510	675,490
{ 1868.....	5,150	1,326,575	2,472	736,376	2,677	580,199

Among the arrivals in 1869, 16 per cent. were under the Belgian flag; among the clearances, 16.2 per cent.

The merchant navy numbered as follows :

END OF YEAR.	SAILING-VESSELS.		STEAMERS.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
1869.....	67	23,981	12	8,762	79	32,743
1868.....	68	23,141	11	8,752	79	31,893

Of railroads, there were, on January 1, 1870 :

	In operation.		In course of construction.		Total.
	Miles.	Feet.	Miles.	Feet.	
State Roads.....	116.3		8.5		124.8
Private Roads.....	263.3		31.5		294.8
Total.....	379.6		40.0		419.6

Of post-offices, there were, in 1869, 418, through which 40,625,377 private letters and 40,822,967 newspapers were forwarded.

The battles at Amiens and Bapaume, in France, induced the Belgian Government in the beginning of January, 1871, to call out again a force of 13,000 men and to concentrate troops on the French frontier. On January 24th the Government demanded from the Chamber a new credit of 5,000,000 francs, for military purposes. In reply to an interpellation concerning the military situation, Minister d'Anethan, on February 1st, stated that the militia could not be dismissed until the truce would be carried out. On March 5th the army was reduced to a peace-footing. On May 25th Baron d'Anethan declared in the Chamber of Representatives that he should not consider or treat as political refugees the villains of the Commune who might escape from Paris into Belgian territory. He considered their case to be different from that of the French regulars "interned" in Belgian territory during the war with Prussia, in that the Communists

were rebels against an established sovereignty, and, furthermore, that their reputed vandalism put them outside of all political privileges. On May 30th Baron d'Anethan declared in the Senate, in reply to an interpellation, that the Government had summoned Victor Hugo to leave the country, as it regarded the letter written by him as endangering the interests of the country. As Victor Hugo had refused to comply with this summons, an order of arrest would be issued and executed. The Senate received this announcement with unanimous approval. On June 23d Baron d'Anethan informed the Chamber that, as far as known, of the Communists under arrest in Paris, 165 were subjects of Belgium. He said the Belgian Government had not asked for their release, nor did it intend to, but it expected and would see that they had impartial trials.

A Catholic demonstration in Brussels, on June 16th, in honor of the twenty-fifth anniversary of the Pope's pontificate, led to violent anti-papal demonstrations, large crowds passing through the streets and smashing the illuminated windows. The troops were kept within their barracks, but a force of special corps of constables was called out and a large number of arrests was made. The Italian flag was frequently displayed, and many citizens wore the Italian colors in their button-holes. On July 3d Baron d'Anethan, in the Senate, stated that the Belgian Government neither approved nor disapproved of the Italian occupation of Rome. Two Belgian legations would still be maintained—one at the Italian court, and the other at the Holy See.

At the beginning of September, large numbers of working-men of various trades struck work. Their principal demand was for the reduction of the hours of labor, and, after an interruption of work for about two weeks, it

was granted. The end of the strike was celebrated by a procession with flags, bands of music, and symbols, expressive of the object of the demonstration. From Brussels, the strikes extended to other cities. At Ghent, on October 8th, 300 workmen struck work, demanding the reduction of the time of a day's labor to ten hours, wages to be unchanged, and 50 per cent. in addition to be paid for work over-time. The strike gradually spread among all the classes of workmen; and here also, through the mediation of the burgomaster De Kerkhove, it ended in a triumph of the working-men.

A new session of the Belgian Chambers was opened on November 14th. In the Senate, the Prince de Ligne was elected President. On November 22d there was an animated debate in the Chamber of Representatives upon the subject of the appointment, as Governor of the province of Limburg, of M. de Decker, the former manager of the Belgian school system. The appointment was vigorously attacked by the opposition, and warmly defended by the Government. The unpopularity of the appointee caused large crowds of the populace to march to the King's palace, and loudly to demand the dismissal of the ministry. On November 23d the Chamber of Representatives, after further animated discussion, finally, and by a decisive majority, voted to support the Government in its appointment of M. de Decker as Governor of Limburg. An enormous and excited crowd gathered around the Chamber, and noisily manifested opposition to the appointment, but the presence of a large police force was sufficient to prevent a breach of the peace during the day. After nightfall, there were serious disturbances, which continued all the evening. Crowds invaded the ministry of Public Works, but were repelled by the police. Several persons were injured in the *mêlée*. On the 27th another excited discussion took place in the Chamber, in the course of which a member of the Left demanded that the ministry tender their resignation. Subsequently a mob assembled before the residence of M. Nothomb, a member of the Right, who made himself particularly obnoxious in supporting the appointment of M. de Decker, and became very disorderly, their actions culminating in the smashing of the windows of the house. So violent were the manifestations of the mob that an alarm was sounded, and the civic guard mustered in strong force. Owing to the continued disorders, and in order to allay the excitement among the people, M. de Decker resigned the governorship. The agitation against the ministry continued, nevertheless, unabated. Petitions to the King for the dismissal of the ministers poured in from all points of the country. An immense mass of people assembled in front of the Palais de la Nation. The appearance of the multitude was threatening; but a strong force of troops was on the

ground, and, although they did not attempt to disperse the crowd, they so far succeeded in preventing violence to persons or destruction of property. Cries of "Resign! resign!" were heard on every side of the palace. On November 30th the burgomaster issued a proclamation in the morning, enjoining all good citizens to remain within their dwellings, forbidding out-door demonstrations, and declaring that illegal assemblages would be dispersed. Nevertheless, in the course of the day the recent disturbances were renewed. Monster crowds of men of opposite political parties collected in the streets, and there were frequent collisions between them. The police seemed to be unable, or unwilling, to disperse the rioters. In one instance a company of civic guards, 60 strong, were ordered to charge upon the people, but they reversed their muskets and refused to obey. The mob held possession of the streets, and the excitement was intense. On December 1st the Baron d'Anethan announced in the Chambers that the King had demanded the portfolios of the ministry, and they had accordingly resigned. The Chambers would, therefore, stand adjourned until a new ministry was formed. The resignation of the d'Anethan government had a most tranquillizing effect. The crowds dispersed, and the people appeared to be satisfied. The formation of a new cabinet was intrusted to M. de Theux, one of the old leaders of the Conservative party.

On December 7th, the *Moniteur* announced the appointment of the new cabinet, composed as follows: Count de Theux, State Minister, and member of the Chamber of Representatives, minister without portfolio, and president of the Council of Ministers; J. Malon, State Minister and Senator, Minister of Finances; T. de Lantsheere, provincial councillor and lawyer, Minister of Justice; Charles Delcour, member of the Chamber of Representatives, Minister of the Interior; Count d'Aspremont-Lynden, Senator, Minister of Foreign Affairs; Moncheur, member of the Chamber of Representatives, Minister of Public Works. Lieutenant-General Guillaume, the only member of the former cabinet whose resignation was not accepted, remained Minister of War.

The president of the new ministry, *Count de Theux*, is one of the veterans of the political and parliamentary conflicts in Belgium. He was born in 1794, and in the war of independence, in 1830, was a prominent member of the national Congress. He has ever since been a member of the Chamber of Representatives, and has for many years been the leader of the Catholic party. In the first cabinet of King Leopold I., he was Minister of the Interior until October, 1832, when M. Rogier received his portfolio in the ministry Goblet. He again became Minister of the Interior and Foreign Affairs, in August, 1839, and remained in this position until April, 1840. In 1846 he became the president of the so-called "Minis-

try of the six Malons," which remained in office until August, 1847. His appointment of president of the ministry in December, 1871, is believed to have been chiefly intended as a mark of respect, as M. Malon will be the actual leader of the ministry.

In October, contracts were entered into in England for the construction of several steamships, destined for service in a line which it is proposed to run frequently between Antwerp and New York, touching at Dover.

BEMAN, Rev. NATHANIEL S. S., D. D., an eminent Presbyterian clergyman, pulpit orator, and author, born in New Lebanon, Columbia County, New York, in November, 1785; died in Carbondale, Illinois, August 8, 1871. He graduated from Middlebury College, Vermont, in 1807, studied theology, and was first ordained pastor of a Congregational Church, in Portland, Maine, about 1810, but, two or three years later, he went as a missionary to Georgia, where he was very successful in building up the waste places and establishing schools of high grade. In 1822 he accepted the call of the First (then the only) Presbyterian Church, in Troy, New York, to become their pastor, and held the pastorate of that church for more than forty years. Eloquent beyond almost any man in his Church, possessed of vast and varied learning, and with a heart warm for all reformatory measures, he was for many years the leader in what afterward became the New School branch of the Presbyterian Church. He took strong ground from the first in favor of temperance, moral reform, the revival measures of Messrs. Finney, Nettleton, and others; showed an early sympathy with the antislavery movement; was a moderator of the Presbyterian General Assembly in 1831; and, in the division of the Church in 1837, he was the champion and leader of the New School party, and won the respect of the Old School by his lofty bearing and his manly reasoning, while his fiery eloquence produced a powerful influence on the Assembly. He wielded for the next twenty-five years a greater power for good than any other man in Troy or its vicinity. In 1863, feeling the infirmities of age coming upon him, he resigned his pastorate, and resided a part of the time in Troy and a part with his daughter at Carbondale, Ill., where he died. Notwithstanding his remarkable abilities, Dr. Beman published but little. Aside from numerous sermons, occasional essays and addresses, we remember but one considerable volume—"Four Sermons on the Atonement."

BENEDEK, Field-Marshal LUDWIG VON, an Austrian general, born at Edenburg, Hungary, in 1804; died in Vienna, October 26, 1871. His father was a physician, but, as he manifested a fondness for military life, he received his military education at the Academy of Neustadt, and entered the Austrian army as cornet in his eighteenth year. He received comparatively rapid promotion, and in 1843 had attained the

rank of colonel. In 1845 he rendered such aid to the Archduke Ferdinand d'Este, during the insurrection in Galicia, as to receive the decoration of the Order of Leopold. In 1847 his regiment, the finest in the army, was incorporated in the Army of Italy, and the two following years he took an active part in the Italian campaigns, and for his admirable conduct at Curtatone received, at Marshal Radetzky's request, the Order of Maria Theresa. He was promoted to the rank of brigadier- and major-general in the first *corps de reserve* of the Army of the Danube, April 13, 1849, and during the remainder of that year took an active part in the Hungarian War, where he was twice wounded. After the pacification of Hungary, he was transferred as chief of staff of the Second Corps of the Army of Italy, but saw no more active service till 1859, when, amid the numerous disasters which befell the Austrians in that short campaign, his brilliant management of the right wing of the Austrian army at Solferino was the only, even temporary, success. He was now a field-marshal, and in that capacity military governor of Venetia. His administration there, if not satisfactory to the Venetians, was at least successful in harmonizing the wishes and feelings of the different nationalities composing the army. In 1866, when the Seven Weeks' War burst like a bomb-shell upon astonished Europe, Field-Marshal Benedek was called at once to the command of the Austrian armies, and there were great expectations entertained from his known ability and military skill. But he evidently underrated his enemy's abilities and tactics, and had no conception of the advantages which the needle-gun gave them. He attempted the Fabian policy of retreat, hoping to draw them into difficult ground, with their forces so far separated that he could beat them in detail; but Moltke's admirable plans, and the rapid marches and brilliant movements of Prince Frederick Charles and Steinmetz, resulted in his overwhelming defeat at Sadowa. Mortified at his overthrow, Marshal Benedek resigned his command, and was put on the retired list in October, 1866, and remained in retirement till his death.

BENEDICT, GEORGE WYLLYS, LL. D., a distinguished scholar, professor, telegraph-constructor, and journalist, of Vermont, born in North Stamford, Conn., January 11, 1796; died in Burlington, Vt., September 23, 1871. At the age of nineteen, he entered the sophomore class of Williams College, September, 1815, and graduated in 1818 with the highest honors. After graduating he became principal of the academy in Westfield, Mass., but was soon after, in 1819, appointed tutor in Williams College, which position he held for three years, when he accepted the charge of the Academy in Newburg, N. Y. While there he was elected Professor of Mathematics and Natural Philosophy in the University of Vermont. He accepted the position in Jan-

nary, 1825, and for the twenty-two years following he gave the prime of his life and the best of his strength to that institution. Of his service in it, President Wheeler, in the historical discourse delivered at the semi-centennial celebration of the university, in 1854, said: "He had been twenty-two years in the institution. He had stood by the smouldering ashes of the first college building. He had been the most active and energetic man in completing the new. He was teacher, he was agent, he was superintendent. He planned the subscription of 1834, and was the general agent in accomplishing it. He was appointed treasurer, and brought light out of darkness and order out of confusion. He planned in a comprehensive manner for the university, and he spent time and money and strength without stint, for its interests." Mr. Benedict left the university to avoid a threatened breaking down of his health. Seeking some occupation which would give him more exercise in the open air, he was engaged as an assistant by Ezra Cornell, who was then, in the construction of the Troy and Canada Junction Telegraph line, making the beginning of the fortune which has since enabled him to found Cornell University. He assisted Mr. Cornell in raising the stock and in the construction of the line, and became the first superintendent of the company. John W. Steward, Governor of Vermont, and L. C. Dodge, mayor of Burlington, were among the first operators under him. He held this position but a short time, leaving it to engage in telegraph-building on his own account. He raised the capital stock of the Vermont and Boston Telegraph Company, and was the contractor for the construction of the first line of that company from Boston to Burlington, and of its extensions to Montreal, Ogdensburg, and through the Connecticut River Valley. In 1853, in company with his second son, he purchased the Burlington *Free Press*, and devoted himself to it, as editor and publisher, for fifteen years, till in 1866 he sold his interest to his youngest surviving son, and retired from active labor. In 1854 he was elected State Senator from Chittenden County, and was reelected in 1855. He was an active and leading member of the Senate, and was chairman of the committee on education and of several important select committees, and drew the report of the select committee on the extension of slavery and the right of a slave to his freedom when brought into a free State, in 1855, which attracted wide attention. Among his associates in the Senate were ex-Governor Coolidge, Norman Williams, John Pierpont, Dudley C. Denison, and other prominent citizens of Vermont. In 1857 he received the degree of LL. D. from the University of Vermont. In every form of activity and public enterprise by which he could promote the interests of his adopted State, Prof. Benedict was prominent; its His-

torical Society, of which he was long a vice-president, its Editors' and Publishers' Association, its railroad enterprises, and above all its university, with which he had been so long identified, were all objects of constant thought and interest to him. His death was occasioned by a disease of the throat and lungs, from which he had suffered for seven or eight years.

BENTLEY, ROBERT, F. R. C. S., F. L. S., an English botanist, professor, and author, born in London, in 1821; died there, September 13, 1871. He became a member of the Royal College of Surgeons in 1847, but had turned his attention mainly to botany and materia medica, and had achieved such distinction in these sciences that he was appointed many years since Lecturer on Botany at the Medical Colleges of the London, Middlesex, and St. Mary's Hospitals; and had been for some years Professor of Botany in King's College, London, Professor of Materia Medica and Botany in the Pharmaceutical Society of Great Britain, and Professor of Botany in the London Institution. He was also a Fellow of the Linnean Society, a member of the Council of the Royal Botanic Society, President of the British Pharmaceutical Congress in 1865 and 1866, and editor and a large contributor of the *Pharmaceutical Journal*. He was also proprietor and publisher of as well as contributor to *Temple Bar*, a magazine of general literature. Prof. Bentley had published a "Manual of Botany," which had a high reputation, and, with Dr. Farre and Mr. Warington, had edited "Pereira's Manual of Materia Medica and Therapeutics," the standard work on these subjects.

BERG, Rev. JOSEPH FREDERICK, D. D., LL. D., a clergyman of the Reformed (Dutch) Church, theological professor and author, born in Antigua, in 1812; died in New Brunswick, N. J., July 20, 1871. His father was a Moravian missionary. His early education was pursued in the Moravian schools in England. In 1825 he came to this country, and continued his studies at the Moravian school at Nazareth, Pa. After completing the course, he remained in that institution a few years as Professor of Chemistry. Licensed to preach the gospel, he accepted, in 1837, the pastorate of the Race Street German Reformed Church in Philadelphia, in which relation he continued until 1852, when he transferred his connection, and became the pastor of the Second Reformed Dutch Church in that city. In 1861 he was elected, by the General Synod of the Reformed Church in America, Professor of Didactic and Polemic Theology in the Theological Seminary at New Brunswick—a position which he held until his death. Dr. Berg was eminently successful as a preacher; in the early part of his ministry he preached without notes, and such was the effect of his thrilling eloquence and his pointed appeals, that two hundred persons applied for membership in his church at one time. He was said to have been more successful in

building up the Reformed Church than any other minister of that denomination. He was a very diligent student, and, retaining all the knowledge he had such a facility for acquiring, his attainments were vast and encyclopaedic in their character. He had a very high reputation as a controversialist, though he shrank from controversy. When George Barker, the noted infidel debater and orator, challenged the clergy of Philadelphia to discuss with him the inspiration and authenticity of the Scriptures, having already defeated two clergymen in public debate, Dr. Berg was requested by the other clergymen of the city to accept the challenge. He was reluctant to do this, but finally consented, and, in the discussion which followed, so completely defeated Barker that he yielded up the contest, and was, as a result of Dr. Berg's cogent reasoning, shortly after, converted, and became an active advocate of the faith he had so long labored to destroy. Dr. Berg also held some discussions on Romanism, and wrote much on that subject. The following is a list of his published works: "Lectures on Romanism," 1840; "Synopsis of the Theology of Peter Dens," translated from the Latin, with notes, 1840; "Papal Rome," 1841; Anonymous Pamphlets: "A Voice from Rome," "Roman Policy toward the Bible," "The Pope and the Presbyterians," 1844; "History of the Holy Robe of Treves," "Oral Controversy with a Catholic Priest," 1843; "Old Paths; or, A Sketch of the Order and Discipline of the Reformed Church before the Reformation," 1845; "Plea for the Divine Law against Murder," 1846; "Mysteries of the Inquisition," translated from the French, 1846; "Reply to Archbishop Hughes on the Doctrines of Protestantism," 1850; "Exposé of the Jesuits;" "The Inquisition;" "Church and State; or, Romish Influence," a Prize Essay; "Farewell Words to the German Reformed Church," and a vindication of the same in reply to J. W. Nevin, 1852; "Prophecy and the Times," 1856; "The Stone and the Image," 1856; "Demons and Guardian Angels," 1856; "The Olive Branch; or, White Oak Farm," a Novel, 1857; and Translations of Van Horn's German Tales.

BEUST, FRIEDRICH FERDINAND, Count von Beust, late Chancellor of the Austrian Empire, was born in Dresden, on January 13, 1809. He studied at the Universities of Göttingen and Leipsic, and passed the examination of the law faculty at the latter university in 1829. In 1832 he became assessor in the Land-direction of the time, and was also employed in the Foreign Office. In 1836 he went to Berlin as secretary of legation, and in 1838 to Paris in the same capacity. Toward the end of 1841 he went as *chargé d'affaires* to Munich, where he married the daughter of the deceased Bavarian Royal Lieutenant-General von Jordan. From 1846 to 1848 he served as minister resident to London. In May, 1848, he went as envoy to Berlin. On the 24th of February,

1849, he undertook the administration of foreign affairs in the Held ministry, which was formed after the retirement of the Braun ministry. Upon the breaking out of the insurrection at Dresden, he appealed to Prussia for help on the 3d of May, having first persuaded the King to flee to Koenigstein, and accompanied him there. In the Zschinski ministry, which was formed after the overthrow of this insurrection, he took the departments of Foreign Affairs and of Religion. Although Saxony was a party to the so-called league of the three Kings, Von Beust refused to attend the Union Parliament at Erfurt. For this, and also because he had entered into an agreement with Austria for the restoration of the old Diet of the Confederation, he was sharply assailed in both Chambers of the new Landtag which met at the close of 1849. When, in consequence of this, the dissolution of the Landtag, and the calling together again of the old orders which had been abolished in 1848, were decreed, and stringent regulations were imposed upon the press and the right of assembly, Von Beust was regarded as the author of these measures, as well as of the whole reactionary policy, which was manifested in various ways. Von Beust succeeded the Minister President Zschinski on his death. When the London Conference for the settlement of the Schleswig-Holstein difficulty was held in 1864, Von Beust was intrusted with the duty of representing the German Confederation as a whole. He gained a remarkable popularity by his bearing at the conference, particularly by his consistent and steadfast defence of the national principle, his vindication of the spontaneity of the action of the people of Schleswig-Holstein, and his pronounced opposition to any arbitrary division of Schleswig. Upon the conclusion of the war of 1866 between Prussia and Austria by the Peace of Prague, Von Beust was dismissed as Saxon minister. He was invited by the Emperor Francis Joseph of Austria to the office of minister of Foreign Affairs of that empire. He accepted, and was shortly afterward named Minister of the Imperial House. He made his influence manifest with remarkable quickness and force. Austria, which had been regarded as on the verge of internal dissolution and financial ruin, was reorganized, one might well say regenerated, under his direction. The arrangement with Hungary was made, by which the constitutional, political, and administrative independence of that kingdom was recognized, and a dualism was established instead of the former centralization. The erection of a separate ministry for the part of the kingdom this side of the Leitha was a necessary consequence of this arrangement. The common affairs of the united monarchy were referred to delegations or committees of the two Reichstags of Pesth and Vienna. In order to give the assurance of their autonomy,

which was demanded by the Slavic crownlands, the Emperor established, by Von Beust's advice, a reform of the political administration, and began a series of measures for organizing the independence of the communes and the separation of justice from the administration. Austria, so far as freedom and parliamentary authority are concerned, forthwith rose to the head of the Continental great states. From that time Von Beust employed himself busily in giving life to the political reforms, and in regulating the finances. In the movement for the repeal of the Concordat he kept himself as passive as possible. Being a Protestant, he thought he should have but little to do with it, and that the initiative belonged to the Reichsrath; if this body should destroy the Concordat by its own enactment, the end would be reached in the easiest manner. On the 23d of June, Von Beust was appointed Chancellor, and on the 5th of December, 1868, the Emperor conferred upon him, in acknowledgment of his services, the hereditary title of count. In March, 1869, it was chiefly the influence of Beust which induced the Lower House of the Reichsrath to adopt a military law which reorganized the Austrian army. When in July, 1870, the war between Germany and France broke out, Count Beust at first gave no public intimation of the policy he would pursue; but he soon declared that Austria would observe the strictest neutrality. It was subsequently asserted that, in August, the court party at Vienna had disposed the Emperor in favor of an intervention in behalf of France, and that this policy was only abandoned because Count Andrassy declared that it was not in the interest of Hungary, and that, if it were persisted in, he would resign. Count Beust, it is further asserted, did not offer his resignation, and the neutral attitude of Austria during the war was, therefore, altogether ascribed to Andrassy. At the close of the year 1870 Count Beust exchanged important diplomatic notes with Count Bismarck concerning the restoration of the German Empire. He gave a ready and unreserved consent to the consolidation of Germany, and cordially reciprocated the friendly sentiments expressed with regard to Austria by Count Bismarck. When in 1871 the Hohenwart ministry yielded to the demands of the Czechs, and was willing to extend the autonomy of the provincial Diets at the expense of the unity of the empire, Count Beust, in union with the Prime Minister of Hungary, Count Andrassy, prevailed upon the vacillating Emperor to reject the programme of Hohenwart, to accept the resignation of the Hohenwart ministry, and to form a new Cabinet under Prince Auersperg, which will, in the main, carry out the principles of the German Constitutional party, and endeavor to strengthen the authority of the Central Reichsrath. The new triumphs made Count Beust more popular among the Ger-

mans than he had ever been before; but, to the great surprise of all, a few days later his resignation was offered and accepted, and he was appointed ambassador to London.

BISMARCK, OTTO EDWARD LEOPOLD, Prince von Bismarck-Schönhausen, was born on April 1, 1815, at the Schönhausen family mansion, in the Prussian circle of Jerichon, province of Saxony. He received the education of a Berlin gymnasium, studied jurisprudence at Göttingen, Berlin, and Greifswald, and entered the legal profession at Berlin in 1835. After the death of his father, he gave up the law and devoted himself to his estates of Schönhausen and Kniephof. In 1847 he was chosen representative of his district in the United German Diet, where he soon made himself noted as one of the most radical, as well as one of the ablest, champions of the feudal party. In the following session of the Diet he was more restrained, but on occasion pronounced distinctly against the revolution. He criticised the King's figuring in processions with the national banners, and thought there would be no peace till all the great cities were destroyed from the face of the earth. During the short triumph of the revolution he had no part in the movements of national politics. He came forward again when the reaction arose, and distinguished himself as a member of the Second Chamber by the vigor of his opposition to the new Constitution and the Frankfort Parliament. This decided partisan attitude, which would recognize only the "actual undiminished power of the Prussian monarchy by the grace of God," prepared his way to the favor of King Frederick William IV. In May, 1851, he was appointed secretary of legation in Frankfort, and three months later, on the departure of Von Rochow, he was made deputy. At first, he accepted with warmth the idea of an Austro-Prussian alliance; but experience in practical politics in time changed his views to such an extent that he saw only the alternatives of the degradation of Prussia under the preponderance of Austria, or the assumption of preponderance over Germany by Prussia herself. In 1859 he said in a letter that the Confederation was an evil to Prussia, which would sooner or later have to be abolished by fire and the sword. "German," he thought, might be restored to the banners instead of "Prussian," when a close and adequate league should be formed with the rest of Germany. On the approach of the Austro-Italian War, Bismarck spoke decidedly in favor of the most strict neutrality on the part of Prussia, and expressed himself so strongly at Frankfort against Austria, that the old liberal Hohenzollern ministry recalled him in 1859, and sent him as envoy to St. Petersburg. Here he continued to plan and suggest, though the Cabinet paid no attention to his views. He indignantly denied the accusations of the Liberal press that he had thought of ceding German territory to Russia and France, in return for an-

nexation of the smaller German states. The press, he declared, was working to defeat its own best efforts when it attacked him; he had never counselled any thing but reliance upon the uprising of the national power. In 1861 he had a conversation with the King at Baden-Baden, in which he unfolded his plans for the aggrandizement of Prussia. A more close consolidation of the German forces for defence, a modification of the customs departments, and, perhaps, a Customs Union Parliament, with a "right conservative" national representation, were the catch-words of his programme. The King entered into these new ideas slowly and reluctantly; but the interview made such an impression on him that Bismarck was invited to give him a memorandum of the substance of it. He thus obtained a basis on which he could develop his plans more fully. The immediate occasion of his recall from St. Petersburg (1862) was, the struggle with the Chambers on the reorganization of the army. The King offered him a place in the cabinet, but he preferred to be sent as ambassador to Paris, perhaps with the design of looking at the condition of affairs at the French court before he took his great designs in hand. He already stood in reality at the head of the Government, and it depended upon himself when he should assume the presidency of the cabinet. When Von der Heide and Von Roon withdrew from the ministry on September 18, 1862, because the Chamber had rejected the budget prepared in view of the project of reorganization, Bismarck was commissioned to form a new cabinet with Von Roon. He took the department of Foreign Affairs, and was, at the same time, made minister president. The contest between the Government and the deputies over the army bill was not allayed by this change of ministry, but was made rather more bitter. After the first attempt to come to terms with the democracy had failed, Bismarck made no other efforts to win the Chambers to his views. He determined to attain his end summarily, by removing at once all impediments, without stopping to consider the constitutionality of his means. When the House of Nobles, in violation of its constitutional rights, altered the budget of the Second Chamber by accepting the plan of the ministry, Bismarck excused it by the consideration that the Government would have to be administered according to its own views if no budget had been agreed upon; there was a defect in the Constitution, if this was not expressly provided for. When the Chamber would not agree to this theory, he declared that the factor which had the power must decide contested questions. Such extreme assumptions made the breach between the ministry and the Assembly seem irreparable; Bismarck was blamed, because in him was seen the leading spirit of the Government, and it was believed that he was violating the Constitution out of pure caprice. A contest between the president, Gra-

bow, and Von Roon, led to an address to the King, in which the House declared that an understanding with the ministry had become impossible, and that he ought no longer to delay a change of persons as well as of the system. The consequence was, the closing of the Diet on May 27, 1863. Bismarck began now a system of open repression against the liberal press and liberal officers. The people were thus driven into new opposition to the ministry. At the ensuing election the party of progress obtained 260 seats, while the ministry obtained only 37. The Chambers assembled on the 9th of November; on the 19th the House of Deputies declared the obnoxious ordinances against the press of the 3d of June unconstitutional. The Government yielded quietly, for, in the mean time, the aspect of foreign affairs had become such that peace with the representatives, or at least a postponement of the contest, seemed advisable.

The proposition of Austria, in 1862, for a popular representation of the Confederacy by a Chamber of Deputies, led to a sharp correspondence, in which Bismarck intimated that the persistence of Austria in such intrigues against Prussia would lead to a dissolution of the Confederacy and the loss of Austrian prestige. Prussia gave Russia an effective support during the Polish insurrection. The Government, by its strong stand against the revolutionists, only paved the way to new difficulties with the Chambers. The idea of the existence of a military convention was ridiculed, but it was generally believed that the only reason one had not been made was that such a step would be regarded with hostility in London and Paris. Perhaps Bismarck wished to keep his hands free in order to interfere at the right time in German affairs, because, as he declared in the circular to the German courts of January 24, 1863, the "relations between Austria and Prussia must in his opinion change either for the better or the worse." The German princes met at Frankfurt on August 17, 1863, to realize the unsuccessful project for delegate representation in some other shape. By Bismarck's advice, the King did not attend the meeting. Its programme excited no interest. The Congress accepted the Austrian plan, and left it for Prussia to decide whether it would see itself excluded from the new organization. Prussia refused to enter it on the 15th of September, and again brought forward its formerly-proposed conditions: a complete parity between Prussia and Austria, the veto-power to be given both the great states on questions of war, and a representation of the nation on the basis of universal suffrage. These proceedings excited little remark among the people, yet they might have led to an open breach, had not the death of Frederick VII. of Denmark, on November 15, 1863, opened the way for a more convenient method of gaining the desired end.

The Diet of the Confederation had commis-

sioned Saxony and Hanover with the occupation of the Elbe duchies. Bismarck, under a plausible pretext, dispatched a Prussian army corps into Schleswig. Observing the Prussian movement, Austria likewise concluded to enter Schleswig. Thus Bismarck won the game: Austria had joined with him in the first fatal, arbitrary step, and would have to continue following him for good or evil, to the loss of her prestige with the middle-sized and small states, as the champion of the legitimacy and the constitutional power of the Confederacy. When Austria perceived this, she began to lean to the side of the Duke of Augustenburg. But it was too late. If she would not surrender the fruit of the war to Prussia, she must agree to Bismarck's proposition to leave the duchies to the unconditional disposition of the associated great powers, thus pushing the Confederation aside. Irritation now began, and soon increased to such a degree that Bismarck, on July 15, 1865, declared war with Austria unavoidable; on the 22d he sent his ultimatum. The Treaty of Gastein (August 14, 1865), which provided that Holstein should be ruled by an Austrian and Schleswig by a Prussian governor, delayed the breaking out of the war for a short time. But Bismarck adhered to his scheme of a complete incorporation of the duchies with Prussia, only adapting his methods of procedure to the changes of circumstances. The alliance with Italy, for which he had labored since 1863, was pushed more energetically; at the same time it was declared loudly that Austria had hostile designs against Prussia. When Prussia began to arm, Austria comprehended that the breach could not be avoided, because it was desired. On June 1, 1866, she formally acknowledged the jurisdiction of the Confederation over Schleswig-Holstein. The Diet, as a demonstration against the menaces of Prussia, ordered the mobilization of three army corps. Now Bismarck had obtained his object. On June 14th Prussia declared the compact of the Confederation broken by this action of the Diet. The people were much embittered against the minister. Regrets were even uttered over the failure of an attempt to assassinate him. The war was denounced as a fratricidal war, and several deputies declared that they would not give "this minister" a groschen to carry it on. Nevertheless, the programme which Bismarck had unfolded to Von der Pfordten, on July 23, 1865, was fulfilled to the letter: "One conflict, a decisive battle, and Prussia will be in a position to prescribe the conditions." The prevalence of the cholera in the army and the possibility of a conflict with France restrained him from pushing the advantage of victory to an extreme point. But Austria was forced in the Treaty of Prague (August 23, 1866) to withdraw from the German Confederation, to surrender Schleswig and Holstein to Prussia, and to consent to the formation of a North-German Confederation, extending to the Main.

Bismarck's position relative to the opposition at home was greatly changed by these events. His negotiations, previous to the breaking out of the war, with Von Roggenbach and Von Benningsen, had been without result. Now the people received him with loud rejoicings, and the majority of the Liberal deputies were willing to accept accomplished events, while he began openly to separate from the extreme "Junker party." He shrunk from further conflict with the Chambers, yet would not rashly complete the breach with the ultra-federalists. He gave up his unpopular plan to assign the county of Calenberg, with the city of Hanover, to the King of Hanover, and applied, at the meeting of the Chambers, for an indemnity, which was granted, in the face of a weak opposition. The Chambers did not stop with this. They voted him a rich dotation, and the King made him a count. His project for the Constitution of a North-German Confederation found, however, only a partial support. In the constituent Reichsrath, which was opened on February 26, 1867, the National Liberals obtained the right of originating the budget; but they waived the demand relative to the Diet of deputies, when Bismarck, as chancellor, declared decidedly that the Council could not on this question be moved from the position it occupied. The Luxemburg question again modified his relation to the Nationalist party. In this he faltered a moment, but the voice of South Germany as well as of North Germany assured him that he might be firm in resistance to Napoleon's annexation plans. On May 8, 1867, he declared to the French envoy, Benedetti, that 900,000 men would be called into the field immediately, if France did not disarm. This bold speech averted the danger of war. With the decisive attitude thus shown in foreign affairs, the progress in internal consolidation, however, did not fully correspond. The Customs Parliament, it is true, was convoked in spite of the opposition of the Catholic party of Bavaria against Prussia, but Bismarck unreservedly opposed the extension of its functions, which was sought by the Liberals, as well as its union with the Reichstag, giving as the ground of his position: "We are too liberal for the South Germans; they will not go with us, and we must wait till they come to us." But when Mathy, Minister President of Baden, in November 1867, pressed upon him the necessity of Baden's entering the Northern Confederation, he replied to him, in a business way, that they would have to be satisfied with the Customs Parliament. He also opposed the demand of the National Liberals that separate officers be appointed to control the finances of the Confederation, and for the organization of a peculiar ministry, which would have served as a counterpoise to the reactionary Council. He, however, approved the organization of separate departments of Trade and Justice, although he did not seek to

prevent the Upper House from disagreeing to the resolution of the Second Chamber, providing for the adoption of the provision of the Federal Constitution, in reference to freedom of speech, into the Prussian Constitution. The antagonism between Bismarck and the Liberals again assumed a serious shape respecting the question of a general nationality. The National Liberals, whose most advanced section was in this case led by Deputy Lasker, made the demand in the Reichstag, in March, 1870, that the admission of Baden to the Northern Confederation should be delayed no longer. Bismarck opposed their proposition in the most determined manner, whereupon that part of the Liberal press which agreed with Lasker declared that there could be no further coöperation with the chancellor. The alienation increased, when Bismarck soon afterward contended against the majority of the Reichstag for the retention of the death-penalty. But it is impossible to determine how far he was carrying out his own views on these contested questions. He often complained that he had to yield to the King and the ultra-feudalists in order not to endanger the success of his own projects. The events of the war showed that this consideration was not without foundation. The hostility between himself and the Count von Lippe, Minister of Justice, was long regarded as a vain comedy. But the count was removed from his office on October 10, 1867, after Bismarck had sharply criticised him in the open session of Parliament. Equally unpleasant were his relations with Count Eulenburg, Minister of the Interior, who, like the Count von Lippe, was highly esteemed at court. Von der Heydt, the Minister of Finance, was also obliged to withdraw from the cabinet in 1869, and Bismarck announced soon afterward in the Second Chamber, that the Government would not neglect to sue for an indemnity for the arbitrary acts which this minister had permitted in the management of the finances. On the other hand, many causes of irritation with the House of Lords were developed, which gradually led to an open breach, and the ultra-feudalists could not conceal from themselves that their traditions and pretensions must receive a severe shock by the operation of the new policy of the minister.

The great labor to which Bismarck had been subjected, brought upon him a nervous disease, which much embarrassed him. He spent the summer and autumn of 1869 at his estate of Varzin, in Pomerania. When he returned to Berlin, about Christmas, he could only superintend the most important affairs, and was obliged to leave the real business to Herren von Thiele and Dellbrück. When, after the adjournment of the Reichstag, the Foreign Office of Prussia was merged in that of the Confederation, Bismarck attained a position which gave him a measurable superiority over the Prussian ministry.

While, during the first months of the year 1870, Count Bismarck occupies but rarely a prominent place in the history of events, the great conflict between Germany and France, which began in July, 1871, again put his statesmanship to severe tests, and gained for him laurels even more brilliant than those won in the past. The diplomatic negotiations which preceded the declaration of war were conducted on the part of Bismarck with a skill which was recognized on all sides. To the great disappointment of France, the South-German governments joined North Germany, and even the Diets of Bavaria and Wurtemberg, which had thus far been controlled by majorities decidedly hostile to the policy of Bismarck, voted the war-credits. While the hostile armies were preparing for the opening of the campaign, Bismarck dealt out to France a staggering diplomatic blow. He published on July 29th an autograph letter addressed to him in 1866, by the French ambassador, Benedetti, in which the latter in the name of his government offered to Prussia an alliance against Austria, claiming in return the consent of Prussia to the incorporation of Belgium with France. As the declaration of Benedetti, that the document had been dictated to him by Bismarck, found but little if any credence, public opinion in the neutral countries became strongly enlisted against Napoleon. On July 31st Bismarck accompanied the King of Prussia to the seat of war. On September 1st he witnessed the great German victory at Sedan, and with Moltke conducted the negotiations concerning the capitulation. When, after the establishment of the French Republic, the negotiations for the conclusion of an armistice and of peace began, Bismarck was careful to secure the coöperation of the diplomatic representatives of the South-German governments. Among the principal conditions of peace, which Count Bismarck in the name of his government demanded, was the session of Alsace and German Lorraine. At its first mention, this demand was indignantly repelled by the French commissioners; it was on many sides, and even by some parties in Germany, denounced as being too harsh; but in his notes, which will form an important contribution to the history of his life, Count Bismarck with an iron calmness developed the reasons why this claim in particular could not be abandoned. The war was continued until conquered France had to accept the terms proposed by Bismarck. When the Peace Conference, which was opened at Brussels in March, protracted the negotiations in an unexpected manner, Bismarck arranged a conference at Frankfort, with Favre (May 10th), when the definitive peace was soon agreed upon and signed.

Long before the conditions of peace had been agreed upon, negotiations began at Versailles, October 25, 1870, between Count Bismarck, and the representatives of the South-German

governments, concerning the future Constitution of the German Empire. Notwithstanding the differences of opinion which were found to exist on some points, the treaty providing for the incorporation of Bavaria, Wurtemberg, Baden, and Hesse, with the new German Empire, was soon concluded, and on January 18, 1871, King William of Prussia assumed the title of Emperor of Germany. It was acknowledged on all sides that Bismarck was in fact the restorer of a united Germany; and the new Emperor and the German Reichsrath did not delay to give expression to their feelings of gratitude. By a Cabinet order, dated March 22, 1871, Bismarck was created an hereditary prince of the German Empire; thus receiving the highest rank, next to the sovereigns of the German States. After the Constitution of the German Empire had gone into operation, Prince Bismarck's title of Chancellor of the North-German Confederation was changed (May 12th) into Chancellor of the German Empire. By an order of June 24th, the Emperor transferred to Prince Bismarck a large estate in the duchy of Lauenburg, which the Diet of this duchy had presented to him.

As regards the foreign relations of Prussia and Germany, Bismarck cultivated with particular attention the friendship of Russia, and the outspoken sympathy of the Russian Government with Germany, at the beginning of the Franco-German War, was considered as a result of this policy. At the close of the year 1870, he succeeded in gaining the full consent of Austria to the reunion of the South-German States with the North-German Confederation, and the reestablishment of the German Empire. The relations of Germany and Austria remained throughout the year 1871 of the most friendly character.

Toward the French Government, which was particularly anxious to shorten the time of occupation of several French departments by German troops, Bismarck showed a very conciliatory spirit. But, when the French courts repeatedly acquitted the assassins of German soldiers, Bismarck, on December 7, 1871, addressed to the German ambassador in Paris, Count Arnim, one of the most remarkable notes which he has issued during his long diplomatic career. He remarks that, if the principles which caused the acquittal of French assassins by the courts of Paris and Melun were adopted in Germany, the killing of Frenchmen within the jurisdiction of Germany would cease to be liable to punishment. But such a retaliation was repugnant to the moral ideas of the German people, who, however, on the other hand, were not willing, in case of the repetition of such crimes, to accept the plea of the independence of the French courts as a satisfactory explanation. The German generals, in the occupied departments, have therefore been instructed to declare a state of siege in order to subject the crimes committed against the German troops to mili-

tary jurisdiction. Should those who murdered German soldiers within the territory occupied by German troops escape, and the French Government refuse their extradition, as had been done in the case of Tonnelet and Berlin, the German Government would order French hostages to be arrested and carried off, and, if necessary, would have recourse to even more stringent measures. In view of the hostile disposition toward Germany, as revealed by these acquittals in Paris and Melun, the German Government, during the future negotiations with France, would have to think, not only of securing the execution of the conditions of peace, but also of strengthening its defensive position in the departments occupied by the German troops. The note produced an extraordinary sensation throughout Europe. President Thiers, in addressing the National Assembly on December 29th, branded the act of Tonnelet and Berlin as criminal, and remarked: "Such deeds bring down upon us harsh words, with regard to which silence is the best answer." The Assembly applauded his remarks.

BLAKE, Commodore GEORGE S., U. S. N., a gallant and accomplished naval officer, born in Massachusetts, in 1801; died at Longwood, Mass., June 24, 1871. He was appointed a midshipman in the U. S. Navy at the age of seventeen. In 1827 he was commissioned lieutenant, and in 1829 was attached to the West India Squadron. He was occasionally connected with the Narraganset Bay Survey, and detailed for duty at the Philadelphia Navy-yard. From 1837 to 1848, he took part in the Coast Survey. He was commissioned as commander February 27, 1847, and was fleet-captain of the Mediterranean Squadron from 1850 to 1852. For two years thereafter he was in the Bureau of Construction. He was commissioned as captain on the 14th of September, 1855, and detailed on special duty until 1858, when he became Superintendent of the Naval Academy. This position he held until 1865, when he was retired from active duty, having been, in the mean time, commissioned as commodore on the 16th of July, 1862. He was a man of fine culture, a graceful and elegant writer, of good executive ability, and genial and affable address.

BOLIVIA, a republic in South America. President, Colonel A. Morales, elected provisional President, for the term of one year, on June 20, 1871. The ministry of the provisional President was composed as follows: Dr. C. Corral, Minister of the Interior and Foreign Affairs; Dr. T. Frias, Minister of Finances; Dr. L. Mendoza de la Tapia, Minister of Justice and Public Worship; Dr. M. Reyes Cardona, Minister of Public Education and Industry; Colonel N. Campero, Minister of War. Mr. L. Markbreit is minister resident of the United States at La Paz, and I. M. Muñoz consul-general of Bolivia at New York. The area of the republic, which was formerly esti-

mated at from 480,000 to 640,000 square miles, was more accurately computed in 1869 by Lieutenant-Colonel J. Ondarza at 842,730 square miles. It is divided into the following nine departments (the new departments of Mejillones and Melgarejo, which had been created by President Melgarejo, having been abolished by the present Government):

PROVINCES.	INHABITANTS.		Bishoprics.	Inhabitants. Last Report.
	Sq. Miles.	Old Rep't.		
Chuquisaca.....	72,796	223,668	Archbish- opric de la Plata.....	706,969
Potosi.....	54,300	281,229		
Oruro.....	21,601	110,931		
Tarja.....	114,489	88,900		
Atacama.....	70,189	5,273		
La Paz.....	43,053	475,322	Bishopric La Paz.....	519,465
Santa Cruz.....	144,084	153,164	Bishopric Santa Cruz. Bish'ric Co- chabamba.	205,131
Beni.....	295,417	53,973		
Cochabamba.....	26,809	349,892		
Indians.....		842,730	1,742,352	1,811,368
Total.....		245,000	245,000
Inh. per sq. m.		1,987,352	2,056,968
		2.35	2.44

According to a late (as yet unpublished) census, the population is reported to approach 3,000,000. The population of the capitals of the nine departments is, according to Ondarza, as follows:

Sucre.....	23,979	La Paz.....	76,373
Potosi.....	22,850	Santa Cruz.....	7,780
Oruro.....	7,860	Trinidad.....	4,170
Tarja.....	5,680	Cochabamba.....	40,573
Cobija.....	2,880		

The standing army of Bolivia, consisting of 31 generals, 359 officers of higher grade, 654 subaltern officers, and 3,034 men, annually costs the republic 2,000,000 pesos. The public revenue for 1869-'70 was about \$2,500,000, and the public debt (all internal) amounted to \$7,500,000. The commerce of the country is estimated at from \$5,000,000 to \$6,250,000; the total imports during 1868 summed up \$4,500,000, and the total exports during the same period \$3,750,000. The state mint at Potosi coins annually about 2½ million pesos in silver. Peru pays to the Bolivian Government 506,250 pesos for duty levied at Arica on merchandise going to Bolivia. Concessions have been granted for two railroads, one to connect Cobija and Potosi, and the other to form a branch of the Peruvian railroad from Arequipa to Puno.

A new revolution against the rule of President Melgarejo broke out in the latter part of the year 1869 in Potosi. Melgarejo marched at the head of his army, took the city, and delivered it up to plunder, and was returning northward, when city after city rose in insurrection. On November 24th, even the capital, La Paz, declared in favor of the revolution. About this time, when fears were entertained for the success of the movement because a chief was wanting, General Morales, the old enemy of Melgarejo, arrived in Bolivia. He had come to stir up a movement in La Paz,

and found the work already accomplished. Soon a large portion of the country had declared against Melgarejo, who left his headquarters at Oruro, and, making forced marches, arrived on the heights above La Paz on the night of the 14th of January. His army of 2,000 men was armed with Remington breech-loaders, amply supplied with ammunition, commanded by experienced officers, and had 12 pieces of artillery. When the news of his movements was received in La Paz, the citizens, from 15 to 60 years of age, were ordered under arms; martial law was declared; the city placed in a state of siege; and all establishments, public and private, ordered to close their doors, in order that public defence only might be attended to. A national guard was formed, badly armed with guns of all calibres, and rusty pistols of ancient date. Barricades of *adobe* were hastily constructed at all important strategic points, but were only half finished when the assault upon the city began. The authorities of the city resolved to use a terrible ally—the Indians. By sending orders in every direction, promising to them their stolen lands, even giving solemn decrees to that effect, about 20,000 Indians, armed with the ancient sling, the lance, and the war-club, were quickly thrown in the path of the advancing army. Hatred and revenge stimulated them to overcome their traditional timidity. They formed a huge and menacing cloud, stretching a cordon around La Paz, and creating apprehensions as to the result of the contest, whatever it might be, since this race had been for three centuries the slave of the other. The king of the Indians was made colonel. The summons of Melgarejo to surrender having been refused, a conflict of the most desperate character began. Morales fired the city, and by a desperate charge threw the attacking party into confusion. The forces of Melgarejo, being weary and much outnumbered, broke and fled, Melgarejo with them, and he succeeded in escaping over the frontier into Peru. Three hundred dead and nine hundred wounded were found on the field of battle. The city was very badly damaged by the fire, and, after the battle was ended, the Indians plundered it, committing the most horrible outrages. Morales, the successful leader of the revolutionary party, assumed the reins of government, and will hold them until the meeting of the Convention.

BRACKENRIDGE, HENRY M., a veteran scholar, politician, diplomatist, and author, born in Pittsburg, Pa., May 11, 1786; died there, January 20, 1871. Pittsburg was, at the time of his birth, a frontier settlement, but his family were prosperous, and he was sent, at an early age, to Louisiana, to obtain an education. At the old French College of St. Genevieve, he obtained such training as was then possible in that country, including the development of his taste for the study of languages. After graduation he studied law, and commenced

practice in Maryland. But he was soon seized with a longing to return to Louisiana, and, embarking on a flat-boat, in 1811, descended the Ohio and Mississippi Rivers. Soon after his arrival in Louisiana, he was appointed Deputy Attorney-General of the Territory of Orleans, before it was made a State. At the age of twenty-eight, he was appointed District Judge, and, the better to qualify himself for his high office, mastered perfectly the Spanish language. Sympathizing earnestly with the measures of Clay, Brackenridge exerted a vigorous pen in defence of that statesman's views on the South American republics and kindred questions. He wrote a history of the War of 1812, a short time after its conclusion, which was soon after translated into French and Italian. Over the signature of "American," he addressed to President Monroe a remarkable pamphlet on nationalities, which, being republished in England, came under the notice of the Spanish minister, who at once replied to it. In 1817 he was appointed commissioner to the South American republics, and, on his return, published the "Voyage to South America" alluded to by Humboldt as containing an "extraordinary mass of information." In 1821 Brackenridge lent his great abilities to General Jackson, in Florida, where his linguistic acquirements came well into play. This special service ended, he was again appointed Judge of the Western District of Florida, and, after ten years' service, removed to his birthplace, Pittsburg, where he entered earnestly into a political career; was, in 1840, elected to Congress, but, for some reason, never took his seat, and, the next year, was appointed a commissioner under the treaty with Mexico. The rest of his life was mainly devoted to writing, chiefly of a political character, his ablest essay of this period being "A History of the Western Insurrection," known as the "Whiskey Insurrection," which is considered a standard work.

BRAZIL, an empire in South America. Emperor, Pedro II., born December 2, 1825; succeeded his father, April 7, 1831. His daughter Isabella is married to the Count d'Eu, son of the Duke de Nemours. The second daughter, Leopoldina, married to Duke Augustus of Saxe-Coburg Gotha, died on February 7, 1871; eldest son of the latter, Pedro, born March 19, 1866. The ministry, appointed on March 8, 1871, consisted of Senator Visconde Paranhos de Rio Branco, President of the Ministry and Minister of Finances; Dr. F. A. Correa de Oliveira, Minister of the Interior; Senator Fr. de P. de Negreiras Sayao Lobato, Minister of Justice; Dr. M. Fr. Correa, Minister of Foreign Affairs; Dr. M. A. D. de Azevedo, Minister of the Navy; Dr. F. M. F. Pereira da Silva, Minister of Public Works, Commerce, and Agriculture. On May 23d Senator Jaguaribe was appointed Minister of War. Area, 3,231,000 square miles. The population was estimated, in a work published in 1867, by order of the Government, at 11,780,000, of

whom 500,000 were Indians; by E. J. Pakenham, secretary of the British legation at Rio de Janeiro, at 9,858,000, exclusive of 200,000. Prof. E. Wappaus, of Göttingen, who is regarded as one of the best living authorities on Brazilian affairs, expresses, in a recent statistical work on Brazil ("Handbuch der Geographie und Statistik von Brasilien," Leipsic, 1871), the opinion that the population of the empire is nearer seven than eleven millions, and that the number of whites is inferior to that of the slaves. The negroes are the most numerous of the unmixed races, but the largest portion of the population is of mixed blood. The population of the largest cities is as follows:

Rio de Janeiro.....	420,000
Bahia (1861).....	152,000
Pernambuco.....	90,000 to 100,000
Maranhã.....	30,000
Parã.....	25,000
Porto Alegre.....	20,000 to 24,000
São Paulo.....	20,000
São Pedro.....	18,000 to 19,000
Carã (Fortaleza).....	16,000
Parahiba.....	12,000 to 14,000

According to the "Statistical Tables relating to Foreign Countries," part xii. (London, 1870), the financial condition of the empire, from 1866 to 1869, was as follows:

YEARS.	Regular Receipts.	Expenditures.	Deficits.
	Milreis.	Milreis.	Milreis.
1866-1867	64,776,844	122,406,738	57,629,894
1867-1868	71,612,194	170,759,745	99,147,551
1868-1869	86,937,127	156,837,345	69,900,218
Total.....	226,677,663

The deficits caused by the war with Paraguay were met by an increase of the public debt, and chiefly by the issue of paper-money.

In the budget of 1869-'70, the receipts and expenditures were fixed as follows:

RECEIPTS.		Milreis.
1. Import duties.....		39,856,300
2. Navigation duties.....		576,000
3. Export duties.....		13,788,700
4. Interior:		
Interest on railroad shares.....		90,400
Profits on the Dom Pedro Railroad.....		2,500,000
Post-Office.....		520,000
Sundry State Institutes.....		542,436
Stamp-tax.....		2,950,000
Mutation-tax.....		2,750,000
Tax on stores.....		1,250,000
Tax on lotteries.....		1,595,994
Sundry taxes.....		763,000
Fees.....		694,000
Slave-tax.....		516,000
State assets.....		450,000
Miscellaneous.....		431,120
5. From the municipality of the capital:		
Proceeds of domains.....		1,580,000
Consumption of liquors and of cattle.....		423,000
Miscellaneous.....		87,600
Extraordinary receipts.....		1,791,450
Deposits.....		4,631,950
Total.....		77,611,950
EXPENDITURES.		Milreis.
1. Ministry of the Interior:		
Civil list and appanages.....		1,378,000
Chambers.....		727,000
Supreme administration.....		439,890
Worship.....		1,106,670
Instruction, Science.....		876,895
Other expenditures.....		304,511
Total.....		4,932,966

	Millreis.
Brought forward.....	4,932,966
2. Ministry of Justice.....	3,233,070
3. Ministry of Foreign Affairs.....	748,420
4. Ministry of Navy.....	7,715,161
5. Ministry of War.....	13,855,873
6. Ministry of Finances:	
Public debt.....	15,882,013
Pensions.....	1,506,449
Tax levy.....	3,303,271
Loan to the provinces.....	1,004,450
Administration of finances.....	6,733,560
7. Ministry of Commerce:	
Interest securities.....	2,311,136
Dom Pedro Railroad.....	1,400,000
Subvention to steamboat companies.....	2,786,000
Post-Office.....	770,741
Other expenditures.....	4,551,833
Total.....	70,786,932

The public debt, in 1870, was as follows:

	Millreis.
Foreign debt.....	113,606,445
Domestic debt @ 4, 5, and 6 per cent.....	240,246,500
Government notes in circulation, paper currency.....	150,397,623
Treasury notes @ 2, 4, and 6 months (April 3, 1870).....	53,893,800
Orphan and deposit money.....	10,776,495
Banco do Brazil.....	12,432,262
Total, 1870.....	581,323,430

The army, on the peace-footing, consisted of 16,650 infantry, 4,231 cavalry, 4,322 artillery, and 641 special corps; total, 25,844 men. To these must be added the corps of engineers, the train, and the naval force. The total force of the army in time of war is 73,784 men.

In February, 1871, it was discovered in the province of Minas Geraes that the slaves were conspiring to assert their liberty. Three hundred slaves on some estates adjoining the gold-mines of the English companies in the province attempted to induce the large bodies of those employed in the mines to rise, expecting that the slaves of some other estates would rally at once under the flag of liberty, and that the movement would speedily extend throughout the empire. The plot was, however, discovered, and about thirty of the ringleaders arrested. This averted the insurrection for the moment, but was regarded as an ominous indication of the approaching doom of slavery, as it would be impossible to conceal from the slaves of the empire that only in Brazil, on the American Continent, were human beings held in bondage.

In May, the Emperor and the Empress left Brazil for a protracted journey to the Old World. During his absence the Princess Imperial, wife of the Count d'Eu, was appointed Regent, with full powers.

The Brazilian Chambers were opened May 3d. The speech from the throne promised reforms in the administration of justice, in the electoral laws, in the organization of the National Guard, and in the system of recruiting. It also announced that the Government would introduce a bill relating to the abolition of slavery, the time having come for a final solution of the slavery question. In June a vote was taken upon the clause of the speech from the throne relative to the emancipation of the slaves belonging to the crown, and resulted

in a majority of 28 for the Government. The long-protracted discussion on the emancipation bill itself closed on September 27th. The bill was adopted in the Senate by a vote of 44 against 33. The declaration of the result of the vote was received in the crowded Senate-house with great applause, and rose-leaves were showered from the galleries upon the Senators. On leaving the Senate, the Visconde de Rio Branco, the Minister of Agriculture, and the Senators who had taken prominent part in the advocacy of the bill, were warmly congratulated by their friends and loudly cheered by the multitude outside. In the evening a serenade was given by the masons of Rio to the Visconde de Rio Branco. The Government received congratulations from all the foreign representatives in Rio and from the local corporations, and felicitations continually came from other parts of the country in proportion as the news reached them. Religious corporations immediately commenced to set at liberty the slaves owned by them, and there were evidences of a movement among the slave-owners, in the direction of either converting their slaves into free tenant farmers or of freeing them upon conditions of a few years' service.

The main points of the bill for the abolition of slavery, as passed by the Senate, are as follows: The children born of a slave from date of this law, within the empire, are considered free-born. While minors, they are to remain in the power and under the rule of the masters of their mothers up to the full age of eight years, the masters being required to feed and to bring them up during this period. At this age, the mother's master has the option, either to receive from the Government a compensation of 600 milreis, or to avail himself of the minor's services up to his full age of twenty-one years. In the former case, the Government takes charge of the minor and of his professional education. Every minor may free himself of his bondage by a compensation in money, offered by himself or any other person to his mother's master, the amount of which is to be previously fixed by estimating the balance of his term of service, if no agreement thereupon exists. The master is bound to feed and educate the children born of the daughters of his female slaves as long as the mother's services shall continue. In case the female slave is set free, her children under eight years of age, who according to the law are under the power of her master, are to be delivered to her without any compensation, unless they should remain with the master by mutual consent of mother and master. In case she is sold, her children under twelve years of age follow her, the new master assuming the rights and obligations of his predecessor. The services of the children of female slaves cease, in case it is decided by a court that the masters of their mothers have ill-treated or beyond measure punished them

or neglected their support and education. The masters' right, as stated in article 1, is transferable in case of necessary heritage. The Government may deliver those children born of female slaves after the date of the law, when they are ceded or given up by or taken away from their masters, to privileged societies.

§ 1. The said societies are entitled to the gratuitous services of such minors, until they come to the full age of twenty-one years, and may hire them out, but they are bound to feed and educate them; to reserve for their benefit a certain portion of their wages; and after the expiration of their term of service to procure them a suitable employment. The societies are subject to the control of the Court of Orphans, as are also the foundling hospitals and all persons intrusted with the education of said minors. The Supreme Government reserves the right of placing the minors in public institutions, in which case the municipal government assume all obligations. In each province of the empire so many slaves are to be set free every year as its quota of the emancipation fund will permit. The emancipation fund is created out of the slave-tax; out of tax had on transferring slaves; from the proceeds, free of taxes, of six yearly lotteries, and the tenth part of all lotteries henceforth to be authorized; from the fees imposed by this law; from the quota to be freed in the budgets of the empire, the provinces and municipalities; and from collections, donations, and legacies, for this purpose. The slave is entitled to his earnings, to his savings, and to donations, legacies, and inheritance, which may devolve on him. This property is to be protected by the Government, and in case of death devolves on the lawful heirs; in default of succession, it is adjudicated to the emancipation fund. Slaves who, by their income, or by the liberality of any one, or by a contract for future services, procure the means for purchasing themselves, have a claim to manumission. The ransom is to be fixed by agreement or by estimate. Contracts for future services, for the purpose of manumission, are subject to the sanction of the Court of Orphans, and can only be closed for a term not exceeding seven years. In case a slave who is owned by several masters is set free by one of them, he may obtain his full freedom by buying out the other masters, according to their shares. This compensation may consist in services not exceeding a term of seven years. Manumission by a contract for future services cannot be annulled by non-fulfilment of this obligation, but the freedman shall be compelled to comply with it. In all cases of selling or transferring slaves, the separation of husband from wife, or children under twelve years from their parents, is entirely prohibited. If a family of slaves devolves by inheritance to several heirs, it is to be sold and the proceeds to be divided. The following slaves are rendered free: 1. The

slaves of the nation, the Government having to provide for their proper employment; 2. Those given to the crown in usufruct; 3. The slaves of the religious orders within seven years, by agreement of the Government as to the latter; 4. Slaves belonging to vacant inheritance; 5. Slaves who save the lives of their masters or the parents or children of their masters; 6. Slaves given up by their masters; the latter are bound to feed them—unless prevented by poverty—if they abandoned them on account of physical unfitness.

BRECKINRIDGE, Rev. ROBERT JEFFERSON, D. D., LL. D., a Presbyterian clergyman, professor, and author, born at Cabell's Dale, Ky., March 8, 1800; died at Danville, Ky., December 27, 1871. He was the son of the Hon. John Breckinridge, the author of the celebrated Kentucky Resolutions of 1798, and Attorney-General of the United States under President Jefferson. Robert was a student both at Princeton and Yale, but graduated at Union College in 1819. He studied law and was admitted to the bar of his native State in 1823, where he practised for eight years, having within that time been elected to the Legislature for four successive years. He made a public profession of religion in 1829, and his attention having been turned to the ministry, he studied theology privately, and was licensed to preach in 1832, and soon after became pastor of the Second Presbyterian Church of Baltimore, in which position he remained thirteen years. In 1845 he was elected president of Jefferson College, Pa., and at the same time took charge of a Presbyterian Church in a neighboring village. After two years in the presidency of the college, he removed to Lexington, Ky., where he became pastor of the First Presbyterian Church, and also Superintendent of Public Instruction for the State. In 1853 he was elected Professor of Didactic and Polemic Theology in the new theological seminary at Danville, which office he continued to hold until his death. He published "Travels in France, Germany," etc., in 1839; a volume on "Popery," in 1841; two volumes on foreign travel, in 1845; the "Internal Evidence of Christianity," in 1852; and an elaborate work on theology, incomplete, in 1857. While in Baltimore he edited a *Literary and Religious Magazine* with great ability. He also edited at Danville, Ky., while professor there, the *Danville Review*, in which he not only defended his theological views, but gave utterance to his patriotic sentiments during the war with such earnestness as to encourage the wavering and greatly provoke the disloyal. Dr. Breckinridge has been one of the most distinguished of the polemic divines of his age. He believed himself to belong to the Church militant, and fought his way through. In the discussions and controversies that preceded the disruption of the Presbyterian Church, he was the champion of the Old-School party; in every conflict, urging on the wavering, rally

ing the forces, charging furiously upon his opponents, his voice ringing like a clarion in the thickest of the fight. He knew nothing of concession, or compromise, or toleration; but pushed his views and measures to extremes, with the boldness, energy, and faith of one who had a special warrant from God to guide the Church. Violent as he was in debate, there were also a gallantry, chivalry, and brilliancy in his attacks, that made them splendid to witness. No debater in ecclesiastical or civil courts ever commanded more rapt and admiring attention than he in the days of his power. Yet he trampled upon laws of order, the amenities of life, and sometimes frightened the timid by his fierce onslaught upon what he would overwhelm. A man of his boldness and fearlessness could not but possess decided political opinions, especially in a family which was for two or three generations prominent in the national service. Dr. Breckinridge was not only a politician, but a very active and earnest one. Previous to the late war, he had been inclined to conservatism, though disposed to deprecate slavery; but when the war came he was from the first intensely, fiercely loyal, though one of his sons, and his nephew John C. Breckinridge, went over to the Confederacy. He presided over the National Republican Convention at Baltimore in 1864, which renominated Mr. Lincoln for the presidency.

BURLEIGH, WILLIAM HENRY, an American journalist, reformer, and poet, born in Woodstock, Conn., in February, 1812; died in Brooklyn, N. Y., March 18, 1871. He was educated mostly by his father, and when he was about fifteen years of age his school-days were terminated by his father's blindness. Thenceforward he commenced a life of toil. At first apprenticed to a printer, he speedily began to contribute to the columns of the newspaper it was a part of his duty to print, not in written communications, but by setting up his articles without the intervention of writing. From the autumn of 1832 to 1835 he was almost constantly engaged in editorial duties, and in charge of papers advocating one or all of the great reforms then agitating the public mind—antislavery, temperance, and peace—neither of which was then very popular. Though naturally one of the most genial and amiable of men, Mr. Burleigh was stern in his adherence to principle, and was many times subjected to mob violence for his unpopular opinions. In 1836 he added to his editorial duties the labor of lecturing in behalf of the American Antislavery Society, and defending their views. He became about this time the editor of the *Pittsburg Christian Witness*, the organ of the Western Pennsylvania Antislavery Society. In 1843 he removed to Hartford, Conn., and became the editor and proprietor of the *Charter Oak*, a vigorously-edited and brilliant defender of the antislavery and temperance reforms. He struck hard, trenchant blows at

popular vices and political depravity in both papers, and received his reward more than once in mob violence. But while he deemed this heroic defence of unpopular doctrines a duty, and maintained it with unflinching heart, his soul loathed controversy, and, whenever he could command the means for it, he would launch a purely literary paper, which, though generally short-lived, always contained gems of poetry and prose from his prolific pen, and always avoided any controversial topics. He possessed in large measure the poetic faculty; and his poems, though generally struck off at a white heat, and hence sometimes lacking the polish and finish which come of long and patient attrition, yet possessed great merit. A volume of them was, we believe, published between 1845 and 1850. In 1850 he disposed of the *Charter Oak* to the Free-soilers, the nucleus of the Republican party which came a little later, and removed to Syracuse, and subsequently to Albany, N. Y., to be the general agent and lecturer of the New York State Temperance Society, and the editor of their organ. He continued in this position till 1855, winning golden opinions from all with whom he was brought into contact, when Governor Clark offered him, unsolicited, the position of harbor-master of the port of New York. He accepted it, and removed to Brooklyn, N. Y. For the next fifteen years he was either harbor-master or port-warden, but found time for a good deal of literary and some political labor. In the political campaigns he was always in demand as a speaker, and his thorough knowledge of all the questions before the people, and his winning eloquence, made him very popular. He was also in great request as a lyceum lecturer, and contributed to literary papers and reviews. A part of his poems have been collected since his death, and published, with a memoir, by his widow.

BUXTON, CHARLES, M. P., an eminent literary critic, member of Parliament, and leader in the educational movement, in Great Britain, born in Weymouth, England, in 1823; died in London, August 10, 1871. He was the eldest surviving son of Sir Thomas Fowell Buxton, the celebrated reformer and colleague of Wilberforce. The son was educated at Trinity College, Cambridge, where he graduated with honors in 1843. His father died in 1845, leaving him a share in the great brewery he had established, and which continues to yield a princely income to its proprietors. In 1857 Charles Buxton was elected to the British Parliament for Newport, Isle of Wight, and continued in Parliament to the time of his death, representing successively that city, Maidstone, and East Surrey. In 1848 he appeared as an author. He published at that time the memoirs of his father, with selections from his correspondence. The book was well received, and attained a third edition. One review pronounced it "one of the most thoroughly well-written pieces of biography

that have issued from the modern press," while the *London Quarterly Review* warmly commended its courteous tone and the excellent judgment evinced in arranging the materials connected with the veteran philanthropist's career. The fame thus early acquired by Charles Buxton was subsequently increased by his contributions to "The Cambridge Essays," and to several reviews. More recently he

had published a small volume entitled "Ideas of the Day on Policy." In the House of Commons he took a leading part in promoting liberal measures, especially such as were connected with popular education. He was a firm supporter of Mr. Gladstone, and a frequent attendant at public meetings, in London, for philanthropic purposes. He inherited much of the popularity of his father.

According to the census of 1870, 91,176 children attended school during the year, of whom 87,598 were native, 3,578 foreign, 46,742 male, and 44,261 female; 24,877 persons, ten years old and over, cannot read; 31,716, including 2,853 Chinese and 1,789 Indians, cannot write, of whom 9,520 are native and 22,196 foreign. Of those who cannot write, 12,362 are males and 9,837 females, twenty-one years

old and over. There were 9,025 deaths during the year, of which 3,539 were from general diseases, 1,104 from affections of the nervous, 436 of the circulatory, 854 of the respiratory, 1,093 of the digestive, 816 of the integumentary system. The assessed value of real estate is \$176,527,160; of personal estate, \$93,116,908; true valuation of real and personal estate, \$638,767,017; total taxation, not national,

\$7,625,561; public debt, county, town, city, etc., \$14,659,555. The number of acres of improved land is 6,218,133; of woodland, 477,880; other unimproved land, 4,731,092; cash value of farms, \$141,240,028; of farming implements and machinery, \$5,316,690; total amount of wages paid during the year, including value of board, \$10,403,447; value of orchard products, \$1,384,480; of forest products, \$566,017; of produce of market gardens, \$1,059,779; of home manufactures, \$301,491; of slaughtered animals, \$6,112,503; estimated value of all farm products, including betterments and additions to stock, \$49,856,024; value of all live-stock, \$37,964,752. The State contains 192,273 horses, 17,533 mules and asses, 164,093 milch-cows, 5,944 working-oxen, 461,361 other cattle, 2,768,187 sheep, and 444,617 swine. The productions were 16,676,702 bushels of wheat, 26,275 of rye, 1,221,222 of corn, 1,757,507 of oats, 8,783,490 of barley, 21,928 of buckwheat, 380,010 of peas and beans, 2,049,227 of Irish and 202,035 of sweet potatoes, 13,294 of flaxseed; 63,809 pounds of tobacco, 11,391,743 of wool, 7,969,744 of butter, 3,395,074 of cheese, 625,064 of hops, 31,740 of flax, 3,587 of silk cocoons, 4,903 of wax, 294,326 of honey; 1,803,586 gallons of wine, 3,693,021 of milk sold, and 551,773 tons of hay. The number of uncivilized Indians is officially estimated at 7,383.

The State debt at the beginning of the term of office of Governor Haight, in December, 1867, was \$5,146,500. On the 5th of December, 1871, it was \$3,462,000, of which the State itself held \$1,133,500 in the School Fund, and \$57,500 in the University Fund. During the fiscal year ending June 30, 1871, the receipts of the State Treasury amounted to \$3,329,984.99, and the disbursements to \$2,915,592.72. The present rate of taxation is 86½ cents on a hundred dollars assessed value of property, distributed as follows: State capital, 10 cents; Normal School, 2 cents; State-prison building fund, 3 cents; school-tax, 10 cents; funded debt (including capital bonds) tax, 23½ cents; Central Pacific Railroad interest, 8 cents; military, 1½ cent, and general fund 28½ cents.

The practical working of the Equalization Act, passed at the session of the Legislature of 1869-'70, has not been very satisfactory. There is a new capital in course of construction at Sacramento. The cost of the work, thus far, has been \$1,939,000, and it will require \$247,242 to complete it, according to the present estimates.

There are in the State 130,116 children over five years old, and 66,292 under that age. Of these, 83,628 attended the public schools during the year, 15,524 attended private schools, and 30,964 attended no school. There is a normal-school building in course of construction at San José. The State University, at Oakland, is in a flourishing condition. During the year there were 301 students in attendance. It is proposed to have new buildings

for this institution, and to establish an agricultural college and experimental farm in connection with it. The State Insane Asylum, at Stockton, had 1,090 inmates, of whom 786 were males and 304 females. The necessity of another asylum is felt, and the Governor recommended to the Legislature at the session of 1871-'72 the appointment of commissioners to locate it "in one of the counties bordering on the bay." The Asylum for the Deaf and Dumb and Blind, located at San Francisco, had, on the 18th of September, 64 deaf and dumb children—37 boys and 27 girls; and 31 blind—18 male and 13 female. The amount needed for current expenses of this asylum for the fiscal year, 1871-'72, was estimated at \$36,000.

The industrial condition of the State is very promising. The cultivation of fruit and manufacture of wine have grown to a very important branch of industry. With regard to the production of wine, it is impossible to obtain precise statistics later than 1868, when there were 2,587,764 gallons. The product of 1871 has been variously estimated at from 4,000,000 to 5,000,000 gallons. There are 30,000 acres of land planted with vines in the State. Tropical fruits have been cultivated in the State with considerable success. There are now upward of 40,534 orange-trees in flourishing condition, 7,851 lemon-trees, 45,655 fig-trees, 29,000 olive-trees, and 28,000 almond-trees. In the southern counties, these, with several other varieties of tropical fruit-trees, are brought to maturity with very little care, and bear abundance of excellent fruit. The manufacture of beet-sugar has been undertaken on a pretty large scale, and has met with encouraging success. The principal company organized for this purpose is that at Alvarado. It had 500 acres planted with beets, which yield about 16 tons to the acre. According to estimates founded on former experience, it was calculated that the beets would yield 160 pounds of sugar to the ton, or 1,120,000 pounds for the year's product. The capacity of the mill now in operation is sufficient to dispose of 60 tons of beets per day. After the sugar has been extracted from the entire crop, the rest of the year is spent in refining and getting it to market. The cost of production is stated at about \$560 per acre of the land under cultivation, while the yield from the same is valued at \$332. The production and manufacture of silk has not been so successful for the past two years as had been anticipated. At several large cocooneries the worms died just before the time for spinning. The mulberry-tree is grown without any difficulty, and in general the worms have been successfully hatched, but the danger is that they will die before the cocoons are made. It is thought, however, that experience in the treatment of the worms will make this a successful branch of industry in California, as it has already proved in some seasons and in some localities. An experienced cultivator makes the following esti-

mates of the expenditures and receipts of feeding 4,000,000 silk-worms to be produced from 100 ounces of eggs. They would consume the leaves of 500 mulberry-trees, ten years old, and covering four and a half acres, for the rent of which he allows \$100 per acre; for rent of the cocoonery, \$500; for 100 ounces of eggs, \$250; for ten hands at \$1 per day, to attend to the worms during the first twelve days, \$120; for twenty hands, ten days, \$200; for thirty-five hands, ten days, \$350; for five hands, eighteen days (after the feeding is done), \$90; for superintendence, \$300; miscellaneous expenditures, \$500; total, \$2,760. The product he estimates at 6,000 pounds of reeling cocoons, at \$1.50, \$9,000; 250 ounces of eggs, at \$2.50, \$625; perforated cocoons and waste, \$25. Total gross receipts, \$9,650; net profit, \$6,890.

The exports from San Francisco over the Central Pacific Railroad for the first ten months of the year, and the corresponding period in 1870, were as follows:

ARTICLES.	TEN MONTHS.	
	1870.	1871.

Total pounds..... 1,704,296

The political campaign of 1871 in California, was one of unusual interest. The people

were known to be divided pretty equally between the two parties, but there had been no practical test of their position, and no expression of their sentiments in public convention for two years. Henry H. Haight, the Governor, was elected by Democratic votes in 1867, but a portion of his party was opposed to his renomination. Several Democratic journals were outspoken and vigorous in their opposition; and, on the very morning of the State Convention at Sacramento, the recognized organ of the party throughout the State, published in that city, said: "We can see no hope for the success of the ticket with Governor Haight at the head of it. By all means, gentlemen of the convention, give us some other man. Can the Democratic party afford to lose a United States Senator this fall? It may be set down as a fixed fact that, with Governor Haight at the head of the ticket, it will be beat several thousand votes in San Francisco, and we will lose twelve Assemblymen, and (with San Mateo) three Senators." The principal issue in the contest related to the policy of granting subsidies to railroads, to which a strong popular hostility had sprung up. It was well known that Governor Haight had signed a number of bills making grants to railroads, and authorizing the taxation of towns and cities to aid in their construction, and this was the main ground of opposition to his reelection, although he now publicly condemned the subsidizing policy, and even expressed the belief that it was unconstitutional. That question was decided, however, by the Supreme Court, in favor of the power of the Legislature under the constitution to make the grants and authorize cities and towns to do so, however impolitic it might be in itself. The decision was rendered in the suit of the Stockton & Visalia Railroad Company against the city of Stockton, which had refused to pay the tax authorized by the Legislature. It was objected to the statute that it authorized taking private property from one class of persons for the benefit of another. The constitution provides, however, that private property may be taken for "public use," if just compensation be paid. Justice Wallace discussed the meaning of the phrase "public use" at much length, and concluded that the Stockton & Visalia Railroad was a public use, because the Legislature had treated it as such. The power of the State government to foster and regulate internal improvements was unquestionable; many of the States had exercised that power in reference to railroads, in one form or another; and the highest courts of a majority of the States have held that such exercise is constitutional. Justice Wallace quotes and refers to a long array of decisions in other States, the great preponderance of authority being in favor of the conclusions which he adopts, that such subsidies are constitutional.

The Democratic delegates assembled at Sacramento on the 21st of June, and put in nomi-

nation the following ticket of candidates for the State offices: For Governor, Henry H. Haight, the incumbent of the office; Lieutenant-Governor, Colonel E. J. Lewis; Justices of the Supreme Court, Jackson Temple and Selden S. Wright; Secretary of State, W. B. C. Brown; Comptroller, R. O. De Witt. The following platform was unanimously adopted:

Resolved, By the Democratic party of California:

1. That, waiving all differences of opinion as to the extraordinary means by which they were brought about, we accept the natural and legitimate results of the war, so far as waged for the ostensible purpose to maintain the Union and the constitutional rights and powers of the Federal Government.

2. That we regard the three several amendments to the Constitution, recently adopted, as a settlement in fact of all the issues of the war, and that the same are no longer issues before the country.

3. That we demand that the rule of strict construction, as proclaimed by the Democratic fathers, and embodied in the tenth amendment to the Federal Constitution, be applied to the Constitution as it is, including the three recent amendments to that instrument; that the absolute equality of each State within the Union is a fundamental principle of the Federal Government; that we shall always cherish and uphold the American system of State and local government for State and local purposes only, as essential to the maintenance of civil liberty; and are unalterably opposed to all attempts at centralization or consolidation of power in the hands of the Federal Government.

4. That we demand of Congress universal amnesty for all political offences.

5. That while we condemn all riotous and unlawful combinations to disturb the peace or infringe the rights of any citizens, we denounce the act commonly called the "Bayonet Bill," passed by Congress, and the more recent act commonly called the "Ku-klux Bill," as enacted for no other purpose than to complete the work of centralization, and, by establishing a military despotism, to perpetuate the present Administration without regard to the will of the people; that these measures are not only inconsistent with the whole theory and character of the Federal Government, and revolutionary and dangerous in their tendency, but are in direct conflict with the spirit and letter of the Constitution, including the amendments which they pretend to enforce.

6. That we are in favor of a tariff for revenue only, and we denounce the system commonly called the protective system as unjust, oppressive, prolific of corruption, and injurious to the best interests of the country; that the tariff legislation of the Republican party during the past ten years has destroyed our shipping, paralyzed industry, and plundered the mass of the people for the benefit of capitalists and monopolists.

7. That the profligate grants of vast tracts of the public domain made by the radical majority in Congress to railroad corporations, regardless of the rights of settlers, and without any proper conditions or restrictions, are a fraud upon the people of the country.

8. That the failure of Congress to repeal the odious income-tax, the maintenance of a vast army of tax-gatherers to harass the people and eat out their substance, and the failure to restrict the importation of Chinese coolies, whose competition tends directly to cheapen and degrade white labor, constitute a catalogue of grievances for which a radical Congress will be held justly accountable.

9. That we are uncompromisingly opposed to subsidizing railway or other private corporations out of the public Treasury, to the overwhelming increase of debt and taxation; that laws which impose taxes upon the mass of citizens in aid of such corporations, whether in the form of donations, loans, or subscrip-

tions, are an invasion of the rights of private property and a departure from sound maxims of government, and result in the bankruptcy of towns and counties; that they lead to gross abuses; are a prolific source of corruption, and violate the cardinal principle of democracy, to wit: that government is instituted for the welfare and security of the mass of the people, and not for the aggrandizement of a favored few; and that the law upon the statute-book known as the five per cent. law ought to be immediately repealed.

10. That we are in favor of amending the State constitution so as to provide additional safeguards against the taxation of private property in aid of private corporations or individuals, and against improvident legislation, and of securing needed constitutional reforms.

11. That the Democratic party, deriving its strength from the working-classes, is the natural enemy of monopolies, and has always been and always will be ready to support and urge such measures for the elevation of the laboring population and the amelioration of their condition as an enlightened policy may suggest; that we point to the legislation of the past three years, reducing the hours of labor, requiring public work to be done by the day, and seeking to restrict Chinese immigration, as evidence of the sympathy of the Democracy with the wishes and interests of the laboring-classes.

12. That we believe that the labor of our white people should not be brought into competition with the labor of a class of inferior people, whose living costs comparatively nothing, and who care and know little about our churches, schools, societies, and social and political institutions, and that we are, therefore, opposed to Chinese immigration; that Congress, by its legislation, having sought to foster such immigration and to prevent our local authorities from interfering with it, and by its attempted abrogation of the foreign miners' license-tax, deserves our severest condemnation, and has given us another illustration of its intention to concentrate all power in the hands of the General Government.

13. That the public lands yet left to the United States and the State of California should be disposed of only to actual settlers in limited quantities, and on the most favorable terms; and the laws, both State and Federal, should be so framed as to insure this result, so vital to a free people.

14. That the interference by the President of the United States with the military power of the Union, in elections to overawe the people and control the right of suffrage, is treason to the Constitution.

15. That we are compelled, by profound convictions of their injustice and impolicy, to record our solemn protest against the leading measures of the national Administration, and we pledge all the power with which we may be intrusted to earnest efforts to lessen the expenditures of the Government, to reduce and equalize taxation, to hasten the extinction of the public debt, and by honest legislation to protect the public domain against the rapacity of the speculators and robbers, and restore early and cordial union and fraternity to the States and the people of the republic.

16. That, by thorough organization and concerted action, another victory is within the reach of the Democratic party of this State, and this convention pledges itself to effect such organization and action, and to secure, by all honorable means, the election of the candidates this day nominated.

17. And whereas, since the advent of the Democratic party to power in 1867, the rate of taxation for State purposes has been reduced from \$1.13 to 86 cents on each \$100 of property, and the State debt reduced more than \$1,000,000, at the same time that the school fund has been increased, and large sums of money have been judiciously expended upon public buildings, a State university organized and put in operation, the tide-lands of the State rescued from

the grasp of speculators, and sold for the public benefit, special franchise legislation successfully checked for the first time by Executive veto, laws enacted for the revision of our civil and criminal code, the equalization of assessments, and the refunding of the State debt, and a successful opposition inaugurated to any taxation of the people for the benefit of railway or other private corporations, besides other useful reforms: therefore—

Resolved, That we heartily indorse the Democratic State administration, and declare it eminently entitled to the confidence and approval of the whole people.

No organized Labor party took part in the campaign, but the influence of the leaders of the associations of working-men, especially those of San Francisco, appears to have been exerted against Governor Haight's reelection. The following resolutions, adopted at a meeting of the Executive Committee of the National Labor Union, the Executive Committee of the Settlers' League, and the officers of several other labor organizations, held in San Francisco in June, express in strong terms the grounds of their hostility to Haight, and exhibit in some measure the sentiments of the working-men on several important subjects:

Whereas, His Excellency Governor Haight, by his past official record, has exhibited such a want of moral courage, manliness, and character, as has left us in doubt whether very many of his official acts were influenced by ignorance and short-sightedness, or corruption;

While he has sanctioned laws to authorize subsidies to railroads, by taxation on the private property of individuals, he has persistently declared such legislation unconstitutional and wrong;

Having solemnly sworn to support the constitution of this State, which specially prohibits lotteries, he weakly or corruptly indorsed a law authorizing the Mercantile Library lottery;

While preaching the gospel of economy, he has put in practice and encouraged the existence of the corrupt measures of the Legislature of a "thousand commissions"—

Thereby saddling on the people of San Francisco millions of dollars of indebtedness, for the benefit of political favorites;

While making loud protestations in favor of the protection of white labor, and the elevation of the laboring-men, he has publicly and officially encouraged the immigration of Mongolian labor, a degraded and debased people, to compete with and depress the American laborer: therefore—

Resolved, That Governor Haight, judged by his official record, is unworthy of the confidence and support of the working-men of this State; he is too short-sighted to perceive and weak-minded to properly discharge the duties of the office of Governor of the State of California.

Resolved, That there is good reason to believe, and we do believe, that, while professing to be the anti-subsidy candidate for Governor, to obtain the anti-subsidy vote, he is silently carrying with him a subsidy candidate for Lieutenant-Governor; and that, if he be elected, he will resign for the United States senatorship, placing the subsidy Lieutenant-Governor over an anti-subsidy people.

Resolved, That the action of Governor Haight, in vetoing the bill passed for the protection of Hutchings and Lamon, settlers on the public lands under the preemption laws of the United States, indicates an utter disregard of the laws of our country, and the rights of working-men; and his attempt to deprive those settlers of their rights, through the courts, was a flagrant outrage on the rights of all settlers on the public domain.

Resolved, That for these, and other good reasons, the working-men of San Francisco are opposed to the nomination and election of H. H. Haight, Governor of this State, and we hereby pledge ourselves to work and vote against him, and thereby defeat his election.

Resolved, That we will not vote for any public officer who employs or encourages the employment or introduction among us of Chinese labor.

Resolved, That whoever encourages Mongolian labor is recreant to the rights and interests of the American public; and we call on every working-man in the State to oppose the nomination and election to office of any man who encourages Chinese or other Mongolian labor on this continent.

The Republican Convention met at Sacramento, on the 28th of June. The candidates nominated for the different State offices were as follows: Governor, Newton Booth; Lieutenant-Governor, Romauldo Pacheco; Secretary of State, Drury Malone; Justices of the Supreme Court, A. C. Niles, A. L. Rhodes; Comptroller, Jas. J. Green; Treasurer, Ferdinand Bauer; Surveyor, Robert Gardner; Attorney-General, John L. Love; Clerk of the Supreme Court, Grant T. Taggart; Superintendent of Instruction, Henry M. Bolander; State Printer, Thos. H. Springer; Harbor Commissioner, John A. McGlynn. The platform, after pronouncing a lofty eulogy on the national Republican party and its past achievements, and giving a hearty indorsement to President Grant and his Administration, proceeds as follows:

Resolved, That the concentration of the landed property of the country in the possession and ownership of the few, to the exclusion of the many, is in contravention of the theory of American government, subversive of the rights, liberties, and happiness of the masses of the people, and if permitted would inevitably terminate in the speedy establishment of an odious aristocracy upon the ruins of our free institutions; and we are in favor of such legislation, both by the nation and the State, as shall secure a just and equal distribution of the public lands remaining to them respectively, to actual settlers and proprietors in small quantities, at the lowest reasonable prices, and for homestead purposes only.

Resolved, That the safety and perpetuity of republican institutions depend mainly upon popular education and intelligence. We therefore approve and recommend a common-school system that shall not only extend its benefits to all; but which shall be compulsory upon all, and we are inflexibly opposed to any application of the public school moneys with any reference to distinctions in religious creeds.

Resolved, That religious liberty in its broadest sense is a fundamental principle of American government, and legislative enactments having in view the establishment of a creed, the regulation of the mode of worship, or the enforcement of religious observances of any kind, are inconsistent therewith, and invasions of the rights of the citizens.

Resolved, That the presence in our midst of large numbers of Chinese, who are incapable of assimilation with our own races, ignorant of the nature and forms of our government, and who manifest no disposition to acquire a knowledge of the same or to conform to our own habits, manners, and customs, is a serious and continuing injury to the best interests of the State; that their employment under the plea of cheap wages is offensive to the exalted American idea of the dignity of labor, detrimental to the prosperity and happiness of our own laboring-classes,

and an evil that ought to be abated; that while we unsparingly reprobate and denounce all acts of violence, whosoever and by whomsoever committed upon them, we are inflexibly opposed to their admission to citizenship, and demand of the Federal Government the adoption of such treaty regulations and legislation as shall discourage their further immigration to our shores.

Resolved, That the subsidizing of railroads, or other private corporations, by grants of public lands or by taxation of private property in any form, is contrary to sound maxims of government and productive of gross corruption and abuse, and a plain invasion of the rights of the citizen, and we hereby pledge the Republican party to an uncompromising opposition to any and all legislation for such purposes; and—

Whereas, The Supreme Court has decided that such legislation is not in conflict with the Constitution: therefore—

Resolved, That we are in favor of an amendment to that instrument prohibiting the enactment of any law granting such subsidies.

Resolved, That we demand an immediate repeal of the act of the last Legislature commonly known as the five per cent. subsidy law.

Resolved, That the scandalous abuse of power exhibited by a Democratic Legislature, in the creation of useless offices, boards of commissions, and the inexpedient increase of salaries and fees for partisan purposes, its palpable and wanton violation of a plain provision of the constitution by the infamous enactment commonly known as the Lottery Bill, its measureless subserviency to a corrupt lobby, evinced by numerous profligate grants of subsidies to railroad companies, the official sanction of most of those pernicious measures, including the aforesaid Lottery Bill, by the present Democratic State Executive; and, in addition thereto, his official approval of a series of legislative enactments whereby railroad companies have been subsidized to the extent of \$40,000,000, afford convincing proof of the apostasy of a Democratic administration to all the pledges upon the faith of which it was elevated to power, and that the affairs of the State cannot with safety be recommitted to its control.

Resolved, That we extend to our newly-enfranchised citizens cordial welcome to the rights of citizenship now permanently secured to them after the hard-fought struggle with their old oppressors; that if they do not now understand the responsibility which rests upon them as freemen, we fully believe that, as they advance in the path of freedom and intelligence, none will regret the act of justice by which the Republican party gave to them constitutional guarantees of civil and political equality.

The election took place, after a vigorous canvass, on the 5th of September, and resulted in the victory of the Republican ticket. The whole number of votes cast for Governor was 120,101. Of these, Newton Booth received 62,581, and Henry H. Haight 57,520, which gives the former a majority of 5,061. In 1867, when Haight was elected, the total vote was 92,352, of which Haight received 49,905, or a majority of 7,458. At the last election, three members of Congress were chosen, all Republicans. One-third of the old Senate held over, and that body now stands—Democrats 21, Republicans 18, Independent 2. In the Assembly, or lower branch of the Legislature, there are 55 Republicans, 24 Democrats, and 1 Independent. In a joint ballot the Republicans have a clear majority of 25. The judicial election occurred in October, and A. L. Rhodes and A. C. Niles, the Republican candidates,

were chosen. Some complaint was made of the operation of the registry and election laws. Among other things it was alleged that the cost to the State of the regular election was about \$85,000, and that of the judicial election \$15,000.

The prevalent feeling against encouraging Chinese immigration, which found expression in the platforms of both political parties, was also exhibited in other ways. There is a law on the statute-books declaring Chinamen incompetent to testify in cases where white men are parties. A decision of the Supreme Court of the State was obtained, at its last term, on the constitutionality of this provision. Its validity had been denied, on the ground that it was in conflict with the fourteenth amendment of the Federal Constitution, which declares that no State shall deny to any person within its jurisdiction "the equal protection of the laws." The court, however, affirmed the validity of the law, Justice Temple taking the ground that the right to testify as a witness was not essential to secure the equal protection of the law, and that it was not the purpose of the Legislature to leave the Chinese unprotected. He seems, furthermore, to question the right of the national Government to interfere in matters of that kind. "It is no part," he says, "of the purpose for which that Government was created to stand guard over the States to see that they execute their laws in a manner not to oppress those who are subject to them."

On the night of the 24th of October, a riot occurred in the city of Los Angeles, in which fifteen Chinamen were hanged and six others shot by a lawless mob. There had been a feud between two Chinese companies of that place, and some of the hostile parties meeting in the street, a fight ensued. When the police attempted to quell the disturbance, they were resisted, and one of their number killed and two others wounded. As soon as the assault upon the police became known, a mob of white men collected and attacked the Chinese quarter, shooting the people without mercy, and hanging those who were caught trying to escape. In a few hours, the more respectable portion of the citizens succeeded in staying the riot, and the matter was soon after taken up and investigated by the grand-jury of Angeles County. Thirty-seven persons were indicted for riot, two for assault with deadly weapons, two for assault to commit murder, and twenty-five for murder, besides eight Chinamen, who were indicted for murder, or assault with intent to murder. In their report the jury blame the officers for their conduct in the following terms: "We believe that we would be wanting in our duty if we should fail to present to this court the painful conclusion forced upon us by the testimony to which we have listened, that the officers of this county, as well as those of this city, whose duty it is to preserve the peace and arrest those who, in their presence,

are violating the law by the commission of crime, were deplorably inefficient in the performance of official and sworn duties during the scenes of confusion and bloodshed which disgraced this city, and have cast reproach upon the people of Los Angeles County. While a feeble and in most cases an ineffectual effort was made by officers to rescue the unfortunate ones that were being dragged away to execution, it does not appear that any attempt whatever was made by any officer to arrest any of those who, in their presence, were openly and greatly violating the law, even to the taking of human life. From the testimony of many witnesses, as well as from the fact that in every case which has come to our knowledge, where two resolute men, or even one determined man, resolved to rescue a captive from the hands of those who were hurrying him away to execution, they were successful, and met with no overpowering resistance. The conviction is forced upon us that, had the officers performed their duty, this grand-jury would not have been called upon to devote weeks to the investigation of this matter, nor would there have been any riotous acts on that night to stain the record of this county, nor the reputation of Los Angeles City. We believe, from the evidence which we have taken, that a great majority of those who witnessed the sad spectacles of that night, instead of being a blood-thirsty mob, having possession of the city, or any part of it, trampling law and order under foot, were unwilling witnesses, anxious to prevent the revolting scenes that were passing before their eyes, and would quickly and cheerfully have prevented or put an end to the anarchy, if any resolute and energetic man, clothed with authority and with an average share of ability and judgment, had placed himself at their head, and in a proper manner directed their efforts."

The nineteenth session of the California Legislature commenced at Sacramento on the 4th of December. The Senate organized by choosing Democratic officers, the Republican Lieutenant-Governor of course presiding, while the House chose all its officers from the Republican majority. On the fourth day of the session, the committee on canvassing the election returns reported that Newton Booth had received 61,818 votes for Governor, and H. H. Haight 56,800; and Roumaldo Pacheco had received 61,700 votes for Lieutenant-Governor, and E. J. Lewis, 56,779. On the following day, the 8th of December, the new Governor was inaugurated. In his valedictory message, Governor Haight gave the following retrospect of the four years of his administration: "The faithful custody and disbursement of the public revenues; the payment of about one-third of the State debt; the reduction of taxation from \$1.13 to 86½ cents; the improvement in the prison buildings and in the discipline and management of the prison; a better system for the government of the Insane Asylum;

the completion of the Asylum for the Deaf, Dumb, and Blind; the organization and endowment of a State University upon a basis which must secure it against the invasion of partisan politics; the progress in completing the State Capitol; the prevention, to so large an extent, of special legislation; the progress made toward a thorough revision of our statutes and the perfection of our revenue system by equalizing assessments; the successful disposal of the tide-lands of the State; the repeal of a vicious system of bounties and the overthrow of the subsidy system, which levied taxation and created debt for the benefit of private corporations; the large increase of the Common-School Fund, and the extension and improvement of the school system; the erection of a State Normal School; the more thorough arrangement of the State archives in the offices of the Comptroller and Secretary of State; the organization of a State Board of Health, for the collation of statistics of hygiene; the law for the preservation of fish in our bays, lakes, and streams; the prosecution of the geographical and geological exploration and survey—constitute an imperfect summary of the administration of the State government for the past four years. This period has been an eventful one in the history of the State in other respects. One continental line of railroad has been completed, and three others are in progress, and our internal railroad system is being rapidly extended. The great industries of the State have undergone a healthy development, notwithstanding the temporary stagnation of labor and capital occasioned by two unusually dry seasons. Enterprises for the irrigation of the uplands in the San Joaquin and Sacramento Valleys, and for the reclamation of the swamp and marsh lands, have been entered upon, the success of which promises results of the greatest importance and value in the future. Our mining, manufacturing, agricultural, and commercial interests have prospered."

For several days the election of a Senator in Congress occupied a good deal of attention, the Republicans especially having many lively discussions upon the subject in their caucuses. They finally settled upon Aaron A. Sargent as their candidate, and he was elected in a joint convention of the two Houses as the successor of Cornelius Cole, receiving 72 votes out of a total of 118; Judge Wallace, the nominee of the Democrats, receiving 46. On the 21st of December the Legislature adjourned over to the 4th of January, 1872. No important legislation was completed before the recess, and comparatively little was set on foot. Among the bills introduced were the following: "An act to facilitate telegraphic communication between America and Asia," empowering certain New York and California capitalists to construct and operate one or more telegraph wires or cables on the lands or waters under the jurisdiction of the State be-

tween the American coast and that of Japan and China; a bill providing that parents or guardians, having the control of children between the ages of eight and fourteen, shall require them to attend school at least twelve weeks during the school-year, and six weeks consecutively, unless they shall be excused by the Board of Trustees on account of inability, or on account of attendance at some private school; a bill requiring mining companies employing twelve men or more, and having a shaft sunk to the depth of not less than three hundred feet, to have an outlet beyond the main shaft, through which the men may escape in case of accident; "An act to prohibit the appropriation of public moneys for private and sectarian purposes;" and "An act to take preliminary steps for the formation of a new constitution for the State of California." A joint resolution was received from the Legislature of Nevada, asking the State "to cede the territory east of the summit of the Sierras to Nevada."

The commission appointed to revise the laws of the State have completed their work, and reported four codes: a civil code; a political code; a code of civil procedure; and a penal code. These comprise all the statutory provisions which it is thought desirable to retain, and such changes and new features as were deemed expedient by the commissioners. Before being submitted to the Legislature, the codes were examined by two prominent jurists at the request of Governors Haight and Booth, and received their approval. They came before the Legislature early in the session, but were not acted upon before the close of the year.

CANNIBALISM. Evidences of the existence of this revolting practice in prehistoric times are abundant. The human bones found in the caves in Italy, France, and Belgium, as in the cave of Chauvaux, near Namur, and in the shell-heaps of Denmark, bear the marks of fire and of having been broken. They are mostly bones of young women and children, affording the inference that human flesh was eaten as a delicacy, and not from necessity. Cannibals are often spoken of, in the writings of the ancients, as living in the East Indies and Africa.

Our present inquiry is as to the extent to which cannibalism still exists. Among Asiatic nations, the Battas, on the island of Sumatra, appear to be the only tribe who continue it. They are mentioned as cannibals by Marco Polo in the thirteenth century, and Nicolo di Corti in the fifteenth century. They are by no means of a low grade of intellectual standing, though they seem to have been formerly more advanced than at present. They are acquainted with farming and some branches of industry, have an alphabet and a show of a literature, and the majority of them can read and write. According to Friedmann ("Die Ostasiatische Inselwelt," Leipsic, 1868)

anthropophagy is with them the expression of sensuality and passionateness, which are highly developed among them. Their unbounded appetites even stoop to cats, rats, sick dogs, etc. "As cannibalism exists at present among them," says Friedmann, "it is regulated by law. Certain offences are punished by death, after which the offender is eaten. Prisoners of war are reserved for the same terrible fate. An enemy taken in arms outside of the Kampong must be eaten alive, that is, without being previously killed." Spies and traitors are also eaten, but are first killed. It would be an error to say that the Battas eat human flesh as a common food. There are, indeed, according to Friedmann, some who buy slaves, fatten and eat them, but they are despised even among their own people.

The classic ground for anthropophagy is still Africa, chiefly on the Guinea coast, where cannibalism is spread from Sierra Leone to Calabar. Even where English influence predominates, it has not been able to stop this practice entirely, as, for instance, in Sierra Leone. The best description of the barbarism reigning in that region is given by Consul Thomas J. Hutchinson in his "Ten Years' Wanderings among the Ethiopians" (London, 1862). Cannibalism also prevails in Omun, on the Cross River. Consul Campbell wrote to Hutchinson from Lagos, that the widespread tribe of the Idshoo were generally assumed to be cannibals. As late as 1859 human flesh was sold in open market at Duketown, on the Old Calabar. In Brass and Bonny all prisoners of war are eaten, with the idea that they impart courage.

A few degrees below the delta of the Niger we again meet with cannibals, the tribe of the Fans, or Pahuins. This tribe has come from the interior of Africa and settled within the limits of the French possessions near the Gaboon. The first account of them was given by Paul du Chaillu ("Explorations and Adventures in Equatorial Africa," etc., London, 1861). Du Chaillu reports that, when he entered the chief village of the Fans, he met a woman carrying the leg of a man, and that he saw human bones lying in front of the huts. But the naval surgeon, Dr. Griffon du Bellay ("Le Tour du Monde," 1865), who made several trips from the coast to the interior in the years 1861 to 1864, states that, although the Fans are cannibals, yet the report of Du Chaillu was exaggerated; he saw no signs of anthropophagy.

More recently we have received news of the existence of anthropophagy in the southern part of Africa, where the caves of the cannibals in the land of the Bassoutos have excited considerable attention. This region, which lies between the Orange Free State and the English possessions, has been the scene of constant wars between the whites and the natives, and the famine which followed these

Wars is said to have led to the eating of human flesh. A very concise account of the cannibalism of the Bassoutos is found in the *Anthropological Review* (No. 25, April, 1869), where James Henry Bowker, Dr. Bleek, and Dr. John Beddoe, have given their observations on the "Cave Cannibals of South Africa." Interesting data are also found in "Relation d'un Voyage d'Exploration au Nord-est de la Colonie du Cap de Bonne Espérance, par Arbousset et Daumas," Paris, 1842, pages 105-123. The voyage was made in the year 1836. In his "Two Lectures on the Native Tribes of the Interior," Capetown, 1855, pages 62-64, Edward Salomons spoke of cannibalism as existing among four tribes. Two of these, the Bakufeng and the Makatla, are Bechuanas; while the other two, the Bamakakana and the Bamatlapatla, are Kaffres. It is suggested that they became cannibals in consequence of the war which devastated that region some fifty years ago, and have remained so ever since.

Some doubt has arisen in regard to the tribe of the Niamaniam, of the district of the White Nile, who have been spoken of as addicted to cannibalism. Henglin says ("Reise in das Gebiet des Weissen Nil und seiner westlichen Zuflüsse," Leipzig and Heidelberg, 1869) the large tribe of the Niamaniam is bounded on the north by the Fertit, on the east by the tribes of Dor, and perhaps some of the Diur tribes, while its extension to the west and south is not yet completely known; single tribes, however, reach beyond the equator and westward of 18° east longitude from Greenwich. Niamiam or Namiam—in the plural Niamaniam—means originally with the Djelabes eaters, in this case man-eaters. According to Marchese Horatio Antinori, they eat ants, grasshoppers, bugs, bats, and hunt monkeys and apes. "I myself," says Antinori, "have had opportunity to examine some of this tribe, whom I have met with the ivory-dealers. I have seen them eat bats and apes which I had shot. They roasted them and devoured the meat with the burnt skin, and then not only the entrails, but even the excrements. But still I cannot say that they are cannibals." Undoubted proof of this is furnished by Carlo Piaggia, who wandered about in the country with the ivory-dealers for several years, and lived with the chief Tombo for nearly a year, up to February, 1865. In their wars with neighboring tribes they ate the bodies of those killed in battle. Of this fact Piaggia was an eye-witness. His statement (see "Year-Book" of the Geographical Society of Florence, 1868) is confirmed by Schweinfurth, who also observed some of their sanguinary feasts during his tour through the country of the Niamaniam in 1870.

In America anthropophagy has very largely diminished in historic times. The Caribs, whom Columbus met, were cannibals in the fullest sense of the word. The human sacri-

fices of the Aztecs and of the Peruvians have been described minutely by historians. The Iroquois and the Algonquins of North America are described as having been in the practice of cannibalism at the time of the arrival of the Europeans. At present cannibalism has entirely disappeared from North America, except in a small tribe on the coast of Lake Superior, the Rabbit Indians, a tribe of the Odjibways, who, according to the testimony of Prof. Credner, of Leipsic, are charged by the neighboring tribes with occasionally indulging in this practice. Besides them, the only cannibals living on the continent are the Miranhas and Mesayas, who are found on the Japure, at its entrance into the Amazon, and the Kasibos on the Pachitua. The description of the feasts of the Mesayas, given by Marcoy, shows plainly that only a very strong desire for revenge actuated them to eat human flesh; for all of them were at great pains after the banquet to cast the human meat forth again. (Marcoy, "Voyage à Travers l'Amérique du Sud, de l'Océan Pacifique à l'Océan Atlantique," Paris, 1869, 2 vols.) As to the Miranhas, Marcoy reported that a famine was raging in their district, and that they ate their aged and sick, but do not leave their country, for fear of death at the hands of their neighbors.

The motives which actuate the sparse native populations of Australia and Oceania to cannibalism are not clear, but seem chiefly to be revenge, hunger, and superstition. Australia has still a native population of 50,000, who practise cannibalism when not restrained by English influence. The German missionaries settled at Cooper Creek, in South Australia, have recently brought to light some revolting facts regarding this subject. One of the missionaries wrote in 1868: "Cannibalism is here a fact; a mother will smilingly eat her child. The blacks eat part of every corpse, when there is any thing to eat. A short time ago, the oldest man of the tribe died. Being asked whether they would eat him, one of the blacks answered: 'No, he is too bony, he has no fat.'" (Extract from the *Deutsche Zeitung*, published in Tanunda.)

In New Guinea the natives are supposed to be cannibals, although we have no direct proofs of the supposition. Every thing known on the subject has been compiled with great carefulness by O. Finsch ("New Guinea und seine Bewohner," Bremen, 1865), who defends the natives against the accusation. Definite information respecting cannibalism in the Louisiade Archipelago, which lies in the elongation of the eastern peninsula of New Guinea, is furnished in the narrative of a shipwreck by the French surgeon V. de Rochas, well known as a writer on travels ("Naufrage et Scènes d'Anthropophagie à l'île de Rossel dans l'Archipel de la Louisiade. In "Le Tour du Monde," t. iv., Paris, 1861): In the summer of 1858, the ship *St. Paul* was wrecked on the island Rossel. It had on board 317 Chinese,

who were on their way from Hong-Kong to Australia. All on board were saved, and managed to reach one of the neighboring small islands, where the captain left them to get help. He reached New Caledonia, where the French authorities immediately sent out a man-of-war to save the shipwrecked travellers. On the 5th of January, 1859, the ship reached the island, when it was found that, of the 300 men, only four were alive. The rest had all been eaten by the natives. One of the survivors afterwards testified, in Sydney, that the blacks had beaten their victims with clubs to make their flesh soft. Cannibalism prevails also in New Britain, the Santa Cruz Islands, the New Hebrides, on New Caledonia, and on the Loyalty and the Feejee Islands, as well as on some islands inhabited by Malays, the Marquesas Islands, and New Zealand. On the Loyalty Islands cannibalism has been extinguished only since 1855, while on New Caledonia it still exists. Among others, the French engineer Garnier has been an eye-witness of the cannibalism of the New Caledonians, and gives very revolting accounts of the same. In reply to the question how the New Caledonians adopted this horrible practice, Garnier gives a conversation with one of them, who said that the Europeans had better and more food. For them human flesh was the best. But this is opposed by the fact that cannibalism was formerly connected with religious rites.

The highest development of anthropophagy, however, has been reached in the Feejee Islands, concerning which, Wilkes's Narrative of the United States Exploring Expedition during the years 1839-1842 (Philadelphia, 1846) says that the practice does not exist there for religious rites only, but because the islanders consider human meat a great delicacy. On the Marquesas Islands, the Irishman Lamont ("Wild Life among the Pacific Islanders," London, 1867) was shown a hut where a white man, who had killed a chief, was to have been killed and eaten, but he had escaped the day before his intended execution. According to W. J. Pritchard, Jr. ("Polynesian Reminiscences, or Life in the South Pacific Islands," London, 1866), the Samoa islanders are not entirely free from anthropophagy, but instances of the practice very seldom occur.

Anthropophagy has ceased in New Zealand since the English have made their power felt by the Maories. According to F. von Hochstetter, in his excellent work on New Zealand (Stuttgart, 1863), it was introduced into these islands only within the last few centuries. When the missionaries rebuked one of the chiefs for cannibalism, he replied: "The large fish eats the small one; the dog eats the man, the man the dog, dogs eat each other, and one god eats another god."

Cannibalism has disappeared from North America, Mexico, and Peru, and is disappearing among the Brazilian tribes. It is also disappearing in the South Sea islands, both in

consequence of the extinction of the natives, and of the rapid advance of the white settlers. Still the number of cannibals is quite large, as the following figures will show: The Battas number (according to Friedmann) 200,000 souls; the cannibals in the delta of the Niger, about 100,000; the Fans (according to Fleuriot de Langle), 80,000; the cave-cannibals in South Africa, 10,000; the Niamaniam, 500,000; the Miranhas and Mesayas (according to Marcoy), 2,000; the other South American cannibals, 1,000; the natives of Australia, 50,000; and the Melanesians (New Guinea not included), 1,000,000; accordingly, the total number of cannibals still living is about 1,943,000, or the 690th part of the population of our globe.

CARY, ALICE and PHEBE, two sisters, distinguished in literature, both of whom died in the year 1871. I. ALICE, born April 26, 1820, in Hamilton County, Ohio, about eight miles from Cincinnati; died in New York City, February 12, 1871. Her parents were people of considerable culture and refinement, but, from the privations incident to a newly-settled country, her early advantages of education were very moderate. She commenced writing verses at the age of eighteen, and wrote largely and acceptably for the press in prose and verse for the next ten years, without compensation. In 1852, with her younger sister Phæbe, Alice came to New York City, and the two devoted themselves thenceforth to a literary life. The sisters had some property, a fair literary reputation, and habits of industry and frugality which enabled them to content themselves with a moderate income, and they had just made their first successful literary venture, a joint volume of poems, when they decided to remove to New York. They were prospered in their enterprise, not with that large measure of success which falls to the lot of perhaps one in ten thousand of those who enter upon a literary life, but with that gradual growth of income which eventuated in a competence. Alice was an indefatigable worker, though her pleasant and cosy home was at all times accessible to her friends, and her society always pleasant. She wrote for the *Atlantic Monthly*, for *Harper's*, for *Putnam*, for the *New York Ledger*, the *Independent*, and other literary periodicals; and her articles, whether prose or poetry, were gathered subsequently into volumes which had a warm welcome both in this country and abroad. But she also wrote novels and poems, which did not make their first appearance in periodicals. Her poems are characterized by a rare naturalness and grace, and, though not ranking in the highest class either in creative genius or exquisite finish, have such merits as entitle her to an equality with the best of the poets, male or female, of the second rank, in our time. Her prose is remarkable for its unhackneyed grace and realistic character. Her descriptions of domestic life are charming, and her plots well sustained and interesting. Besides the volume above mentioned, Alice

Cary's published works were: "Clovernook Papers," two series (1851 and 1853); "The Clovernook Children" (1854); "Lyra, and other Poems" (1853), and an enlarged edition, including "The Maiden of Tlasecala," in 1855; "Hagar, a Story of To-day" (1852); "Married, Not Mated" (1856); "Pictures of Country Life" (1859); "Lyrics and Hymns" (1866); "The Bishop's Son" (1867); "The Lover's Diary" (1867); "Snow Berries, a Book for Young Folks" (1869). Her last illness was protracted, and attended with much suffering, but was borne with great patience and cheerfulness.

II. PHOEBE, younger sister of the preceding, born in Hamilton County, O., in 1825; died at Newport, R. I., July 31, 1871. Her advantages of early education were somewhat better than her sister's, of whom she early became the almost inseparable companion. They were very different both in temperament and figure, and in mental constitution, but the one admirably supplemented the other. Phoebe began to write verse at the age of seventeen—crudely and imperfectly, she herself said; and yet one of her earliest poems, written in 1842, was that one so widely known the world over, and which has been of such comfort to thousands, entitled "Nearer Home," and commencing "One sweetly solemn thought." Of the volume, "Poems of Alice and Phoebe Cary," published in Philadelphia in 1850, only about one-third were written by Phoebe. In their house-keeping in New York, she took, from choice (Alice being for many years an invalid), the larger share of the household duties, and hence found less leisure for literary labor than she otherwise might have done. She wrote very little prose, and her poetry was so different in style, so much more buoyant in tone, and independent in manner, that no one could mistake the effusions of the one sister for those of the other. To most readers, however, Phoebe's poems would be more attractive than those of Alice. In society she was brilliant and witty, but always kindly and genial. Her published works, aside from her share in the Philadelphia volume, already noticed, were "Poems and Parodies" (1854); "Poems of Faith, Hope, and Love" (1868); and a large share of the "Hymns for all Christians," compiled by Rev. Dr. Deems in 1869. She had written a very beautiful and touching tribute to her sister's memory, published in the *Ladies' Repository* a few days before her own death. She had enjoyed robust health till her sister's death; but her constitution, weakened by her intense sorrow, was shattered by exposure to malarious disease, and she did not rally from the intensity of the attack, though removed to Newport in the hope that a change of air might prove beneficial.

CENTRAL AMERICA.* There are at present in Central America five independent republics: Costa Rica, Guatemala, San Salvador, Nic-

aragua, and Honduras. Their area and population were, in 1869, 173,700 square miles, with 2,665,000 inhabitants.

COSTA RICA.—President of the Republic, Tomas Guardia; minister resident of the United States, J. B. Blair, in San José. The public revenue amounted, in the year 1867-'68, to \$1,501,786, the expenditures to \$1,594,427. The foreign debt in 1868 was \$104,500; the claims of native creditors were, in 1867, estimated at \$3,000,000.

GUATEMALA.—Provisional President of the Republic, M. G. Granados (1869-'72); minister resident of the United States, S. A. Hudson, in Guatemala; Minister of Guatemala and San Salvador, at Washington, M. J. Vela. Public revenue, in 1869, \$1,885,532; expenditures likewise \$1,885,532. The annual average of the exports from 1863-'68 was 1,794,061 piasters; the annual average of exports, 9,184,429 piasters.

SAN SALVADOR.—Provisional President of the Republic, General Santiago Gonzalez (1871-1872). In the budget for 1869, the revenue amounted to \$830,371; the expenditure to \$802,802. The consolidated public debt amounted, in 1869, to \$705,800. Annual amortization, \$24,587; floating debt, \$84,264. The imports in 1869 (exclusive of precious metals) were valued at \$2,389,454; the exports at \$3,768,357.

NICARAGUA.—President of the Republic, Vicente Cuadra, elected February 1, 1871; minister resident of the United States, in 1870, C. N. Riotte; minister resident of Nicaragua at Washington, in 1870, J. R. Perez. Revenue, in 1865, \$632,471; expenditure, \$630,120; expenditure, in 1868, \$517,709. The public debt is estimated at \$4,000,000. Imports in 1869, \$914,648; exports, \$924,031. The ports of Realejo (or Coniito) and San Juan del Sur, which are situated on the Pacific coast, were in 1870 visited by 19 vessels, among which were 7 German and 4 English.

HONDURAS.—President of the Republic, Captain-General J. M. Medina, reelected in February, 1866, and again proclaimed President in 1869. The United States Government is represented by H. Baxter, minister resident at Comayagua. Revenue, about \$400,000 annually; expenditure, about \$185,000; total public debt, in 1868, \$1,050,000; consolidated debt, \$600,000, for the redemption of which the import duties at the port of Truxillo, and a part of those at Amapala, are pledged.

On February 1st the Government of Honduras declared war against President Dueñas, of San Salvador. At the same time, a revolution broke out against him in San Salvador, the leaders of which acted in concert with the Government of Honduras. Several prominent generals left Dueñas and joined the Honduran party. General Torbert, United States minister to San Salvador, addressed a note to the Government, on behalf of England and the United States, regarding the war, notifying it that

* See AMERICAN CYCLOPEDIA for 1869, for details of area and population.

strict neutrality must be observed toward the Honduras Railroad. On the other hand, General Xatruch, an ally of Dueñas, invaded Honduras, gained some successes over the Government troops, and even proclaimed himself Provisional President. On April 7th a decisive battle, lasting three days, took place at Santana, in which the troops of San Salvador were totally defeated. When the news reached the capital, the populace rose and sacked the barracks of the soldiers and the private house of President Dueñas. Assassinations were committed, and anarchy reigned supreme. This state of affairs resulted from the flight of all the high officials, and the absence of both the police and soldiers, who had all deserted. The prisoners in the jails were released by the mob. At length, however, the merchants and all the foreign residents formed a vigilance committee, and in two days tranquillized the city, captured many of the escaped prisoners, and then resigned in favor of the new officers, who were appointed immediately upon the entry into the capital of the Provisional President, Gonzalez, accompanied by his army. Ex-President Dueñas and General Martinez fled to the American legation, whence they communicated with the victors, asking certain guarantees for their lives and property. The new Government decreed that there should be full and complete liberty of the press in San Salvador, and abolished the use of the word "Excellency," as applied to the President and ministers, as incompatible with the principles of the true republic. The victorious army was enthusiastically received on entering the capital. A new ministry was appointed, composed as follows: Interior, Manuel Gallardo; Treasury and War, Maximo Arango; and Foreign Affairs, Gregorio Albizu. General Torbert, the United States minister in San Salvador, recognized the new Government. In Honduras, the revolution continued until June, when it was suppressed, and General Xatruch left the country. The Government granted a general amnesty, excepting General Xatruch and his adherents. Ex-President Dueñas and General Martinez were, in June, liberated by the Government of San Salvador. In August commissioners were appointed by the Governments of San Salvador and Honduras to consult upon the policy of adopting measures for the establishment of a Central American Federation. Minister of War and the Treasury Don Maximo Arango disappeared on finding that a conspiracy had been discovered to overthrow President Gonzalez. The movement was to have been supported by President Medina, of Honduras, who handed over to Gonzalez the correspondence of Arango. Borgo Bustamante succeeded Minister Arango as Secretary of War, and was named brigadier-general. Owing to some warm debates a misunderstanding arose between Gonzalez and the Ministers Ulloa and Gallardo, which ended by those two ministers resigning their portfolios.

Licentiate Figueroa received the place of Gallardo as Minister of the Interior.

Another revolution was attempted in Costa Rica in May. It was discovered almost before its initiation, and was promptly put down. The leaders were arrested and banished.

A serious revolution against President Cerna of Guatemala broke out in May. General Rufino Barrios, at the head of 600 rebels, defeated the Government troops at Guezaltemango. General Vikeria, at the head of 200 men, joined the insurgents. In the latter part of the month, the revolutionists, under command of their chief leader, Miguel Garcia Granados, attacked and took possession of the town of Retalhulchu, which was garrisoned by some 300 Government troops under Colonel Cadenas, after a sharp fight, in which the loss on each side was about equal—some 20 men each, among whom was Colonel Peron, of the revolutionists, formerly a general under Maximilian, in Mexico. The Government forces retired, leaving the place in possession of Granados, who, in revenge for the obstinate resistance made by the inhabitants of Retalhulchu, set fire to the town and destroyed 400 of the Indian huts of which it was composed. The revolutionists next marched on Masaterango, another important town in the Costa Grande, and surrounded by one of the richest coffee-regions in the republic, and occupied it without resistance. Then they took up their line of march to the city of Antigua, the former capital, which they reached without encountering any opposition. It was their intention to enter and occupy this city also, but finding the inhabitants less enthusiastic in his favor than he expected, and doubting his ability to cope successfully with the force under Colonel Barrientos, which defended the place, Granados abandoned the idea and continued with his command to the town of San Martin, whence he might successfully operate against Guatemala City, the capital of the republic. For several days after the receipt of the news that the revolutionists had intrenched themselves at San Martin, the most intense excitement existed in the capital, and an attack was hourly expected. The general feeling was openly and decidedly expressed in favor of the proposed new *régime*; but the revolutionary leader, apparently ignorant of the state of affairs at the seat of government, delayed, awaiting reinforcements from San Salvador and fire-arms from abroad, which he daily expected. In the mean time, Government troops were called in from all available points, and the city put in such a state of defence as to render a successful attack on the part of Granados, with his limited force, impossible. The critical moment being thus allowed to pass without advantage having been taken of it, the Government decided to act on the offensive. A force was organized, under command of Colonel Calogne, and sent out against the revolutionists in San Martin. The latter, hearing of this movement, and having been disappoint-

ed both in the reinforcements and supplies expected, abandoned their position and moved in the direction of Vera Cruz. Colonel Calogne followed in pursuit, and on the 29th of May succeeded in overtaking the retreating enemy at the town of Chiché, in the department of Totomicapan, where a battle was fought, which resulted in the defeat of the Government troops, with a loss of 10 or 12 killed and wounded. The force under Colonel Calogne, thus disgracefully defeated, numbered 800 men, commanded by Lieutenant-Colonels Cuernas and Salazar. From Chiché Granados returned to Masatenango, where he declared himself liberator of the country. Soon after President Cerna left the country, and Granados entered Guatemala, declaring himself Provisional President. The ministry organized by him seemed to afford general satisfaction. The following appointments were made: Dr. Felipe Galoy, Minister of Finance and Foreign Affairs; Dr. Areado Estrado, Minister of the Interior; Marescal Lavallo, Minister of War; and José Maria Samayoa, Jr., Minister of Public Works. The Government entered into several contracts, of which the most important is for a tramway from the port of San José to the city of Guatemala. Dr. Galoy, the Minister of Foreign Affairs, died in November, and was succeeded by Señor Favala. The new Government of the republic exiled the Archbishop of Guatemala as well as the Jesuits, as both were charged with stirring up a revolution in favor of the Government of ex-President Cerna. The Departments of Chiquimala and Jalapa were declared in a state of siege. The revolutionary outbreaks were suppressed by General Barrios.

The Costa Rica Government, in April, decided to build a railroad from San José to the Atlantic coast. The estimated cost of the work is \$7,000,000. A contract for the construction of the railroad was concluded with Henry Meigs.

The cultivation of coffee and sugar-cane in Guatemala continued to increase, and that of indigo was attracting a great deal of attention.

In San Salvador a beginning has been made in the construction of telegraph-lines.

The new President, Cuadra, of Nicaragua, received an autograph letter from the Pope, congratulating him on his elevation to the presidency of Nicaragua, and thanking him for promising to promote and protect the holy Catholic religion.

CENTRAL ASIA. Events of great political importance have taken place in Central Asia within a few years, attended with a rapid extension of Russian influence and authority into those Mohammedan countries, from which Europeans and their civilization have been hitherto rigidly excluded.

Afghanistan was recently disturbed by the danger of a civil war growing out of the rebellion of the Sirdar Mohammed Yakooob Khan, against the authority of his father, the ruler

of Cabul, which has, however, been suppressed by the submission of the son and his partial reconciliation with his father. This insurrection arose out of the family complications and rivalries engendered by polygamy. Sheer Ali Khan had two sons by different wives. The mother of Yakooob Khan, a daughter of the Dschemshid chief Chan Aka, was his favorite wife when he ascended the throne, and her son was of course preferred. Having participated with much credit in many severe engagements in behalf of his father, he was proclaimed heir to the throne, but without the public ceremonies which are demanded by the customs of Afghanistan. After a time the affections of the King took another direction. An Afghan princess, whom he had married later, supplanted the Dschemshid wife in the royal favor. She also was the mother of a son, Abdallah Shan, now eleven years old. She persuaded the King to put her son forward, and proclaim him heir, instead of the Sirdar Mohammed Yakooob Khan, before designated. This being done, Abdallah Shan was recognized by the British representative at Cabul as the lawful heir of his father's honors and subsidies. Yakooob Khan, much enraged, unceremoniously left the court of Cabul as soon as his father returned. The mother of Abdallah Shan and her party rejoiced much at this, imagining that the prince would quench his political ambition in the excitement of the wild sports of the wilderness of Siftan. The father, who better understood his son's wild temper, looked with apprehension for news from the western part of his kingdom. He felt comparatively secure, as affairs there were in the hands of his most trusted servants. Herat was under the control of the Prince Feth Mohammed Khan, a favorite nephew of the son of the celebrated Shah Ekber, the assassin of Sir W. MacNaughten; at Ferrah was Afzal Khan; at Gizni, Chudah Nazr; and at Candahar, Safdar Ali Khan, in all of whom the Emir had full confidence. Sheer Ali Khan was therefore tolerably safe from treachery; Yakooob Khan was not able to persuade even his own father-in-law to break faith. But the designs of the prince were not hindered by these circumstances; his reputation as a warrior was sufficient to enable him to gather a small but resolute band, with which he came out of the wilderness of Kain, and on March 27, 1871, encamped before the important fortress of Gurian. As soon as he received news of this proceeding, Feth Mohammed Khan sent his son, Sirdar Aziz, to the assistance of the fortress with two regiments of infantry, two light cannon, and a few howitzers. But, before they reached Gurian, the fortress had surrendered, and its commandant, Ali Chan, had fallen in battle. What added to the advantage gained by the rebellious son was, that the mercenary troops who had hastened to the defence, instead of going into battle, went over to the conqueror, and left the officers to return to Herat alone, the best

way they could. Soon afterward, Ferrah, only three days' march from Herat, fell into the hands of the prince. The commander of the latter place, hazarding every thing for the cause of his sovereign, would not wait for the enemy to come up, but gave battle before the gates of the city. The engagement resulted unfortunately; and, while the commander was killed, the inhabitants of Herat, or, according to another version, the soldiers of Sheer Ali Khan, opened the gates of the fortress to the rebellious prince. He found himself suddenly in possession of the western outposts of the kingdom, and master of a situation which surpassed his highest anticipations.

At that time the condition of the different parts of the Afghan kingdom was not the most orderly. In the northern part of Toorkistan the roads were infested by the adherents of Abderraman Khan. Indeed, it was reported that this chief, who was also a pretender to the throne, had brought a force against Memen, which khanate itself was not regarded as entirely faithful to the ruler of Cabul. It had been necessary to send a division of troops to the south to repress the robberies of the Cheiberis; the Dschemschids, the Beloochees, the Hezars, and the Toorkomans, were all awaiting with much expectation the breaking out of hostilities between the father and son. If the latter had only used more energetically the means at his command, he would have sat to-day supreme ruler on the throne of Cabul. It is strange that the news of the critical situation in Afghanistan was not received in Great Britain, the European state which is most concerned in Afghan affairs, until the civil war was at its height. The Viceroy of India was instructed to enter into an alliance with Sheer Ali Khan. On the 8th of May this chief, greatly incensed at the conduct of his son, set out with a force against Herat. Doubtless, had he been allowed to follow the policy suggested by his impulses, he would have lost his throne and exposed Afghanistan to devastation. But, through the influence of British agents, who saw clearly the danger of such a proceeding, he was persuaded to adopt a more conciliatory policy. Accordingly, in June last, the Sirdar Mohammed Yakooob Khan, accompanied only by a few friends, returned to Cabul in the character of a penitent, with the Koran at his neck, and a rosary in his hand. Although he knew that his father was not too scrupulous to put him out of the way by poison or assassination, he has remained in Cabul, where he has been publicly proclaimed heir to the throne. The offended father, who is debarred from wreaking vengeance upon his son, satisfies himself by the execution of summary measures upon his followers, whose places at Herat and in the neighborhood he has bestowed upon his own people. But the army of the rebellious prince refuse to take an oath of unconditional allegiance to Sheer Ali. According to the last ac-

counts, the soldiers were impatiently awaiting Yakooob Khan's return, and had declared that, if the prince were not soon placed at their head, they would go to Memen and enlist under the banners of Abderraman Khan.

This opposition of the army is, however, not of great importance. Yakooob Khan is at present in Cabul, the object of lukewarm manifestations of friendship from the court, and, on the other hand, a witness of the manner in which his chief abettor, Ezlen Khan, who was brought to the residence loaded with chains and thrown into prison, has to suffer the penalty which he escapes. It is easy to believe that the reconciliation between the father and the son is only apparent. For, as the latter has temporarily suspended carrying out his designs only because he expects to attain his ends by more peaceful means from his intimidated father, so the other has given pardon only in consequence of orders from Calcutta, and because fearing that England would regard the question of the title to the Afghan crown simply in the light of the principle of the right of the strongest, he desires to obviate the danger of the annual British subsidy going into Yakooob Khan's war-chest.

This prince is regarded by a part of the Anglo-Indian press as hostile to the British interests, while another part hope that he will be favorable to them. Both parties agree that he is an important person to gain over; and the proposition is made in one journal that he be sent to reside on the Hoogly as the plenipotentiary of his father, in order that he may be educated for the contingencies of the future, in the immediate neighborhood of British influences.

That part of East Toorkistan over which the Chinese claim jurisdiction may be divided into three poorly-endowed districts: 1. That of South Eelee, where the Chinese formerly had a penal colony, of which Kultscha, on the river Ili, is the capital; 2. The middle district of Keer-Kasa-Oosoo, which has a marshy soil and many lakes; 3. The northern district of Tarkatai, of which Tchoogootchak is the capital. The Russians have recently encroached upon this region, and have taken a slice from the territory of the Chinese Empire, and, singularly enough, upon the invitation of the authorities of the latter. In June, 1871, it was announced in the semi-official journals of Russia that the Chinese had asked the Czar to help suppress the rebellion of the Soongarians. East Toorkistan revolted from Chinese rule some seven years ago, and has since maintained its independence under its own chiefs. In the district called by the Chinese Thian-Shan-Nan Loo, i. e., the southern Thian-Shan district, or Toorkistan, as we call it, Yakooob Kushbegi still rules. In the north, however, in the Thian-Shan-Peloo of the Chinese, or in Eelee, as we designate it, the Calmucks and the Tarandshis, with the last of whom the Soongarians, or Chinese Mohammedans, were affiliated, have assumed dominion.

As the former tribe consists mostly of nomads, the latter, Mohammedan Tartars, who are a settled, agricultural people, are likely to gain the ascendancy. The Tarandshis number, according to the estimate of Radloff, who visited this part of Asia in 1862, about 6,000 families. The Soongarians may number a little more. The latter far surpass not only the Calmucks, but even the Tarandshis, in both mental and physical respects. Till about two years ago, nothing more was heard of the Tarandshis and Soongarians than that the chief place of the former was at Kultscha, of the latter at Uruntzi, and that, although they did not stand exactly in friendly relations, there was no hostility between them. More recently, since the movement to assume a separate existence has been agitated among the Soongarians, the reports from there have been of a dubious character. The spiritual and temporal leader of the Soongarians, Daud Khalife, has become a rival of Yakoub Kushbegi, and, although the report which reached Europe by Forsyth, that the Soongarians would support the Chinese in seeking the restoration of East Toorkistan, has not been confirmed, the relations between these people of common faith in the far East have continually grown more cool, till, in 1869, the ruler of Yarkand, in Northern Turfan, became involved in a war with these Soongarians.

Of the Tarandshis, whom a year's endurance of Chinese rule had made quite submissive, nothing was heard till the summer of 1871. Their great concern was to maintain the *status quo* with reference to the Buddhist Calmucks. In order to secure themselves against these, they studiously avoided collision with the Soongarians in the east, and with the ruler of East Toorkistan in the south, and lived quite peacefully under the spiritual and temporal rule of their mollah in Kultscha, who claimed to be Seid. But at length, in May, 1871, this people was brought out upon the stage of the world's affairs, through the advance of a division of the Russian army, which established a watch-post on the borders of the district of Semiretchink, on the banks of the little river Uessüg. The object of this step was, on the one hand, to watch and protect the Kirgheez, who were living in that region under cover of the Russian power, and, on the other hand, to keep an eye on the newly-organized state of the Tarandshis; for the Czar, at the request of the Chinese Emperor, had undertaken to reduce this people to subjection. It is difficult to decide whether General Kolpakovsky, the Russian commandant, brought on a quarrel with the Sultan of Kultscha, or whether he was compelled to take the offensive, as we have only the Russian version of the proceeding. But the circumstance that the Russians had, early in the spring of 1871, pushed their posts for the protection of the frontier over the Uessüg, the former boundary between the Russian and

Chinese Empires, prevents our regarding it as a wholly defensive measure. One Tasa Beg, who held the rank of an ensign in the Russian army, with a band of Kirgheez, rebelled against the Russian authority and fled to the Chinese territory, in order to join the insurgents there. To prevent the accomplishment of this design, the Cossack officer, Gerassimoff, was sent to the border. The Sultan of Kultscha seems also to have been apprised of Tasa Beg's intention, for he sent a small force to assist his fellow-religionists. Gerassimoff, not being in a position to give battle, advanced a company with two guns, and thereby succeeded in keeping back the Tarandshis, and occupying a deserted fort on the river Korgas, but not in preventing the escape of Tasa Beg. These events marked the beginning of hostilities. General Kolpakovsky dispatched a message to demand from the Sultan of Kultscha, whom the Russians call Abil Oglan, the surrender of the fugitive Kirgheez. The Sultan refused to give them up. In May, 1871, General Kolpakovsky sent three small bodies of troops, consisting of infantry and cavalry, with a few field-pieces, over the border into the territory of the Tarandshis, to call the Sultan to account, and, in case diplomacy did not succeed, to take sterner measures, to cure him of his disposition to endanger Russian interests. It is evident that the Tarandshis are very unequal antagonists to the Russians. The people of Central Asia are far inferior to those of the countries farther east; the people of East Toorkistan, kinsmen of the Tarandshis, are inferior to the other people of Central Asia; and the Tarandshis themselves, an agricultural and hitherto servile folk, rank in bravery far below their brethren beyond the hills of Thian-Shan. It was difficult to comprehend how these undisciplined farmers, of whom about a tenth part may have possessed a poor sort of a matchlock, would be able to sustain a battle against the thoroughly-drilled Russians, using the newest weapons. But we learn, from the Russian dispatches, that Colonel Jelensky, the commander of one of the corps that had been sent forward, was attacked by about 3,000 well-armed and brave Tarandshis, and that he defeated them after an engagement of five hours, inflicting upon them a loss of 200 men, while his own loss amounted to only three killed and eight wounded. On the 18th of May the Russians took the fortress at Mezar, where a large stock of provisions, and a number of Chinese arms, fell into their hands. More severe battles took place at Akkend, on the 16th of June, and at Alim, on the 28th of the same month, where, according to the Russian accounts, the whole camp of the enemy was captured, together with twenty-three heavy guns. Shortly afterward, the fortress of Tching-dee-kho-see was captured, and the power of the Sultan of Kultscha was entirely broken in a decisive battle before the fortress of Süding, which is about four miles from

Kultscha. After this, there was, of course, no alternative left the Sultan but unconditional surrender. The official report of General Kolpakovsky to the Czar gives the following account of the surrender: "After the battle at Süding, the Sultan of Kultscha sent to me with a request that I would permit him to come in person to my camp. At the same time he surrendered to me the fugitive Kirgheez, Lieutenant Tasa Beg, whose flight with a thousand men to the Tarandshis territory had given occasion for the campaign. Toward evening, the Sultan, Abil Oglan, attended by several of his nobles, came into our camp. He declared himself alone responsible for every thing, and surrendered unconditionally to the Russian Government, asking pardon for his followers, and promising that he and his wife would implicitly obey our commands. I replied that it was the will of the Russian Emperor that our troops occupy Kultscha; for the rest, I assured him that we would not disturb his private property, and would give him liberty to choose where he would reside. Our forces immediately set out for Kultscha, and were everywhere received by the people with a spirit of entire submission. On reaching Kultscha, our camp was established in the gardens around the fort. I rode around the works, the Sultan having given me the keys to the gates and to all the store-houses. In the citadel we found provisions of all kinds, 250 head of cattle, and 6,000 measures of wheat and barley. Deputations of Tarandshis, Kirgheez, and Calmucks, are continually coming in from distant parts of the country to announce their unconditional submission." It is not likely that the subsistence stores of the Russian army will be greatly increased by the acquisition of the Kultscha district. The whole region had been already stripped by the Chinese, and had suffered during the later disturbances to such a degree that its possession is now of less economical than political and strategical value. It is hard to over-estimate its importance in the last respect. We cannot as yet prognosticate how far the Russians will push their conquests in the East. They are now in the immediate neighborhood of the Soongarians, and not far from their capital, Keer-Kara-Oosoo, and may, if the Chinese Emperor calls upon the Czar for further assistance, by accomplishing the conquest of this rebellious people, bring themselves to the edge of the Desert of Gobi, and add to their possessions, at one stroke, a territory extending through twelve degrees of longitude and about six degrees of latitude.

While these enlargements of the boundaries are of great importance with reference to the plans for the future toward China, they have a much greater bearing upon the attitude of the Russians to their British rivals in Central Asia. By the incorporation of Soongaria the court of St. Petersburg gains possession of that valley district through which lie the most

convenient and the most used roads over the Muzart Hills to East Toorkistan, namely, the road going southwest toward Aksoo, and the one that extends southeastwardly toward Kultscha. Till this time, while the principal road to Toorkistan through the Terek Pass led through the territory of Khokan, it was customary to use courteous language in dealing with Yakoo Khan. Now, when it can bring its power to bear upon him at any time by the roads we have mentioned, the court of St. Petersburg will be apt to demean itself very differently toward this troublesome chief. The Russians are in a position to occupy Kashgar at their pleasure. The new acquisitions have nothing in common with the Russian conquests in the western part of Central Asia. Since East Toorkistan has been separated during a hundred and fifty years of Chinese rule from the three Toorkoman states of the oases, Soongaria has become a complete *terra incognita* to the Mohammedans of the Oxus and the Jaxartes, even of the existence of which they know nothing. Moreover, no extraneous influences are needed to preserve quiet among the western tribes; for during the last two years they have been completely subjected, and their social and political life has been adjusted to the Russian ways to such an extent that the government at St. Petersburg could not reasonably have wished for better results in so short a time. Khuda Yarkhan at Khokan, happy to live at ease under the Russian flag, pays his tribute punctually. Muzaffarreddin Khan, Prince of Bokhara, likewise accepts his fate and sets himself at ease. The last spark of revolutionary fire appears to be extinguished from the heart of this once formidable leader, who used to style himself "Prince of all the Faithful," and of his fanatic mollahs.

The Russians report that they have established a journal at Tashkend, for circulation among the Kirgheez. This is a matter of small importance, for few of the Kirgheez can read, and those who can will likely continue to give more attention to the sacred books of the Mohammedans than to the views of the Russian unbelievers. It was reported in the spring of 1871 that the Russians were about to send a force against the ruler of Kharsam to punish him for a breach of faith. He is not in a condition to make an effective resistance. The Russians say also that it is only the revolt of a small clan of Kirgheez that prevents them from accomplishing the annexation of Khiva. These Kirgheez rebels, at whose head, according to the Russian accounts, is a certain Sadik, consist of not more than three hundred families of nomads who wander around on the left bank of the lower Oxus, refusing to pay tribute either to the Czar or to the Khan of Khiva. The old men of this group are accustomed, when they become weary of their wandering life, to make some arrangements with the chiefs of Khiva. They will pay a third or a half of the regular tribute, and obtain permission

to pasture in peace their flocks a little while longer. This is possibly the extent of the connection of Khiva with these so-called rebellious Kirgheez, although the Russian journals assert that the revolt had its origin in Khiva, and that that state must be punished for it.

These movements of Russia in Central Asia are of equally momentous importance, whether we regard them in a political and strategical view, or in their bearings on the extension of civilization and commerce. Russia has already done very much, in proportion to the time she has exercised control there, for the development of the countries on the Oxus. A plan for a net-work of railways has been prepared by Prince Michael Nicholaivitch, and approved by the Emperor and his council, of which about 922 miles, it was expected, would be completed in 1871. The most important line is projected from the western shore of the Caspian Sea to the southern slope of the Caucasus. The objective point on the Black Sea is Poti. The railway from this place to Tiflis, it is understood, is finished. From Tiflis a road will extend to Baku, and will there connect by a line of steamers with Krasnowodsk, a newly-established fort on the eastern shore of the Caspian. A road is projected from there through the steppes and across the plateau of Kaplankir to the banks of the Oxus. The engineering difficulties in the way of operating some parts of these routes are very great, owing to the drifting sands which are liable in exposed places to bury the road with all its works at any time. Nevertheless, the Russians are working at their railway enterprises with a zeal that renders it quite probable that within the next ten years we shall be brought into convenient communication with countries now quite unknown to us.

Russia has already taken important steps for the advancement of agriculture and certain branches of industry in East Toorkistan. A commission has been for several months engaged in investigating the productions and capacity of the steppes of Dshizzak, and an increased exportation of silk, cotton, wool, hides, dried fruits, and other raw articles, is promised, to be accompanied, of course, with the enjoyment by the dwellers on the Oxus and Jaxartes of comforts of which they have never dreamed.

The advance of Russia upon the Oxus has already given rise to apprehensions, as yet only hinted at by the English, that complications may arise between the Russian and British interests in Afghanistan. Once in firm possession of the right banks of the Oxus, under the provocations of such unquiet neighbors as the Toorkomans and the Afghans, the Russians will hardly be restrained from crossing. Rumors of Russian intrigue in Afghanistan have been whispered already. It is no secret that Abderraman Khan, the formidable rival of Sheer Ali Khan, whom we have pre-

viously mentioned, stands high in favor with the governor-general at Samarcand, and that he receives a yearly stipend from St. Petersburg. A report prevailed recently in India, and in Cabul, that the Russians intended to set up Abderraman Khan in the place of the present Khan of Bokhara, because the latter had not been able to keep his turbulent subjects under satisfactory restraint. This story has not been confirmed. Abderraman Khan has a strong party and a considerable force on the left bank of the Oxus, and it is not probable that the loyalty of the Russian politicians will allow them to neglect to use him when time and circumstances shall make his services desirable.

The extension of the Russian power to the East can hardly fail of effect upon the integrity of the British Empire in India. Confidence in the permanency of this dominion has been greatly shaken of late by the threatening attitude assumed by the Mohammedans, the dangerous character of which is more developed every day. It was strikingly exemplified during the summer in the assassination of Chief-Justice Norman by a fanatic Mussulman on the steps of the court-room. To repel the Mussulman agitation, the British have to depend upon the native Hindoos—the Bramins, a race whose lack of spirit and of revolutionary ardor contrasts most unfavorably with the wild enthusiasm of the Mohammedans—and upon the troops which can be sent from England. These facts have not been much discussed publicly in England, but there is no doubt that the situation in India has been carefully considered in the Cabinet. A project has been devised for the establishment of direct railroad communication with India. A few years ago Colonel Chesney, advancing his project for the Euphrates Railway, was pronounced a visionary. Now, a scheme for a railway 5,311 English miles long receives favorable consideration from the Government and from the British and Indian press. A detailed plan, of which the estimates reach the sum of 40,600,000 pounds sterling, has been referred to a parliamentary committee. It is contemplated, however, that the cost shall not be borne by a single country, but shall be laid upon all the lands through which the railway will run. It is shown by the estimates of Messrs. William Lord and George Thomas that, by this line when completed, it will be possible to perform the journey from the Thames to the Hoogly, which now takes nearly a month, in seven days, thirteen hours, and twenty minutes. It begins to be evident that, if Great Britain does not build such a road, Russia will anticipate her in securing direct railway communication with the whole East, and will establish herself in a position to cut the British off from their own possessions, and eventually to undermine their power there.

CHAMBERS, ROBERT, LL. D., the younger of the two brothers whose copartnership, under

the style of W. & R. Chambers, fills so large a space in the bibliography of the nineteenth century, was born at Peebles, a pretty town in the south of Scotland, July 10, 1802. His father was at one time a prosperous manufacturer, but was ruined by the competition of machine with hand-loom weaving, and, with the wreck of his fortune, removed to Edinburgh, where, by the aid of his excellent and energetic wife, he managed to bring up creditably a family of six children. Robert, the second son, grew up a quiet, self-contained boy, who may be said to have devoured books from his infancy. In the preface to his collected works he writes: "Books, not playthings, filled my hands in childhood: at twelve I was deep not only in poetry and fiction, but in encyclopedias." He read almost unceasingly, and occasional duties required by his parents, he himself tells us, were grudged if they kept him from study. The rudiments of a classical education he obtained at the Peebles Grammar-School, and he made further progress under the teaching of an Edinburgh instructor. But his father's misfortunes compelled Robert, who was intended for the Church, to forego the advantages of a university education. At the age of fifteen he opened a small book-shop in Leith Walk, a long suburb stretching from Edinburgh to its port-town of Leith. He managed this humble business with so much tact and energy that in 1822 he was enabled to remove to India Place, Edinburgh, where his establishment soon became a favorite resort with intelligent book-buyers. While conversing with his customers, he would occupy himself in making quill-pens, which he sold among other articles of stationery. When George IV. visited Edinburgh, it was the self-reliant young bookseller of India Place who was employed by the city authorities to copy in vellum the address presented by them to the king. Robert Chambers's first essay in literature was made by commencing a small periodical called the *Kaleidoscope*. The literary work was entirely his, while his elder brother William set the type and printed it, without any assistance. It was not a pecuniary success, and, in 1823, it was discontinued. The same year his first work appeared, entitled "Illustrations of the Author of Waverley," a pleasant anecdotal volume, which at once attracted for the young author the notice of the leading literary men of Edinburgh. Jeffrey, then wielding the powerful pen of the *Review*, with the quick intuition of intellectual clairvoyance, said, "There's mettle in that lad." Mr. Chambers's second work, "The Traditions of Edinburgh," appeared in 1824. This entertaining book, which has been frequently reprinted (the last time in 1868), while full of humor and romance, is, at the same time, most accurate in its details. It gained for its author the friendship of Sir Walter Scott, Henry Mackenzie, and other literary men of Scotland. In 1826 the "Popular Rhymes of Scotland" appeared,

and in the year following was published his "Pictures of Scotland." Although now a prosperous bookseller, Mr. Chambers found leisure to write and compile upward of a dozen volumes in three years. Among the number was a "History of the Rebellion of 1745-46," forming the most popular addition made by any author to *Constable's Miscellany*. It was followed by histories of the insurrections of Montrose, Dundee, and Mar, and by a "Life of James the First." During the same time, he edited a collection of Scottish songs and ballads in three volumes, wrote a compact little history of Scotland for juvenile readers, and edited a newspaper known as the *Edinburgh Advertiser*. The agitation throughout Great Britain, in 1831, for parliamentary reform awakened a necessity for the spread of education. Lord Brougham proclaimed that the "schoolmaster was abroad," and, after the passage of the Reform Bill of 1832, organized the "Society for the Diffusion of Useful Knowledge." On the 4th of February—six weeks before the *Penny Magazine* was issued by this organization—the first number of *Chambers's Edinburgh Journal*, a folio sheet of closely-printed matter, was published, at the low price of three halfpence, by William and Robert Chambers. Its success exceeded not only expectation, but the means of production. The *Edinburgh Journal*, the first high-class, cheap periodical published in Great Britain, and its successor the *Penny Magazine*, were the practical embodiments of that fruitful scheme for improving the education of the people by means of good and low-priced serials, which originated with and was so ably advocated by Henry Brougham, James Mill, and others. William and Robert Chambers and Charles Knight will be remembered as the fathers and founders of this class of literature. In the year 1829 the brothers united in the production of a "Gazetteer of Scotland," which was given to the world in 1832, the year that the firm of W. & R. Chambers, one of the literary and commercial successes of the century, was formed. Three years later, Robert compiled the "Biographical Dictionary of Eminent Scotsmen," in four octavo volumes. His next important work was the "Cyclopædia of English Literature," a publication of higher rank than any previous compilation of a similar character. Not less than a quarter of a million of copies of this excellent introduction to the British classics have been sold in the United States and Great Britain. This work was followed by his "Life and Letters of Robert Burns," including his poems. This edition is the most complete and useful ever given to the public, and it should not be forgotten that the profits of the work, amounting to over one thousand dollars, were given to Burns's surviving sister. "Domestic Annals of Scotland," three octavo volumes, and a "Life of Tobias Smollett," were Robert Chambers's latest works. He also ed-

ited the "Book of Days" and "Chambers's Encyclopædia." Among the various volumes which were edited by the two brothers may be mentioned "Information for the People," "Editions of Standard English Works," "Tracts for the People," "History of the Crimean War," and "Chambers's Educational Course," of nearly seventy volumes.

No notice of Robert Chambers and his writings would be complete without mention of an anonymous work of a philosophical character, entitled the "Vestiges of Creation." The controversy which this remarkable book, the matrix of Darwin's, engendered, was most venomous; and when, in 1848, Dr. Chambers was selected to be Lord Provost of Edinburgh, he thought it expedient to withdraw in the face of a storm raised against him as the supposed author. There were good reasons why he should not admit the authorship. Had he done so, the religious bodies of Scotland and England would have risen against the firm, and their numerous educational works would have been driven from the schools. For business reasons, rather than from any other cause, the author chose not to father a book which must certainly be regarded as one of the greatest speculative works of the nineteenth century. Should it be proved that Robert Chambers wrote it, his title to fame will be materially strengthened, for the writer of that book was the forerunner of Darwin. In a letter to his friend General J. G. Wilson, dated St. Andrews, September 9, 1866, Dr. Chambers remarks: "It is only this last week, after an interval of three years, that I have got once more settled in a house of my own. My health, after being out of order for an equal space of time, is now completely restored. I am setting up a household with one young daughter and three grandchildren, hoping to have a few pleasant leisurely years at the close of a life which has perhaps been too active and laborious. Of my eight daughters, six have been married (one of these dead), another has died unmarried, and one remains, not yet marriageable. Occasionally a married daughter comes to see me with one or two little ones—always a great pleasure. My eldest son is now the principal partner of any activity in our concern at Edinburgh, for my brother, although still fit for that kind of work, has entered upon a period of office, as Lord Provost of the city, which engrosses all his time." The distinguished author, editor, and publisher, died at St. Andrews, March 17, 1871, and was interred by his own request close by the tower of St. Regulus, in the cathedral burying-ground of St. Andrews. Robert Chambers was a man who experienced in its broadest sense the assurance of the sacred proverbialist: "Seest thou a man diligent in business? He shall stand before kings: he shall not stand before mean men."

On the appearance several years since of a collection of miscellaneous papers, under the

title of "Select Writings of Robert Chambers," in which were included four volumes of his delightful essays, an eminent English critic said: "It is marvellous to imagine how much the writer who dissipates himself in constant periodical publication does actually produce. On an estimate, it would seem as if his very breath had been a printed sentence: as if his mouth never opened but to deposit types, as the gifted fairy princess dropped diamonds. The many years which Robert Chambers, in particular, has devoted to literary production, have accumulated a mass which, we believe, would astonish, were it all placed in a manuscript heap before his eyes, even himself. And when we reflect upon the character of the whole—how good it has been, how free from objection, how well calculated to attract and benefit the popular mind in the very humblest circle where the art of reading is taught, yet often addressing the highest and most cultivated—we cannot but consider that the writer has been a marked benefactor to his country and his kind. He has displayed great judgment in the choice of his many designs, and great talent in his contributions, to their far and wide acceptance as guides to the useful, and pleasant pastimes to the recreative. Scotland has reason to be proud of his and his brother's labors. The influence they have had nationally is incalculable; and the seed they have sown must bear an inestimable harvest for many a future year, and for tens of thousands yet unborn."

CHEMISTRY. *Gaseous and Liquid Notes of Matter.*—Cagniard de la Tour, in 1822, discovered that volatile liquids, such as ether, alcohol, and water, when heated in hermetically-sealed tubes, became vapors of apparently only about three times the original bulk of the liquid. To investigate these phenomena more fully, Prof. Andrews, of Belfast, devised a novel form of apparatus, and made experiments covering a period of ten years. He used glass tubes in which the properties of matter could be studied under such varied conditions of temperature and pressure as had never before been realized. A steel screw was made to enter a space in a tube filled with water and mercury, this space having above it the gas or vapor to be examined. The whole contents and parts of the apparatus were so proportioned that the gas or vapor did not come into view till it was reduced to about one-fortieth of its original volume. This arrangement worked so perfectly, that accurate measurements of compression were obtained at different temperatures up to a pressure of 300 atmospheres. Carbonic-acid gas, partly liquefied in the apparatus, the temperature being at the same time raised nearly to 31° C., gradually lost the surface of demarcation between its liquid and gaseous states; and finally, the distinct joining-point of gas and liquid became indistinguishable. If the temperature exceeded 31° C., liquefaction could not be effected even

with a pressure of 400 atmospheres. The temperature at which liquid ceases to be formed under any degree of pressure that can be applied, is called the "critical point." For carbonic acid this point is 30.9°C ., or 87.7°Fahr . Prof. Andrews conceives these experiments to afford the strongest grounds of believing that the liquid and gaseous conditions are only different forms of the same state of matter.

A Law in Chemical Dynamics.—Messrs. Gladstone and Tribe communicated to the Royal Society in June the results of their investigations of the process by which one metal has the power of decomposing another metal, until the more powerful metal has entirely taken the place of the other. Their experiments were generally performed as follows: In a tall glass they placed 72 cubic centimetres of an aqueous solution of a salt of known strength, at 12°C .; a perfectly clean plate of metal of 3.230 square millimetres was then weighed and placed vertically in this solution without reaching either to the top or the bottom; the action was allowed to proceed quietly for ten minutes, when the plate was removed, and the deposited metal scraped off. The loss of weight gave the amount of metal dissolved, and represented the chemical action. The most complete series of results was with copper and nitrate of silver:

In the earlier terms of this series, twice the percentage of silver-salt gives three times the chemical action. The close agreement of the observed numbers with those calculated on this supposition continues as far as the 9th term. The law then breaks down, and after about 7 per cent. the increased action is almost in direct ratio with the increased strength. The position of the plate in the solution was found to make no difference to this 2-3 law. Similar series of experiments were made with zinc and chloride of copper, zinc and sulphate of copper, zinc and nitrate of lead, iron and sulphate of copper, and other combinations; and, in every instance where the solution was weak and the action simple, the law of three times the chemical charge for twice the strength was found to hold good. It was proved that the breaking down of the law at about 3.5 per cent. of salt in solution was irrespective of the quantity of the liquid, or of the time for which the plate was exposed. With 72 cub. centims. of a 1.41 per cent. solution of nitrate of silver, the rate of action remained sensibly the same for as long as twenty-five minutes, notwithstanding the constant deposition of silver. This apparently paradoxical result is due to fresh relays of the original solution being brought up to the plate by the currents produced, and that period of time elapsing before any of the products of decomposition are brought back again in their circuit.

When it was perceived that within easily-ascertainable limits the chemical action is the same for similar consecutive periods of time, experiments were made in far weaker solutions. It was only necessary to lengthen the time of exposure. It was thus found that the law of three times the chemical action for twice the strength of solution holds good through at least eleven terms of the powers of 2; in fact, from a solution that could dissolve one gramme of copper during the hour, to a solution that dissolved only 0.00001 gramme, a million times less.

The manner in which the silver is deposited on a copper plate was examined, and the currents produced were studied. At first a light-blue current is per-

ceived flowing upward from the surface of the plate, presently a deep-blue current pours downward, and these two currents in opposite directions continue to form simultaneously. A similar phenomenon was observed in every case where a metallic salt attacked a plate of another metal. The downward current was found to be a solution of almost pure nitrate of copper, containing about three times as much NO_3 as the original silver solution, while the upward current was a diluted solution of the mixed nitrates. Moreover, the heavy current took its rise in the entangled mass of crystals right against the plate, while the light current flowed from the tops of the crystalline branches. It was evident that, when the fresh silver was deposited on these branches, and the fresh copper taken up from the plate, there was not merely a transference of the nitric element from one combination to another, but an actual molecular movement of it toward the copper plate, producing an accumulation of nitrate of copper there, and a corresponding loss of salt in the liquid that is drawn within the influence of the branching crystals. Hence the opposite currents.

The amount of action in a circuit of two metals and a saline solution must have as one of its regulating conditions the conducting-power of that solution. It appeared by experiment that a strong solution of nitrate of silver offers less resistance than a weak one; and it was also found, on adding nitrate of potassium to the nitrate of silver, that its power of attacking the copper plate was increased; that the augmentation of the foreign salt increased the action still further; and that the 2-3 law holds good between two solutions in which both the silver and potassium salt are doubled, though it does not hold good if the quantity of foreign salt be kept constant. Similar results were obtained with mixed nitrates of silver and copper.

Heat in Chemical Combinations.—Dr. Andrews, of Belfast, is the author of a long and careful series of experiments, to ascertain the heat developed in the combination of acids and bases. The results prove that the heat developed in the union is determined by the base and not by the acid; that, when a neutral is converted into an acid salt by combining with one or more atoms of acid, no change of temperature occurs; and that, when a neutral is converted into a basic salt by combining with an additional proportion of base, the combination is accompanied with the evolution of heat; and other laws of minor interest were also demonstrated. In the following table, the author gives a summary of the more important of his experiments, arranging the acids in the order of their thermal action:

ACID.	Potash. Deg.	Soda. Deg.	Ammonia. Deg.
Sulphuric acid,.....	3.378	3.353	2.976
Oxalic acid,.....	3.058	3.040	2.648
Hydrochloric acid,.....	3.021	3.982	2.623
Nitric acid,.....	2.993	2.929	2.566
Acetic acid,.....	2.852	2.832	2.492
Tartaric acid,.....	2.732	2.710	2.376

He remarks that it is interesting to observe how closely the results in the three vertical columns agree relatively with one another. The acids follow in the same order under each base, and even the differences in the amount of heat disengaged by the several acids in combining with the different bases approximate in many cases closely to one another. Thus

the heat given out when the sulphuric acid combines with potash exceeds that given out when the oxalic acid combines with the same base by 0.320° , the corresponding differences in the case of soda and ammonia being 0.313° and 0.328° . If, in like manner, we compare the differences between the heat disengaged by the acetic and tartaric acids, we fall upon the numbers 0.012° , 0.122° , and 0.116° . Even in the case of the oxalic, hydrochloric, and nitric acids, which disengage so nearly the same amount of heat, the same order is observed with the three bases.

Ozone and Hygiene.—From January, 1869, to February, 1871, Dr. Cohen, of Quincy, Ill., was engaged in taking daily ozonometric observations. In all that time there was not a total absence of ozone from the atmosphere for more than three or four days at a time, and this occurred only in very cold weather. During that period Dr. Cohen and his medical brethren of Quincy remarked that less of malarial disease existed then than ever before, and indeed exhibited a marked decrease; while, on the other hand, catarrhal and bronchial affections increased in prevalence. In a communication to a Quincy paper, the author says:

Within the last few weeks there has been a remarkable exemplification of the effects of the sudden appearance of a large amount of ozone in the atmosphere; from the latter part of January to February 6th, there had been a considerable quantity indicated; and it will be recollected that catarrhal and eruptive fevers were then quite prevalent. On February 6th, the ozonometer recorded "highly intense," and from February 7th to March 10th, inclusive, the record was "none," with the exception of one day, February 26th, on which it was "moderately intense," and five other days, at intervals, on which there was a slight indication. During this period, the complaints I have mentioned disappeared, but, on March 11th the record was again "highly intense," and has remained fluctuating with a tendency to a high degree up to this day. Mark the results: influenza, bronchitis, tonsillitis (which some sharp practitioners have dignified with the title of diphtheria, a disease which never appears unless there is a continued excessive amount of ozone present), some cases of pneumonia, and other severe catarrhal affections, have appeared as if by magic, while intermittent, remittent, and typhoid fevers—often prevalent at this season, but never when those affections I have mentioned are rife—are scarcely, if at all, heard of.

He thus recalls his experience in the same line of investigation in New Orleans:

During the epidemic of yellow fever in New Orleans, in 1867, not a trace of ozone could be discovered; and, by the observations of Prof. Ford and myself, this condition of the atmosphere continued during the entire winter following, which was marked by the prevalence of an unusual number of cases of malarial fevers, characterized by various types. In the autumn and winter of 1868, however, according to the observations of Prof. Ford, a very large amount of ozone was constantly present, and, while, for the first time in many years, not a single genuine case of yellow fever was reported, and much less than the usual amount of intermittent, remittent, and typhoid fevers prevailed, influenza, diphtheria, and pneumonia, became almost epidemic.

A writer in the *American Journal of Science* sums up the recent investigations of Engler and Nasse as follows. Following Meissner's method, they used an ozonizing tube 85 centimetres long, containing 28 wires enclosed in glass, and a coil sufficiently powerful to render the entire bundle of electrodes luminous in the dark:

If the ozonized oxygen be passed through a U-tube 30 centimetres long and one centimetre in diameter, containing zinc-sodium in fragments, the ozone odor disappears completely. If the same tube be placed between the potassium iodide solution and the water over which the cloud appears, the formation of the cloud is not interfered with; thus showing that it is only the ozone and not the antozone which is destroyed by the zinc-sodium. Since Meissner concedes that the ozone must be removed to detect the antozone, it follows that, were the antozone formed in the electrizing tube, the gas issuing from it after passing through the zinc-sodium tube, and thus being deprived of ozone, should, on bubbling through water, produce a cloud; but this the authors find not to be the case. Moreover, they show that, if the stream of oxygen issuing from the potassium iodide solution be passed through a tube 1.3 metres long, filled with fused calcium chloride, the antozone disappears; while ozone passed through such a tube is unaffected. But, if the gas from the ozonizing tube be passed directly through this calcium chloride tube, then through potassium iodide solution and then through water, the cloud appears with full strength. Engler and Nasse hence infer that the antozone is formed when the ozone is destroyed in presence of water, and only then. Whence they conclude, with Von Babo and Weltzien, that antozone is only hydrogen peroxide. In support of this view they give the following experiments: 1. The stream of electrized oxygen, deozonized by a solution of potassium iodide, was passed through a spiral tube 1.5 metres long, and found to give the mist on passing through water. This spiral was then heated in a zinc chloride bath; as the temperature rose, the mist formed became less and less, disappearing completely at 170° , and returning again as the tube cooled. 2. The stream of deozonized oxygen was passed through a short tube containing fragments of potassium hydrate, and then through four narrow tubes 60 centimetres long filled with glass fragments; but its mist-forming power was hardly weakened; when these tubes were cooled to -20° , however, no mist appeared on passing it through water; and, when two narrower and empty tubes were used, and the stream of gas continued for 24 hours, water condensed in them which gave the reactions of hydrogen peroxide. In conclusion, the authors show that the division of oxides by Schönbein into ozonides and antozonides is not well founded.

Indigotin.—Commercial indigo contains from fifty to sixty per cent. of pure indigo-blue, the remainder being gluten and various resinous substances formed indirectly from the decomposition of the indigo-blue, or directly from the indigo-plant itself. Certain matters are also added occasionally as adulterants. The laboratory mode of purifying commercial indigo is to treat it successively with dilute sulphuric acid, with boiling water, and with alcohol; but this treatment does not yield a chemically-pure product. The dyers' method of purification gives a better result; it consists of converting indigo-blue into indigo-white by reducing agents, and, subsequently, reoxidizing it. MM. d'Aguier and Baeyer have recently

discovered a more ready mode of preparation, by which they obtain the article chemically pure. They find, on boiling finely-powdered commercial indigo with aniline, that the whole of the coloring-matter dissolves, yielding an intensely deep-blue solution, most of the impurities being left behind. The solution is filtered while hot, and allowed to cool gradually. In five or six hours almost the whole of the indigotin is deposited in a crystalline state. A second crystallization from an aniline solution, followed by alcoholic washing, purifies it perfectly. As thus prepared, indigotin has a brilliant coppery lustre by reflected light, in this respect resembling pure Prussian blue, and rivals in appearance the indigotin obtained by sublimation. The authors have also discovered that, to some extent, indigotin is soluble in hot benzol and chloroform, depositing itself as a flocculent precipitate on the solution cooling. Alcohol and ether also dissolve it at their boiling-points, but in very small quantity.

New Coloring-Substances.—Pyrogallie acid melted with naphthalic acid and other ingredients (not mentioned by Prof. Baeyer, the discoverer) yields a coloring-substance, which he calls "gallein." This appears as a brownish-red powder, or as metallic-green crystals. On boiling these with water, zinc, and sulphuric acid, the color changes to light-reddish yellow, and, after further treatment, large brownish crystals are obtained, to which the name "gallin" has been given, and of which "gallein" forms a small part. Heating "gallin" with concentrated sulphuric acid to 200° Cent., its color changes to a greenish brown, and, after the reaction is completed, and the mass has been boiled, and the deposit washed, another coloring-matter, "cerulein," appears. This is soluble in hot water, and imparts an indigo-blue color. "Reforcin" and "fluorescein," the latter dyeing silk and wool yellow without a mordant, are other products discovered in pyrogallie and naphthalic acids by Prof. Baeyer.

Prof. Bötger has ascertained that, by dissolving molybdic acid in concentrated sulphuric acid with heat, a colorless fluid is obtained supposed to be a double acid. When a little of this is heated in a porcelain crucible till it throws off vapors, and absolute alcohol is added, a blue color appears, which can be used to dye silk without a mordant.

Artificial Bases.—In the address of Dr. Andrews, president of the Chemical Section of the British Association, at its last meeting, mention was made of recent triumphs in preparing artificial bases. Picoline is one of these, a base isomeric with aniline. Baeyer discovered the process of its artificial manufacture, for which he has two methods. One is founded on an experiment of Simpson, in which a new base was obtained by heating tribromallyl with an alcoholic solution of ammonia. By pushing further the action of

the heat, Baeyer succeeded in expelling the whole of the bromine from Simpson's base in the form of hydrobromic acid, and in obtaining picoline. The same chemist has also prepared artificially collidine, another base of the pyridine series. To this list of remarkable synthetical discoveries, another of the highest interest has lately been added by Schiff—the preparation of artificial coniine. He obtained it by the action of ammonia on butyric aldehyde (C_4H_8O). The artificial base has the same composition as coniine prepared from hemlock. It is a liquid of an amber-yellow color, having the characteristic odor, and nearly all the usual reactions, of ordinary coniine. Its physiological properties, so far as they have been examined, agree with those of coniine from hemlock, but the artificial base has not yet been obtained in large quantity nor perfectly pure.

New Bases.—Stenhouse has obtained two new bases, furfuraniline and furfuraluidine, by the treatment of aniline furfural. The bases are nearly colorless, but form beautifully-colored salts. By treating codeia with chloride of zinc, Matthiessen and Burnside have obtained apocodeia, which stands to codeia in the same relation as apomorphia to morphia, an atom of water being abstracted in its formation. Apocodeia is more stable than apomorphia, but the action of reagents upon the two bases is very similar. As regards their physiological action, the hydrochlorate of apocodeia is a mild emetic, while that of apomorphia is an emetic of great activity. Other bases have been obtained by Wright by the action of hydrobromic acid on codeia. In two of these bases, bromotetracodeia and chlorotetracodeia, four molecules of codeia are welded together so that they contain no less than seventy-two atoms of carbon. They have a bitter taste, but little physiological action.

Pyrene is the name given to a new product of the distillation of coal-tar, having a higher boiling-point than anthracene. It may be isolated by combining it with picric acid, with which it forms a red crystalline mass. Ammonia unites with the acid and sets free the pyrene in the form of colorless leaves which closely resemble anthracene, are soluble in alcohol, benzol, ether, and bisulphide of carbon. It melts at 142° C. Nitric acid readily converts it into nitro-compounds. The formula of pyrene is $C_{16}H_{10}$.

Iodo-Sulphates.—Prof. Zinno, of Naples, obtains the little-known compound iodo-sulphuric acid from the reaction of ioduret of starch and sulphuric acid. He prepares the acid and its salts by the following modes: 1. With alkaline sulphates and iodoret of starch; 2. By dissolving some determinate proportions of iodine and the solution of the said sulphates; 3. By making the iodine act on the hyposulphates of alkali; 4. By the action (already mentioned) of sulphuric acid

on iodoret of starch, or on iodine itself. According to the author, the second process is the best, and this is the one from which he developed the three iodo-sulphates of soda, potash, and ammonia. Each of these salts is soluble in water, but very slightly in alcohol; the first and third are partly effervescent; they are, besides, decomposable by heat and by light, direct and indirect.

Spontaneous Explosive.—The *Scientific American* says that some experiments, recently conducted at the Philadelphia High School, demonstrated that when a strong solution of phosphorus in bisulphide of carbon is poured upon finely-powdered chlorate of potash resting on paper, and that mixture is exposed to air, upon the evaporation of the bisulphides, the phosphorus, being left in a finely-divided state, intimately mixed with the chlorate, the mixture presently explodes spontaneously, with a loud report. The explosion is analogous to that of phosphorus and chlorate of potash when struck or rubbed together, the mixture in the case cited being, however, much more perfect than can be obtained by any mechanical means.

Dynamite.—This explosive (which is a combination of silica with nitro-glycerine—the former making the nitro-glycerine safer for handling) has been tested by comparison with other powders by the Austrian Government. The report sums up as follows:

1. The preparation of nitro-glycerine, and the explosive mixtures of which it forms a part, particularly dynamite, is simple, safe, rapid, and gives a uniform product.
2. These preparations can be rendered safer for transportation and keeping than gunpowder.
3. The loss from decomposition is less than the deterioration of gunpowder by pulverization and dampness.
4. For equal weights, dynamite has from two to ten times the strength of gunpowder; for equal volumes, four to sixteen times.
5. In the use of dynamite, 20 to 40 per cent. of expense and 40 to 70 per cent. of time are saved. For equal weights dynamite removes 5 to 8 times as much rock as powder, for equal volumes 8 to 10 times.
6. In water or rock impregnated with water, 50 per cent. of expense and 100 per cent. of time are saved by the use of dynamite.
7. The gases resulting from the explosion of dynamite are much less noxious than those from that of gunpowder.

A comparison of dynamite and gun-cotton gives the following results: 1. For equal volumes, gun-cotton is less powerful than dynamite by 30–40 per cent. 2. Gun-cotton costs 20–30 per cent. more than dynamite. 3. Gun-cotton, for marine blasting, has all the disadvantages of gunpowder. 4. The gases from the explosion of dynamite are less noxious than those from the explosion of gun-cotton. 5. Gun-cotton is more sensitive to heat and mechanical derangements than dynamite. Dynamite is also easier of preparation.

The disadvantages of dynamite are: 1. The easy separation of nitro-glycerine from the silica by water, in case the cartridges, permeable to water, are left for some time submerged. 2. Becoming hard at a temperature which causes difficulty in working and using it.

Lithofracteur.—This (*Anglicè*) “stone-breaker” is a patented invention of Prof. Engels, of Cologne. Lithofracteur is a new explosive composed of nitro-glycerine as a base, and gun-

cotton, the constituents of gunpowder, some chlorates, and an infusorial earth. The substances are blended in a special way, and the details of the manufacture are kept secret by those concerned in it. The product is a black compound of the consistence of soft putty, and is made up for use into paper cartridges $4\frac{1}{2}$ in. long by $\frac{3}{8}$ of an inch in diameter, and weighing 14 oz. each. When lighted in the air by ordinary means it simply burns out, leaving a light white powder as a residuum; but, when it is ignited either in the air or in a closed chamber with a capped fuse, its full violence is developed. It is safe under all ordinary and even extraordinary circumstances of storage and transit, as recent experiments in England and lengthened use on the Continent have proved. It was used by the Prussians against the French during the recent war, Herr Engels being the operator. After Fort Issy was taken, the Prussians destroyed a number of French heavy siege-guns by blowing off their muzzles with lithofracteur.

A long series of experiments was recently conducted in England to test the value of the compound. The following are given as some of the results:

The preliminary experiment consisted in throwing a box containing 5 lbs. of lithofracteur from the top of the quarries, at a height of 150 feet from the ground, into the plateau below. The box was smashed and the cartridges were scattered about, but not one was exploded. A cartridge was then lighted by an ordinary fuse, when it burned slowly out. Another cartridge was then placed upon a block of stone and fired with a percussion fuse, when a violent report followed, and the top face of the stone was broken off. The power of the lithofracteur when confined was then exhibited by firing charges in the bore-holes of several blocks of stone, which were shattered into many fragments. The tamping in all cases was effected with water, thus proving the usefulness and reliableness of the compound in workings where wet ground was met with. The next part of the programme consisted in firing a number of shots, both horizontal and vertical, in the face of the quarry. As these were more or less repetitions of each other, we need only notice a few of them, although they all give extraordinary results. The holes were mostly bored under the direction of some of the mining gentlemen present, who, with a view of testing the compound to the utmost, selected the worst possible spots, some of which, they stated, gunpowder would not possibly touch. The first of these blasts was made with a 1 lb. 14 oz. of lithofracteur placed in a horizontal bore-hole 3 ft. 4 in. deep, and 14 in. in diameter. A large quantity of the stone was blown out to the front, and the face of the rock was scaled and cracked over an area of 20 ft. 6 in. wide by 13 ft. high. A couple more shots were then fired simultaneously near to the last, the bore-holes were each 3 ft. deep, and were charged with 13½ oz. and 1 lb. 4 oz. respectively, and an immense face of rock was brought down. The best blast, however, was the last of this series; it was fired in a vertical bore-hole, 4 ft. 6 in. deep, on a ledge of rock, about 23 ft. from the level of the plateau below, 1 lb. 14 oz. of lithofracteur being used. The explosion brought down at least 20 tons of rock, and loosened an enormous mass behind the bore-hole, the shot being one of the finest we ever saw with so small a quantity of material. Some experiments were next made with the view of showing the disruptive effect of lithofracteur on iron, and for

this purpose a 4 ft. length of 75 lbs. double-headed rail was laid on its side, being supported at each end at a height of 3 in. from the ground. A charge of 1 lb. 3 oz. of the compound was placed in a lump on the centre of the rail, and tamped with paper, three old sleepers being placed on the tamping, and fired with a percussion fuse. A startling report ensued, the fragments of the sleepers being sent in all directions, and on examination the rail was found much bent, and with one head cut through, and 11 in. of the web blown away in the centre.

Delicate Test for Nitric Acid.—The employment of sulphate of aniline as a reagent to detect with accuracy the least trace of nitric acid, is recorded in the *Scientific American*. The *modus operandi* is as follows: Place in a watch-glass about 1 cubic centimetre of pure and concentrated sulphuric acid at 1.84; then pour, drop by drop, half a cubic centimetre of a solution of sulphate of aniline, prepared by mixing 10 drops of commercial aniline with 50 cubic centimetres of diluted sulphuric acid. A glass rod is dipped in the liquid to be tested, and then introduced in the watch-glass and stirred in a circular way, the experimenter from time to time blowing slowly on the agitated liquid. If it contains traces of nitric acid, circular lines of a deep red are soon visible, coloring the whole liquid to a pink. On adding a very small quantity of nitric acid to the liquid, it becomes of a carmine color. This simple process can be applied to the detection of nitric acid in the commercial sulphuric acid. Hypoazotic or hyponitric acid produces the same reaction; moreover, when any traces of hyponitric acid are detected, the distinction can easily be made by the use of starch and iodide of potassium, acidulated by sulphuric acid.

The Spectroscope in Chemical Analysis.—The editor of the *Boston Journal of Chemistry* gives a chapter from his experience in chemical spectroscopy, concerning which less is generally known than about the use of the spectroscope in astronomical researches. He says:

We have tried several forms of instruments, with prisms varying in number from one of flint glass to six of bisulphide of carbon, and, as the result of these trials we have concluded that an instrument furnished with good telescopes and a single flint-glass prism is all that is necessary for chemical use. A piece of apparatus that requires much adjustment or delicate manipulation is altogether out of place in the laboratory.

A common fault with the ordinary spectroscope is, that they are made too small in all their parts. We should prefer for our own use an instrument which had telescopes of two inches aperture, although those of one inch aperture do very good work. But with the large instrument we have been enabled to detect potassium and rubidium in substances in which our small instrument did not show a trace.

The scales with which almost all spectroscopes are furnished are of but little use except to the beginner, and we have even then found them to be of a positive disadvantage. The eye may soon be educated to know the relative places and the colors of the lines given by the various elements. It is much less liable to err than when an arbitrary scale is used that may become displaced. The sodium line is always present, and serves as a standard of reference. The scales on no two instruments that we have ever seen

were precisely alike, and therefore, in referring to scale numbers, it is always necessary to reduce them to some known standard.

Candy Adulterations.—Mr. Endemann, assistant chemist of the New York Health Department, has examined a great variety of candies collected from various dealers by the sanitary inspectors. The following is the substance of his report:

Inorganic adulterations were detected in only two cases, in both cases in lozenges, to the extent of three and six per cent. In one establishment visited, a white powder was obtained, which proved to be gypsum, sulphate of lime.

Coloring-Matters.—Reds were either carmine or aniline red; both harmless.

Blues were either ultramarine or Prussian blue; both harmless.

Yellows were either saffron, chromate of lime, chromate of baryta, chromate of lead, gamboge, or yellow vegetable colors precipitated by alum and chalk.

Of ten samples examined, five were colored with chromate of lead and one with gamboge, both of which are poisonous.

Greens were found to be harmless.

Flavors.—Oil of peppermint is often adulterated with oil of turpentine. The other flavors are generally artificial ethers, as, for example, butyric ether. Many of these are considered injurious.

Substitutes for Sugar and Gum-Arabic.—Glucose, starch-sugar, is common in some kinds of candy. Starch is extensively used as a substitute for the more expensive gum-arabic. Both of these substances are harmless.

In conclusion, the public is cautioned against highly-colored yellow, orange, and green candies, and against highly-flavored candies."

Utilizing Gas-Lime.—Lime spoiled in the purification of gas has long been regarded as a waste product, and the expense and trouble of its removal drove the London gas companies to use ferric hydrates in its stead. This residuum is now employed in making "Prideux cement," for protecting floors and roofs from rain; also for paving-stones, with a preparation of broken flag, and as a material for hearths and mantel-pieces. The cement "sets" in about twelve hours. The London *Builder* says of its composition:

It is not a Portland or a Roman cement, although some hydraulic characters are very distinct. It does not set so quickly, but allows more time for finishing up the faces of moulded work. It is far from common mortar, for without any sand it can be formed into blocks, which set hard throughout. A piece of a mantel-piece which had been made some six months, gave the following results upon analysis:

Carbonate of lime.....	69.08
Sulphate of lime (hydrated).....	22.63
Hydrate of lime.....	1.36
Sulphide of calcium.....	trace
Insoluble matter.....	6.50
Alumina and oxide of iron.....	.45

It is obvious, from the above, that the setting must at first be due to the combination of water with the

dehydrated sulphate of lime, or, in other words, the plaster of Paris formed by the calcination of the cement. The quantity of caustic lime which is present in the cement keeps the plaster of Paris always fresh, that is, dehydrated, until mixed with excess of water employed at the moment of using it. This will account for the fact that the cement does not lose its quality by keeping, as the hydraulic cements do. After the plaster of Paris is set, the caustic lime goes on absorbing carbonic acid, and thus indurating the mass in the ordinary manner of lime-mortars.

The Phosphate Process for utilizing Sewage.

—A second paper on this subject was read before the British Association during the year by David Forbes, F. R. S., explaining the operation of his process on the large scale. To the disposal of sewage, by distributing it over the land at once, there are several objections. The suspended and most offensive solid matter cannot sink into the soil, but remains upon the surface, covering the place with its fetid deposits, and polluting the atmosphere; moreover, sewage, though rich in ammoniacal salt, is poor in phosphates, and therefore its application to general farming is restricted. It is claimed that, by the phosphatic process, these difficulties are overcome. This consists in treating the sewage with a solution of the native phosphate of alumina dissolved in sulphuric or hydrochloric acid, which arrests decomposition and causes the precipitation of the suspended matter. The liquid thus purified will now carry to the land a considerable quantity of soluble phosphates in addition to its other ingredients.

The phosphate process, as applied to the complete precipitation of the sewage, is in successful operation at the Tottenham Sewage Works, and goes a step farther than suggested above, by precipitating all the fertilizing materials. The sewage is run into reservoirs along with a suitable quantity of the phosphate solution, and immediately afterward milk of lime is run in sufficient to neutralize the acid of the phosphate solution. This precipitates the phosphates in solution together with all the organic matter, and, after settling, the supernatant water can be discharged into the streams, without polluting them. The purification requires from three to eight hours. At the Tottenham Sewage Works one ton of such phosphate is employed for 500,000 gallons of sewage. The phosphate is mixed, in a state of powder, with 12 to 14 cwts. of sulphuric acid. After standing a short time, it is dissolved in water and run into the sewage. The milk of lime is added until the sewage gives a faint alkaline reaction. An analysis of some dried sewage deposit, thus produced from London sewage, indicates 0.57 per cent. nitrogen, equal to 0.69 ammonia, and 28.52 per cent. phosphoric acid, equal to 62.26 phosphate of lime. The writer, however, does not think the manure will pay the cost of the process, though it will nearly do so, and is considerably more advantageous and economical than the other processes proposed.

Changes of Color produced by Cold.—Prof. E. J. Houston, of Philadelphia, has published, in the *Journal of the Franklin Institute*, a statement of his investigations on this subject. In his experiments on solids, the reduction of temperature was obtained by the evaporation of ether, bisulphide of carbon, or liquid sulphurous acid, the substances operated upon being placed in vessels exposed to that cold-producing action. The degrees of change in temperature necessary to cause change in color are not set down; but the following are some of the results with solids:

Sulphide of Mercury.—Changes from a bright red to a brighter red.

Bisulphide of Tin.—Changes from a brownish orange-yellow to a lighter brownish-yellow.

Subsulphate of Mercury.—Changes from a yellow to a greenish-yellow.

Iodide of Lead.—Changes from an orange to a lighter orange.

Chromate of Lead.—Changes from a yellowish-orange to a yellowish-green.

The effect of cold on the color of solutions is thus stated:

Sulphate of Copper.—Solution of a pure blue; deepens on the application of cold.

Ferrocyanide of Potassium.—Saturated solution of a nearly pure yellow; becomes tinted slightly with green.

Chloride of Copper.—Solution of a bluish-green; becomes a more decided bluish-green.

Sesquichloride of Iron.—Solution, orange-yellow; becomes an orange-yellow in which the yellow is more predominant than in the preceding.

Sesquinitrate of Iron.—Solution, orange-yellow, like the chloride.

Wishing to obtain a solution that could be exposed to a much lower temperature without freezing, a solution of the chloride of copper in ether was prepared. The color was yellowish-green. When exposed to a low temperature by the evaporation of the bisulphide of carbon, the color changed very decidedly to a pure green.

The author adds: "It can hardly be urged, with fairness, that all colored compounds should be equally influenced by the action of the less rapid heat-vibrations, for the differences presented by bodies, as regards their transparency or opacity to light, or their diathermancy or adiathermancy to heat, clearly indicate a very great difference in their molecular structure, which difference offers reasons amply sufficient to explain why the colors of some compounds should be more influenced by heat than others. Again, there can be little doubt that more extended observations will increase the great number of compounds already noticed. For instance, the well-known change from red to yellow, presented by the red iodide of mercury, dissuaded us at first from submitting it to an experiment. On a careful trial, however, it was found to illustrate the law, changing to a decidedly darker red up to the temperature requisite to alter its crystalline form.

"The theory also receives further support and confirmation from the following considerations:

"It is well known that when a yellow and a

red substance, which have no chemical action on each other, are mixed together, the resulting color is orange. The explanation is undoubtedly to be found in the raising of the less rapid red vibrations by the yellow, and the consequent lowering of the yellow by the red, the mean resulting vibration being that capable of producing orange light."

The Coloring-Matter in Foliage.—Mr. H. C. Sorby contributes an interesting paper on this topic to *Nature*. He announces that, up to the middle of 1871, he had been able to distinguish several dozen coloring-matters in the leaves of different plants, and far more than that number in the petals and fruits, and had no doubt that further inquiry would readily increase the list. The subject would be unmanageable if he did not divide the varieties of coloring-substance into well-marked groups by means of their optical characters. The colors are not only related to one another optically and chemically, but also have a very similar connection with the growth of the plants. The very numerous tints of foliage depend almost entirely on the relative and absolute amount of the various colors of the different groups. The groupings suggested by Mr. Sorby are as follows:

1. The *Chlorophyll* group is distinguished by being insoluble in water, but soluble in alcohol, and in bisulphide of carbon. There are three or four species, giving well-marked spectra, with several narrow, dark absorption-bands, one or more of which occur at the red end. The mixed chlorophyll of ordinary green leaves may be obtained in a tolerably satisfactory state by heating in alcohol dark-green holly-leaves, previously crushed so as to insure rapid solution, and then, when cold, agitating in a test-tube with bisulphide of carbon. This sinks to the bottom, holding nearly the whole of the dark-green chlorophyll in solution, while nearly all the xanthophyll remains dissolved in the alcohol.

2. The *Xanthophyll* group also contains several distinct species, but only two are common in leaves, one being more, and the other less, orange. They are characterized by being insoluble in water, but soluble in alcohol and in bisulphide of carbon; and when dissolved in the latter their spectra show two not very distinct absorption-bands at the blue end; but the red, yellow, and yellow-green rays are freely transmitted. They may be obtained from yellow leaves, by the use of alcohol and bisulphide of carbon.

3. The *Erythrophyll* group comprises a number of colors soluble in water, in alcohol, and in ether, but insoluble in bisulphide of carbon. Those met with in leaves are more or less purple, made bluer by alkalis, and redder by acids; and thus sometimes plants containing the same kind may vary more in tint, owing to a variation in the amount of free acid, than others colored by entirely different kinds. The erythrophyll may be obtained,

free from chlorophyll and xanthophyll, by heating the leaves in alcohol, evaporating to dryness, redissolving in water, filtering, and evaporating at a gentle heat.

4. The *Chrysotannin* group contains a considerable number of yellow colors, some so pale as to be nearly colorless, and others of a fine, dark, golden yellow. They are soluble in water, in alcohol, and in ether, but not in bisulphide of carbon. Their spectra show a variable amount of absorption at the blue end, usually with no bands when in their natural state, but sometimes with one or more sufficiently distinct when they are oxidized. They may be obtained free from chlorophyll and xanthophyll by processes similar to those made use of in the case of erythrophyll, and leaves should always be selected which are as free as possible from colors of that group.

5. The *Phaeophyll* group comprises a number of more or less brown colors, insoluble in bisulphide of carbon, and of variable solubility in water or alcohol. The spectra show strong absorption at the blue end extending over the green; often the red is very dull, and sometimes there are definite absorption-bands when the solution is acid, neutral, or alkaline.

Fluorescent Solutions.—President Henry Morton, of the Stevens Institute of Technology, contributes to the *American Journal of Science* some interesting observations on the color of fluorescent solutions. He examined the tincture of turmeric, which is set down in the standard works as fluorescing red. He found that when concentrated it has a rich, orange-red color, but, when the solution is diluted until its color is reduced to yellow, the fluorescence appears green. A marked increase in the amount of fluorescence is visible after the solution has been filtered through bone-black, as the light-absorbing coloring-matter is removed. By continuing the decoloration until the liquid is colorless, or of a very light tint, the fluorescence is distinctly blue.

The results with the spectroscope, when it was applied to this substance, were the same as with the solution of asphalt. Such also is the case with tinctures of chlorophyll, which, when fresh and green, gives apparently a green light, and, when old and brown, a gray color.

Finally, I took up the nitrate of uranium, about which such contradictory statements have been published. This salt in its solid state gives a brilliant green fluorescence, whose spectrum is figured by Becquerel, and abounds in green rays; but in solution it gives a very feeble fluorescence, far inferior to that of turmeric, and of no more green tint than would be due to its yellow color. So in fact says also the spectroscope.

From these results it would seem that the molecules of fluorescent bodies *in solution* are not capable of restricting their vibrations to limited ranges, but move at rates corresponding with all refrangibilities, having simply an excess of the higher ones, though the same substances in the solid state may act quite differently, as in the case of nitrate of uranium, and possibly the fluorescent material in the asphalt, which may be related to the solid hydro-carbon fluorescing green, which Becquerel mentions.

The Ammonium-Amalgam Controversy.—The *American Journal of Science* for May contains a paper by the late Dr. C. M. Wetherill, on the existence of the so-called compound, ammonium-amalgam. After describing the preparation of methyl-ammonium oxalate by Lea's process, he says that when a portion of fluid sodium amalgam, the size of a pea, was placed by him in a small test-tube ($\frac{1}{4}$ inch diameter), and the solution of methyl-ammonium oxalate was added, the swelling (or formation of the mercury with the so-called metal ammonium) was observed both with and without shaking, in the cold and warm. The same experiment was performed with different specimens of methyl-ammonium oxalate; in some instances the swelling was from eight to ten times the original volume, which was very much less than the turgescence of the ammonium salt. The methyl-ammonium amalgam presented the same buttery appearance as the ammonium amalgam. When the lump was pressed between two plates of glass, myriads of gas-bubbles were apparent; when these were pressed out, the amalgam was at once restored to the condition of mercury. A piece of filter-paper was placed upon a glass plate, then saturated with a strong solution of the recrystallized methyl-ammonium oxalate; a globule of mercury the size of a small pea was placed upon the paper with the negative poles of twenty Bunsen cells in contact with it, the positive pole touching the paper; the globule of mercury swelled slightly, presented a buttery appearance, attached itself to and amalgamated the blade of a penknife which was in contact with the negative pole, and, upon being pressed under a glass plate, showed innumerable gas-bubbles in its substance—in fact, was a metallic froth. It results from these experiments that the compound ammonium examined by this author may form the so-called amalgam.

Sulphur in Illuminating Gas.—The following practical method of proving the presence of sulphur in illuminating gas is published by Ulex, of Hamburg.

If a platinum dish is filled with half a litre of water and heated over a Bunsen burner until all the water is evaporated, a viscous fluid is found on the outside of the dish, where it was in contact with the flame, which is concentrated sulphuric acid. A second proof of the presence of sulphur in purified coal-gas can be obtained from lamp-chimneys. After being used a short time, their interior becomes lined with a white coating, and in places with incrustations. If they are rinsed out with water, sulphate of ammonia is found in this. A more convincing proof is the following: If several gas-burners have been ignited in a room for several evenings, it is only necessary to rub the tip of the finger over a pane of glass and wash it off with distilled water, to obtain a solution, which turns white and milky, on the addition of barium chloride, from sulphate of baryta, and brick-red on the addition of iodide of potassium and mercury. If the windows of a room in which gas is burnt are not washed for a week, thousands of small lustrous crystals may be observed in sunlight, which also give the above reaction, and prove to be sulphate of ammonia, and, as the solution has

an acid reaction, contain an excess of sulphuric acid. To the presence of sulphate-of-ammonia fumes in a room must probably be ascribed the difficulty with which plants are raised in the same, and often die, and the complaint of persons with weak lungs of the dryness of the air in rooms where gas is burned, while in reality the moisture of the same is so much increased by burning-gas.

Chemistry of Tobacco-Smoke.—Drs. Vohl and Eulenberg have invariably found nicotine in commercial smoking-tobacco—four per cent. or more—while only traces of it could be discovered in chewing-tobacco and snuff. They say that there are no cases on record of nicotine-poisoning from the use of snuff or chewing-tobacco. The gaseous products of the combustion of good cigars and smoking-tobacco are oxygen, nitrogen, marsh-gas, carbonic oxide, sulphuretted hydrogen, and hydrocyanic acid. Other products are formic, acetic, metacetic, butyric, valeric, and carbolic acids; creosote and succinic acid, a solid hydro-carbon and a liquid hydro-carbon. The poisonous characteristics of tobacco are found in the alkaloids of the pyridin and picolin series, produced from the destructive distillation of wood as well as from tobacco. Experiments upon animals proved that these were sufficient to cause death. The same alkaloids resulting from the distillation of opium, Drs. Vohl and Eulenberg suggest that those substances, and not the morphine, cause the effects noticeable in opium-smoking.

Chinese Varnish.—The Chinese varnish, schio-lias, employed for making wooden vessels water-tight, is said to be made by mixing three parts of fresh-beaten, defibrinated blood with four parts of slacked lime and some alum—the result being a thin, sticky mass, which is immediately ready for use. Wooden chests coated two or three times with this varnish have performed the journey over Siberia to St. Petersburg and back, and remained sound and water-tight. Even baskets of straw, used in China for the transportation of oil, are made perfectly fit for the purpose. Pasteboard by its use becomes both in appearance and firmness like wood. In China most of the exposed wood-work is coated with schio-lias, which gives it an ugly red appearance, but it gains in durability.

Etching on Glass.—In place of using aqueous hydrofluoric acid for engraving on glass, Mr. Siegevert recommends a solution of eight parts of any alkaline fluoride dissolved in 100 parts of water, mixing this solution, just previous to use, with one part of oil of vitriol. In order to remove any trace of organic matter, the glass before immersion in the bath should be thoroughly cleansed with a solution of bichromate of potash, acidulated with sulphuric acid. A few hours' exposure is said to be sufficient at ordinary temperatures to obtain a true frosted surface.

Chloralum.—This article, the accurate chemical term for which is chloride of aluminium, is coming into use in England as a disinfectant,

and is highly commended in some of the English journals. A writer in the *Chemical News* says:

Solutions of chloralum from 1005 to 1010 sp. gr., i. e., containing from 1 to 3 parts of chloride to 140 or to 70 parts of water, are sufficiently strong to keep fish and meat which have been simply dipped in them and then suspended in the dry air. The quantity of antiseptic use is but a small fraction of one per cent., and the preservation complete if the necessary precautions have been taken. According to my observations, chloralum is more active than sulphurous acid.

Both sulphurous acid and chloralum are available when the carbolic and cresylic acids cannot be used, owing to their smell, flavor, and causticity. I have employed the last-named agents very largely for several years, and they stand unrivalled for a limited number of medical and economic purposes, but chloralum covers a much larger field of useful applications, and we are not yet acquainted with a tithe of these. Proof positive of its unequalled value is the extraordinary rapidity with which medical men have taken it up, and reported on its use in the treatment of wounds, arresting the fetor of cancer, checking the throat lesions in diphtheria and scarlatina, preventing suppuration, absorbing from the air the odor of fresh paint, in a manner not yet explained, in addition to destroying many fetid emanations which are simply masked by carbolic acid, and which are offensive, if not even actively poisonous.

The London Cotton Mills, Limited, have undertaken the manufacture of wools and waddings containing a definite percentage of chloride of aluminium. Cotton-wool thus treated is styptic and antiseptic. It may be used as a padding under bed-sores for the absorption of fetid secretions, and suspended in the air as a filter of atmospheric currents. A curtain containing a layer of this wool, within a light porous covering, suspended over the door of a sick-chamber, will very materially check the dispersion of fever-poisons from a sick-room into other parts of a house.

Tests for Alum in Bread.—Mr. R. C. Moffat, of Glasgow, having been engaged to report professionally on the occurrence of alum in some breads, found the usual tests untrustworthy and awkward. After making about two hundred experiments, none satisfactory, on the old methods, he adopted a process known as Horsely's, which recommends the bread to be placed in vinegar for a short time, the vinegar to be strained off and a little ammonia added to the clear liquor to neutralize the acid. An alcoholic solution of logwood was then added, which, it was said, gave the solution a blue color when alum was present. Fourteen loaves had been given him to test, and with Mr. Horsely's process every one of them contained alum; but, in experimenting further, he found that the blue color was produced when no alum was present, and that the most reliable test for detecting the presence of alum in bread or flour was the simple alcoholic solution of logwood, without any of the burning, boiling, or other processes. One hundred and twenty grains of chip-logwood, digested in eight ounces of methylated spirits for eighteen hours, then filtered, yielded a solution which, when brought in contact with bread or flour free from alum, produced a pale-yellow or straw color, but a dark red when

alum is present. With this test he had found that only one of the fourteen loaves contained alum—showing that alum is not used so extensively for the purpose of whitening bread as has been supposed by many.

Cheap Hydrogen.—The *Journal of the Society of Arts* records successful experiments by MM. Tessie du Motay and Marechal (discoverers of a cheap mode of obtaining oxygen) to make hydrogen economically. Alkaline and earthy hydrates, such as hydrate of potash, soda, strontia, baryta, and chalk, are mixed with charcoal, coke, anthracite, pit-coal, or peat, and heated to a red heat, when they are speedily decomposed into carbonic acid and hydrogen, without further loss of heat than is due to the production of those two gases. The hydrates (especially those of chalk or lime) can be used over indefinitely in this process, provided they are moistened each time with water, so as to reproduce the decomposed hydrates. In this operation the hydrogen is generated without any special production of steam, and may thus be produced without any other generating apparatus than the retorts themselves. These retorts, not being exposed to the direct action of the steam, are not subject to any interior alteration or damage. It follows, therefore, that the hydrogen gas, produced by the decomposition of the above-named hydrates by means of carbon, can be generated at a very small cost, and with the same facility as carburetted hydrogens from the distillation of pit-coal or other organic hydrocarbon matter. These alkaline and earthy alkaline hydrates may be mixed with the different mineral or vegetable combustibles, either in a definite chemical proportion, or without a fixed or determinate proportion, and in any suitable distilling or heating apparatus, in order to produce, when heated to a red heat, hydrogen gas for illuminating and heating purposes. The advantage of the production of hydrogen as cheaply as oxygen, which has been obtained, is likely to create a revolution in many industries, and especially in metallurgy. A cheap method of producing a great heat in order to reduce metals, such as platinum, gold, silver, and iron, has long been sought for in Europe, where the oxy-hydric blow-pipe is now used to melt the platinum in a calcium crucible. By this discovery it becomes possible to obtain an immense heat which could be regulated by a simple tap. Enamellers and porcelain-makers may thus get rid of one of their greatest troubles.

New Chlorine Process.—The use of manganese is now dispensed with in making chlorine at the Widnes Alkali Works, England. A mixture of air and hydrochloric-acid vapor is passed over a mass of broken brick heated to 700° Fahr., that has previously been soaked in a solution of blue vitriol and dried. An almost complete decomposition of the acid takes place. The copper salt acts in some unknown way, as it is found at the end of the operation

unchanged; the sole obvious result being, that the chlorine of the acid is set free by the oxygen of the air, with a rapidity that leaves nothing to be desired. Although this process has not yet been worked on a manufacturing scale, considerable experience has been acquired in regard to it, and the difficulties to which it at first seemed liable have been overcome. One inevitable difficulty, arising from the dilution of the chlorine, has proved to be less serious than was anticipated; it has not been found to interfere with its application to the manufacture of potassic chlorate or of bleaching-powder.

CHILI,* a republic of South America. President, for the term from 1871 to 1876, F. Errazuriz. The revenue for 1871 is estimated at \$11,550,000; the expenditures at \$12,542,493. The home debt, on July 12, 1869, amounted to 16,686,103 piastres, and the foreign debt to 23,238,720 piastres, making a total public debt of 39,924,823 piastres. The troops of the line numbered, in 1871, 5,176 men, and the National Guard, in 1870, 52,721 men. The area of Chili, according to the official work on the census of 1865, amounts to 132,622 square miles. The fleet in 1870 consisted of 12 screw-steamers, manned by a battalion of marines of four hundred men.

The following table exhibits the population according to the census of 1865,† and an official calculation made in 1868 on the basis of the rate of increase of the population during the previous period:

PROVINCES.	1865.	1868.
Atacama.....	78,973	81,615
Coquimbo.....	145,895	154,183
Aconcagua.....	124,828	130,673
Valparaiso.....	143,629	142,168
Santiago.....	341,683	364,171
Colchagua.....	223,045	147,598
Curico.....		97,443
Talca.....	100,575	104,245
Maule.....	187,983	206,075
Nuble.....	125,409	122,070
Concepcion.....	146,056	148,340
Arauco.....	71,901	82,709
Valdivia.....	23,429	26,059
Llanquihue.....	37,601	40,986
Chilo.....	59,022	60,346
The colony of Magallanes (Punta Arenas)....	195	644
Total.....	1,819,223	1,908,350
To this estimate of the population, according to a remark in the census report, about 10 per cent. must be added, as not counted in the census, say.....		190,835
Besides, there are about 80,000 Araucanians and 3,800 Patagonians not included in the census.....		83,800
Total population of Chili.....		2,182,985

The movement of commerce, embracing the imports from and the exports to the other countries of America and Europe in 1869, together with the amounts of the same for 1868, was as follows:

COUNTRIES.	Imports.	Exports.
Peru.....	\$1,700,000	\$7,060,000
Argentine Confederation.....	1,480,000	230,000
Uruguay.....	40,000	1,960,000
Brazil.....	680,000	50,000
Bolivia.....	140,000	510,000
North America.....	1,490,000	79,000
Other Countries of America.....	340,000	290,000
America, 1869.....	\$5,870,000	\$10,880,000
America, 1868.....	5,360,000	6,450,000
England.....	10,320,000	14,470,000
France.....	7,190,000	1,400,000
Germany.....	2,290,000	350,000
Belgium.....	590,000	
Other countries of Europe.....	880,000	50,000
Europe, 1869.....	\$21,210,000	\$16,270,000
Europe, 1868.....	20,330,000	22,070,000
Other countries.....	150,000	560,000
Total, 1869.....	\$27,230,000	\$27,720,000
Total, 1868.....	25,840,000	29,530,000
On an average, 1861 to 1867.....	19,730,000	23,690,000

The number of vessels entering the Chilean ports in 1869, and their tonnage, were as follows:

1,699 English vessels,	each of	1,205 tons.
148 German "	"	61 "
199 Italian "	"	56 "
93 French "	"	41 "
36 Other European vessels	"	13 "
643 Chilean "	"	149 "
476 North American "	"	154 "
700 Other American "	"	187 "
12 Polynesian "	"	7 "

Total, 1869, 4,000 vessels of 1,872 tons.
Total, 1868, 3,526 vessels, of 1,720 tons.

Great progress continues to be made in the construction of railroads. The following shows the length of railroads completed and in course of construction (1 kilometre = 0.62 miles):

COMPLETED.	
Santiago to Curico.....	185 kilometres.
" to Valparaiso.....	184 "
Caldera to San Antonio.....	150 "
Ovalle to Tongoy.....	67.7 "
Coquimbo to La Cardas.....	63 "
Tabellon to Chañarcillo.....	43 "
Carrizal Alto to Carrizal Bajo.....	40 "
Total.....	731.7=454.46 m.
IN COURSE OF CONSTRUCTION.	
Talcabnano to Chillan.....	180 kilometres.
San Fernando to La Palmilla.....	30 "
Llailai to San Felipe.....	29.3 "
Total.....	239.3=148.67 m.
Total, completed.....	731.7=454.46 m.
Grand total.....	971 = 603.13 m.

The roads from Santiago to Valparaiso and Curico are almost entirely, and all the roads in the course of construction wholly, owned by the state; the others belong to private companies.

The population of the principal cities in 1865 was as follows:

Santiago.....	115,377
Valparaiso.....	70,738
Talca.....	17,900

The most important event in the history of the year was the election of a new President, which took place in September. Suffrage in Chili is by no means universal, as out of a

* See, in the AMERICAN ANNUAL CYCLOPEDIA for 1870, a detailed account of the area of the several provinces.
† The census is taken every tenth year.

population of nearly two millions but forty thousand are qualified voters. The requisite qualifications are—to be of lawful age (twenty-five years, or, if married, twenty-one); to be able to read and write, and to have a certain income of at least \$200. The struggle was of unusual significance, as the opposition to the Government comprised a large portion of the wealth and intelligence of Chili, and announced as its platform, in addition to other reforms, a determination to curb the power of the clergy in political affairs, to secure entire freedom of religion, and, of course, to separate ere long Church from State. The Liberal (anti-clerical) party nominated as their candidate José Urmenita, and the Conservative (clerical) party Federigo Errazuriz. The extensive patronage at the disposal of the Government was freely employed in the interest of the latter, and, in the opinion of the Liberal party, to this patronage his success was chiefly due. In Valparaiso and Santiago the voting was conducted with the greatest order; there was little noise and no disturbance. In some other parts of the republic there was more disorder, but nowhere a riot, and still less any attempt at revolution.

The severest earthquake in Chili, since 1851, occurred on the 25th of March, at eleven o'clock in the morning. There were three heavy shocks, lasting over a minute. As the day was a religious holiday, the churches were filled, when the walls and roofs commenced swaying. The multitude, intensely terrified, rushed wildly into the streets. No lives, however, were lost. The movement was from east to west. Bells were rung by the force of the shock, and much property destroyed at Valparaiso and Santiago. In the latter part of the year small-pox raged in the department of Los Andes and other parts of the republic, and caused great losses.

The Government of Chili strongly opposed the annexation of St. Domingo to the United States, and the press of the country urged that the Government protest against it as the first step toward annexing all the Spanish-American republics.

Rich gold deposits were, in May, discovered in Cordova.

For the purpose of promoting the education of the people, the Government established in a number of provincial towns circulating libraries.

A new dispute as to the true boundary of Chili and Bolivia has been occasioned by the discovery of the Caracoles mines, which were yielding abundantly. In November, Señor Frias, the Argentine minister, was appointed umpire in the dispute between Chili and Peru. At the close of the year the Government was planning a scheme to effectually occupy the Araucanian territory.

Federigo Errazuriz, the President-elect, is in the prime of life, and one of the prominent men in Chili. He has had a long and varied experience in public affairs, and has served as

the head of nearly every executive bureau. He has been Minister of Foreign Affairs, Minister of the Interior, Minister of Justice, and Minister of War, and a member of both branches of the national Congress.

CHINA,* an empire in Eastern Asia. The Council of State is the highest official body, and consists of four high dignitaries and two assistants, selected from the Grand College. It is the duty of the latter to guard and protest against any decree which may be in contradiction to the fundamental laws of the empire, as contained in the holy books of Confucius. The members of the Council of State are called State Ministers. There are six departments, to wit: 1. For the appointment and control of civil officials throughout the empire; 2. Department of Finance; 3. Department of Public Worship; 4. Department of War; 5. Department of Justice (highest criminal court); 6. Department of Public Works. Besides, there is a college which attends to foreign affairs.

The area of China proper is estimated at from 1,294,000 to 1,543,000 square miles; of China and its dependencies at about 4,700,000 square miles. The population of China proper is about 420,000,000; of its dependencies 26,500,000.

In March, the imperial authorities paid 200,000 taels indemnity for the French property destroyed at Tien-tsin, and appointed a Frenchman to the position of imperial interpreter, with a salary of \$15,000 per annum. These concessions, it was thought, would be accepted as a full settlement of the Tien-tsin claims. But the Bishop of Peking objected to the acceptance of the money; holding that when missionaries or Sisters of Charity devote themselves to work in China they give their labors and their lives, if necessary, but do not sell them. The money which the Lazaristes consented to receive he regarded as the price of blood. The Chinese should not be allowed to think that the blood of Christian missionaries is of monetary value. He further wished to discourage the view, too common among the Chinese, that any difficulty with foreigners, of what nature soever, can be settled by money. As regards compensation for destruction of property, the bishop would be willing to accept money on the following conditions: The infliction of such punishment on the instigators and perpetrators of the massacre as the foreign ministers shall agree to be fitting; the erection on the actual site of the outrage of a substantial monument, with an inscription blaming the atrocity, and admitting the innocence of the victims. The murderers of two Russians, who were among the victims of the Tien-tsin massacre, were executed. The Russian consul, apprehensive that innocent persons might be brought up, as is the custom in China, to personate the guilty, insisted on a prompt execution, to prevent any such substitution.

* See ANNUAL CYCLOPEDIA of 1870 for an account of the imperial family.

About two years ago General Le Gendre, United States consul at Amoy and Formosa, had the courage to visit the savages of the southern end of Formosa, with whom he negotiated a sort of treaty for the preservation of the lives of shipwrecked sailors. He was led to that undertaking by the massacre of an American ship's crew, including the captain and captain's wife. These savages never spared any who were cast on their shores, and, as vessels are daily exposed to disasters on that island, it was desirable to effect an amicable arrangement with the natives, who could never be reached by armed expeditions. Although it was feared that not much reliance could be placed on the promises which were made to General Le Gendre, the mission was a success. Early in 1871, a junk, under English colors, was wrecked near Tai-la-suh River, with considerable loss of life, but the survivors were hospitably entertained by the chief of the eighteen southern tribes, with whom the arrangement was made. It was therefore believed that these people would make no breach in the agreement which the consul made with them. They were manifesting a desire to carry out the stipulations agreed on, in their integrity.

A new survey of the Yang-tse River has been

made by the American steamer Alaska, Captain Homer Blake. By far the greatest portion of the foreign traffic on that great artery of China being carried on by American steamers, it was considered fitting that, when resurveys were needed, the navy of the United States should assume that task.

The customs returns show the following amount of duties paid:

Duties paid in Haiknan Taels (1 Tael equal to \$1.52) at 8 Francs.

DUTIES.	1868.	1869.	1870.
Import duties.....	3,287,679	3,472,820	3,569,250
Export duties.....	5,341,600	5,546,967	5,160,938
Tonnage duties.....	203,767	223,549	207,815
Duty paid by coasting trade.....	474,302	489,509	449,214
Duty on home productions.....	118,308	147,343	9,545,848
Total taels....	9,425,656	9,890,188	9,545,848
Equivalent to gold.	\$14,327,007	\$15,017,885	\$14,519,688

The following is the official report of the foreign commerce of China in the years 1869 and 1870—the commercial tael at \$1.43. It embraces a list of the countries with which a trade was carried on, with the imports from and the exports to these countries; also the trade at each of the open ports:

TRADING COUNTRIES.	1869.		1870.		PORTS OPEN TO FOREIGN COUNTRIES.	1870.

The importance of the tariff at the Yang-tse is shown by the consular returns for the quarter ending December 31st last. The imports into Shanghai in American bottoms alone amounted to the sum of \$20,147,847, and the exports during the same period reached the sum of \$15,947,583, exceeding by far that carried by all other nationalities put together. During the same quarter the imports into Hankow stood at \$4,052,716, and the exports at \$4,423,470. With a few insignificant exceptions, the American commerce on the Yang-tse is carried on by the Shanghai Steam Navigation Company, whose shares stand to-day at thirty-three per cent. premium.

In April, information was received at Peking that the Imperial Government had made a demand upon the foreign ambassadors that schools for the education of females be abolished; that the teaching to male subjects of the empire of all doctrines opposed to those of Confucius be forbidden; that missionaries be considered Chinese subjects, and that women should not be permitted access to the empire as missionaries. It was also stated to the ambassadors that the attendance of women upon religious service was one of the occasions for the recent massacres of foreigners; and that, though those events could not but be deplored by the Imperial Government, compensation for their commission was absolutely refused. In reply to this decree of the Chinese Government, a memorial was presented by the Protestant missionaries in China to the diplomatic body at Peking, deprecating the policy of allowing the Chinese authorities to escape from their treaty engagements to grant protection to Christian missionaries. The hostility toward foreigners is, the memorialists say, not likely to subside without further violent scenes, unless firmness and energy are shown by foreign powers in opposing infractions of the treaties. The ambassadors of the Christian countries took, however, no decided steps in this direction, although the Chinese Government appeared to be greatly influenced by an anti-foreign court party. Thus the Canton customs authorities trebled duties on opium, and laid a tariff on all native goods coming from Hong-Kong, not hitherto exacted. The existing forts were greatly strengthened. New forts were constructed farther up the Peiho, and other preparations were made indicative of an antici-

pated foreign war. For a time new complications were feared, but in June it was announced that the influence of the war-party in Peking had been broken. The death of Wo, the tutor of the Emperor, and secretary of the Imperial Library, had deprived the anti-foreign party of one of its most influential men, whose hatred against the Christian foreigners appeared to increase from year to year. The chief of the war-party, a younger brother of Prince Kung, known under the name of the Seventh Prince, was degraded to a lower rank; and the influence of Prince Kung, who, it is thought, desires the maintenance of friendly relations, was again strengthened. In December it was announced that the Chinese Government had determined to follow the example of the Japanese, and send young men to England and the United States to be educated in the schools of those countries.

At the beginning of 1870 the number of Protestant missionaries in China was, according to the *Chinese Recorder*, a Protestant missionary paper, edited by the Rev. S. L. Baldwin, at Foochow, 152 males and 129 females, divided over the various ports of China. The aggregate number of Protestant chapels at these places was 296. The number of boys and girls who were daily taught was over 4,000; the number of Sunday communicants nearly 6,000. Among the missionaries were several who had studied medicine, and hospitals for the Chinese were conducted by them at Peking, Tien-tsin, Shanghai, Hankow, Ningpo, Amoy, Canton, Hangchow, Taiwan, etc. The Protestant missions were divided as follows:

PROVINCES.	English.	American.	German.
Pekin.....	8	30	..
Tien-tsin.....	11	2	..
Chefoo.....	6	3	..
Tungchow.....	..	12	..
Shanghai.....	6	15	..
Kinkiang.....	..	2	..
Hankow.....	12	21	..

Foochow.....	6	14	..
Amoy.....	12	5	..
Taiwan.....	4
Swatow.....	6	4	..
Canton.....	17	9	13
Hong-Kong.....	6	..	14

The China Inland Mission, under the Rev. Mr. and Mrs. Taylor, consisted of fifteen males and fifteen females.

In September the northern provinces great-

ly suffered from inundations. More than 20,000 square miles of territory were inundated, and in New Chiang alone 1,000 people were drowned.

CHRISTIAN CHURCH, OR CONNECTION. The official organ of this body describes it as a brotherhood of a purely unsectarian character, organized on the platform: "1. The Bible alone the rule of religious faith and practice; 2. Christian the only name; 3. Christian character the only test of Christian fellowship." It has existed about seventy years. Its strength has been variously estimated at from thirty to one hundred thousand members. The most complete and official exhibit of its statistics in detail which has ever been made gives, for 1872, the following tables:

CONFERENCES (NORTH).-	Ordained Ministers.	Members.	Churches.	Sunday-school Scholars.

The whole number of Conferences in the Northern States and Canada is 65, of which 62 are represented in the statistical table. Besides the ordained ministers, there are 201 reported as unordained, or licentiates, making the total number 1,198. The number of meeting-houses is given at 552; of parsonages, 26; total value of church property, \$908,775. The number of Sunday-schools reported is 453; of officers and teachers, 3,837; funds raised for Sunday-schools, \$3,311.

The following statistics are given of the General Convention of Christians of the South:

CONFERENCES.	Ordained Ministers.	Members.	Churches.
Deep-River Valley.....	9	622	13
East Virginia.....	11	2,404	18
Georgia and Alabama.....	5	300	5
North Carolina and Virginia.....	29	3,177	18
North Carolina (colored).....	16	3,798	22
Valley Virginia.....	2	280	5
Total.....	72	10,581	81

The number of licentiates reported is 18. In other particulars the statistics are defective.

Total, for the two Conventions: Ministers, 1,069; ministers and licentiates, 1,288; members, 67,539; churches, 1,155.

The next meeting of the American Christian Convention North will be held in June, 1872; the place is not named. The schools of the Christian Connection are: The Union Christian College, Merom, Ind., 168 students; Starkey Seminary, Eddytown, N. Y., 427 students, 18 graduates; Biblical School, Eddytown, N. Y.; Wolfborough Christian Institute, Wolfborough, N. H.; and the Le Grand Christian Institute, Le Grand, Iowa (suspended). The General Societies are a Publishing Association and a Ministerial Life Assurance Association. There are also connected with the New England Christian Convention an Educational Society, a Sunday-school Association, and a Home and Foreign Missionary Society.

CHRISTIAN UNION, THE. This Society was organized, during the late civil war, by members of various churches who disapproved of the active interest which the bodies to which they belonged took in political questions. They aimed to form a church in which political matters should receive no consideration. The Society has shown much activity, and has made considerable progress, as appears from the following summary of its statistics:

Ministers.....	300
Appointments.....	2,000
Members.....	40,000
Sunday-schools.....	900
Meeting-houses.....	300
Institutions of learning.....	3
Value of church property.....	\$600,000

CLARK, Right Rev. DAVIS WESGATT, D. D., LL. D., bishop of the Methodist Episcopal Church, born in the island of Mount Desert, Hancock County, Me., February 25, 1812; died in Cincinnati, O., May 23, 1871. His early opportunities for education were but meagre,

but, having become a member of the Methodist Church, he abandoned his previous design of being a sailor, and determined to obtain an education. After studying for some time at home, he entered the Wesleyan Seminary at Kent's Hill, Me., at the age of nineteen, and, nearly two years later, became a member of the Freshman class in Wesleyan University, Middletown, Conn., whence he graduated in 1836, with high honors. From 1836 to 1843 he was the popular and successful principal of Amenia Seminary, Dutchess County, N. Y., and in the latter year entered the itinerancy in the Methodist Church, preaching with great acceptance till 1852, when he was elected editor of the *Ladies' Repository*, one of the periodicals of the Methodist Church at Cincinnati. He made an admirable editor, and greatly increased the circulation as well as improved the literary character of the *Repository*. He remained in this position for twelve years, preaching almost constantly during the time, and such was his reputation for eloquence and catholicity in the pulpit, that he was often, for months together, called to supply the pulpits of churches of other denominations. In 1864, he was chosen by the Quadrennial General Conference one of the bishops of the Church, and had filled the responsible position with marked ability and wisdom. The feebleness of Bishop Morris, the hopeless illness of Bishop Baker, and the sudden death of Bishops Thomson and Kingsley, threw upon him a greater amount of labor than his somewhat delicate constitution was capable of sustaining, but he went through it uncomplainingly, until April, 1871, when, on his return from attending his last conference, in a condition so feeble as to be unable to sit up, he said, "I have come home to die." He had furthered with all his devotion and liberality the erection of two elegant church edifices, and the founding and endowment of a Wesleyan female college in Cincinnati, and these remain as monuments of his love and zeal for Methodism. Bishop Clark had been a somewhat prolific writer, mainly of religious works, though he had published one or two academic text-books while at Amenia. The catalogue of the Methodist Book Concern has about twenty volumes from his pen; among them, aside from two or three volumes of sermons, are: "A Treatise on Mental Discipline;" "Death-bed Scenes;" "Fireside Reading," 5 vols.; "Life and Times of Bishop Hedding;" "Select London Lectures," etc.

CLARKE, WALTER, D. D., an American clergyman, pulpit orator, and author, born in Middletown, Conn., April 5, 1812; died in Buffalo, N. Y., May 23, 1871. He graduated from Yale College in 1837, and, having already turned his attention to medicine, attended two courses of lectures, but did not take a diploma. In 1838 he taught in the Waterbury (Conn.) Academy, and commenced reading law. He was nearly ready for admission to the bar, when he was elected Professor of

Greek in the College of Mobile. He spent about a year there, and returned North for the summer, expecting to resume his duties in the fall, when he was surprised by the intelligence of the failure of the institution. He had previously had strong inclinations toward the ministry, and at this time decided that he would enter it. He took a partial course in Yale Theological Seminary, and in May, 1841, was ordained pastor of the First Congregational Church in Canterbury, Conn. Four years later he was called to the South Congregational Church in Hartford, where he remained fourteen years, and won for himself high reputation as an eloquent preacher, a vigorous original thinker, and a profound scholar. In 1859 he became pastor of the Mercer Street Presbyterian Church in New York City, and two years later accepted the call of the First Presbyterian Church in Buffalo, where he remained till his death, greatly beloved and honored. He received the degree of D. D. from Williams College in 1853. Dr. Clarke was a close student all his life. His range of knowledge was very great; he was at home alike in languages, in metaphysical studies, and in English and continental literature. Yet, aside from his preparations for the pulpit, he wrote comparatively little. His occasional sermons and addresses were remarkable for the vigor of their thought and the dignity and magnificence of their diction. He published, also, we believe, a volume of sermons, a semi-centennial history of the First Presbyterian Church in Buffalo, and one or two controversial pamphlets.

COGSWELL, JOSEPH GREEN, LL. D., who died at Cambridge, Mass., November 26, 1871, was descended from a highly-respectable English family. His progenitor, John Cogswell, sailed from Bristol, May 23, 1635, in a vessel called the *Angel Gabriel*—a name significant of the Puritan habit of connecting every thing with religion. Her cargo was mostly his own, and consisted of a large portion of his valuable estate. The vessel arrived off the coast of Maine amid a fearful tempest, and was wrecked at Pemaquid Bay, August 15th, the crew and passengers all being saved, but a large proportion of the cargo was lost. After camping out for some days, Mr. Cogswell chartered a small bark, which landed him with his family, furniture, silver plate, and such books as he had saved, at Ipswich, Mass., where many of his descendants have continued to reside to the present time. Later in the same year, he purchased an extensive tract of land and erected the third house built at Ipswich. The reasons assigned for leaving his opulent English home for a log house in the wilderness of a new world were, that the ancient faith and true worship might be found inseparable companions in their practice, and that his posterity might be undefiled in religion. Among John Cogswell's descendants was Nathaniel Cogswell, who studied medicine with Dr.

Perkins, one of the celebrities of Boston, and an intimate friend of the philosopher Benjamin Franklin. He was present when Franklin killed a pigeon with his new electric battery—a circumstance Dr. N. Cogswell remembered and related with no small degree of satisfaction. Joseph Green Cogswell was born September 27, 1786, and in his twenty-first year was graduated with honor at Harvard University. In a letter to General J. G. Wilson, dated Cambridge, May 27, 1870, he says: "When I was a youth, I lived in Ipswich, my native place, and used to see Dr. Nathaniel Cogswell often. He owned several acres of valuable land near the grammar-school where I received my early education, and used to come to look after his land frequently, but I only knew him as one of the most respectable and wealthy gentlemen in the neighborhood. I was too young to claim an acquaintance with him. His son, your father-in-law, was my college classmate and valued friend through life. He generally called on me at the Astor Library when he came to New York. We were both descendants of John Cogswell, who came over from England between 1630 and 1640, and was shipwrecked near Cape Ann, but got safe to land, though he lost all his money, which was a considerable sum—tradition says five thousand pounds. He had been a merchant in London." After making a voyage to India as supercargo of the vessel in which he sailed, Dr. Cogswell practised law for a few years at Belfast, Me. The death of his wife, a daughter of Governor Gilman, of New Hampshire, induced him to abandon a profession for which he doubtless had little taste, and he became, in 1814, a tutor at Harvard College. In 1816 he visited Europe, and, in company with George Ticknor, spent two years at the University of Göttingen, where they advanced together in the special culture which has associated their names with what is highest in American literature and bibliography. He remained two years longer in Europe, chiefly on the Continent, passing most of his time in the principal capitals, and directing his attention especially to educational problems and bibliography. He was, with his friend Ticknor, the guest of Sir Walter Scott, at Abbotsford; and contributed to *Blackwood's Magazine* a paper on American literature, which attracted much attention. Returning to the United States in 1820, he was appointed Professor of Geology and Mineralogy in his *alma mater*, and librarian of the same institution. In 1823, having resigned his position in Harvard, he, in connection with George Bancroft, the historian, established the Round Hill School, at Northampton, Mass. The plan of the institution was novel, and based on an examination of the best English and German systems of education. After Mr. Bancroft's retirement in 1830, Dr. Cogswell continued the school by himself for six years, when he

assumed the charge of a similar institution in Raleigh, N. C. Abandoning this field of labor, he accepted the editorship of the *New York Review*, one of the ablest critical journals then existing in the country, which he conducted till its termination in 1842. Becoming the friend and companion of John Jacob Astor, he, in conjunction with Washington Irving and Fitz-Greene Halleck, arranged with him the plan of the Astor Library. With Halleck, Irving, and others, Cogswell was appointed a trustee of the fund for its creation. When Washington Irving was appointed minister to Spain, he was anxious that his friend Cogswell should accompany him as secretary of legation, and accordingly wrote to Washington, requesting his appointment. "He is," said Irving, "a gentleman with whom I am on terms of confidential intimacy, and I know no one who, by his various acquirements, his prompt sagacity, his knowledge of the world, his habits of business, and his obliging disposition, is so calculated to give me that counsel, aid, and companionship, so important in Madrid, where a stranger is more isolated than in any other capital of Europe." Cogswell received the appointment, and Astor, finding that he was likely to lose his invaluable services, made him librarian of the embryo institution. After the rich merchant's death, he went abroad to purchase books; and it may safely be said that no library in the land has been selected with more discrimination and economy. The judicious selections made by him would sell to-day for ten times the amount which he expended in their purchase, while many of the books could not be bought at any price. He gave the Astor Library his own valuable series of works relating to bibliography, as he had before united with a friend in presenting Harvard College with a rare cabinet of minerals and numerous plants. During Dr. Cogswell's active superintendency of the Astor Library, he prepared a valuable alphabetical and analytical catalogue of its contents, which was published in eight large volumes, displaying his extraordinary knowledge of the comparative value and significance of the books he collected. He continued the duties of superintendent, which he had performed with singular industry and fidelity, until the pressure of advancing years induced him to retire from the institution. Two years later, having chosen a residence at Cambridge, he also resigned the office of trustee. In accepting his resignation, the Board passed a resolution highly complimentary to his talents, great learning, and spotless character. All who enjoyed the privilege of Dr. Cogswell's acquaintance, and the thousands of seekers after information who remember the patience and urbanity with which he was ever ready to aid them in their researches, will most cordially unite in the richly-merited tribute to his learning, amiability, and unsullied life. Since 1862, when he went to reside in Massachusetts,

it was his habit to make annual visits of several weeks to attached friends living in New York. While his physical strength gradually failed, his intellectual remained undiminished, and his sparkling *commensalia* was as interesting as in earlier years. He had, in his frequent visits to Europe, met many of the most distinguished men of the nineteenth century, including Goethe, Humboldt, Béranger, Byron, Scott, Jeffrey, and the brilliant circle that thronged Gore House in Lady Blessington's palmy days. Dr. Cogswell left, of his moderate fortune, four thousand dollars to a school in his native place, where he was buried by the side of his mother's grave, and where a handsome monument will be erected by his Round Hill pupils, no one of whom ever left the school without carrying away with him a strong affection for the faithful friend and teacher.

COLOMBIA,* UNITED STATES OF, a republic in South America. President for two years from April 1, 1870, General E. Salgar; Secretary of State and of Foreign Affairs, Dr. F. Zapata; Secretary of Finances, Dr. S. C. Rodan; Secretary of the Treasury and of National Credit, General J. Trujillo; Secretary of War, Dr. R. Nunez. The republic consists of the nine States of Antioquia, Bolivar, Boyaca, Cauca, Cundinamarca, Magdalena, Panama, Santander, and Tolima. President of the State of Panama, General B. Correo. Area, variously estimated at from 357,000 to 513,000 square miles. Revenue, 1866-'67, \$2,417,370, gold; expenditure, 1865-'66, \$2,020,000, gold. Public debt, in 1867, 49,646,000 pesos.

A new census was taken in 1870, but we have thus far only the results in a few States. The population, according to the census of 1864, and so far as ascertained of 1870, is as follows:

STATES.	POPULATION.		Capital.	Inhab'ts.
	1864.	1870.		
Antioquia.....	327,322	365,974	Medellin.....
Bolivar.....	175,006	Cartagena.....	25,000
Boyaca.....	442,996	482,874	Tunja.....	8,000
Cauca.....	427,102	Popayan.....	20,000
Cundinamarca..	391,096	409,602	Bogota.....	40,000
Magdalena.....	100,284	Santa Marta..	2,000
Panama.....	173,729	220,542	Panama.....	18,000
Santander.....	496,000	Socorro.....
Tolima.....	250,938	Hagué.....
Total.....	2,794,473		

The railroad across the Isthmus of Panama, 48 miles long, was, until 1870, the only one in operation. On December 3, 1870, the road from Port Sabanilla at the mouth of the Magdalena River to Baranquilla was opened in the State of Bolivar. It is 18.4 miles long.

At the close of the year 1870 considerable excitement was produced by a letter from the President of Ecuador, Garcia Moreno, to General Mosquera, who was then preparing to return home from Peru, threatening to shoot

him should he attempt to land at Guayaquil on his way. When the English steamer from the south coast touched at Guayaquil, she was boarded by a squad of officers, who looked about the ship and satisfied themselves that Mosquera was not on board. The State Assembly of Panama, on December 31st, passed a resolution, asking the General Government to look upon the boarding of the steamship as an insult to Colombia, and to demand an apology from Ecuador. General Mosquera made a protest to the Government of Ecuador against the letter of President Moreno, and the Government of Colombia demanded an explanation.

The Constitutional State Convention, of Panama, after being in session from December 1, 1870, finished, in January, 1871, revising the constitution of the State. The reforms made relate chiefly to elections, the term of the State presidency, and the meetings of the Legislative Assembly—the former to be for four years instead of two, and the latter to meet only every two years instead of yearly.

In the city of Panama the commercial tax for 1871 again gave general dissatisfaction on account of its partiality. The tax for the year is put down at \$50,000, which is only one-sixth less than in past years, although business has fallen away to almost nothing, and many of the leading houses have been closed. The merchants, as usual, announced that they would seek redress from this onerous imposition, but there was little hope that they would find any. The alternative, as in former years, would be that they must either pay the tax or close their stores. The burdens fall heaviest on the foreign firms, whom the Government considers itself at liberty to bleed to any extent.

In January, 1871, a new revolution broke out in the State of Boyaca against the administration of President Perez. Martial law was proclaimed in three departments, and the insurgents were preparing to invade Tunja, the capital. The Mosquera party was believed to be implicated in this movement. In the first encounter, President Perez was defeated, when the insurrection spread through the entire State. In February a severe fight took place at Saruca, between 500 Government troops under Reyes, and 800 under Chaparros. The State troops were defeated with the loss of 100, 50 being killed. Perez escaped to Santander, and Reyes was made prisoner. Peace was then restored. Perez resigned the presidency of the State as well as the appointment as Senator by the Assembly. In May the State was again the scene of serious disturbances. An engagement took place at Tilpa, between the Government troops and the insurgents, in which the former were victorious, driving the latter on all sides, and inflicting great slaughter. The Government troops numbered 1,000, and the insurgents, 800. The latter were disbanded, and the Government party was again secure in power.

* See AMERICAN ANNUAL CYCLOPEDIA of 1870, for information on the revenue, debt, army, and commerce of the republic.

In March, a rebellion broke out in the departments of Chiriqui and Los Santos, in the State of Panama. The movement was headed by General Tomas Herrera. Señor Correo, the President of the State, while making an official visit to those departments, was surprised at Negho, in Las Tablas, but managed to reach the woods unhurt, and in this manner escaped the assassination which was attempted. He arrived at Panama after a journey of twenty-three days, enduring many privations and being much of the time without food. The American steamer Montijo, owned by the Messrs. Schuber, of Panama, was seized by the insurrectionists, who took from her thirty-eight hundred dollars of Government money that was found on board. Panama was greatly excited over the event, and all the males over eighteen years of age were called to arms to defend the city. In May the rebellion was put down. The Montijo was returned to her owners, and the question of indemnity was to be decided by arbitration, Messrs. Schuber & Brother appointing one, President Correo another, and these two naming a third umpire. The rifles, the property of a New York firm, which were consigned to a commercial house in Panama on commission, and were appropriated by the Government and used during the revolution, were returned to Mr. W. F. Kelly, the representative of the owners, and \$5,000 paid for the use of them. The arms and ammunition of the rebels, consisting of about three hundred Remington rifles, with suitable cartridges, which were deposited with the British consul when peace was declared, together with 500 Remington rifles purchased in New York, by Mr. Losa for the use of the Government, were sold to the same Mr. Kelly.

The Congress of Colombia met on March 1st, at Aguilar, with Parra as President of the Senate, and Lino Bernal as President of the House. Among its first acts was the ratification of a treaty of peace with Peru. In the House of Representatives, on the 22d of May, a note from the Secretary of the Treasury was read, asking for special measures to enable him to make up for the deficit in the public rents produced by the non-payment of the subvention of the Panama Railroad, which it owes to the republic. One of the leading journals of Bogota, *El Tiempo*, in its review of the labors of Congress which closed its session toward the end of May, says:

Looking at the dark clouds accumulating in the political sky and horizon, the air about the capital smells of sulphur, and war seems imminent. The value of the national bonds has declined, not from purely political causes, but rather from a bill for the amortization of the interior debt, which has been submitted to the Senate. This bill, as well as many others which have been touched upon, would appear to have been brought forward owing to the unusual delay of the Panama Railroad Company in paying the \$250,000 which, as an annual rent, belongs to this republic. This notice has caused no little sensation in official regions.

The *Nacion*, of Bogota, of the 25th of May, referring to the same subject, says:

The managing director of the Panama Railroad Company has addressed to the President of the Union a note, dated from New York last month, setting forth the difficult circumstances in which the company at present finds itself placed, caused by the small profits accruing from the undertaking, and requesting a modification of the existing contract. It is said that the company pretends that the Government should agree to have the contract altered, so that in place of the \$250,000 annual subscription paid by the railroad to the Government, the latter should accept so much per cent. of the earnings of the road as in the former contract.

The *Nacion* observes that, however much the income of the railroad may have declined, still it cannot be less than \$1,000,000 annually, and recommends Congress, before providing measures to fill up the deficit caused in the national Treasury by the non-payment of the \$250,000, that that body should take up the question with all the severity the case demands, and believes it will be found that the company, if properly managed, is quite able to pay the sum it obliges itself to do.

In June railroad directors notified the Government that they would refuse to pay annually, hereafter, the \$250,000, and offered instead, to allow the Government a certain proportion of the profits.

The Bank of Bogota was established and opened for business in the capital on November 25, 1870, with a capital of \$235,000, which may be increased to \$500,000.

In December, 1870, a committee of Darien Indians arrived at Bogota, and were well received by the President, who afterward gave them a private audience. They seemed to be an intelligent people, showing a favorable disposition toward civilization. The tribe to which they belong consists of thirty villages, and cultivates cocoa, coffee, and maize.

An Immigration Society, in February, 1871, was formed at Santa Marta.

On May 31, 1871, Captain Selfridge made the following report to the Government of the United States of Colombia on the Darien Surveying Expedition:

UNITED STATES STEAMER RESACA, }
CHEPIGANA, TIURA RIVER, May 31, 1871. }

To His Excellency Señor Eustorjio Salgar, President of the United States of Colombia, Bogota: I consider it my duty to inform your Excellency of the general results obtained by the Isthmus of Darien Exploring Expedition for the opening of an interoceanic ship-canal, which I have the honor to command. This expedition, composed of two vessels of the United States Navy, sailed from New York in January, 1870, and arrived in the bay of Caledonia in the month of February following. A vessel belonging to the Pacific Squadron was sent to coöperate on the Pacific coast.

From the port of Caledonia various observations were made with instruments, and also from the port of Sarsardi toward the northern extremity, on two lines which terminated on the coast of the Pacific, in the confluences of the rivers Sabana and Lara. The first of these lines was to cross the Cordilleras, follow the valley of the Sucubi to as far as the union of this river with the Chucunaque, and then cross the isthmus to the point fixed on in the Pacific. The

second, starting from Sarsardi, crossed the Cordilleras in the neighborhood, and, following the valley of Morti, ended at the same point as the first. These observations, carefully made with the air-level, showed that both lines were impracticable for a ship-canal. The Cordillera has not in any part a lower level than 1,000 feet, and the extent of the area of the mountain is such as to render the construction of tunnels impossible. Nor does there exist a sufficient quantity of water to enable us to overcome the difficulties by means of locks.

The expedition sailed for the bay of San Blas in the latter part of April. This route formed the narrowest part of the isthmus, measuring only twenty-six miles from the Atlantic to the navigable river Bayamo, all of which gave me great hopes that the desired route would be found in this region. Explorations were accordingly made, following the valleys of the principal rivers which fall into the bay of San Blas, notwithstanding the principal line followed the Mandingo up-stream, crossed the Cordilleras and followed the Mamoni down-stream until the confluence of the Bayamo or Chepo River, which up to this point is navigable. The results obtained were equally unfavorable along this line; the lowest level of the Cordillera in this region was found to be 1,134 feet, and there existed heights of 800 feet each side. This obstacle could not be overcome either by a tunnel or by locks, and to make an open canal would cost so much as to put all consideration of it out of the question. It not being possible to continue the explorations during the rainy season, on the termination of the last exploration the expedition sailed for New York on June 10, 1870. The disposition of the Indians in the interior was not found to be friendly. They refused us permission to pass through their territory, and we had to go through contrary to their will. The express orders given to avoid all injury to their property, and taking always a superior force, avoided any hostile demonstration on their part.

Explorations in 1871.—The United States Government, being desirous of including all of the Isthmus of Darien in this exploration, in order to settle definitely the question of its adaptability for the construction of a ship-canal, I received orders to continue the survey, and, consequently, the present expedition sailed in December last for the gulf of Darien and anchored off the mouth of the Atrato River on the 30th of the same month.

The explorations of this year comprehended routes which follow certain tributaries of the Atrato, as well as a line said to have been discovered by M. Lucien de Puydt. From M. Truchon, French vice-consul, who accompanied M. de Puydt, I obtained the necessary data to follow the same route in which he pretended to have discovered a summit level of only eighty metres elevation. Your Excellency doubtless has heard of this route. I will not, therefore, go into any details about it. It is enough to say that no such pass exists as that pretended by M. de Puydt. A careful exploration, made with an exact mercurial barometer, showed an altitude of 750 feet in the valley of Tunela before arriving at the Cordilleras.

The principal labor of the expedition has been to explore a line beginning at the Atrato and following the valley of the Paranchita (a tributary of the Cacarecan), crossing the Cordillera of Cué (a tributary of the Tuira) down-stream, and from this point to Penogana and thence to a navigable point. The total length is fifty-five miles, and the route is generally known as that of Tuyra. The lowest point of the Cordilleras in this line following the valley has some 400 feet, but crossing about two miles to the southward of this point is an altitude of — feet and the land is more uniformly level. The land throughout the whole extent of this line is too broken, and crossed by mountain-spurs and hills every now and then of about 250 feet above the general level.

In like manner has been explored the whole length of a line extending from the bay of Cupica in the Pacific and following the valley of the Napipi to its mouth. By this route the ground is probably more level than by any of the others examined in Darien, but it has the drawback of requiring a longer line of navigation in the Atrato River against a strong current, and there is much doubt whether the river would or not prove navigable for ships above the mouth of Napipi.

Having finished these explorations, there did not remain any other part of the isthmus to be examined, and, although these explorations have not entirely fulfilled the hopes of the United States Government nor my own, they have, nevertheless, been of great utility in having thrown much light upon a subject little known, and have also added to what was already known of the geography of Colombia. I have been informed that there is a route by way of the river Bojaya, but I received the information too late to make use of it. It is impossible to continue the explorations during the rainy season; the dust has exhausted my strength, and I am unable to begin anew. It is not likely, however, that this route would give better results than that by the Napipi; both rivers run at but a short distance from each other. Although the Bojaya is wider, canalization is not practicable on account of the frequent floodings, caused by the tropical rains. The routes that were examined last year—viz., that of the Tuyra and the Napipi—are practicable for a canal, but at an enormous expense; the first would cost \$140,000,000, and the second \$110,000,000.

Before concluding, I beg to make a few observations:

The United States of America are interested, to a certain extent, in the construction of a canal across the isthmus, but the perfection of the railroad system across the continent has removed many inconveniences met with in the transit, and a canal is, therefore, now not so much of a necessity. England, with her possessions in the South Seas, and Germany, with her daily increasing commerce, have the same interests with the United States; but to the Republic of Colombia a canal across her territory would be an incalculable gain. The benefit she would derive from it does not so much consist in having a share of its profits as being placed in the most remarkably central portion of America. The cultivation of her great extension of lands and attraction for immigration cannot fail to bring great wealth to the country. The immense sums of money required in its construction, the great scientific problems to be solved, as well as the doubtful financial results of the Suez Canal, will all tend to make capitalists unwilling to undertake the work unless on the most favorable conditions.

The route by Nicaragua, from its immense water-supply, and with an elevation of only 120 feet above the sea, is a formidable rival to all the lines I have yet examined. It becomes a serious question for the people of Colombia whether they had better grant liberal concessions to those who will construct a canal within their territory, in view of the immense benefit that must indirectly flow from it, or concede a privilege with the conditions which hitherto served as a base to previous proposals, losing, in consequence, a brilliant opportunity and turning attention toward the advantages of the route through Nicaragua.

With sentiments of the most profound respect toward your Excellency, and the most sincere wishes for the prosperity of the Republic of Colombia, I have the honor, etc., TH. O. SELFRIDGE,

Commanding U. S. Darien Surveying Expedition.

COMMERCE OF THE UNITED STATES FOR 1871. For the fiscal year ending June 30, 1871, the general commerce of the country shows the sum of \$541,493,774 in foreign im-

ports (gold value), being an increase of \$79,116,187 over the total imports for the same period in 1869-'70. The total exports for the fiscal year ending June 30, 1871, amounted (estimated in gold) to \$513,044,273, against \$420,535,258 in the previous fiscal year, exhibiting a gain of \$92,509,015. Reexports for

the same period foot up \$28,459,899—less by \$1,967,260 than those for the fiscal year preceding. Goods remaining in warehouse June 30, 1871, were valued at \$68,324,855, against \$56,980,841, July 1, 1870—a difference of \$11,394,014. Appended are summaries of statistics for the last two fiscal years:

Imports at all United States Ports.

YEAR.	MERCHANDISE.			GOLD AND SILVER.	AGGREGATE.
	Free.	Dutiable.	Total.		
1869-1870.....	Dollars. 20,159,964	Dollars. 415,817,537	Dollars. 435,977,501	Dollars. 26,400,066	Dollars. 462,377,587
1870-1871.....	35,951,784	483,641,966	519,593,750	21,900,024	541,493,774

Reexports at all United States Ports.

YEAR.	MERCHANDISE.			GOLD AND SILVER.	AGGREGATE.
	From warehouse.	Not from warehouse.	Total.		
1869-1870.....	Dollars. 14,419,801	Dollars. 1,735,494	Dollars. 16,155,295	Dollars. 14,271,864	Dollars. 30,427,159
1870-1871.....	12,670,688	1,750,582	14,421,270	14,038,629	28,459,899

Exports from all United States Ports.

YEAR.	MERCHANDISE.		SPECIE AND BULLION.		Total domestic exports, at gold value.
	Atlantic ports, currency value.	Pacific ports, gold value.	Atlantic ports, gold value.	Pacific ports, gold value.	
1869-1870.....	Dollars. 441,166,569	Dollars. 14,041,472	Dollars. 25,033,572	Dollars. 18,850,530	Dollars. 490,535,258
1870-1871.....	464,300,771	13,712,624	76,187,027	8,818,229	513,044,273

The official returns of United States commerce for the first nine months of 1871 are not yet made; but the following are leading items of the statistics, as compiled at Washington:

PERIODS.	Imports.	Domestic exports, specie value.	Re-exports.
Nine months ending Sept. 30, 1870.	\$374,036,995	\$323,117,375	\$23,168,035
Nine months ending Sept. 30, 1871.	456,062,860	388,133,609	21,979,878

The value of foreign commodities in warehouse, September 30, 1871, was \$64,395,227, against \$51,062,252, September 30, 1870—a difference of \$13,332,975.

The relative values of imports and exports which consist of merchandise and specie and bullion, for the corresponding periods of the two years, are as follows:

Nine months ending September 30, 1870.

ARTICLES.	Imports.	Domestic exports, specie value.	Re-exports.
Merchandise.....	\$355,427,853	\$271,503,607	\$12,664,541
Specie and bullion.	18,609,142	56,613,768	10,503,494

Nine months ending September 30, 1871.

ARTICLES.	Imports.	Domestic exports, specie value.	Re-exports.
Merchandise.....	\$440,804,539	\$331,355,674	\$11,059,351
Specie and bullion.	15,258,321	56,777,935	10,920,527

The following is a table of the comparative amounts of total foreign trade, imported and exported in American and foreign vessels, in cars and other land vehicles, for the first nine months of each of the two years:

Nine months ending September 30, 1870.

VESSELS.	Imports.	Domestic exports, mixed values.	Foreign exp'rts.
American.....	\$120,687,934	\$129,991,823	\$11,328,567
Foreign.....	250,132,797	236,965,714	11,031,195
Cars, etc.....	8,216,264	1,390,696	808,273

Nine months ending September 30, 1871.

VESSELS.	Imports.	Domestic exports, mixed values.	Foreign exp'rts.
American.....	\$134,526,488	\$129,841,813	\$7,191,189
Foreign.....	306,389,195	291,732,361	13,174,977
Cars, etc.....	11,847,177	4,787,542	1,613,712

From these tables it appears that over 69 per cent. of our foreign commerce was carried in foreign vessels, for the first nine months in 1871, against 65 per cent. for the relative period in 1870.

For the twelve months ending September, 1871, the following is the report of the number and tonnage of American and foreign vessels engaged in the foreign trade, which entered into and cleared from United States ports, compared with those of the twelve months ending September 30, 1870:

VESSELS.	ENTERED.		CLEARED.	
	Number.	Tons.	Number.	Tons.
American.....	10,877	3,778,818	10,824	3,832,012
Foreign.....	19,309	6,615,198	19,451	6,623,066
Total.....	30,276	10,394,016	30,275	10,460,078

Twelve months ending September 30, 1871.

VESSELS.	ENTERED.		CLEARED.	
	Number.	Tons.	Number.	Tons.
American.....	10,779	3,556,452	10,335	3,529,828
Foreign.....	18,854	5,569,863	18,759	5,471,653
Total.....	29,633	9,126,315	29,094	9,001,481

Full comparative tables of commerce at the port of New York for the year 1871 are given by the *Journal of Commerce*. The total imports for the year are almost \$385,000,000—a larger sum by \$70,000,000 than ever before landed here in a single year. The following is a statement of the relative totals of these imports for the last ten years:

YEAR.	Dutiable.	Free goods.	Specie.	Total.
1862...	\$149,970,415	\$23,291,625	\$1,290,277	\$174,652,317
1863...	174,521,766	11,567,000	1,925,811	187,614,577
1864...	204,128,236	11,731,902	2,265,622	218,125,760
1865...	212,208,301	10,410,837	2,123,281	224,742,419
1866...	284,083,567	13,001,588	9,578,029	306,613,184
1867...	298,297,955	11,044,181	8,306,399	325,648,475
1868...	232,344,418	11,764,027	7,085,389	251,193,834
1869...	275,779,976	14,789,235	15,788,462	306,357,673
1870...	289,618,878	13,716,500	11,864,644	315,200,022
1871...	349,635,398	28,878,294	6,348,608	384,862,300

Under dutiable are included goods entered directly for consumption, and the total entered for warehousing. The specie and bullion came mostly in transit to foreign ports, and the greater part of it is again included in the exports.

In the subjoined tables of monthly summaries for four years, the first shows the total dutiable entered each month directly for consumption; the second the monthly entries for warehousing; the third the free goods thrown directly on the market; the fourth the specie; and the fifth the total monthly entries of all kinds:

Foreign Imports entered at New York during the Years 1868, 1869, 1870, and 1871.

ENTERED FOR CONSUMPTION.

Notwithstanding the enormous increase in imports, the profits on the year's business have been larger than for several years previous, prices having fluctuated less, and the gold market having been subject to less violent changes. The total monthly entries at all the bonded warehouses are given above at \$142,348,150; the total withdrawals, as per annexed table,

were \$125,661,966, showing an increase of only about \$17,000,000.

The monthly table of goods taken out of bond stands thus:

WITHDRAWALS FROM WAREHOUSE.

The exports show an increase of about \$44,500,000 over those of 1870, against an increase of about \$70,000,000 in the imports—the gain in export specie being some \$6,000,000, leaving nearly \$39,000,000 as the gain in produce and merchandise. This is the foreign trade of New York alone, which, in imports, is about two-thirds, and in exports about 40 per cent., of the foreign trade of the whole United States.

CONGREGATIONALISTS. Pursuant to a call of a committee of a provisional conference which was held in Boston in December, 1870, a Council of Congregational churches assembled at Oberlin, Ohio, on the 15th of November. This Council was the fifth national assembly of the representatives of the Congregational churches in the United States; the first having been held at Newtown, Mass., in 1637; the second, called the Synod of 1648, at the same place in 1646-'47 and '48; the third at Albany, N. Y., in 1852; and the fourth in Boston, in 1865. Hitherto it had been the prevailing sentiment among the Congregational churches, that national conventions should not be called except upon special occasions of common concern. The Council of 1871 was called, however, under the impression that a stated national gathering, and a more formal manifestation of the connection of the churches than had before been had, were needed. Nevertheless, it was a subject of discussion and doubt, previous to the meeting of the Council, whether a permanent organization should be effected. The question seems, however, to have been substantially decided as soon as the Council met, for the organization was effected without the showing of any substantial differences of opinion, except on detail. The point most actively debated related to the name by which the body should be known, the names *Conference*, *Council*, *Union*, *Convention*, and *Association*, each receiving considerable support. The following constitution was adopted:

The Congregational churches of the United States by elders and messengers assembled, do now associate themselves in National Council:

To express and foster their substantial unity in doctrine, polity, and work; and

To consult upon the common interests of all the churches, their duties in the work of evangelization, the united development of their resources, and their relations to all parts of the kingdom of Christ.

They agree in belief that the Holy Scriptures are the sufficient and only infallible rule of religious faith and practice; their interpretation thereof being in substantial accordance with the great doctrines of the Christian faith, commonly called Evangelical, held in our churches from early times and sufficiently set forth by former general councils.

They agree in belief that the right of government resides in local churches or congregations of believers who are responsible directly to the Lord Jesus Christ, the one head of the Church universal and of all particular churches; but that all churches, being in communion one with another as parts of Christ's catholic Church, have mutual duties subsisting in the obligations of fellowship.

The churches, therefore, while establishing this National Council for the furtherance of the common interests and work of all the churches, do maintain the Scriptural and inalienable right of each church to self-government and administration; and this National Council shall never exercise legislative or judicial authority, nor consent to act as a council of reference.

And, for the convenience of orderly consultation, they establish the following rules:

Sessions.—The churches will meet in National Council every third year. They shall also be convened in special session whenever any five of the general associations or conferences shall so request.

The churches shall be represented at each session by delegates, either ministers or laymen, appointed in number and manner as follows:

1. The churches, assembled in their local conferences, appoint one delegate for every ten churches in their respective organizations, and one for a fraction of ten greater than one-half; it being understood that, wherever the churches of any State are directly united in a general organization, they may, at their option, appoint the delegates in such body, instead of in local organization, but in the above ratio of churches so united. 2. In addition to the above, the churches united in State organization appoint by such body one delegate, and one for each ten thousand communicants in their fellowship, and one for a major fraction thereof; it being recommended that the number of delegates be, in all cases, divided between ministers and laymen, as nearly equally as is practicable.

Such Congregational General Societies for Christian work, and the Faculties of such theological seminaries, as may be recognized by this Council, may be represented by one delegate each, such representatives having the right of discussion only.

Officers.—At the beginning of every stated or special session, there shall be chosen by ballot, from those present as members, a moderator, and one or more assistant moderators, to preside over its deliberations.

At each triennial session there shall be chosen by ballot a secretary, a registrar, and a treasurer; to serve from the close of such session to the close of the next triennial session.

The secretary shall receive communications for the Council, conduct correspondence, and collect such facts, and superintend such publications, as may from time to time be ordered.

The registrar shall make and preserve the records of the proceedings of the Council; and, for his aid, one or more assistants shall be chosen at each session, to serve during such session.

The treasurer shall do the work ordinarily belonging to such office.

At each triennial session, there shall be chosen a Provisional Committee, who shall make needful arrangements for the next triennial session, and for any session called during the interval.

Committees shall be appointed, and in such manner as may from time to time be ordered.

Any member of a church in fellowship may be chosen to the office of secretary, registrar, or treasurer.

urer; and such officers as are not delegates shall have all the privileges of members, except that of voting.

By-Laws.—The Council may make and alter by-laws at any triennial session.

Amendments.—This constitution shall not be altered or amended, except at a triennial session, and by a two-thirds vote, notice thereof having been given at a previous triennial session, or the proposed alteration having been requested by some General Association or Conference of churches, and published with the notification of the session.

The following declaration on the unity of the Church was adopted, and ordered to be recorded in close connection with the constitution:

The members of the National Council, representing the Congregational churches of the United States, avail themselves of this opportunity to renew their previous declarations of faith in the unity of the Church of God.

While affirming the liberty of our churches as taught in the New Testament, and inherited by us from our fathers, and from martyrs and confessors of foregoing ages, we adhere to this liberty all the more, as affording the ground and hope of a visible unity in time to come; we desire and purpose to co-operate with all the churches of our Lord Jesus Christ.

In the expression of the same catholic sentiments solemnly avowed by the Council of 1865, on the Burial Hill at Plymouth, we wish at this new epoch of our history to remove, so far as in us lies, all causes of suspicion and alienation, and to promote the growing unity of council and of effort among the followers of Christ. To us, as to our brethren, "there is one body and one spirit, as we are called in one hope of our calling."

As little as did our fathers in their day, do we in ours, make pretension to be the only churches of Christ. We find ourselves consulting and acting together under the distinctive name of CONGREGATIONALISTS, because, in the present condition of our common Christianity, we have felt ourselves called to ascertain and do our appropriate part of the work of Christ's Church among men.

We especially desire, in prosecuting the common work of evangelizing our own land and the world, to observe the common and sacred law, that in the wide field of the world's evangelization we do our work in friendly co-operation with all others who love and serve our common Lord. "We believe in the holy catholic Church."

It is our prayer and endeavor that the unity of the Church may be more and more apparent, and that the prayer of our Lord for His disciples may be specially and completely answered, and all be one; that, by consequence of this Christian unity in love, the world may believe in Christ as sent of the Father to save the world.

The Congregational Publishing Society, the Society for the Promotion of Collegiate and Theological Education at the West, the theological seminaries at Oberlin, Chicago, and Oakland, and the case of the New England Church at Chicago (burned out in the great fire), were commended to the churches, by resolution. A resolution was passed commending the policy of establishing and sustaining not many theological seminaries, but a few, judiciously distributed, and completely empowered in all respects for their perfect work. The Council voted to petition Congress to aid schools at the South; for legislation in behalf of the temperance reform; for the enactment of measures looking to a code of in-

ternational arbitration; and for justice to the name and memory of Dr. Whitman, whose journey to the Pacific contributed to securing that coast to this country. In view of the union of the several State organizations in the National Council, it was declared expedient that the practice of formally interchanging delegates between these bodies be discontinued. The preparation of a manual of doctrine and polity for use in families and Sunday-schools was approved. The manual is not to be regarded as binding, but as a means of general instruction. A committee was appointed to consider and report at the next session of the Council what can be done toward consolidating the various benevolent organizations of the churches. The formation of State organizations in every State for home missionary work was recommended. A committee was appointed to confer with the directors of the Home Missionary Society, and arrange with them a plan for co-operation of the State organizations with the parent society. The sum of half a million dollars annually was agreed upon as the least that ought to be appropriated to the home mission work. The churches which made special contributions during the memorial year for the payment of debts, the endowment of institutions, and the erection and completion of buildings for sacred and educational purposes, were requested to report the same for publication. A resolution was passed urging the opening of colleges and schools to students without distinction of color. The by-laws adopted by the Council provided, among other things, for a Provisional Committee, to arrange the place, date, and general programme of meetings; that the session of the Council shall ordinarily be held in the latter part of October or early part of November; that the secretary shall present, at each triennial session, comprehensive and comparative summaries of denominational statistics for the three years preceding; that the Council will welcome correspondence by interchange of delegates with the general Congregational bodies of other lands, and with the general ecclesiastical organizations of the evangelical churches in the United States, the delegates to be appointed by the Council in the years of its session, and by the Provisional Committee in intervening years; and that the term "Congregational" as applied to the general benevolent societies in connection with representation in this body, is understood in the broad sense of societies whose constituency and control are substantially Congregational.

The Rev. W. R. Clark, delegate from the Congregational Union of Quebec and Ontario, reported eighty churches connected with the Union, only twenty of which are self-supporting.

The Rev. J. B. Helwig, of the General Synod of the Evangelical Lutheran Church, gave an account of the measures already taken,

looking to a closer union between the body which he represented and the Congregational churches. He also presented the leading features in the doctrines and polity of the two churches in a light indicating a more near resemblance than had generally been supposed to exist.

The Council consisted of 277 regular delegates; 10 honorary members, and 3 corresponding members (two from the Congregational Union of Ontario and Quebec, and one from the Lutheran General Synod)—in all, 290 members.

Until recently the Congregational churches have coöperated with the American and Foreign Christian Union in the prosecution of missionary work in Roman Catholic countries. During the last summer, steps were taken to organize a similar work to be carried on exclusively by Congregationalists. A "Provisional Committee of Foreign Evangelization" was formed, to consider the subject, to take the opinion of the churches upon it, and present it to the American Board, at their annual meeting in October. That Society adopted the following resolution, approving the scheme, and accepting it:

Resolved, That hereafter the American Board will be ready to enlarge its operations by extending its work in nominally Christian lands, and will form missions in Europe, South America, or other foreign lands, as God in His providence may open the way; and that the Prudential Committee are requested to conduct such missions on the same general principles as they have acted upon in past years.

In accordance with this resolution, four missionaries are under appointment to Spain. The prosecution of this work in Italy, France, Austria, and Hungary, is also contemplated.

During the year, the arrangements previously made, for a division of the former missionary work of the American Board of Commissioners for Foreign Missions between the Presbyterian Board of Foreign Missions and the American Board as it has been constituted since the withdrawal of the Presbyterians, were fully carried out. Of the results to the missions in consequence of these changes, and of other events of the year, the Board say, in their report:

By the graduation of the mission to the Sandwich Islands, with its fifty-six churches and other Christian institutions well established, and the transfer of five fields to the Presbyterian Board—Syria, Persia, the Gaboon, and two of the smaller Indian tribes—the Board was called to part with twenty-one ordained missionaries, and one missionary physician, including two young men in North China, and two under appointment in this country, with 162 native preachers and teachers, 19 churches, having a membership of 403—besides 722 communicants in Persia, where no separate churches had been organized—with five seminaries, including those for both sexes, and 89 schools, containing 2,281 pupils. The expenditure of the Board on these fields for the year, given in the last Annual Report, was \$48,201.10. Despite these changes, it is an interesting fact, as illustrative of the healthful progress of the work, that the field actually occupied to-day, counting the towns and cities in which the Gospel is preached, is as

large as the entire field of six years ago: the number of native pastors is larger by 26; of native preachers by 30; of scholars in schools by nearly 4,000. Of greater and more hopeful significance is the fact that nearly 1,000 communicants have been added to the churches on profession of faith during the past year—in several fields more than double the number ever reported before in any one year.

The following is the general summary of the missions for January, 1872:

MISSIONS.	
Number of missions.....	14
Number of stations.....	78
Number of out-stations.....	415
LABORERS EMPLOYED.	
Number of ordained missionaries (4 being physicians).....	109
Number of physicians not ordained.....	6
Number of other male assistants.....	4
Number of female assistants.....	165
Whole number of laborers sent from this country.....	284
Number of native pastors.....	87
Number of native preachers and catechists.....	277
Number of school-teachers.....	411
Number of other native helpers.....	159
Whole number of laborers connected with the missions.....	984
	1,218

THE PRESS.	
Pages printed (so far as reported).....	12,588,422

THE CHURCHES.	
Number of churches.....	172
Number of church-members (so far as reported).....	8,486
Added during the year (so far as reported).....	978

EDUCATIONAL DEPARTMENT.	
Number of training and theological schools.....	10
Number of boarding-schools for girls.....	14
Number of common schools.....	417
Number of pupils in common schools.....	13,583
Number of pupils in training and theological schools.....	284
Number of pupils in boarding-schools for girls.....	402
Other adults under instruction.....	1,248

The receipts of the American Board were \$429,844.96.

The receipts of the American Missionary Association were \$366,825, and the expenditures \$428,686. The Association has under its care 44 churches, with 2,744 members, of whom 464 were added during the year; 7 chartered institutions of learning; 18 graded and normal schools; and 65 common schools. The number of pupils enrolled for the school year was 17,015; the value of the school property is estimated at \$550,000. The Association labors chiefly among the colored people of the South. The reports present the following epitome of ten years' work: The amount expended in money and clothing is nearly two and a quarter million dollars; schools have been established in 343 places in the South, including most of the chief cities and centres of population. The whole number of commissions issued to missionaries and teachers in the ten years is 3,470, and the pupils enrolled 321,099. Thirty-five churches have been formed, or remodelled on a better basis, and some of them aided in building houses of worship.

The *Congregational Quarterly* for January, 1872, reports the statistics of Congregation-

alism in the United States and the British Colonies, for the year 1871, as follows :

STATES.	Churches.	Ministers.	Members.	In Sabbath-Schools.

The English *Congregational Year-Book* for 1872 reports the following statistics of Congregationalists in Great Britain and the British dependencies:

County Associations and Unions.—England, 42; Wales, 16; Scotland, 8; Ireland, 1; colonies, 8. Total, 75.

Churches at Home and Abroad.—England, 2,235; Wales, 897; Scotland, 105; Ireland, 27; islands of the British seas, 17; Canada and British North America, 105; Australia and New Zealand, 177; South Africa and Demerara, etc., 12; mission churches, about 300. Total of vacant churches, 305. Number of home missions, out-stations, and evangelistic stations, 3,000.

Ministers and Missionaries.—England, 1,989; Wales, 400; Scotland, 114; Ireland, 24; Continent, 7; colonies, 245; foreign countries, 156; natives, ordained in heathen lands, 109; ministers with pastoral charges, 2,450; without pastoral charges, 594.

Colleges.—England, 8; Wales, 3; Scotland, 1; colonies, 3. *Institutes.*—England, 4; foreign, 10. Students in colleges, 315. Students in institutes, 242.

Among the principal Congregational Societies of Great Britain belong the English *Con-*

gregational Chapel-Building Society, which extends its operations throughout England, the English districts of Wales, the Channel Islands, and Ireland; expenditures for the year 1870-'71, £9,877; the *Home Missionary Society*, income £7,019; the *Colonial Missionary Society*, income, £4,068; expenditures, £3,735. The *London Missionary Society*, which is not an exclusively Congregational society, but is supported by the Congregationalists as a body, had an income of £107,245, and its expenditures were £107,351.

In France the Union of Evangelical Churches comprises forty-five churches, divided into seven groups, which hold frequent meetings for fellowship and local business. Altogether the Free Churches of France number 104 pastors, 132 temples, and a total population of about 30,000.

The Free Churches of the Canton of Vaud, in Switzerland, are united on a basis which, though Presbyterian in form, secures the independence of each. There are also free churches in the Cantons of Geneva, Neuchâtel, and Bern.

The Thirty-second Assembly of the Congregational churches of *England and Wales* met at Swansea, Wales, on the 9th of October. Between six and seven hundred delegates from all parts of the United Kingdom, and from foreign countries, were in attendance. A revised draft of the constitution was adopted, in which it is provided that the Union shall not in any case assume legislative authority, or become a court of appeal. The objects of the Union are declared to be to uphold and extend evangelical religion in connection with churches of the Congregational order; to promote scriptural views of church-fellowship and organization; to strengthen the fraternal relations of the Congregational churches, and facilitate their coöperation; to maintain correspondence with Congregational and other Christian churches throughout the world; to obtain Congregational statistics; to work for perfect religious equality and the promotion of reforms. The Union took decided action upon the elementary education act, opposing those provisions by which the funds raised by the imposition of rates is used for the payment of the fees of indigent children attending denominational schools.

The Synod of the *French Evangelical Churches* was held at Mazamet, on the 19th of October. Forty-five churches were represented. Very little progress is shown in the reports of the churches since the Synod met before, three years ago. The Evangelists reported the public mind favorable to the reception of their preaching; but the war with Germany was a great drawback upon their work, and prevented their making visible gains. Among the speakers at the opening of the session was M. de Pressensé, who insisted that the time had come for French Protestantism to manifest its existence.

CONGRESS, UNITED STATES. The third session of the Forty-first Congress* commenced at Washington on December 5, 1870. (For the President's message, see PUBLIC DOCUMENTS, ANNUAL CYCLOPEDIA, 1870.) The Vice-President, Schuyler Colfax, presided in the Senate, and James G. Blaine presided as Speaker of the House.

In the House, on December 7th, Mr. Mungen, of Ohio, offered the following resolution:

Whereas, The President of the United States, in his annual message to Congress, on the 5th day of this month, says: "I now firmly believe that, the moment

it is known that the United States have entirely abandoned the project of accepting as a part of its territory the island of San Domingo, a free port will be negotiated for by European powers in the bay of Samana;" and whereas President Monroe, in his seventh annual message of December 2, 1823, set forth certain principles of action since known as the "Monroe doctrine," which principles have met with general acceptance among the people of the United States, and which principles declared that we should consider any attempt on the part of European powers to extend their system of government to any portion of this hemisphere as dangerous to our peace and safety, and that we could not view their interposition for the purpose of oppressing or controlling

* The following is a list of the members of Congress:

SENATE.

Alabama—Willard Warner, George E. Spencer.
Arkansas—Alexander McDonald, Benjamin F. Rice.
California—Cornelius Cole, Eugene Casserly.
Connecticut—William A. Buckingham, Orrin S. Ferry.
Delaware—Abijah Gilbert, Thomas W. Osborn.
Florida—Abijah Gilbert, Thomas W. Osborn.
Georgia—Joshua Hill, H. V. M. Miller.
Illinois—Lyman Trumbull, Richard Yates.
Indiana—Oliver P. Morton, Daniel D. Pratt.
Iowa—James B. Howell, James Harlan.
Kansas—Samuel C. Pomeroy, Edmund G. Ross.
Kentucky—Garret Davis, Thomas C. McCreery.

West Virginia—Isaac H. Duvall, James C. McGrew, John S. Witcher.

Wisconsin—Halbert E. Paine, David Atwood, Amasa Cobb, Charles A. Eldridge, Philetus Sawyer, Cadwalader C. Washburn.

in any other manner the destiny of any independent government in any other light than as a manifestation of an unfriendly disposition toward the United States: Therefore

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That we should regard an attempt by European powers to obtain the control of the bay of Samana, or any other portion of San Domingo, as unfriendly to the United States, and in contravention of our policy, as declared by President Monroe, concerning the independent actions of the people of the American Continent.

It was referred to the Committee on Foreign Affairs.

In the Senate, on December 12th, Mr. Morton, of Indiana, offered the following resolutions relative to the annexation of Dominica:

Resolved, etc., That the President of the United States be authorized to appoint three commissioners, and also a secretary (the latter to be versed in the English and Spanish languages), to proceed to the island of San Domingo, and to inquire into, ascertain, and report—

1. The political state and condition of the Republic of Dominica.

2. The desire and disposition of the people of the said republic to become annexed to and to form part of the people of the United States.

3. The physical, mental, and moral condition of the said people, and their general condition as to material wealth and industrial capacity.

4. The resources of the country; its mineral and agricultural products; the products of its waters and forests; the general character of the soil, the extent and proportion thereof capable of cultivation; the climate and health of the country, its bays, harbors, and rivers; its general meteorological character, and the existence and frequency of remarkable meteorological phenomena.

5. The debt of the government and its obligations, whether funded and ascertained, and admitted, or unadjusted and under discussion.

6. Treaties or engagements with other powers.

7. Extent of boundaries and territory; what proportion is covered by grants or concessions, and generally what concessions or franchises have been granted.

8. The terms and conditions on which the Dominican Government may desire to be annexed to and become part of the United States as one of the Territories thereof.

9. Such other information, with respect to the said government or its territories, as to the said commissioners shall seem desirable or important with reference to the future incorporation of the said Dominican republic into the United States as one of its Territories.

Sec. 2. *And be it further resolved,* That the said commissioners shall, as soon as conveniently may be, report to the President of the United States, who shall lay their report before Congress.

Sec. 3. *And be it further resolved,* That the said commissioners shall serve without compensation (except the payment of expenses), and the compensation of the secretary shall be determined by the Secretary of State, with the approval of the President.

They were laid on the table.

In the House, on December 12th, Mr. Banks, of Massachusetts, offered the following joint resolution:

Be it resolved by the Senate and House of Representatives, etc., That the President be, and hereby is, authorized to appoint a commission, consisting of five persons, to negotiate a treaty with the authorities of San Domingo for the acquisition of the territory of

that government, with instructions to report such information as a full and complete investigation of all the various questions connected with the subject may enable them to present to the two Houses of Congress; and that the report of said commission shall be considered a privileged report, and in order whenever it shall be presented by the said commission.

On the motion to lay the resolution on the table, the vote was as follows:

YEAS—Messrs. Ambler, Asper, Axtell, Beatty, Beck, Bird, Booker, George M. Brooks, James Brooks, Burr, Coburn, Cowles, Cox, Crebs, Darrall, Dickinson, Doh, Duke, Eldridge, Farnsworth, Finkelburg, Fisher, Fox, Getz, Gibson, Griswold, Haldeman, Hale, Hamill, Hawkins, Hoar, Holmes, Johnson, Thomas L. Jones, Knott, Manning, Mayhew, McCormick, McNeely, Morey, Morgan, Samuel P. Morrill, Morrissey, Mungen, Niblack, Peters, Poland, Reeves, Rice, Sherrod, Shober, Slocum, Joseph S. Smith, Stiles, Stone, Swann, Taffe, Townsend, Trimble, Van Trump, Voorhees, Wells, Willard, Eugene M. Wilson, Winchester, and Wood—66.

NAYS—Messrs. Allison, Armstrong, Arnell, Atwood, Ayer, Bailey, Banks, Barry, Beaman, Benjamin, Benton, Bingham, Blair, Boles, Boyd, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, Churchill, William T. Clark, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Cook, Cullom, Dawes, Degener, Joseph Dixon, Nathan F. Dixon, Dockery, Donley, Duval, Ferriss, Ferry, Fitch, Garfield, Gilfillan, Hamilton, Harris, Hawley, Hay, Heflin, Hooper, Jenckes, Alexander H. Jones, Julian, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Lafin, Lawrence, Logan, Loughridge, Lynch, Maynard, McCrary, McGrew, McKee, McKenzie, Mercier, Eliakim H. Moore, Jesse H. Moore, William Moore, Morphis, Daniel J. Morrell, Myers, Negley, O'Neill, Orth, Packard, Paine, Palmer, Peck, Phelps, Platt, Pomeroy, Porter, Prosser, Rainey, Roots, Sanford, Sargent, Sawyer, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Worthington C. Smith, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strickland, Strong, Tanner, Taylor, Tillman, Twichell, Tyner, Upson, Van Horn, Wallace, Cadwalader C. Washburn, William B. Washburn, Welker, Williams, John T. Wilson, Witchee, and Wolf—117.

NOT VOTING—Messrs. Adams, Ames, Archer, Barnum, Bennett, Biggs, Bowen, Buck, Cake, Calkin, Cessna, Cleveland, Conger, Conner, Covode, Dickey, Dyer, Ela, Haight, Hambleton, Hays, Hill, Hoge, Holman, Hotchkiss, Ingersoll, Judd, Kerr, Lash, Lewis, Marshall, McCarthy, Milnes, Newsham, Packer, Pease, Potter, Randall, Rogers, Schenck, Schumaker, Strader, Sweeney, Sypher, Van Alken, Van Wyck, Ward, Wheeler, Whitmore, Wilkinson, Winans, and Woodward—52.

So the House refused to lay the resolution on the table.

It was then referred to the Committee on Foreign Affairs.

In the House, on December 12th, Mr. Cox, of New York, offered the following preamble and resolution embodying a system of revenue and expenditure, and for a commission to examine into questions of taxation:

Whereas, The Government of the United States was established by the people for their own protection and benefit, and should be administered upon the strictest principles of frugality and economy in its expenditures, and that no money should be taken from the people by taxation except to supply the necessary wants of the Government, administered upon such principles; and whereas at the present time the ordinary expenditures of the Government, exclusive of the payment of the interest on the pub-

lic debt and a reasonable sum to be applied in the reduction of said debt, should not exceed the sum of \$100,000,000 annually; and whereas the money annually raised by taxation upon the people should not exceed the sum of \$250,000,000, said sum being amply sufficient to provide for the ordinary expenditures of the Government, the payment of the interest of the public debt, and \$25,000,000 to be applied in liquidating the principal of said debt; and whereas it is believed that the existing internal revenue system should be abolished, and the sum deemed proper to be raised by internal taxation assigned in just quotas or proportions to the several States, to be collected by the authorities thereof, and paid into the national Treasury, thereby dispensing with the expensive, corrupting, and annoying machinery now in force for that purpose; and whereas the highest rate of duty on articles of merchandise imported from foreign countries into the United States should be levied with a view to revenue only; and whereas under our present system there are duties levied of a prohibitory nature, and others with the purpose and effect of protecting particular classes, trades, and individuals at the expense of the people; and whereas there are many dutiable articles which should be entirely free, such as salt, coal, etc., and the duties upon other articles should be greatly reduced in the interest of revenue and equitable taxation, such as lumber, leather, pig-iron, etc.: Therefore,

Be it resolved, That the Committee of Ways and Means be directed to embody the foregoing principles in a bill or bills, and to report the same for action at the present session.

In the House, on December 12th, Mr. Kelley, of Pennsylvania, offered the following resolution on revenue reform:

Resolved, That the true principle of revenue reform points to the abolition of the internal revenue system, which was created as a war measure to provide for extraordinary expenses, and a continuance of which involves the employment, at the cost of millions of dollars annually, of an army of assessors, collectors, supervisors, detectives, and other officers previously unknown; and requires the repeal, at the earliest day consistent with the maintenance of the faith and credit of the Government, of all stamp and other internal taxes; and that properly-adjusted rates shall be retained on distilled spirits, tobacco, and malt liquors, so long as the legitimate expenses of the Government require the collection of any sum from internal taxes.

Mr. Brooks, of New York, said: I do not think there is any objection to this resolution on this side of the House, as we understand it. If the gentleman can stand the repudiation of the public debt, involved in it, we can. I for one, do not mean to oppose; I mean to vote for the resolution."

On a motion to suspend the rules for the adoption of the resolution, the vote was as follows:

YEAS—Messrs. Allison, Ambler, Armstrong, Arnett, Atwood, Axtell, Barry, Beaman, Beatty, Beck, Benton, Bingham, Bird, Blair, Boles, Booker, Bowen, Boyd, James Brooks, Buckley, Buffinton, Burchard, Burdett, Burr, Roderick B. Butler, Calkin, Churchill, William T. Clark, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cowles, Crebs, Cullom, Darrall, Dickinson, Nathan F. Dixon, Donley, Dox, Duke, Duval, Eldridge, Farnsworth, Ferriss, Ferry, Fisher, Fitch, Fox, Garfield, Getz, Gibson, Gilfillan, Griswold, Hamill, Hawkins, Hawley, Hay, Hedin, Holmes, Ingersoll, Jenckes, Johnson, Alexander H. Jones, Thomas L. Jones, Julian, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Knott, Laffin, Logan, Lynch, Manning, Mayham, Maynard, McCormick, McCrary, McCrew, McKee, McKenzie, McNe-

ly, Meaurio, Eliakim H. Moore, Jesse H. Moore, William Moore, Morey, Morgan, Morphis, Daniel J. Morrell, Samuel P. Morrill, Morrissey, Mungen, Myers, Negley, Niblack, O'Neill, Orth, Packard, Packer, Paine, Palmer, Peck, Perea, Peters, Phelps, Platt, Poland, Pomeroy, Porter, Frosser, Rainey, Reeves, Rice, Sanford, Sargent, Sawyer, Schenck, Schumaker, Scofield, Shanks, Lionel A. Sheldon, Porter Sheldon, Sherrod, Shober, Slocum, John A. Smith, Worthington C. Smith, Starkweather, Stevens, Stevenson, Stiles, Stokes, Stone, Stoughton, Strader, Strickland, Strong, Swann, Sypher, Taffe, Tanner, Taylor, Tillman, Townsend, Trimble, Upson, Van Horn, Van Trump, Voorhees, Wallace, Cadwalader C. Washburn, Welker, Wells, Wilkinson, Willard, Williams, John T. Wilson, Witcher, Wolf, Wood, and Woodward—166.

NAYS—Messrs. Asper, Ayer, Benjamin, Cox, Finkelnburg, and William J. Smith—6.

Nor VOYCE—Messrs. Adams, Ames, Archer, Bailey, Banks, Barnum, Bennett, Biggs, George M. Brooks, Buck, Benjamin F. Butler, Cake, Cessna, Cleveland, Conner, Covode, Dawes, Degener, Dickey, Joseph Dixon, Dockery, Dyer, Ela, Haight, Halderman, Hale, Hambleton, Hamilton, Harris, Hays, Hill, Hoar, Hoge, Holman, Hooper, Hotchkiss, Judd, Kerr, Lash, Lawrence, Lewis, Loughridge, Marshall, McCarthy, Milnes, Newsham, Potter, Randall, Rogers, Root, Joseph S. Smith, Sweeney, Twichell, Tyner, Van Auker, Van Wyck, Ward, William B. Washburn, Wheeler, Whitmore, Eugene M. Wilson, Winans, and Winchester—63.

So the rules were suspended; and the resolution was adopted.

In the Senate, on December 12th, Mr. Schurz, of Missouri, offered the following resolution relative to political disabilities:

Resolved, That the disqualifications and disabilities imposed upon persons lately in rebellion against the Government of the United States were dictated by imperative public necessities, and not by a spirit of hatred or vindictiveness; and that, as soon as such public necessities cease, due regard for the fundamental principles of our system of government, as well as every consideration of sound statesmanship, demands the removal of those disqualifications and disabilities.

It was laid on the table.

In the House, on December 14th, Mr. Butler, of Massachusetts, from the select Committee on Reconstruction, reported the following bill, which was read a first and second time, and ordered to be engrossed.

The bill was as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That each and every person, and all and singular the bodies politic and corporate and municipal, and each and every of them, shall be, and by virtue and authority of this act are, acquitted, exempted, released, discharged, and do hereby receive full and perfect amnesty of and from all manner of treasons and misprisions of treason, felonies, and misprision thereof, treasonable and seditious words, all libels, seditious and unlawful meetings; and also of and from all riots, insurrections, rebellious acts against the Government, all offences, contempts, trespasses, entries, wrongs, deceits, misdemeanors, forfeitures, disabilities, political or other, penalties, sums of money due or owing, and generally of and from all other things, causes, quarrels, suits, judgments, and executions not in this act hereafter excepted, which may have been made, done, committed, omitted, perpetrated, incurred, or forfeited, between the 11th day of April, in the year 1861, and the 20th day of August, in the year 1866, in carrying on, prosecuting, aiding, or interfering with the war of the rebellion, in its be-

half, or in behalf of the Government of the United States, or in any way or manner whatever arising, or springing out of, or coming from, any act done or omission made in and about, or concerning, the war of the rebellion between said last-mentioned dates, with full restoration of all rights and privileges lost or injured thereby or therein; so that no damage, loss, harm, wrong, or injury, shall hereafter come, or any right or claim accrue, to the United States, or to any persons against any other person not hereinafter excepted, of, from, or because of any act, done by him, or omitted to be done, in aid of, or in the suppression of, or because of, the late rebellion.

SEC. 2. *And be it further enacted*, That no suit or proceeding, either civil or criminal, at law or in equity, shall be had or entertained in any court of the United States, in any manner whatever, for any act done or omitted, or penalty incurred, mentioned in the first section of this act, and not hereinafter excepted, save in the manner and for the purpose hereinafter set forth; and all orders, decrees, judgments, executions, levies, extents, fines, penalties, forfeitures, punishments, heretofore made, entered, and ordered, of and concerning any act or thing mentioned in the first section of this act, of any court of the United States, are hereby declared to be void and of none effect, from and after the passage of this act, except as hereinafter set forth. And in case any suit shall be, or shall have been commenced, or is now pending in any court of the United States, for or because of any act hereinbefore in the first section of this act mentioned, it shall be sufficient defence thereto to show at any time to the court that the cause of action in any way or form arose out of, or was because of, any act mentioned and set forth in said first section of this act, and not hereinafter excepted. And upon the fact being shown to the satisfaction of said court that the cause of action or of complaint did so arise, the said action or proceeding, whether at law or in equity, or by information or indictment, shall be forthwith dismissed, and judgment entered for the defendant; and if such action was brought by or in behalf of a private party, an execution shall issue for all legal and taxable costs against the party prosecuting the same. And if any suit, civil or criminal, either at law or in equity, by bill, summons, capias, or other process, or by information or indictment, shall be brought against any person because of or concerning any matter or thing arising out of any act done, or omitted to be done, as set forth in the first section of this act, and not hereinafter excepted, in any court in any of the United States, it shall be lawful for the defendant in such suit, plaintiff, or indictment, to suggest and have entered upon the record that the cause of action grew out of or is concerning any act done, or omitted to be done, or arising out of, the late rebellion, as set forth in the first section of this act, and not hereinafter excepted. And upon such suggestion, either made verbally in open court by the defendant, or in writing, at any time, either before or after final judgment, said cause, suit, plaintiff, or indictment, whether civil or criminal, and the record and process thereof, shall be, by virtue of this act, removed from said State court, and from the jurisdiction thereof, wherein the same may theretofore have been pending, and shall thereupon, and by virtue of this act and said suggestion, with or without motion in that behalf, be removed into the circuit court of the United States in the circuit wherein said suit was brought and entered. Whereupon all further proceedings in said cause, suit, plaintiff, or indictment in said State court shall cease and be stayed and determined; and whoever shall prosecute or promote, directly or indirectly, such cause, suit, plaintiff, or indictment, whether as party or attorney; and whoever shall further entertain or consider as judge any such cause, suit, plaintiff, or indictment in said State court, after such suggestion shall have been made or filed in writing, shall be liable as and for a high misdemeanor, and,

upon indictment in the circuit court of the United States for that district, and upon conviction, to be punished by fine of not less than one thousand dollars, and not more than five thousand dollars, and imprisonment in the penitentiary not less than one year nor more than five years, at the discretion of the court. And it shall be the duty of whoever shall have prosecuted such cause, suit, plaintiff, or indictment in said court so removed to a circuit court, to enter the same at the term thereof next to be holden in said district; and if the party prosecuting fail to enter the same at said term, then the party defendant may enter said cause, suit, plaintiff, or indictment in said court at the next succeeding term thereafter. And it shall be the duty of the clerk or other recording officer of the court from which said cause, suit, plaintiff, or indictment has been removed, forthwith to deliver a memorandum of the cause, containing the names of the parties, and the suggestion upon which the same was removed, to the clerk of said circuit court, and to furnish, upon the application of either party, copies of all proceedings in said cause, plaintiff, or indictment, and papers filed therein, in said court, upon the payment or tender of payment of the fees prescribed by law for copies of like papers in said State court. And if such clerk or other recording officer shall refuse, upon the tender of payment, to give said copies, or shall neglect to deliver said memorandum, then he shall be liable, upon indictment and conviction, to be punished as a promoter of said cause, suit, plaintiff, or indictment, after the removal thereof, as hereinbefore set forth. And if the copies of the papers in said cause, suit, plaintiff, or indictment cannot be procured by either party thereto from such clerk or recording officer, then either party may set forth, by his affidavit, the substance of said papers and the proceedings in said State court, and file the same, instead of the papers in said cause, suit, plaintiff, or indictment, in said circuit court; whereupon the same proceedings shall be had as if the copies of said cause, suit, plaintiff, or indictment had been duly and legally transmitted by the clerk of said State court to said circuit court, save that after the entry of said case the judge of said circuit court shall have power to order the clerk of said State court to be summoned and to bring with him the papers in said cause, suit, plaintiff, or indictment, or duly certified copies thereof; and a failure to comply with said order of said circuit court shall be adjudged and treated and punished as a contempt of said court. Whenever it shall appear to said circuit court in any cause, suit, plaintiff, or indictment so removed into said court, after due hearing of the parties, that the suggestion for the removal of the same is not in fact true, that the cause of action did not arise out of or concerning any matters mentioned in the first section of this act, and not hereinafter excepted, said court shall remand said cause, suit, plaintiff, or indictment to the State court from which the same had been removed, to stand for trial as if this act had not been passed, with costs duly and legally taxed as well in the State court as in the circuit court, adjudged for plaintiff in the said cause against the defendant making the suggestion of cause of removal. But if it shall appear, upon the hearing of the parties, or by confession, or by non-prosecution, or otherwise, that said suggestion of cause of removal is true in fact, and that the cause of action, or any part thereof, did arise out of any act done, or omitted to be done, as mentioned in the first section of this act, and not hereinafter excepted, then said circuit court shall forthwith order judgment to be entered in said cause, suit, plaintiff, or indictment, for defendant, with full costs, duly and legally taxed as well in the State court as in the circuit court, and execution shall issue therefor accordingly. And from an order of said circuit court remanding said cause, suit, plaintiff, or indictment, or entering judgment for the defendant in such case, an appeal shall lie to the Supreme Court of the United States by

either party, which shall bring up the record in such case to the Supreme Court, and have all other rights and incidents as to time, form, and manner of procedure as other cases of appeal from a circuit court; and for this purpose the orders or decrees in that behalf of the circuit court shall not be deemed interlocutory but final. And the Supreme Court shall, upon said appeal, consider and determine the question whether said cause, suit, plaint, or indictment arose out of or concerning any act done, or omitted to be done, mentioned in the first section of this act, and not hereinafter excepted, and shall enter such order or judgment thereon as the circuit court ought to have entered, it being the meaning and intention of this act that no person or body corporate, politic, or municipal, or their successors or legal representatives, shall be sued, vexed, or unquieted in their bodies, goods, chattels, lands, or tenements for any matter, cause, contempt, misdemeanor, forfeiture, trespass, offence, or any other thing done, or committed, or omitted to be done or committed, between said 11th day of April, in the year 1861, and the 20th day of August, in the year 1866, arising from, growing out of, belonging to, or in any way appertaining to, the prosecution of the war against the States lately in rebellion, or in the prosecution of the war by them against the United States, or by any person or persons engaged therein, either directly or indirectly, but only for such causes, matters, and offences as may be mentioned as exceptions in this present act, and for none other. And whenever any suit or proceeding, civil or criminal, at law or in equity, shall involve an inquiry into any of the offences enumerated in the first section hereof, this act shall be adjudged to be an act of amnesty and oblivion for all such offences, and such causes shall proceed and judgment shall be rendered as if no such offences had been committed, except as hereinafter excepted.

SEC. 3. *And be it further enacted*, That the following classes of persons, and the rights, titles, and causes of action and matters hereinafter set forth, shall be excepted from all provisions of this act, and none other:

1. Whoever, having been educated at the Military Academy at West Point, or the Naval School at Annapolis, shall have engaged in the rebellion and insurrection against the United States, or given aid and comfort to the enemies thereof.

2. Whoever, having been a member of either House of Congress of the United States, shall have engaged in rebellion against the same, or given aid and comfort to the enemies thereof, and whoever was a member of the so-called Confederate Congress.

3. Whoever shall have held the office of head of one of the Executive Departments of the Government of the United States, or minister plenipotentiary, or minister resident, or judge of any court under the United States, and shall have engaged in rebellion or insurrection against the same, or given aid and comfort to the enemies thereof; and whoever shall have held either of the like offices under the so-called Confederate States.

4. Whoever as a member of a convention shall have voted for or signed any ordinance of secession of any State, or whoever shall have held the office of Governor of such State while the same was in rebellion.

5. Whoever, while in the service of the so-called Confederate States, treated with cruelty, or otherwise than according to the usages of war, any prisoner of war held by authority of the so-called Confederate States.

6. Whoever, having charge and custody of the public moneys of the United States, intrusted to them between said dates, have not duly accounted for and paid over the same; and whoever shall have embezzled or secreted public stores, public goods, chattels, moneys, provisions, or military and naval property of the United States.

7. All deserters from the Army and Navy of the United States, and all bounty-jumpers.

8. All property and rights of property acquired by any levy, judgment, or extent made and executed upon any lands or tenements, goods and chattels, or other valuable thing whatever, and any sale or forfeiture by confiscation or taxation, whereby any rights or titles have become vested either in the United States or in third persons.

9. Every piece and parcel of land, however it may be described or bounded, which now is or has been used as a cemetery in which the bodies of the soldiers of the United States are interred, which is in the occupation of the United States for the purpose of a cemetery, which parcels of land are hereby declared the property of the United States in fee by capture in war, and forever dedicated to the uses and purposes of cemeteries for the soldiers of the United States heretofore interred or hereafter to be interred therein, and to be under the sole jurisdiction of the United States for such purposes inalienable forever: *Provided*, That nothing herein contained shall affect or impair the validity of any act of Congress removing the political disabilities of any person herein excepted from the benefit of the provisions of this act, and that all persons whose political disabilities shall have heretofore been removed shall be entitled to all the benefits conferred by this act.

10. Every right of action and liability arising upon any ordinance, law, or contract in aid of rebellion, and every such right shall be deemed invalid.

SEC. 4. *And be it further enacted*, That this act of amnesty and oblivion shall extend to all acts and omissions made, or done, or omitted to be done, by any officer or soldier or other agent of the United States, in carrying out or putting in execution the laws of the United States known as the reconstruction acts, and the other acts for the government of the rebellious States, however the same may be entitled, as fully, and with the same benefit, and to the same extent, as if said acts or omissions had been done or omitted by such officers and soldiers during the war of the rebellion.

Mr. Butler, of Massachusetts, said: "Mr. Speaker, no more important subject has been or will be presented to Congress at this session than the one now before you. The first proposition to which I wish to call the attention of the House is the difference between pardon and amnesty. There have been no more fruitful subjects of error than these.

"The Constitution of the United States puts in the power of the Executive to grant reprieves and pardons. It does not put within the power of the Executive to grant amnesty. Amnesty can only be proclaimed by the Executive in accordance with an act of Congress. And this distinction was well known by the Government from whom we derived so many of our laws, in that land from which we derived so many of our institutions. In our first section, we have recited every class of persons and every act done or omitted, and then have pardoned, amnestied, spread the mantle of oblivion and forgiveness over every thing done during the war, as well on the one side as on the other. You will see that all quarrels, sins, omissions, commissions, that every thing is covered by the mantle of oblivion, so that we may have peace.

"I would, for one, that the state of the loyalty and obedience to the laws in the Southern country was to-day such that we could with

safety strike out all after that first section, and the second section, which carries the first into effect. But such is not the fact or condition, in my belief, and in the belief of the majority of the committee who have reported this bill. Therefore we have made certain exceptions. Let me repeat, in order that there may be no misunderstanding, that we have swept out every thing in the first section that has been done wrong by everybody on the one side as well as on the other, so that no more suits can be brought for acts done or committed in the war either against those who warred in behalf of the United States, or those who warred against the United States. Many of the officers of the United States—all the military officers—are to-day protected by acts in their behalf similar to this. None of the Confederate officers are protected. Therefore we see suits pending against them to-day. The intention in this bill has been to have general amnesty, and to save from trouble and vexation every thing that happened during the war except the exceptions.

"Now, let me say right here that this bill leaves all the excepted cases but one, and that is in regard to the national cemeteries, just where they are now. It imposes no new pains, no new penalties, but simply does not take any pains or penalties from those excepted cases with which they are burdened. It leaves those excepted cases just where they are; therefore the action of the bill is to give the great mass of the people of the South full amnesty; to throw the mantle of oblivion, as I have said before, over all that has happened; but it is deemed necessary to make exceptions; it has always been deemed necessary in every civilized country to hold up for reprobation and example certain great and leading criminals in all rebellions and in all public wrongs; and, therefore, we have excepted out those classes of men who have stood forth as the leaders. And why should they not be excepted? They played for empire and lost; let them take the penalties of the loss. Therefore, they are held by this bill just where they are. I will examine those exceptions in detail by-and-by.

"The second section of the bill is a very long one. It involves many considerations, but its object and bearing can be explained in a word. It provides machinery adapted, under our complex system of State and national judiciaries and laws, to prevent suits being carried on either by Confederates against a Federal officer or by a Union man against a Confederate officer or Confederate neighbor, or *vice versa*.

"I come now to the third section, and I observe that the third section of this bill excepts classes of persons, and the rights, titles, and causes of action and matters set forth.

"There is a proviso to this section that whosoever's disabilities having been removed by act of Congress, by name, shall have all the benefits of this act. That would seem to be just and fair.

"Then there is one other exception. We except every right of action and liability arising upon any ordinance, law, or contract in aid of the rebellion, and every such right shall be deemed invalid; that is to say, when we sweep away all disabilities, all penalties, and settle all quarrels, it might be held by some court to revive rights of action upon contracts, and contracts under the rebellious States. I do not believe it would; but, to exclude the conclusion, we have put in that exception.

"The last section extends all these immunities to every officer engaged in carrying out the reconstruction laws. Congress, as we know, has been employing for many months officers in the South to carry on the reconstruction laws, and as those reconstruction acts are attacked as unconstitutional, suits are being brought against those officers for acts in the premises. I thought it was but just, and your committee agreed with me, to extend this immunity and amnesty to that class of our public servants."

Mr. Beck, of Kentucky, said: "I propose as a substitute for the bill which has been reported by the gentleman from Massachusetts (Mr. Butler), from the Committee on Reconstruction, that which I send to the clerk's desk to be read, as follows: "

Strike out all after the enacting clause, and insert in lieu thereof the following:

(Two-thirds of each House concurring), That all persons, other than those hereinafter excepted, now disqualified to hold office by the third section of the fourteenth article of amendments to the Constitution of the United States, are hereby relieved from such disqualification, and the same is hereby removed, from and after the passage of this act, except from the following classes of persons, namely:

1. Whoever, having been educated at the Military Academy at West Point, or the Naval School at Annapolis, shall have engaged in the rebellion and insurrection against the United States, or given aid and comfort to the enemies thereof.

2. Whoever, having been a member of either House of Congress of the United States, shall have engaged in rebellion against the same, or given aid and comfort to the enemies thereof.

3. Whoever shall have held the office of head of one of the Executive Departments of the Government of the United States, or minister plenipotentiary, or minister resident, or judge of any court under the United States, and shall have engaged in rebellion or insurrection against the same, or given aid and comfort to the enemies thereof.

Mr. Farnsworth, of Illinois, said: "I move to amend the substitute by striking out all after the word 'that,' where it first occurs, and inserting, in lieu thereof, the following: "

All political disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States are hereby removed.

Mr. Bingham, of Ohio, said: "I send to the Clerk's desk an amendment to the text of the original bill."

The Clerk read as follows:

Be it enacted, etc. (two-thirds of each House concurring therein), That all legal and political disabilities imposed by the fourteenth amendment of the

Constitution of the United States, by reason of participation in the late rebellion, be, and they are hereby, removed from all persons, except such persons as were Senators and Representatives in Congress in the year 1860 or 1861, or were in either of said years officers in the Army or Navy of the United States, heads of any Department of the Government of the United States, or judges of any of the courts thereof, or foreign ministers of the United States; and except also all persons who, in violation of said amendment, have held office since the 1st day of June, A. D. 1870.

Mr. Bingham: "I move to strike out all but the enacting clause, and to insert this in its stead."

Mr. Beck: "I can say in a very short time what I desire to say in opposition to this bill, and in support of the substitute I offered, and especially in support of the amendment to the substitute offered by the gentleman from Illinois (Mr. Farnsworth). That amendment embodies what I desire, what I preferred. That is what I would have offered myself—a general removal of all political disabilities from all classes of men—but for the fact that I feared that this House might not be prepared to grant, now, a general removal of disabilities, but might agree to remove disabilities from all persons, with the exception of certain classes, whom I therefore excepted in order to accomplish the best I could, desiring at the same time the success of an amendment similar to that offered by the gentleman from Illinois, which I hope the House will adopt; and I desire it to be presented as an amendment to my substitute, so it can be voted on first.

"If the House does not adopt that amendment, if it is not prepared to grant a general removal of disabilities from all men, then I think the substitute offered by me, with the exceptions therein contained, ought to be adopted, if this House intends to do what the country expects of it; or, I may say, what all men of all political parties in the country, if we are to judge by the expressions of public opinion given through the press, desire and deem to be right and proper. I offered that substitute because I considered that there were many things in the bill offered by the chairman of the committee that were not proper subjects for the consideration of the Committee on Reconstruction, which belonged especially to the Committee on the Judiciary, and which by that committee should have been carefully considered and reported upon to this House. I contended before the Committee on Reconstruction, and contend now, that the Committee on Reconstruction went beyond its rights and its duties in presenting such a bill as this.

"You will observe this bill grants general amnesty and pardon to each and every person, and all bodies, politic, corporate, and municipal, for all acts done in or concerning the rebellion, and condones all misdemeanors and offences connected with the rebellion. What will be the effect and extent of these sweeping provisions, perhaps no member of this House

knows or understands; and if the bill is passed it may, and I believe will, produce results which very few members would be willing to admit were intended to be brought about by them when they voted for it.

"This bill, as I understand it, grants to all men, who, in violation of the proclamation by Mr. Lincoln, or of the acts of Congress, saw fit to carry on illicit intercourse with the South by sending them arms, munitions of war, provisions, and supplies, whether by the Ohio and Mississippi or by the seaboard, pardon, amnesty, oblivion, forgetfulness, so that they may sue for the contract-price of these contraband goods and collect it in lawful money. That is one of the purposes of this bill. At present they cannot collect what would be due them for such supplies; but this bill is intended to allow them to do it. It will no longer be a defence that the contract was in violation of law. All is forgiven and forgotten, so far as the persons not within the exceptions of this bill are concerned.

"Surely this House does not intend to permit those who, while residing in adhering States and professing to be true to the union of these States and to the rights of the Federal Government, sent supplies of arms and provisions of all sorts, which were contraband of war, through the lines to the rebels, to recover now in United States money that which was then agreed to be paid them, perhaps in Confederate money, when ten dollars of it was not worth one gold or greenback dollar. Take the case of General Pillow, which has been cited by the chairman of the committee, and how does he stand? He comes within the exceptions. The men who sold any thing to him can go and sue him and collect all that he agreed to pay them, and collect it in lawful money of the United States to-day. He, and all other men who are in the excepted classes, are placed at the mercy of every man who saw fit to deal with them during the rebellion and who pretended to be loyal; and as the law now stands they can defend themselves by showing that the plaintiffs were wrong-doers, and, while they may be also culpable, their maxim, '*in pari delicto*,' is a good defence. But if this bill passes they are barred from using the defence they now have, as well as from setting up similar claims themselves, because they are stricken out of this bill. All their rights, titles, and causes of action, are by the third section of this bill left as they now stand under existing laws.

"Instead of a bill granting amnesty, this is a bill making odious discriminations which the Constitution of the United States never contemplated. You have no right thus to relieve one man and not another, unless you can show some constitutional provision authorizing such an act. If I have to pay a part of what another man is relieved from, then I am worse off. If you untie the hands of one wrong-doer, while you keep my hands tied so that I cannot plead

any thing against him, then I am worse off; and that is just the case here.

"I confess, Mr. Speaker, that I have never before, in my limited experience as a member upon this floor, seen a bill which went further aside from carrying out the object it purported to have in view than the one now under consideration reported from a majority of the select Committee on Reconstruction. While it holds out the promise to the ear, it breaks it to the hope. While it retains all the pains and penalties imposed upon the people who were engaged in the rebellion, it takes away from them all rights of action under the law which they may have against even the most flagrant wrong-doers, against the despoilers of their homes, and the plunderers who for private gain made them beggars. It subjects them to suits on contracts with men who were equally amenable to the charge of giving aid and comfort to the rebellion as themselves. While you allow rights of property, as decided by the courts, to be taken away from these men, you still allow them to be proceeded against in every form, and cut off all their defence. There are thousands and tens of thousands of such persons, men of wealth and position, brought within the various exceptions."

Mr. Potter, of New York, said: "I do desire to call the attention of the House at this time to the extraordinary provisions of this bill in so far as it affects private rights throughout the South. If I understand the bill, this mantle of oblivion, as he styles it, which the gentleman from Massachusetts (Mr. Butler) brings here to-day, will extinguish every private right of property throughout the Southern States which may have grown out of the transactions of the war. According to the views of gentlemen on the committee, with whom I have spoken on the subject, and to the explanations of the bill made by the gentleman from Massachusetts (Mr. Butler) himself, any officer who, during the war, broke into the private house of any citizen, and, in pursuance of orders received, carried off that citizen's property, and then kept it, and who has since been sued by the citizen so injured for the recovery of the property taken, will be entitled, after the passage of this bill, to plead the amnesty created by it as a bar to the recovery by the owner whom he wronged of the property taken.

"Now, surely, sir, if this bill is to have such an effect as I have stated upon private rights, it must shock every man's sense of justice. Whatever forgiveness we may be willing to exercise in regard of the rebellion, that forgiveness should not be allowed to impair any man's right of property in what justly belongs to him. And yet the obvious effect of the provisions of this law is not only to impair but to utterly destroy most important rights of property. This bill declares that 'each and every person, and all and singular the bodies politic and corporate and municipal, and each and every of them, shall be discharged' not only in respect

of all treason, but in respect of all 'trespasses, entries, and wrongs,' and of all sums of money due or owing, of every name and kind whatever, and in respect of 'all other causes, quarrels, and things' 'in any way or manner whatever arising or springing out of or coming from any act done or omission made in, about, or concerning the war of the rebellion,' from the year 1861 to the year 1866."

Mr. Morgan, of Ohio, said: "I regret, Mr. Speaker, that the chairman of the select Committee on Reconstruction (Mr. Butler) who has reported this measure, which he styles an amnesty bill, has not learned the true meaning of the word as lately taught by the people of Missouri and West Virginia at the ballot-box. I do not refer to those elections in a spirit of partisan triumph, but to cause gentlemen to realize the great change which has taken place in public sentiment during the past few years. Sir, the people, always patriotic even when in error, are tired and weary of discord, and long for the return of peace, good-will, and prosperity. They look with alarm at the constant recourse to the bayonet, on any and every pretext, to control elections and enforce the collection of unequal and oppressive taxes. They are tired of 'military necessity' in time of peace, and ask that the Constitution and the laws may be reestablished and respected.

"The angry passions which existed at the close of the war have subsided, and the people, irrespective of party, desire to see proclaimed amnesty in fact, the restoration of political rights to our countrymen, and to enter upon a new career of good-will among all, prosperity and happiness for the whole people, with one flag, one country, and one destiny.

"There is very little in this bill which should commend it to this House, or which will commend it to the country. Under the fourteenth amendment, political disabilities can only be removed by a vote of two-thirds of each House. No such provision is in this bill. On the contrary, it provides in the first section 'that no damage, loss, harm, wrong, or injury, shall hereafter come, or any right or claim accrue, to any persons against any other person not hereinafter excepted, of, from, or because of any act done by him, or omitted to be done, in aid of, or in the suppression of, or because of the late rebellion.' The worst of traitors—the Northern man who, for the sake of blood-stained gain, secretly furnished the Confederates with munitions of war, while prating loyalty at home—is not only granted 'full and general grace, amnesty, and oblivion of all wrongful acts and doings in the war of the late rebellion,' but by being pardoned he would be enabled to collect and receive payment upon the supplies made by him to aid in the overthrow of the Union.

"In disregard of the wishes of the people, the bill ingeniously provides against the removal of political disabilities; the very thing our constituents demand, a demand made sig-

nificant by the late elections. The bill refuses pardon for political offences, but grants full and general grace, amnesty, and oblivion for the thief, the burglar, the arsoner, and assassin, whether the criminal be of the South or of the North. For my own part, I hold that the man who committed robbery, murder, arson, or any other felony, under the pretence of making war, is a worse man than he who becomes an outlaw against society, and commits crimes at his own risk. Such criminals, whether they be of the North or of the South, should be arraigned and tried for their offences as a warning to desperadoes, should our country be again involved in war. On the other hand, acts done according to the laws of war need no amnesty, for the simple reason that acts so committed by one belligerent against another are lawful. Hence, no one even dreams of putting on trial any soldier of the Confederacy for military acts done during the late civil war. A great deal was said as to trying Jefferson Davis; but he was never put on trial, although during a long time he was held as a prisoner. Then, sir, the granting of this pretended amnesty without the restoration of political rights would be a mere cheat."

Mr. McKenzie, of Virginia, said: "When I attended the convention of the Republican party at the city of Richmond, we pledged ourselves to go for universal amnesty. I am for carrying out that pledge like an honest man, with no dodging about it. If we cannot whip our opponents honestly with the colored vote, why, let Democracy reign. My own opinion is, decidedly, that we ought to pass a general amnesty bill, and let us have peace, or try to have peace; although I know some of these people are not much inclined to peace, and do not like the Government. I am sorry for it; but I do not think we shall get them to like it any better by keeping them in a state of bondage. Now, if this bill is to pass, I would like to have it pass without all this stuff about 'general grace, amnesty, and oblivion,' etc., which I cannot comprehend."

Mr. Farnsworth, of Illinois, said: "I proposed that amendment because I want to have no half-way work. I do not think that the present condition of the country requires that we should any longer hesitate to remove the disabilities of all persons, as it was contemplated we should do at the time that amendment was adopted. That section of the amendment imposing disabilities was intended at the time to remain operative until (and no longer) reconstruction could be completed and the rights of all persons under the Government should be secured by proper constitutional guarantees, so that it should be safe to relieve these persons."

"I find from Representatives from Southern States, members of the same political party to which I belong, that it is pretty nearly the unanimous sentiment of the Republicans in those States that these disabilities should be

removed. I am not aware that anybody in the country has asked that Congress should make any exceptions in this matter of removing disabilities. I have seen no petition from any State in the South, or from any quarter, remonstrating against our relieving all persons; nor has any member of this House, I venture to say, seen any petition from any source praying Congress to pass any such bill as has been reported from the committee."

"The fact has already been adverted to by other gentlemen that this bill is a very singular and incongruous mixture. It contains matters which may become law if adopted by a majority vote; and it contains other matters which cannot become law unless adopted by a two-thirds vote of each House of Congress. Now, these things ought not to be grouped together in the same bill. It is contrary to all precedent, contrary to all fairness, that they should be so grouped. It is a cheat, whether so intended or not, to group together things of that sort, contradictory in their nature, some of which may be adopted by a majority vote, while others cannot be adopted except by a two-thirds vote; thus hoping to get votes for the relief of disabilities, so as to pass the bill by a majority vote, without any expectation of a two-thirds vote for the relief of political disabilities."

"There is another thing about this bill which has been adverted to. It comes from the Committee on Reconstruction, which is the political committee, not the law committee of this House. That committee should have nothing to do with the settlement of legal questions, the relief from legal disabilities, or the definition and restoration of legal rights. There is a law committee here, composed of gentlemen supposed to be learned in the law, whose duty it is to investigate all such questions, and to report to the House all bills of that kind. But this bill, unless passed by a two-thirds vote, so as to make it apply to political disabilities, is in no sense a political bill. It becomes then a law adopted by a majority vote of both Houses, settling legal questions, and legal questions only."

"Sir, if this bill be adopted without amendment, I defy any lawyer in this House to give a clear and satisfactory explanation of the effect it will have when construed by the courts upon these various controversies. It will land us I certainly do not know where. This, perhaps, is owing to my ignorance; but I have read and reread the bill several times with a good deal of care, and I confess that it is beyond my ken to tell where it would land us; what construction the various provisions would receive from the courts. I do not know what claws are covered in this meal; but that there are claws we shall certainly find out if the bill ever becomes a law."

Mr. Lawrence, of Ohio, said: "I am for amnesty whenever it is safe to grant it; but before I grant it I want some evidence that it

is safe. That evidence has not yet been presented to this House. We have no sufficient evidence that the classes of men whom this bill proposes to relieve are safe depositaries of political power. It is a duty we owe to the loyal people of the country to see to it that their rights are not imperilled. We should at least pause before we admit the 'wooden horse' within our halls, and know beyond doubt that with it will come friends, not enemies, of the republic."

Mr. Wood, of New York, said: "I desire to say of the bill here, as I said of it in the committee, that it is in no sense an amnesty bill. Every section of the bill after the first section really and in fact deals with other questions, relieves nobody, removes the disabilities of none imposed by the fourteenth amendment. But, on the contrary, in the list of exceptions to the benefits under the bill there is created a new class of persons who are virtually disfranchised and removed from any hope of ever hereafter having their political disabilities removed as long as this bill, if it becomes a law, shall remain on the statute-book.

"Instead of an amnesty bill, it is a property-grabbing bill. Instead of giving general pardon for the oblivion and removal and annihilation of all political offences committed in the South during the rebellion; instead of being a measure of grace, it is a bill to defeat justice; it is a bill to deny a man's right to recover his property; it is a bill to prevent any persons from making application to the courts for the purpose of securing their property rights, wrongfully, improperly, and illegally taken away from them. It is a measure, the effect of which, if passed—I will not say the design of which by those who present it, but the effect of which, if passed, will be to do injustice, to deprive litigants of their proper redress, and to grant a boon and a relief to the people, of all others in the United States, who are the least entitled to it."

Mr. Cox, of New York, said: "For one, I am thankful that this measure, however exceptional and multifarious, is reported. The nation should thank, as I do, the Massachusetts member for its introduction. It will enable the House to act. We are to have done, I hope, with the retailing of personal amnesty. This is a relief, for the principle of partial reprieve which such partial legislation favors is even more objectionable than the present measure. We have now an opportunity to perfect a general measure under the impulses and sentiment of the recent election.

"I hope the author of this bill, if it be amended to make it simply an act of amnesty from disqualifications for office, will not repine, but carry the rejected parts of his bill to another committee for a fuller consideration. I promise him a candid discussion from this part of the House. If the bill, as amended by the gentleman from Illinois (Mr. Farnsworth), is not comprehensive enough to suit the gentle-

man from Massachusetts (Mr. Butler), if we fail to do all which he thinks necessary for oblivion of our civil war and its litigious consequences, let us console ourselves with the thought that the remainder can be done in a better form and spirit after public discussion, and by a majority vote only. If our arrows fall short of their aim, or be aimed, like those of the friendly Jonathan, to fall beside the mark, let them be found, when gathered up, to be feathered from the dove of peace, and not from that bird of prey which figures in our rhetoric. Thus will we best progress toward a just and perfect amnesty.

"I do not doubt, Mr. Speaker, that if the spirit of Sherman's agreement with Johnston, or Grant's with Lee, had been observed, there would to-day, after so long a time, have been no need of this measure. The third section of the fourteenth amendment of the Constitution, forbidding the rebel leaders to hold Federal and State offices, would never have been passed, nor would we now be required to obtain two-thirds of each House to remove such disabilities. There would have been no need of an amnesty like that of the fourth section of this bill for the Republican reconstructionists. Had General Grant's recommendation for the immediate representation of a contented and obedient South—known as the 'whitewashing' report—been acted on in its unpartisan and patriotic spirit, the discontents, wrongs, and troubles of the South which yet continue, would never have existed. The South, or portions of it, now a heathen waste, like the islands of the coast, would have been as they once were, garden-spots of beauty and plantations of utility."

Mr. Bingham, of Ohio, said: "The House will take notice that, in addition to the bill reported from the Committee on Reconstruction by the honorable gentleman from Massachusetts (Mr. Butler), there are pending four amendments, to wit, the substitute offered by the honorable gentleman from Kentucky (Mr. Beck), the amendment thereto offered by the honorable gentleman from Illinois (Mr. Farnsworth), and the substitute for the first section of the bill which I had the honor to present, and in addition to that the motion of the honorable gentleman from California (Mr. Sargent) to strike out all the original bill but the first section.

"I take notice of the last proposition first; and, in pronouncing the judgment which I pronounce to-day, I act upon the accepted rule of statesmen in this age and in every age—not what you would do, but what you can do, provided that what you can do is fitting and just in itself. I shall be constrained, without wasting words upon it, to vote against the proposition of the gentleman from Illinois. The country is not yet prepared to take that step; nor do the public interests require the present removal of the disabilities of all who, being officers of the United States in 1860 or

1861, voluntarily, and in disregard of their official oath to support the Constitution, organized and aided rebellion. On the contrary, I believe the public interests would be promoted by the rejection of that proposition.

"But, sir, in my judgment, the country is prepared to relieve, as far as consistent with the public peace and the public interests, all persons from the disabilities imposed by the fourteenth article of amendments. I ask the House to consider the spirit in which the American people adopted that amendment, and that they adopted it with a unanimity never manifested for any other measure from the foundation of this Government.

"As nearly as I can ascertain, there are about twenty thousand men scattered throughout this country who are under the disability of the fourteenth amendment, the majority of whom, I undertake to say, all things considered, are as guiltless of their country's blood as we ourselves are. It is a very easy thing for a man to say that it is a great shame, a great dishonor, a great crime to violate an oath, contrary to its spirit as well as its letter, in aid of an unjust, an unnatural, and unrighteous rebellion. But let gentlemen, before they pronounce that judgment, be just and consider the circumstances and the surroundings of these men, and apply to the case the time-honored rule of the common law—which is the common-sense and the common judgment of mankind the world over—that what a man does by coercion he is not responsible for, and is not guilty in that behalf, either before God or man. That is the condition, as I have before said, of the majority of the persons who, anterior to the organization of this revolt, in the earlier days of the republic, held office, and in their old age yielded to that cruel necessity which made them, in seeming at least, agree and consent to the overthrow of the Union and of the Constitution."

On December 21st Mr. Butler, of Massachusetts, moved to postpone the further consideration of the bill and the amendments to January 11th. The motion was carried by the following vote:

YEAS—Messrs. Allison, Ambler, Armstrong, Arnell, Asper, Atwood, Beaman, Beatty, Benjamin, Bennett, Benton, Bowen, George M. Brooks, Buffinton, Burdett, Benjamin F. Butler, Cessna, Churchill, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cowles, Cullom, Dickey, Joseph Dixon, Donley, Duval, Ela, Ferriss, Ferry, Fisher, Giffillan, Hale, Hamilton, Harris, Hawkins, Hawley, Hoge, Holmes, Hooper, Ingersoll, Alexander H. Jones, Judd, Julian, Kelley, Kelsey, Ketcham, Knapp, Lawrence, Maynard, McCrary, McGrew, Mercut, Eliakim H. Moore, William Moore, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, O'Neill, Orth, Packard, Packer, Paine, Palmer, Peck, Phelps, Pomeroy, Porter, Prosser, Rainey, Sanford, Sawyer, Seofield, Shanks, Porter Sheldon, John A. Smith, William J. Smith, Starkweather, Stevens, Stokes, Stoughton, Strickland, Strong, Taffe, Tanner, Taylor, Townsend, Twichell, Tyner, Upson, Van Horn, Wallace, Cadwalader C. Washburn, Welker, Wilkinson, Willard, Williams, John T. Wilson, and Wolf—102.

NAYS—Messrs. Archer, Axtell, Ayer, Bailey, Barnum, Barry, Beck, Biggs, Bingham, Bird, Booker, Boyd, Buckley, Burchard, Burr, Calkin, William T. Clark, Cleveland, Cook, Cox, Crebs, Degener, Dickinson, Dockery, Dox, Duke, Eldridge, Farnsworth, Finkelburg, Fitch, Getz, Griswold, Haldeman, Hamill, Hay, Heflin, Holman, Jencks, Johnson, Thomas L. Jones, Knott, Ladin, Lewis, Lynch, Manning, Marshall, Mayham, McCormick, McKee, McKenzie, McNeely, Milnes, Jesse H. Moore, Morgan, Morrissey, Mungen, Niblack, Peters, Platt, Potter, Reeves, Rice, Rogers, Sargent, Schumaker, Lionel A. Sheldon, Sherrod, Shober, Joseph S. Smith, Stiles, Stone, Strader, Swann, Tillman, Trimble, Van Auker, Van Trump, Voorhees, Wells, Whitmore, Eugene M. Wilson, Winans, Winchester, and Wood—84.

NOT VOTING—Messrs. Adams, Ames, Banks, Blair, Boles, James Brooks, Buck, Roderick R. Butler, Cake, Conner, Covode, Darrall, Dawes, Nathan F. Dixon, Dyer, Fox, Garfield, Gibson, Haight, Hambleton, Hays, Hill, Hoar, Hotchkiss, Kellogg, Kerr, Lash, Logan, Loughridge, McCarthy, Morey, Morris, Newsam, Pece, Poland, Randall, Roots, Schenck, Slocum, Worthington C. Smith, Stevenson, Sweeney, Sypher, Van Wyck, Ward, William B. Washburn, Wheeler, Witcher, and Woodward—49.

The bill was not further considered during the session.

In the House, on January 31st, Mr. Butler, of Massachusetts, said: "I am instructed by the Committee on Reconstruction to report back Senate bill No. 218, prescribing an oath of office to be taken by persons who participated in the late rebellion, but who are not disqualified from holding office by the fourteenth amendment of the Constitution of the United States, and recommend its passage."

The bill was read. It provided that when any person, who is not rendered ineligible to office by the provisions of the fourteenth amendment to the Constitution, shall be elected or appointed to any office of honor or trust under the Government of the United States, and shall not be able, on account of his participation in the late rebellion, to take the oath prescribed in the act of Congress approved July 2, 1862, the said person shall, in lieu of said oath, before entering upon the duties of the said office, take and subscribe the oath prescribed in an act of Congress entitled "An act prescribing an oath of office to be taken by persons from whom legal disabilities shall have been removed," approved July 11, 1868.

Mr. Maynard, of Tennessee, said: "I wish to call the attention of the House to what this bill is. It in effect repeals the act of 1862 prescribing an oath of office; that is to say, it relieves every man from the necessity of taking it who cannot take it, and leaves those who can take it with a safe conscience to take it as before. It is one of those measures that go fundamentally and radically to the whole system of policy that we have adopted with reference to what is called by the general name of 'reconstruction,' and I trust that it will not be passed in this hasty and summary manner. This is a bill which has been lying until this morning upon the Speaker's table, and a bill that will effect

the entire abrogation of the present oath of office prescribed in the act of 1862."

Mr. Butler, of Massachusetts, said: "The scope of the bill is exactly this: what is known as the 'test-oath,' or the 'iron-clad oath,' cannot be taken by any man who took part in the rebellion, and the object of the bill is to allow any man who took part in the rebellion, but who is not disqualified by the fourteenth article of the amendments to the Constitution, to take an oath precisely as though his disabilities were removed; that is, an oath to support the Constitution, such an oath as we hear frequently at our desk. So that the effect of the bill is to repeal the test-oath for every man who took part in the rebellion, but who has not been disqualified by the fourteenth article of amendment.

"That is the entire scope of the bill; and, when the House understands that, they will be able to vote understandingly upon it. Its purpose is, to enable men who have no disabilities to take the oath of office prescribed for men whose disabilities have been removed."

Mr. Beck, of Kentucky, said: "Gentlemen will see, by referring to volume seventy-eight of the Congressional Globe, page 2894, under date of April 22, 1870, that this bill passed the Senate, I believe, on the report of Mr. Trumbull, the chairman of the Committee on the Judiciary of that body. I believe it passed that body unanimously.

"Another thing: all the persons whom this bill proposes to relieve from taking the test-oath can now hold office in their respective States. It does not increase that class at all. It only provides that persons not disqualified under the fourteenth article of amendments to the Constitution of the United States from holding office may take the form of oath prescribed by this bill."

Mr. Morey, of Louisiana, said: "While I am in favor of this bill, there is one thing in it which strikes me as rather peculiar. It is, that we should prescribe a simple oath to support the Constitution to those who were engaged in the rebellion, and continue to require the test-oath of everybody who was not engaged in the rebellion. I think the bill should specify that all those disqualified under the fourteenth article of amendments to the Constitution of the United States shall not hold office, and that everybody else shall simply take an oath to support the Constitution of the United States."

Mr. Farnsworth, of Illinois, said: "That is, to repeal the test-oath."

Mr. Morey: "Yes; in other words, to repeal the test-oath. It seems to me to be rather a peculiar state of affairs, that the loyal people should be obliged to take the test-oath, while all those who were engaged in the rebellion should take a simple oath to support the Constitution of the United States. It would be more simple to pass a bill repealing the test-oath entirely, and then leave all those disqualified from holding office under the fourteenth

article of amendments to the Constitution to continue under their disabilities."

Mr. Farnsworth: "I concur in the remarks just made by the gentleman from Louisiana (Mr. Morey). There is no necessity of the test-oath to prevent from holding office those who are disqualified under the fourteenth article of amendments to the Constitution of the United States, for they cannot hold office by taking any sort of oath. Then, where is the necessity of continuing the test-oath at all? We propose by this bill to repeal the test-oath so far as those are concerned who were in the rebellion, but are not excluded from office by the fourteenth article of amendments to the Constitution, while we continue it in reference to ourselves and all others who were never engaged in the rebellion, and require them to take an oath a yard long before they can hold office. It prevents this absurdity and incongruity of requiring a man to swear simply because he can swear. I would rather carry out the scriptural injunction to 'swear not at all.'"

Mr. Porter, of Virginia, said: "This bill, which a majority of those present at the meeting have directed the chairman to report to the House, is virtually a repeal of the test-oath. The gentleman from Louisiana, while he favors the bill, yet would like it better if it did not require that loyal men must continue to take the oath, whereas those who participated in the rebellion are not to take it if this bill passes, but are to be permitted to take the modified oath. That is nothing new, for practically disabilities have generally been placed upon loyal men in the South instead of upon those to whom they should more properly apply. The passage of such a bill as this will result in opening the doors of Congress to men who are now disqualified from occupying seats here or in the Senate. It will also throw open the whole field of appointments to Federal positions to men who are now excluded by the test-oath.

"Are we prepared to take this step? Are we prepared to take this leap in the dark? We know not what the future may have in store for our country. We know not what political changes may occur within the next two years; and the question is, whether this House is ready to agree with the Senate in declaring that all these appointments shall be thrown open to men who carried on the rebellion, who made a gigantic effort to destroy this Government.

"I am in favor, Mr. Speaker, of opening the doors to the enemies of the country when I can see the doors open to loyal men."

Mr. Bingham, of Ohio, said: "Mr. Speaker, I would have preferred if the Senate bill had provided simply for the repeal of what is known as the 'iron-clad' oath of 1862, and for the reason that the oath was, in my judgment, superseded by the provision of the fourteenth article of amendments to the Constitution, and from the day of the adoption of that amendment should

not have remained upon the statute-book. Mr. Speaker, as has been remarked, a new official oath was prescribed by the Congress of the United States, in 1863, as to persons whose disabilities under the fourteenth article of amendments had been removed. While the 'iron-clad oath' remains as to all persons not under disabilities, it does not remain as to that class of persons from whom, by the action of Congress, disabilities have been removed. Gentlemen stand here and ask, 'Why should you require a loyal man to take the iron-clad oath?' I answer back, why should you excuse a man who broke his oath to enter upon the work of the rebellion from taking the iron-clad oath, and deny that privilege to the man who never committed that offence at all? This act of the Senate merely puts those who never did violate an oath to enter upon rebellion upon a footing with those who did, and whose disabilities have been removed. It ought to occur to the House that this is simply equal-handed justice, and there is much in favor of the proposition to commend it as it now stands which never did exist to commend it in the other case at all—never. It became a necessity in 1862 to require of United States officers the iron-clad oath, and that was the reason of its enactment. And because, after disabilities were removed, while the oath remained unchanged the officer-elect could not enter upon the discharge of his duties, Congress passed the act of 1868.

"Now, we are told that we must deny to the people of the United States everywhere the privilege that rightly belongs to them under the Constitution of this country, to elect to Federal offices those who are not under disabilities imposed by the Constitution itself. It is not competent for the Congress of the United States to impose such disabilities; not at all.

"By the passage of the fourteenth article of amendments to the Constitution of the United States, the will of the people was incorporated in the Constitution to the effect that all persons having the qualifications of age, citizenship, and residence, required by the Constitution for Federal offices, and not under the disabilities named in the fourteenth amendment, shall be elective to the offices designated in the Constitution and laws, and if elected by the people should enter upon the office.

"I therefore make this appeal to-day, not so much in behalf of the persons directly affected by this bill as in behalf of the rights of the American people. So long as your statute remains unchanged, you say to the voters of every congressional district in America, that, although they should vote unanimously for a citizen of the United States, resident in the State, qualified as required by the Constitution to represent them in the Congress of the United States, we will interpose this iron-clad oath and nullify their action. Sir, I deny the right of the Congress of the United States, under the circumstances, to do any such thing,

and for the simple reason that, since the passage of the act of 1862 prescribing the test-oath, the people have declared their will and purpose in this behalf, and the extent to which participation in rebellion shall disqualify for office, by an express provision in the fourteenth article of amendments, and also the mode by which such disabilities might be removed."

The question was then taken on the passage of the bill, and it was decided as follows:

YEAS—Messrs. Adams, Archer, Asper, Axtell, Ayer, Bailey, Banks, Barnum, Beck, Bethune, Biggs, Bingham, Bird, Blair, Booker, Buck, Buckley, Burchard, Burr, Calkin, Churchill, Sidney Clarke, Cleveland, Conner, Cook, Cox, Crebs, Darrall, Degener, Dickinson, Joseph Dixon, Dockery, Dox, Duke, Dyer, Eldridge, Farnsworth, Finkelnburg, Garfield, Getz, Gibson, Griswold, Haight, Haldeman, Hale, Hambleton, Hamill, Harris, Hay, Hedin, Hill, Holman, Hotchkiss, Jenckes, Johnson, Thomas L. Jones, Judd, Kellogg, Kerr, Ketcham, Ladin, Lewis, Lynch, Manning, Marshall, Mayham, McCormick, McKee, McKenzie, McNeely, Morey, Morgan, Morphis, Niblack, Halbert E. Paine, William W. Paine, Perce, Peters, Platt, Poland, Potter, Price, Randall, Reeves, Rice, Sanford, Sargent, Lionel A. Sheldon, Sherrod, Shober, Slocum, John A. Smith, Joseph S. Smith, Stiles, Stone, Strader, Strickland, Strong, Swann, Sweeney, Sypher, Taylor, Tillman, Trimble, Upson, Van Auken, Van Trump, Voorhees, Wallace, Cadwalader C. Washburn, Wells, Eugene M. Wilson, Winans, Winchester, Witcher, Wood, Woodward, and Young—118.

NAYS—Messrs. Allison, Ambler, Arnell, Atwood, Beaman, Beatty, Benjamin, Bennett, Benton, George M. Brooks, Buffinton, Burdett, Benjamin F. Butler, Roderick R. Butler, Cessna, William T. Clark, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Coles, Culom, Dawes, Dickey, Nathan F. Dixon, Donley, Duval, Ela, Ferriss, Ferry, Fisher, Gillilan, Hawley, Hoar, Hoge, Holmes, Julian, Kelley, Kelsey, Knapp, Lawrence, Logan, Long, Loughridge, Maynard, McCrary, McGrew, Mercur, Eliakim H. Moore, Jesse H. Moore, William Moore, Daniel J. Morrell, Myers, Newsham, O'Neill, Orth, Packard, Packer, Palmer, Peck, Phelps, Pomeroy, Porter, Prosser, Rainey, Roots, Sawyer, Scofield, Shanks, William J. Smith, Starkweather, Stevens, Stokes, Stoughton, Taffe, Tanner, Townsend, Twichell, Tyner, Van Horn, Van Wyck, Ward, William B. Washburn, Welker, Wheeler, Wilkinson, Willard, Williams, John T. Wilson, and Wolf—90.

NOT VOTING—Messrs. Ames, Armstrong, Barry, Boles, Bowen, Boyd, James Brooks, Cake, Corker, Fitch, Fox, Hamilton, Hawkins, Hays, Hooper, Ingersoll, Alexander H. Jones, Knott, Lash, McCarthy, Milnes, Samuel P. Morrill, Morrissey, Mungen, Negley, Rogers, Schumaker, Porter Sheldon, Worthington C. Smith, Stephenson, and Whitmore—31.

So the bill was passed.

In the House, on February 15th, the bill reported by the Judiciary Committee to enforce the fifteenth amendment was considered.

Mr. Eldridge, of Wisconsin, said: "Mr. Speaker, of all the legislation proposed by this or any other Congress, there is none, in my judgment, more unwarrantable and unjustifiable than that proposed by this bill. It is absolutely atrocious. It has no warrant in the Constitution, and no precedent, unless it be in the act to which this is amendatory, in any previous practice of the Government. Aside from that, it stands alone, original as it is

hideous and revolting. It has not the merit of one redeeming provision or quality. It will bind the several States hand and foot, and deliver them over to the Federal Government subjugated and helpless, the mere tools and slaves of Congress. This bill a law, and the law acquiesced in by the people, the States and all State institutions and laws, so far as rights and powers are concerned, are absolutely overthrown and blotted out. The existence of the States and all their institutions can only be in the name; they cannot act or move except by the permission and will of the Federal power.

"Sir, this bill is the crowning act of centralization and consolidation. Stealthily, and by somewhat measured step heretofore, has been the march of Federal power upon the rights and jurisdiction of States; but this reaches the point and accomplishes State destruction by a single bound, by one grand act. It brushes away at once and finally all State machinery and local authority, and substitutes in their place the Federal bayonets. It not only subjugates and subjects all local and State offices and officers to the Federal will, making them the instruments of its execution, loading them with pains, penalties, and forfeitures for its neglect, but makes them criminals for obedience to the laws of the State whose officers they are, and to which they are bound by their solemn oaths. It creates a host of new offices before unknown, and fills the land with spies and informers, with large pay and emoluments for their filthy work. It establishes and ordains a multitude of crimes heretofore not known to our law. It seeks to overawe free American citizens and control their votes by the menace of the sword and the presence at the voting precinct of the soldier of the army. It places for ten days at and before the time of elections paid agents, two or more at each voting-place, in the interest of the majority of Congress, to 'scrutinize,' manage, and control the votes of the people, to secure by fair means or foul the continuation in power of a corrupt and radical Congress.

"Mr. Speaker, no fair-minded man, no disinterested, unprejudiced man, can read the provisions of this bill without being convinced that it has its origin in the interest of an unscrupulous and desperate party. It bears on its face and in all its provisions the clearest evidence of its origin and purpose, not to secure, but to prevent pure and fair elections, not to aid the voter to express his own unbiased judgment, but to awe him into submission, and control him against his conviction. Its very title is a false pretence, if not a lie, adopted for the purpose of defrauding the people and cheating them into the support of a most infamous measure:

An act to enforce the rights of citizens of the United States to vote in the several States of this Union.

"The falsity of this title will be perceived

VOL. XI.—10 A

by reference to only a few of the provisions of the bill imposing conditions upon and throwing impediments in the way of free suffrage.

"In the first place, by the first section of the bill, the Federal Government takes full and absolute possession of the registry of voters provided for by any of the States of the Union. It takes possession and control of all the State officers provided by State laws for the administration of the registry laws of the States. It adopts the registrations made by the States in the following proviso:

That every registration made under the laws of any State or Territory, for any State or other election at which such Representative or Delegate in Congress shall be chosen, shall be deemed to be a registration within the meaning of this act, notwithstanding the same shall also be made for the purposes of any State, Territorial, or municipal election.

"Notwithstanding this, it imposes penalties, and denounces, as crimes, acts of such officers in conformity with and in obedience to the registry laws of the States.

"It provides for the appointment of supervisors to guard and 'scrutinize' the registrations and elections, whose duties, among others, as provided by the fourth section, are thus defined:

They and each of them are hereby authorized and required to attend at all times and places fixed for the registration of voters, who being registered would be entitled to vote for Representative or Delegate in Congress, and to challenge any person offering to register.

"Let it be observed: 'required to attend and to challenge any person offering to register.' How far this is calculated to enforce the right of citizens of the United States to vote, how far it goes to sustain the truthfulness of the title, I leave for the present to the candid mind to judge.

"The bill further requires these tools of party and of the Federal power to attend at all times and places where the names of registered voters may be marked for challenge, and upon any occasion and at any time when so in attendance to personally inspect and scrutinize such registry; and this without regard to and to the exclusion of the officers of the State in charge. By the fifth section of the bill these supervisors are 'required' to attend at all times and places for holding elections for Representatives in Congress, and for counting the votes cast, 'to challenge any vote offered,' to remain with the ballot-box till the last vote is counted, and to themselves count and canvass each and every ballot, whatever may be the indorsement on said ballot or in 'whatever box it may be found.' And these supervisors are authorized and required to make and attach to the returns any statement touching the truth or accuracy of the registry or the truth or fairness of the election, any law of any State notwithstanding.

"The sixth section provides that these supervisors shall, on the day or days of registration, on the day or days when registered voters

may be marked for challenge, and on the day or days of election, take, occupy, and remain in such position or positions before or behind the ballot-boxes as their judgment may dictate. And when the polls shall be closed they are required to place themselves in such position with reference to the ballot-boxes as they may choose for the purpose of canvassing the votes. All these things may be done without regard for and to the exclusion of the State officers appointed to do the work.

"Mr. Speaker, I might stop here. I have shown by the mere statement of these provisions of this bill that the title is an untruth. In view of these provisions alone no sane man can believe this is a bill to 'enforce the right of citizens of the United States to vote.' It must be seen that it is a bill to prevent, hinder, and delay citizens in voting. It provides a system to drive citizens from the polls, and to disgust all honest men with our elections.

"But the worst of it is yet to be considered. And first, let me remark that this new and cumbersome machinery is not confined, as some have supposed, to cities having upward of twenty thousand inhabitants. The bill is drawn, I apprehend, to suggest this view, and to divert attention from its true intent and meaning. The language of the bill is: 'that whenever, in any city or town having upward of twenty thousand inhabitants,' etc. The word 'town' must be taken in its popular sense, and will be construed in this bill as synonymous with township.

"It will extend to any rural town or township, and every town having a population of twenty thousand will be covered by this provision. These officers then can be appointed in the great majority of the election precincts of the United States. They will swarm over and throughout the length and breadth of the land, and their name will be legion. They will be an electioneering force such as was never before organized in any country on earth; such as no free country can or ever ought to tolerate. But two of these partisan agents in each election district in cities and towns having upward of twenty thousand inhabitants are only a small number of these creatures of the Federal power authorized by this bill, as we shall see when we have looked it through, when we shall consider the other appointments by the United States marshals which will be made, and to which there is no limitation.

"I said the worst is yet to come. By the eighth section the marshal of the United States is empowered, and it is made his duty, on application of two citizens of any such city or town, to appoint 'special deputies,' whose duty it shall be to attend at all the times and places specified for the attendance of the supervisors. The pretence of their appointment is to preserve order, keep the peace, and support and protect the supervisors in the discharge of their duties. They are to prevent fraudulent

registration and fraudulent voting, or fraudulent conduct on the part of any officer of election, and immediately, either at said registration or polling-place or elsewhere, and either before or after registering or voting, to arrest and take into custody, with or without process, any person who shall commit, or attempt, or offer to commit, any of the acts prohibited by this act or the act hereby amended, or who shall commit any offence against the laws of the United States.

"The power to arrest is also conferred upon the supervisors. In addition to all this, the tenth section provides that 'whoever, with or without any authority, power, or process of any State, Territorial, or municipal authority,' shall in any wise 'interfere with or prevent the supervisors of elections, or either of them, or the marshal or his general or special deputies, or either of them,' in any duty required of them, 'or shall molest, interfere with, remove or eject from any such place of registration or poll of election,' 'any supervisor of election, the marshal, or his general or special deputies,' or attempt to offer so to do, or shall refuse or neglect to aid and assist any supervisor of election or the marshal or any of his deputies when required, shall be guilty of a misdemeanor and liable to instant arrest, with or without process, and on conviction thereof shall be punished by imprisonment not less than one year nor more than two years, or by fine not less than one thousand dollars or more than three thousand dollars, or by both such fine and imprisonment, and shall pay the cost of prosecution.

"But, to cap the climax of the enormity, to outrage every sense of honor, propriety, and decency, to insult and trample upon all law, and make the liberty of the citizen a delusion and suffrage a pretence and a snare, it is provided by the twelfth section that all these great and little satraps, the supervisors, the marshal and his deputies, may, when they shall see fit, summon to their aid the by-standers, a *posse comitatus*, and require the commanding officer of the nearest United States military or naval forces to enable them to accomplish the purposes of their appointment. Yes, sir, the bill requires it; the biggest fool the marshal shall be able to appoint his deputy will be in command of the Army and Navy of the United States. 'And it shall be' (I use the words of the bill) 'the duty of such commanding officer, upon such requisition being made, to obey it without delay.' There is no alternative, no discretion, no delay. The highest and the lowest military or naval commander must instantly obey the deputy-marshals created under this act. The President of the United States, the Commander-in-Chief, must be subject to such order. The voice of Congress is the voice of omnipotence. It has made the rule, it has established the regulation. President, generals, lieutenant-generals, major-generals, brigadier-generals, and all, are sub-

ject to the command of the most insignificant deputy-marshal of the United States. Was there ever so supremely ridiculous and absurd a proposition? This bill not only places the States, State officers, and all local State authorities, but the United States, all United States officers, civil and military, and all the powers of the Federal Government, under the control and at the disposal of these election officers."

Mr. Mayham, of New York, said: "But there is one feature of this bill to which I feel constrained briefly to refer. I have said that the Federal courts have exclusive jurisdiction of all cases of outrage perpetrated under the pretence of this act. But that is not all. Any person who may be appointed under this law to a position as supervisor, marshal, or any person whose duty it is to execute this law or aid in its execution, has full and complete immunity from all liability to State or municipal authority."

"If, as I before remarked, the vilest murderer that ever went unchanged should be appointed a special deputy-marshal under this act, no matter how many indictments or bench-warrants from courts of Oyer and Terminer in States were in the hands of sheriffs for his arrest, the sheriff is by this act prohibited from making the arrest while this person is acting under this bill, upon pain of two years' imprisonment and five thousand dollars' fine. Or, if, while so acting as marshal or supervisor, he should commit murder, arson, burglary, or any other crime known to the law, he would still be subject to this immunity and protection under this law."

"Sir, the whole law is, it appears to me, dangerous and pernicious in all of its features and subversive of our free institutions. It centralizes the power in the Federal Government which properly belongs in the States. It is calculated to bring the State and Federal Governments into collision. It allows military interference with the freedom of elections. It takes away the safeguard of the citizen from unlawful and illegal arrest and imprisonment. It creates a horde of Federal officers in the States not chosen by the people, and, in most instances, against their wishes. It unnecessarily increases the expenses of the Government, and, for these and many other reasons, should not pass."

Mr. Churchill, of New York, said: "Mr. Speaker, the Government of the United States was founded upon a principle which, although not new in theory to the speculators upon political rights, was certainly new in practice—the principle that government depends upon the will of the governed; in other words, that the will of the majority of the people of any State, when that will can be ascertained, is the proper law of the country. The whole value, the whole moral force of this principle depends, however, upon the question whether or not, after the election shall be held, the people believe that the result of the election, as declared

by the authorities who preside over it, expresses truly the wishes of the majority of the people. We have for eighty years submitted quietly to the result of elections on the assumption that this principle has been faithfully observed. Elections have been held for the highest and the lowest officers in the State, and whoever has been declared elected has been obeyed as the rightful officer."

"But, Mr. Speaker, for some years past grave doubts have prevailed in different portions of this country as to whether the declared results of elections have truly expressed the will of the people. With regard to officers of States and officers of minor communities, this doubt, so far as it exists, is left to be determined, as it can only be determined, by the laws existing in those States or communities. But so far as regards members of the Congress of the United States, although the first legislation in regard to the matter is intrusted by the Constitution of the United States to the States themselves, the power is properly reserved to Congress itself to determine by what rules these elections shall be conducted; and if, in regard to elections held under State laws for national officers, this doubt exists, if in this way the principle of representative government is threatened, then the power is by the Constitution reserved to Congress to determine the manner in which elections shall be held, and thereby to insure that the result, when declared, shall be the real will of the majority of the people."

Mr. Speaker, the bill before the House is intended to do nothing more than to remove the doubts which have arisen as to whether the declared results of elections held in different parts of the country represent truly the will of the majority of the people."

Mr. Lawrence, of Ohio, said: "Now, sir, there are two questions to be considered, I take it, and they are simply, first, as to the necessity of this bill; and, secondly, as to the constitutional power to enact it."

"A few words as to its necessity. I suppose no member upon this floor will pretend to deny for one moment that in every age and in every country, where there have been popular elections, there have also been frauds and violence, and it has been found necessary to guard against both by law. From the earliest period in English history Parliament has enacted laws for the protection of the exercise of the elective franchise. One of the provisions of the bill which was enacted by this Congress, and which this bill proposes to amend, was taken from section eighty-three of the statutes of sixth Victoria, chapter eighteen. The English statute-books are full of laws designed to prevent bribery, fraud, and violence, and to preserve the purity of the franchise. Sir, in every State of this Union it has been found necessary to enact laws to protect the ballot, to preserve the purity of elections, and this fact shows there is a necessity for legislation upon the subject."

"Sir, we all know that Ku-klux outrages

have been committed, not only in North Carolina, where it was recently necessary to call out a military force to protect the people at the elections, but in other States of the South; and that in more than one city of this Union enormous frauds have been perpetrated upon the ballot-box. I regret that, in the discussion of a grave question like this, one that underlies our republican system, there should be manifested any party spirit or party feeling. I submit that we ought to come up in a spirit of patriotism and all agree to the enactment of whatever laws may be necessary to secure a free and untrammelled ballot.

"And now a few words as to the constitutional power to enact this bill. The gentleman from Pennsylvania (Mr. Woodward) contends that we have no power under the Constitution to pass this bill. Sir, I will call the attention of the House to provisions of the Constitution which, in my judgment, clearly authorize the enactment of this bill. Section four of article one of the Constitution provides:

The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

"Then, again, it is provided that Congress shall have power—

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof.

"Then the fourteenth article of amendments to the Constitution provides—

That no State shall make or enforce any law that shall abridge the privileges or immunities of the citizens of the United States.

"And it also provides that—

Congress shall have power to enforce, by proper legislation, the provisions of this article.

"Under the provisions I have read, Congress could provide officers to conduct the elections of Representatives in Congress. Under these provisions Congress may define and punish crimes against the exercise of the elective franchise in the election of Representatives in Congress.

"Then, sir, the power to make regulations as to the 'times, places, and manner' of holding elections for Representatives in Congress carries with it the right to define penal offences against the exercise of the elective franchise. There can be no doubt of the power of Congress on this subject. The idea that Congress cannot protect the national Government in the election of the very officers who are to make its laws is supremely ridiculous and absurd. No government ever yet lived that had not necessarily and inherently, from the character of its organization, the power of self-preservation, the power to protect itself from overthrow. This power to preserve the purity of

the ballot is simply the exercise of that inherent power, which this, like every other government, has—a power higher, if possible, than the Constitution—the power of preserving its own existence when that existence is threatened by force or fraud; and the highest crime that can be known in a republican government is that which seeks to rob the people of their right of suffrage by frauds upon the ballot.

"Sir, it is said that this bill authorizes the aid of the military power of the Government to be called in; and to this objection is made. I do not say this bill adopts the best mode of calling in the military aid. But, sir, this is no new feature in the legislation of Congress. When it was deemed necessary to capture fugitive slaves, there was no warning voice raised from the other side of this Chamber against the exercise of military power for that purpose; and the Supreme Court of the United States declared that that legislation was authorized by the Constitution."

Mr. Bingham, of Ohio, said: "I desire to offer a substitute for this bill."

The substitute was to strike out all after the enacting clause of the bill and to insert in lieu thereof the following:

That section twenty of the act to enforce the rights of citizens of the United States to vote in the several States of this Union, and for other purposes, approved May 31, 1870, shall be, and hereby is, amended so as to read as follows:

"SEC. 20. *And be it further enacted*, That if at any registration of voters for an election for Representative or Delegate in the Congress of the United States any person shall knowingly personate and register, or attempt to register, in the name of any other person, whether living, dead, or fictitious, or fraudulently register, or fraudulently attempt to register, not having a lawful right so to do; or do any unlawful act to secure registration for himself or any other person; or by force, threat, menace, intimidation, bribery, reward, or offer or promise thereof, or other unlawful means, prevent or hinder any person having a lawful right to register from duly exercising such right; or compel or induce, by any of such means, or other unlawful means, any officer of registration to admit to registration any person not legally entitled thereto, or interfere in any manner with any officer of registration in the discharge of his duties, or by any such means, or other unlawful means, induce any officer of registration to violate or refuse to comply with his duty or any law regulating the same; or if any such officer shall knowingly and wilfully register as a voter any person not entitled to be registered, or refuse to so register any person entitled to be registered; or if any such officer or other person whose duty it is to perform any duty in relation to such registration or election, or to ascertain, announce, or declare the result thereof, or give or make any certificate, document, or evidence in relation thereto, shall knowingly neglect or refuse to perform any duty required by law, or violate any duty imposed by law, or do any act unauthorized by law, relating to or affecting such registration or election, or the result thereof, or any certificate, document, or evidence in relation thereto; or if any person shall aid, counsel, procure, or advise any such voter, person, or officer to do any act hereby made a crime, or to omit any act the omission of which is hereby made a crime, every such person shall be deemed guilty of a crime, and shall be liable to prosecution and punishment therefor, as provided in section nineteen of said act of May 31, 1870, for persons guilty of any of

the crimes therein specified: *Provided*, That every registration made under the laws of any State or Territory, or for any State or other election at which such Representative or Delegate in Congress shall be chosen, shall be deemed to be a registration within the meaning of this act, notwithstanding the same shall also be made for the purposes of any State, Territorial, or municipal elections."

SEC. 2. *And be it further enacted*, That whenever in any city or town having upward of twenty thousand inhabitants there shall be two citizens thereof who, prior to any registration of voters for an election for a Representative or Delegate in the Congress of the United States, or prior to any election at which a Representative or Delegate in Congress is to be voted for, shall make known, in writing, to the judge of the circuit court of the United States for the circuit wherein such city or town shall be, their desire to have said registration, or said election, or both, guarded and scrutinized, it shall be the duty of the said judge of the circuit court, within not less than ten days prior to said registration, if one there be, or if no registration be required, within not less than ten days prior to said election, to open the said circuit court at the most convenient point in said circuit. And the said court, when so opened by said judge, shall proceed to appoint and commission, from day to day and from time to time, and under the hand of the said circuit judge, and under the seal of said court, for each election district or voting precinct in each and every such city or town as shall, in the manner herein prescribed, have applied therefor, and to revoke, change, or renew said appointment, from time to time, two citizens, residents of said city or town, who shall be of different political parties and able to read and write the English language, and who shall be known and designated as supervisors of election. And the said circuit court, when opened by the said circuit judge, as required herein, shall therefrom and thereafter, and up to and including the day following the day of election, be always open for the transaction of business under this act; and the powers and jurisdiction hereby granted and conferred shall be exercised as well in vacation as in term time; and a judge sitting at chambers shall have the same powers and jurisdiction, including the power of keeping order and of punishing any contempt of his authority, as when sitting in court.

SEC. 3. *And be it further enacted*, That whenever, from sickness, injury, or otherwise, the judge of the circuit court of the United States in any judicial circuit shall be unable to perform and discharge the duties by this act imposed, it shall be his duty, and he is hereby required, to select and to direct and assign to the performance thereof, in his place and stead, such one of the judges of the district courts of the United States within his circuit as he shall deem best; and upon such election and assignment being made, it shall be lawful for, and shall be the duty of, the district judge so designated to perform and discharge, in the place and stead of the said circuit judge, all the duties, powers, and obligations imposed and conferred upon the said circuit judge by the provisions of this act.

SEC. 4. *And be it further enacted*, That it shall be the duty of the supervisors of election appointed under this act, and they and each of them are hereby authorized and required, to attend at all times and places fixed for the registration of voters, who, being registered, would be entitled to vote for a Representative or Delegate in Congress, and to challenge any person offering to register; to attend at all times and places when the names of registered voters may be marked for challenge, and to cause such names registered as they shall deem proper to be so marked; to make, when required, the lists, or either of them, provided for in section thirteen of this act, and verify the same; and upon any occasion, and at any time when in attendance under the provisions of this act, to personally inspect and scrutinize such registry,

and for purposes of identification to affix their or his signature to each and every page of the original list, and of each and every copy of any such list of registered voters, at such times, upon each day when any name may or shall be received, entered, or registered, and in such manner as will in their or his judgment detect and expose the improper or wrongful removal therefrom or addition thereto in any way of any name or names.

SEC. 5. *And be it further enacted*, That it shall also be the duty of said supervisors of election, and they and each of them are hereby authorized and required, to attend at all times and places for holding elections of Representatives or Delegates in Congress, and for counting the votes cast at said elections; to challenge any vote offered by any person whose legal qualifications the supervisors, or either of them, shall doubt; to be and remain where the ballot-boxes are kept at all times after the polls are open until each and every vote cast at said time and place shall be counted, the canvass of all votes polled be wholly completed, and the proper and requisite certificates or returns made, whether said certificates or returns be required under any law of the United States, or any State, Territorial, or municipal law; and to personally inspect and scrutinize, from time to time, and at all times, on the day of election, the manner in which the voting is done, and the way and method in which the poll-books, registry lists, and tallies or check-books, whether the same are required by any law of the United States; or any State, Territorial, or municipal law, are kept; and to the end that each candidate for the office of Representative or Delegate in Congress shall obtain the benefit of every vote for him cast, the said supervisors of election are, and each of them is, hereby required, in their or his respective election districts or voting precincts, to personally scrutinize, count, and canvass each and every ballot in their or his election district or voting precinct cast, whatever may be the indorsement on said ballot, or in whatever box it may have been placed or be found; to make and forward to the officer who, in accordance with the provisions of section thirteen of this act, shall have been designated as the chief supervisor of the judicial district in which the city or town wherein they or he shall serve shall be, such certificates and returns of all such ballots as said officer may direct and require; and to attach to the registry list, and any and all copies thereof, and to any certificate, statement, or return, whether the same, or any part or portion thereof, be required by any law of the United States, or of any State, Territorial, or municipal law, any statement touching the truth or accuracy of the registry, or the truth or fairness of the election and canvass, which the said supervisors of election, or either of them, may desire to make or attach, or which should properly and honestly be made or attached, in order that the facts may become known, any law of any State or Territory to the contrary notwithstanding.

SEC. 6. *And be it further enacted*, That, the better to enable the said supervisors of election to discharge their duties, they are, and each of them is hereby, authorized and directed, in their or his respective election districts or voting precincts, on the day or days of registration, on the day or days when registered voters may be marked to be challenged, and on the day or days of election, to take, occupy, and remain in such position or positions, from time to time, whether before or behind the ballot-boxes, as will, in their judgment, best enable them or him to see each person offering himself for registration or offering to vote, and as will best conduce to their or his scrutinizing the manner in which the registration or voting is being conducted; and at the closing of the polls for the reception of votes they are, and each of them is hereby, required to place themselves or himself in such position in relation to the ballot-boxes for the purpose of engaging in the work of canvassing the ballots in said boxes contained as will

enable them or him to fully perform the duties in respect to such canvass provided in this act, and shall there remain until every duty in respect to such canvass, certificates, returns, and statements shall have been wholly completed, any law of any State or Territory to the contrary notwithstanding.

Sec. 7. *And be it further enacted*, That if in any election district or voting precinct in any city, town, or village, for which there shall have been appointed supervisors of election for any election, at which a Representative or Delegate in Congress shall be voted for, the said supervisors of election, or either of them, shall not be allowed to exercise and discharge, fully and freely, and without bribery, solicitation, interference, hindrance, molestation, violence, or threats thereof, on the part of or from any person or persons, each and every of the duties, obligations, and powers conferred upon them by this act and the act hereby amended, it shall be the duty of the supervisors of election, and each of them, to make prompt report, under oath, within ten days after the day of election, to the officer who, in accordance with the provisions of section thirteen of this act, shall have been designated as the chief supervisor of the judicial district in which the city or town wherein they or he served shall be, of the manner and means by which they were, or he was, not so allowed to fully and freely exercise and discharge the duties and obligations required and imposed by this act. And upon receiving any such report it shall be the duty of said chief supervisor, acting both in such capacity and officially as a commissioner of the circuit court, to forthwith examine into all the facts thereof; to subpoena and compel the attendance before him of and witnesses; administer oaths and take testimony in respect to the charges made; and, prior to the assembling of the Congress for which any such Representative or Delegate was voted for, to have filed with the Clerk of the House of Representatives of the Congress of the United States all the evidence by him taken, all information by him obtained, and all reports to him made.

Sec. 8. *And be it further enacted*, That whenever an election at which Representatives or Delegates in Congress are to be chosen shall be held in any city or town of twenty thousand inhabitants or upward, the marshal of the United States for the district in which said city or town is situated shall have power, and it shall be his duty, on the application, in writing, of at least two citizens residing in any such city or town, to appoint special deputy-marshals, whose duty it shall be when required as provided in this act to aid and assist the supervisors of election in the verification of any list of persons made under the provisions of this act, who may have registered or voted, or either; to attend in each election district or voting precinct at the times and places fixed for the registration of voters, and at all times and places when and where said registration may by law be scrutinized, and the names of registered voters be marked for challenge; and also to attend, at all times for holding such elections, the polls of the election in such district or precinct. And the marshal and his general deputies, and such special deputies, shall have power, and it shall be the duty of such special deputies, to keep the peace, and support and protect the supervisors of elections in the discharge of their duties, preserve order at such places of registration and at such polls, prevent fraudulent registration and fraudulent voting thereat, or fraudulent conduct on the part of any officer of election, and immediately, either at said place of registration, or polling-place, or elsewhere, and either before or after registering or voting, to arrest and take into custody, with or without process, any person who shall commit, or attempt or offer to commit, any of the acts or offences prohibited by this act, or the act hereby amended, or who shall commit any offence against the laws of the United States: *Provided*, That no person shall be arrested without process for any offence not com-

mitted in the presence of the marshal or his general or special deputies, or either of them, or of the supervisors of election, or either of them, and for the purposes of arrest or the preservation of the peace, the supervisors of election, and each of them, shall, in the absence of the marshal's deputies, or if required to assist said deputies, have the same duties and powers as deputy-marshals: *And provided further*, That no person shall on the day or days of any such election be arrested without process for any offence committed on the day or days of registration.

Sec. 9. *And be it further enacted*, That whenever any arrest is made under any provision of this act, the person so arrested shall forthwith be brought before a commissioner, judge, or court of the United States for examination of the offences alleged against him, and such commissioner, judge, or court shall proceed in respect thereto as authorized by law in case of crimes against the United States.

Sec. 10. *And be it further enacted*, That whoever, with or without any authority, power, or process, or pretended authority, power, or process, of any State, Territorial, or municipal authority, shall obstruct, hinder, assault, or, by bribery, solicitation, or otherwise, interfere with or prevent the supervisors of election, or either of them, or the marshal or his general or special deputies, or either of them, in the performance of any duty required of them, or either of them, or which he or they, or either of them, may be authorized to perform by any law of the United States, whether in the execution of process or otherwise, or shall by any of the means before mentioned hinder or prevent the free attendance and presence at such places of registration or at such polls of election, or full and free access and egress to and from any such place of registration or poll of election, or in going to and from any such place of registration or poll of election, or to and from any room where any such registration or election or canvass of votes, or of making any returns or certificates thereof may be had, or shall molest, interfere with, remove or eject from any such place of registration or poll of election, or of canvassing votes cast thereat, or of making returns or certificates thereof, any supervisor of election, the marshal, or his general or special deputies, or either of them, or shall threaten, or attempt, or offer so to do, or shall refuse or neglect to aid and assist any supervisor of election, or the marshal or his general or special deputies, or either of them, in the performance of his or their duties when required by him or them, or either of them, to give such aid and assistance, he shall be guilty of a misdemeanor, and liable to instant arrest without process, and on conviction thereof shall be punished by imprisonment not more than two years, or by fine not more than \$3,000, or by both such fine and imprisonment, and shall pay the costs of the prosecution. Whoever shall, during the progress of any verification of any list of the persons who may have registered or voted, and which shall be had or made under any of the provisions of this act, refuse to answer, or refrain from answering, or answering shall knowingly give false information in respect to any inquiry lawfully made, such person shall be liable to arrest and imprisonment as for a misdemeanor, and on conviction thereof shall be punished by imprisonment not to exceed thirty days, or by fine not to exceed \$100, or by both such fine and imprisonment, and shall pay the costs of the prosecution.

Sec. 11. *And be it further enacted*, That whoever shall be appointed a supervisor of election or a special deputy-marshal under the provisions of this act, and shall take the oath of office as such supervisor of election or such special deputy-marshal, who shall thereafter neglect or refuse, without good and lawful excuse, to perform and discharge fully the duties, obligations, and requirements of such office until the expiration of the term for which he was appointed, shall not only be subject to removal from office with loss of all pay or emoluments, but shall be guilty of

a misdemeanor, and on conviction shall be punished by imprisonment for not less than six months nor more than one year, or by fine not less than \$200 and not exceeding \$500, or by both fine and imprisonment, and shall pay the costs of prosecution.

SEC. 12. *And be it further enacted*, That the marshal, or his general deputies, or such special deputies as shall be thereto specially empowered by him, in writing and under his hand and seal, whenever he or his said general deputies or his special deputies, or either or any of them, shall be forcibly resisted in executing their duties under this act, or the act hereby amended, or shall, by violence, threats, or menaces, be prevented from executing such duties, or from arresting any person or persons who shall commit any offence for which said marshal or his general or his special deputies are authorized to make such arrest, are, and each of them is hereby, empowered to summon and call to his or their aid the by-standers or *posse comitatus* of his district, and to require the commanding officer of the nearest United States military or naval force to detail and furnish forthwith a sufficient portion of such military or naval force to enable the said marshal or his deputies to discharge their duties under this act and the act hereby amended. And it shall be the duty of such commanding officer, upon such requisition being made, to obey it without delay, and forthwith to detail and employ the military or naval force of the United States under his command in the aid of said marshal or his said deputies, and under the direction of the said marshal, or any or either of such of his deputies as are herein empowered to make such requisition, to such extent as may be necessary to enable said marshal or his deputies to perform all the duties imposed on them by this act or the act hereby amended.

SEC. 13. *And be it further enacted*, That it shall be the duty of each of the circuit courts of the United States in and for each judicial circuit, upon the recommendation in writing of the judge thereof, to name and appoint, on or before the 1st day of May, in the year 1871, and thereafter, as vacancies may from any cause arise, from among the circuit court commissioners in and for each judicial district in each of said judicial circuits, one of such officers, who shall be known for the duties required of him under this act as the chief supervisor of elections of the judicial district in and for which he shall be a commissioner, and shall, so long as faithful and capable, discharge the duties in this act imposed, and whose duty it shall be to prepare and furnish all necessary books, forms, blanks, and instructions for the use and direction of the supervisors of election in the several cities and towns in their respective districts, to receive the applications of all parties for appointment to such positions, and, upon the opening, as contemplated in this act, of the circuit court for the judicial circuit in which the commissioner so designated shall act, to present such applications to the judge thereof, and furnish information to said judge in respect to the appointment by the said court of such supervisors of election; to require of the supervisors of election, where necessary, lists of the persons who may register and vote, or either, in their respective election districts or voting precincts, and to cause the names of those upon any such list whose right to register or vote shall be honestly doubted, to be verified by proper inquiry and examination at the respective places by them assigned as their residences; and to receive, preserve, and file all oaths of office of said supervisors of election, and of all special deputy-marshals appointed under the provisions of this act, and all certificates, returns, reports, and records of every kind and nature contemplated or made requisite under and by the provisions of this act, save where otherwise herein specially directed. And it is hereby made the duty of all United States marshals and commissioners who shall in any judicial district perform any duties under the provisions of this act, or the act hereby amended, relating to, con-

cerning, or affecting the election of Representatives or Delegates in the Congress of the United States, to, from time to time, and with all due diligence, forward to the chief supervisor in and for their judicial district all complaints, examinations, and records pertaining thereto, and all oaths of office by them administered to any supervisor of election or special deputy-marshal, in order that the same may be properly preserved and filed.

SEC. 14. *And be it further enacted*, That there shall be allowed and paid to each chief supervisor, for his services as such officer, the following compensation, apart from and in excess of all fees allowed by law for the performance of any duty as circuit court commissioner: for filing and caring for every return, report, record, document, or other paper required to be filed by him under any of the provisions of this act, ten cents; for fixing a seal to any paper, record, report, or instrument, twenty cents; for entering and indexing the records of his office, fifteen cents per folio; and for arranging and transmitting to Congress, as provided for in section seven of this act, any report, statement, record, return, or examination, for each folio, fifteen cents; and for any copy thereof, or of any paper on file, a like sum. And there shall be allowed and paid to each and every supervisor of election, and each and every special deputy-marshal who shall be appointed and shall perform his duty under the provisions of this act, compensation at the rate of five dollars per day for each and every day he shall have actually been on duty not exceeding ten days. And the fees of the said chief supervisors shall be paid at the Treasury of the United States, such accounts to be made out, verified, examined, and certified as in the case of accounts of commissioners, save that the examination or certificate required may be made by either the circuit or district judge.

SEC. 15. *And be it further enacted*, That the jurisdiction of the circuit court of the United States shall extend to all cases in law or equity arising under the provisions of this act or the act hereby amended; and if any person shall receive any injury to his person or property for or on account of any act by him done under any of the provisions of this act or the act hereby amended, he shall be entitled to maintain suit for damages therefor in the circuit court of the United States in the district wherein the party doing the injury may reside or shall be found.

SEC. 16. *And be it further enacted*, That in any case where suit or prosecution, civil or criminal, shall be commenced in a court of any State against any officer of the United States, or other person, for or on account of any act done under the provisions of this act, or under color thereof, or for or on account of any right, authority, or title set up or claimed by such officer or other person under any of said provisions, it shall be lawful for the defendant in such suit or prosecution, at any time before trial, upon a petition to the circuit court of the United States in and for the district in which the defendant shall have been served with process, setting forth the nature of said suit or prosecution, and verifying the said petition by affidavit, together with a certificate signed by an attorney or counsellor-at-law of some court of record of the State in which such suit shall have been commenced, or of the United States, setting forth that as counsel for the petition he has examined the proceedings against him, and has carefully inquired into all the matters set forth in the petition, and that he believes the same to be true; which petition, affidavit, and certificate shall be presented to the said circuit court, if in session, and if not, to the clerk thereof at his office, and shall be filed in said office, and the cause shall thereupon be entered on the docket of said court, and shall be thereafter proceeded in as a cause originally commenced in that court; and it shall be the duty of the clerk of said court, if the suit was commenced in the court below by summons, to issue a writ of *certiorari* to the State

court, requiring said court to send to the said circuit court the record and proceedings in said cause; or if it was commenced by *capias*, he shall issue a writ of *habeas corpus cum causa*, a duplicate of which said writ shall be delivered to the clerk of the State court, or left at his office by the marshal of the district, or his deputy, or some person duly authorized thereto; and thereupon it shall be the duty of the said State court to stay all further proceedings in such cause, and the said suit or prosecution, upon delivery of such process, or leaving the same as aforesaid, shall be deemed and taken to be moved to the said circuit court, and any further proceedings, trial, or judgment therein in the State court shall be wholly null and void; and any person, whether an attorney or officer of any State court, or otherwise, who shall thereafter take any steps, or in any manner proceed in the State court in any action so removed, shall be guilty of a misdemeanor, and liable to trial and punishment in the court to which the action shall have been removed, and upon conviction thereof shall be punished by imprisonment for not less than six months nor more than one year, or by fine not less than \$500 nor more than \$1,000, or by both such fine and imprisonment, and shall in addition thereto be amenable to the said court to which said action shall have been removed as for a contempt; and if the defendant in any such suit be in actual custody on mesne process therein, it shall be the duty of the marshal, by virtue of the writ of *habeas corpus cum causa*, to take the body of the defendant into his custody, to be dealt with in the said cause according to the rules of law and the order of the circuit court, or of any judge thereof in vacation. And all attachments made and all bail or other security given upon such suit or prosecution shall be and continue in like force and effect as if the same suit or prosecution had proceeded to final judgment and execution in the State court. And if upon the removal of any such suit or prosecution it shall be made to appear to the said circuit court that no copy of the record and proceedings therein in the State court can be obtained, it shall be lawful for said circuit court to allow and require the plaintiff to proceed *de novo*, and to file a declaration of his cause of action, and the parties may thereupon proceed as in actions originally brought in said circuit court; and on failure of so proceeding, judgment of *non prosequitur* may be rendered against the plaintiff, with costs for the defendant.

Sec. 17. *And be it further enacted*, That in any case in which any party is or may be by law entitled to copies of the record and proceedings in any suit or prosecution in any State court, to be used in any court of the United States, if the clerk of said State court shall, upon demand and the payment or tender of the legal fees, refuse or neglect to deliver to such party certified copies of such record and proceedings, the court of the United States in which such record and proceedings may be needed, on proof by affidavit that the clerk of such State court has refused or neglected to deliver copies thereof on demand as aforesaid, may direct and allow such record to be supplied by affidavit or otherwise as the circumstances of the case may require and allow; and thereupon such proceeding, trial, and judgment may be had in the said court of the United States, and all such processes awarded, as if certified copies of such records and proceedings had been regularly before the said court; and hereafter in all civil actions in the courts of the United States either party thereto may notice the same for trial.

Sec. 18. *And be it further enacted*, That sections five and six of the act of the Congress of the United States approved July 14, 1870, and entitled "An act to amend the naturalization laws and to punish crimes against the same," be, and the same are hereby, repealed, but this repeal shall not affect any proceeding or prosecution now pending for any offence under the said sections, or either of them, or any question which may arise therein respecting the

appointment of the persons in said sections, or either of them, provided for, or the powers, duties, or obligations of such persons.

Sec. 19. *And be it further enacted*, That all votes for Representatives in Congress shall hereafter be by written or printed ballots, any law of any State to the contrary notwithstanding; and all votes received or recorded contrary to the provisions of this section shall be of none effect.

Mr. Finkelnburg, of Missouri, said: "I will move to strike out of section twelve of the substitute the following:

And to require the commanding officer of the nearest United States military or naval force to detail and furnish forthwith a sufficient portion of such military or naval force to enable the said marshal or his deputies to discharge their duties under this act and the act hereby amended. And it shall be the duty of such commanding officer, upon such requisition being made, to obey it without delay, and forthwith to detail and employ the military or naval force of the United States under his command in the aid of said marshal or his said deputies, and under the direction of the said marshal, or any or either of such of his deputies as are herein empowered to make such requisition, to such extent as may be necessary to enable said marshal or his deputies to perform all the duties imposed on them by this act or the act hereby amended.

"That we leave the section to read as follows:

Sec. 12. *And be it further enacted*, That the marshal, or his general deputies, or such special deputies as shall be thereto specially empowered by him, in writing and under his hand and seal, whenever he or his said general deputies or his special deputies, or either or any of them, shall be forcibly resisted in executing their duties under this act or the act hereby amended, or shall, by violence, threats, or menaces, be prevented from executing such duties, or from arresting any person or persons who shall commit any offence for which said marshal or his general or his special deputies are authorized to make such arrest, are, and each of them is hereby, empowered to summon and to call to his or their aid the bystanders or *posse comitatus* of his district."

The question was taken upon the amendment, and it was agreed to.

The substitute, as amended, was agreed to.

The bill, as amended, was then read a third time.

The question was then taken, and it was decided as follows:

YEAS—Messrs. Ambler, Ames, Armstrong, Asper, Atwood, Ayer, Bailey, Barry, Beaman, Beatty, Benjamin, Bennett, Bethune, Bingham, Blair, Boles, George M. Brooks, Buck, Buckley, Buffinton, Burdett, Benjamin F. Butler, Roderick R. Butler, Cessna, Churchill, William T. Clark, Sidney Clarke, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cowles, Cullom, Darrall, Degener, Joseph Dixon, Dockery, Donley, Duval, Dyer, Ela, Ferriss, Ferry, Finkelnburg, Fisher, Garfield, Gilfillan, Hale, Hamilton, Harris, Hawley, Hays, Hill, Hoar, Holmes, Hooper, Hotchkiss, Jencks, Judd, Julian, Kelley, Kellogg, Kelsey, Laflin, Lash, Lawrence, Logan, Long, Loughbridge, Lynch, Maynard, McCarthy, McCrary, McGrew, McKee, McKenzie, Mercier, Eliakim H. Moore, Jesse H. Moore, William Moore, Morey, Morphis, Daniel J. Morrell, Samuel P. Morrill, Myers, Negley, Newsham, O'Neill, Orth, Packard, Halbert E. Paine, Palmer, Peck, Perce, Peters, Phelps, Platt, Poland, Pomeroy, Porter, Prosser, Rainey, Roots, Sanford, Sargent, Sawyer, Seofield, Shanks, Porter Sheldon, John A. Smith,

William J. Smith, Worthington C. Smith, Starkweather, Stevens, Stevenson, Stokes, Stoughton, Strickland, Strong, Sypher, Tanner, Taylor, Tilman, Townsend, Twichell, Tyner, Upson, Van Horn, Van Wyck, Wallace, Ward, Cadwalader C. Washburn, William B. Washburn, Welker, Wheeler, Whiteley, Whitmore, Wilkinson, Willard, Williams, John T. Wilson, Witcher, and Wolf—144.

YAYS—Messrs. Archer, Axtell, Beck, Biggs, Bird, Booker, James Brooks, Burr, Calkin, Conner, Cox, Crebs, Dickey, Dickinson, Duke, Eldridge, Fox, Getz, Gibson, Griswold, Haight, Haldeman, Hambleton, Hamill, Hawkins, Hay, Holman, Johnson, Thomas L. Jones, Kerr, Lewis, Manning, Marshall, Mayhain, McCormick, McNeeley, Morgan, Morrissey, Niblack, William W. Paine, Potter, Price, Randall, Reeves, Rice, Rogers, Schumaker, Sherrod, Shober, Slocum, Joseph S. Smith, Stiles, Stone, Strader, Swann, Trimble, Van Auker, Van Trump, Voorhees, Wells, Eugene M. Wilson, Wood, Woodward, and Young—64.

NOR VOTING—Messrs. Adams, Allison, Arnell, Banks, Barnum, Benton, Bowen, Boyd, Burchard, Cake, Cleveland, Corker, Dawes, Nathan F. Dixon, Dox, Farnsworth, Fitch, Heflin, Hoge, Ingersoll, Alexander H. Jones, Ketcham, Knapp, Knott, Milnes, Mungen, Packer, Lionel A. Sheldon, Sweeney, Taffe, Winans, and Winchester—32.

So the bill was passed.

In the Senate, on February 24th, the above bill of the House was considered.

Mr. Vickers, of Maryland, said: "Mr. President, this bill seems to be the offspring of a bill passed at the last session of Congress with the specious title of an act to enforce the right of citizens of the United States to vote in the several States of the Union, and for other purposes. The effect, if not the object of the bill of the last session, was to intimidate and overawe the free citizens of the United States who were entitled to the right of suffrage; but the people were so prudent, forbearing, and discreet, that no disturbance was created, and therefore no pretext furnished for an attempted interference with the freedom of elections or to set aside the elections which were held in the States.

"Thus the bill failed of its effect; the results of the elections were not such as the framers of the bill contemplated when they introduced and passed it in Congress. It became necessary therefore to bring forward the present bill to strengthen the weaknesses of the bill of last session and to supply additional and stringent measures in reference to future elections to be held in the States. Both bills are obnoxious to constitutional objections; they are bills inexpedient, unjust, and unfit to be executed in the States.

"This bill assumes the power of the General Government to superintend and regulate registrations and elections in the States for Representatives to Congress, and to punish by fine and imprisonment where such registrations and such elections are made and held, as well for State Legislatures and officers of the States. The power is claimed under the first clause of the fourth section of the Constitution, which reads:

The times, places, and manner of holding elec-

tions for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

"In pursuance of this provision the State Legislatures did prescribe the times, places, and manner of choosing Representatives to Congress, and under those regulations the General Government was put into operation, and has continued down almost to the present time, without any interference on the part of that Government except that in 1862 an act of Congress was passed providing for the district system, instead of election by general ticket. This was alleged to be necessary, to preserve the rights of minorities. The reason for giving this power to the States in the first place in the Constitution was—

"1. That the State Legislatures, coming fresh and direct from the people, knew best what times, places, and manner of elections would suit them. The General Government was further removed.

"2. The framers of the Constitution had strong reasons for thus investing the States with the power. They knew that the Constitution would not be adopted without it.

"It was defended by Mr. Hamilton in the *Federalist* in three numbers; and he put it expressly on the ground of the necessity of placing the ulterior authority in the General Government.

"Both Mr. Nicholas and Mr. Madison place the power on the express ground of absolute necessity, and assert its exercise only—

"1. To protect the existence of the Government.

"2. To prevent an end being put to the Union, in the language of Mr. Nicholas.

"3. In the language of Mr. Madison, to prevent its own dissolution.

"4. And if the State governments should not attempt to use the power to destroy, Mr. Madison said it would never be exercised by the General Government.

"Judge Story, in his Commentaries on the Constitution, embraces the views of Hamilton, Madison, and Nicholas.

"Mr. President, there is one principle that runs through all these authorities which I have submitted, and that is, that Congress can only interfere to perpetuate the Government, to prevent its dissolution. That is the very ground upon which the framers of the Constitution placed the defence of this provision. If it had been asserted at the time when the Constitution was under consideration that Congress should have the power at any time, at its own pleasure, to withdraw from the States the regulation of the time, place, and manner of holding elections, the Constitution never would have been adopted. It required three labored articles from General Hamilton to defend this provision, on this ground of absolute necessity and of self-protection.

"But this provision itself was predicated and grounded upon the necessity of the General Government preserving its own existence. It was the first law of the Constitution, as it is the first law of Nature, that a man shall have the power to defend himself, to preserve his own existence; and so it was necessary, as they alleged, that this power should ultimately be placed in the General Government, but in the first place in the States. Why was it placed in the power of the States at all? Could not the Convention in this Constitution have directed the election of members of Congress to be held at a particular period which might have been stated? Could they not have made some other provision for the first election? Sir, it was because the people thought, and it was inculcated upon them by the framers and defenders of the Constitution, that this power should be given to the States to be exercised by them, and that it should only be resumed by the General Government whenever the States intentionally refuse, or by neglect should omit, to order elections, or where, by reason of an invasion of the country, the elections in the States could not be held at the places and at the times which the State laws had prescribed; and when an enemy possessed a State, or a part of a State, Congress, in this case of extremity and necessity, might appoint the time, place, and manner of holding the election in order to perpetuate its own existence; for if there be no House of Representatives, the General Government must necessarily be dissolved. There is no power to lay taxes and to originate appropriations but the House of Representatives. That being an essential part of the Government, it was absolutely necessary that under extreme circumstances the power should be lodged somewhere of continuing the existence of that House.

"But what is proposed by this bill? You propose to send United States marshals to superintend State registrations and elections held and regulated by State laws. You propose to make them spies and informers upon State officers and authorities. You propose to prescribe the manner in which these State officers shall perform their duties, and to punish any one by fine and imprisonment who violates a law of a State. You assume the right to write upon and identify the books and papers of judges and registration-officers; to challenge persons offering to register; to mark upon the book such challenges; to challenge voters at elections; to inspect and scrutinize at all times during the election the manner in which the voting is done and poll-books kept; to scrutinize, count, and canvass each and every ballot; to remain before and behind the ballot-boxes; to have appointed marshals, deputy-marshals, and special deputies without number, and in their discretion, before or after registration or voting, to arrest and take into custody, with or without process, any person who shall in their judgment commit any of-

fence under this act. It punishes any one who, by authority of any sovereign State, shall obstruct these high functionaries of the Federal Government in performing their duties as they may choose to understand them; and any who shall not in humble submission get out of the way in their 'full and free access and egress to and from any such place of registration or poll of election;' and also punishes any one 'who shall refuse to aid and assist any supervisor of election, or the marshal, or his general or special deputies, or either of them, in the performance of his or their duties, when required by him or them;' and shall be subject to immediate arrest without process, and on conviction to be punished by imprisonment not less than one year nor more than two years, or by fine not less than one thousand nor more than three thousand dollars, or by both fine and imprisonment, and to pay the costs of prosecution! Every special deputy is to be paid five dollars per day; and in case any citizen shall sue any of these high dignitaries in any of the State courts for assault and battery, or false imprisonment, or if any grand-jury shall indict any such Federal officer or deputy for an offence against the peace and order of the State, the defendant, at his mere will and pleasure, without an affidavit, can put all the State courts at defiance, and remove his case to a United States court, distant from the scene of outrage and oppression, and in which the jury is to be selected by a partisan officer in full sympathy and accord with these supervisors, deputies, and special deputies, and overseers of State elections. Did any bill ever before presented to an American Congress contain such a catalogue of oppressions and enormities as that under consideration? The alien and sedition laws of the elder Adams were mild and benignant compared with the provisions of this bill. They were intended as aids to prop a failing Administration; these, to perpetuate party ascendancy under the guise of a disposition to prevent or punish frauds. The first proved to be a lever to overthrow those whom they were intended to subserve; the latter will contribute much to the discomfiture and destruction of a party which, for partisan ends, will inflict so many and such dangerous wounds upon the Constitution of the country and the liberties of the people."

The bill was reported to the Senate without amendment, ordered to a third reading, and read the third time. The question being taken, resulted as follows:

YEAS—Messrs. Abbott, Ames, Anthony, Boreman, Buckingham, Carpenter, Chandler, Cole, Conkling, Corbett, Cragin, Edmunds, Gilbert, Hamilton of Texas, Hamlin, Harlan, Howard, Howe, Howell, McDonald, Morrill of Vermont, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Revels, Robertson, Ross, Sawyer, Scott, Sherman, Spencer, Stearns, Stewart, Warner, Williams, and Wilson—89.

NAYS—Messrs. Bayard, Blair, Casserly, Fowler, Hamilton of Maryland, Johnston, McCreery, Miller, Thurman, and Vickers—10.

ABSENT—Messrs. Brownlow, Cameron, Cattell,

Davis, Fenton, Ferry, Flanagan, Harris, Hill, Kellogg, Lewis, Morrill of Maine, Morton, Patterson, Rice, Saulsbury, Schurz, Sprague, Stockton, Sumner, Thayer, Tipton, Trumbull, Willey, and Yates—25.

So the bill was passed.

In the Senate, on December 20th, Mr. Morton, of Indiana, moved to take up his resolution above mentioned (*see* page 133) relative to San Domingo. The reading of the following resolution, submitted by Mr. Sumner, of Massachusetts, on December 9th, was also called for:

Resolved, That the President of the United States be requested to communicate to the Senate, if, in his opinion, not incompatible with the public interests, copies of all papers and correspondence relating to the proposed annexation of the Dominican portion of the island of San Domingo, or the purchase of any part thereof, including the original and all subsequent instructions to any agent or consul of the United States, with the correspondence of such agent or consul; also, any protocol or convention signed by such agent or consul; also an account of the debt and liabilities of the Dominican Government, especially its obligations to the neighboring republic of Hayti; also, the provisions of the existing constitution of Dominica, so far as the same relate to the sale or transfer of the national domain; also, any treaty with Hayti or France by which Dominica is bound or affected; also, any communication from the neighboring republic of Hayti, or from our minister there, relating to the proposed annexation; also, instructions to the commander of our naval squadron in the waters of the island since the commencement of the late negotiations, with the reports and correspondence of such commander; also, any information tending to show what European power, if any, proposes to acquire jurisdiction of any part of the island, and, if so, of what part; also, any information with regard to the position of President Baez, under whom the treaty of annexation was negotiated, and the extent to which he has been maintained in power by the presence of United States vessels-of-war; also, any information with regard to the sentiments of the people in Dominica, and the reported pendency there of civil war; also, any information with regard to any claim of jurisdiction by the republic of Hayti over the territory of Dominica.

Mr. Edmunds, of Vermont, said: "Mr. President, I simply rise to say that I do not see any ground myself for opposing either of these resolutions or for not taking them up and acting upon them. I now speak of their substance; I have not stated the exact phraseology of either of them; but I mean the main idea. They are not in the least incompatible, I would suggest to my friend from Massachusetts (Mr. Sumner); both of them are calling for information, and each for information of a different kind. One is for diplomatic correspondence, the political intercourse between States respecting this island; the other is for the information of Congress and of the Senate respecting the actual condition—physical, moral, and social—of the island itself. Certainly both of them are subjects of interest to the American people, whatever their opinions may now be, or whatever they may hereafter be, touching what is wise or desirable respecting the acquisition of that territory."

Mr. Howard, of Michigan said: "As was

very justly observed by the Senator from Vermont, these two resolutions contemplate a different description of inquiry. The resolution presented by the honorable Senator from Indiana contemplates the appointment of a commission, who, I suppose, if it shall be created, will repair to the island of San Domingo for the purpose of making a thorough inquiry into the condition of that island, its population and commercial advantages, and, in short, into the necessity and propriety of its final annexation to the United States, as has been suggested by the President of the United States in his message at the opening of the present session.

"This inquiry is a much broader and more satisfactory one in its nature, as it seems to me, than that which is suggested by the resolution of the honorable Senator from Massachusetts. The latter resolution simply calls for executive documents and information documentary in its nature and in the possession of the Executive of the United States.

"Now, I wish to inquire of the honorable Senator from Massachusetts, who asks that the resolution of the Senator from Indiana may be postponed until his is answered, what he expects to obtain that is not already presented in the report of that special committee, as found in committee report No. 234 of the last session of Congress?"

Mr. Sumner, of Massachusetts, said: "My friend, the other day, called my attention to the point which he now makes, and at his suggestion I referred to the report which is before him. I examined it to see to what extent it contained a reply to the inquiries in my resolution, and I found very, very little indeed. One or two things in my resolution of inquiry will be found in that report, but the main body of inquiries in my resolution is unanswered in that report. At the proper time I will go into an explanation."

Mr. Sumner subsequently further explained the object of his resolution, until the question was taken on the motion of Mr. Morton to take from the table the resolution of the latter. On this motion the yeas and nays were as follows:

YEAS—Messrs. Abbott, Ames, Boreman, Brownlow, Buckingham, Carpenter, Chandler, Cole, Conkling, Corbett, Edmunds, Flanagan, Gilbert, Hamlin, Harlan, Howard, Howe, Howell, Lewis, Morton, Nye, Osborn, Pomeroy, Pool, Ramsey, Revels, Rice, Sawyer, Sherman, Sprague, Stewart, Thayer, Warner, Willey, Williams, and Windom—38.

NAYS—Messrs. Bayard, Casserly, Davis, Fowler, Hamilton of Maryland, Harris, McCreery, Morrill of Vermont, Patterson, Robertson, Schurz, Scott, Stockton, Sumner, Thurman, Tipton, and Vickers—17.

ABSENT—Messrs. Anthony, Cameron, Cattell, Cragin, Fenton, Ferry, Hamilton of Texas, Johnston, Kellogg, McDonald, Morrill of Maine, Pratt, Ross, Saulsbury, Spencer, Trumbull, Wilson, and Yates—18.

Mr. Buckingham, of Connecticut, then moved to refer the resolution to the Committee on Foreign Affairs.

Mr. Thurman, of Ohio, said: "I believe, sir, it is proper enough for me to say, for I think the President himself says it in his annual message, that a treaty was negotiated for the annexation of Dominica to the United States, and that that treaty failed to receive the requisite votes in favor of its ratification, thus disclosing the fact that between the President of the United States and the Senate there is a direct opposition of opinion upon the subject of this acquisition. Now, not willing to defer to the opinion of the Senator—and I do not say that in order to blame him; he has a right to his own opinion—the President, with very great earnestness, urges upon Congress and upon the country the desirableness of this acquisition, and he goes so far as to suggest the mode by which Dominica may be annexed. Seeing that it is not likely to be annexed under the treaty-making power, for want of the requisite support in the Senate, he suggests that it may be annexed by joint resolution, as in the case of Texas; and it is with a view to carry out, no doubt, the wishes or opinions of the President in this particular that the Senator from Indiana has introduced this joint resolution.

"Now, the first thing that strikes me is this: is the Senate ready to recede from its position? Is the Senate willing to ratify a treaty for the annexation of Dominica, or is the Senate ready to annex Dominica by joint resolution? And in that connection I beg leave to call the attention of the Senate to the fact that you cannot by joint resolution annex Dominica as a Territory; you must annex her as a State if you annex her by joint resolution. There is no clause in the Constitution of the United States that provides for the acquisition of territory by joint resolution of Congress unless it be one single provision, and that is that the Congress may admit new States into the Union. And it was upon the argument that there was no limitation upon that power to admit new States into the Union, that it was not limited to territory belonging to the United States, but that territory belonging to a foreign power might be admitted into the Union as a State—it was upon that doctrine that the resolution in the case of Texas was passed. But no one has ever pretended that you could by joint resolution annex territory as a Territory without admitting it as a State. Then, if a treaty is to be abandoned, the proposition which is before the Senate is, is this Senate prepared to annex Dominica in its present condition, without one man in it out of ten thousand who can speak the English language, without one man out of ten thousand who can read a word in any language, without one man in ten thousand who has the slightest idea of our Government? Is the Senate prepared to admit Dominica as a State in this Union at this session of Congress? That is the question."

Mr. Scott, of Pennsylvania, said: "Mr.

President, it is a wide departure that we are asked to take from the original policy of the Government. It was at one time made a question, and a very serious one, whether Congress had the right to acquire territory at all. We all know that Mr. Jefferson, when it was proposed to acquire Louisiana, if not in his public messages, in his private letters, said that there was no power vested in Congress to acquire it, even although it was a great commercial necessity, and he advised his friends to violate the letter of the Constitution and depend upon the people for an amendment afterward to justify it. But now we are asked not simply to annex territory within the continent, but to go outside and commence the policy of insular acquisition. That policy is well worth inquiring into before we send a commission to investigate the physical, and mental, and moral condition of the people who inhabit the island which we are asked to annex."

Mr. Patterson, of New Hampshire, said: "What are the facts? We have had a treaty brought before the Senate for the annexation of Dominica. All the facts upon which the President acted in negotiating that treaty are before the President of the United States, and it is in his power to communicate all those facts to the Senate of the United States on the call of the Senator from Massachusetts. If those facts were sufficient to justify the President of the United States in negotiating the treaty for the annexation of that island, they are sufficient for the action of the Senate when the subject is brought before the Senate. If they are not sufficient for the Senate of the United States, then, sir, they were not sufficient for the President of the United States in negotiating the treaty, and no treaty ever should have been negotiated without a fuller knowledge of the facts.

"It seems to me that this is a point which we have overlooked in this discussion. The President has all the facts on which the original treaty was negotiated, and he can communicate them to the Senate upon the call of the Senator from Massachusetts. If they were sufficient for him in his action, they should be sufficient for the Senate of the United States in its action. If sufficient facts are not accessible to us here in Washington, then the facts were not sufficient to justify the Administration in negotiating the treaty which was placed before us for our action."

Mr. Morrill, of Vermont, said: "Mr. President, I trust that this resolution will be allowed to go to the Committee on Foreign Relations. The Senator from Indiana has already intimated his willingness to accept of one amendment. I think that if the resolution is to pass it ought to be very carefully matured and further amended. Why this haste? Why not take a little time to consider a matter so confessedly important, and have it properly matured, if we are to do any thing of this kind at this early day? I hope, therefore, that the

resolution will be referred, as proposed by the Senator from Connecticut."

Mr. Edmunds, of Vermont, said: "Mr. President, I say that the information which these gentlemen are to report to us I believe will demonstrate to me and my associates in this body that the present incorporation of that people into the political system of the United States, taking part in its government with us and making laws for us, is not desirable. So, then, as an opponent of the annexation of San Domingo, I am very glad indeed that the Senator from Indiana has proposed that a commission appointed by the President of the United States, the political friend certainly of us all upon this side of the Chamber, and the independent Chief Magistrate of the whole people, without regard to politics, who would not select for such a high mission as this any persons in whose rectitude, and fidelity, and intelligence, entire trust could not be placed, shall proceed to obtain this information.

"Now, sir, it cannot be disguised, it ought not to be disguised from the people of this country and from ourselves, that we cannot fail to look with absorbing interest upon all the peoples and the islands of this great archipelago of the tropics. We have for more than half a century held out to the world that we should look with a jealous eye upon any interference with their affairs by foreign nations further than the principles of public law and the existing condition of things permitted it. Certainly if there be any distinctive American doctrine upon which the whole people are supposed to be a unit it is that we shall not permit European interference or aggression beyond existing conditions (which the faith of treaties and public law do not permit us to interfere with), or the enlargement of the domain of that species of interference in Governments in this great tropical archipelago of which I have spoken. Therefore, information in respect to any of these islands, in respect to their capacity to uphold and support a free, industrious, and self-governing population, is of interest to the people of the United States. I say this with reference to Cuba as well as San Domingo; Hayti, the other end of this island, as well as Dominica; St. Thomas, or whatever the island may be; as to the people who inhabit all those islands, there must be with us always a centring and absorbing interest, they, taken as a whole, lying in that great Mediterranean Sea of the Western Hemisphere connecting us with the isthmus of Panama and our great coast on the Pacific."

Mr. Sumner: "Mr. President, I am going now to renew the motion I made a few moments ago, that the Senate proceed to the consideration of executive business."

The Presiding Officer: "The question is on the motion of the Senator from Massachusetts, to proceed to the consideration of executive business."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Bayard, Casserly, Davis, Fowler, Hamilton of Maryland, Harris, Johnston, Kellogg, McCreery, Patterson, Robertson, Schurz, Scott, Sherman, Stockton, Sumner, Tipton, and Vickers—18.

NAYS—Messrs. Abbott, Ames, Boreman, Brownlow, Buckingham, Carpenter, Chandler, Conkling, Corbett, Cragin, Edmunds, Flanagan, Hamilton of Texas, Hamlin, Harlan, Howe, Howell, Lewis, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Revels, Rice, Sawyer, Stewart, Thayer, Trumbull, Warner, Williams, and Yates—34.

ABSENT—Messrs. Anthony, Cameron, Cattell, Cole, Fenton, Ferry, Gilbert, Howard, McDonald, Morrill of Maine, Morrill of Vermont, Ross, Saulsbury, Spencer, Sprague, Thurman, Willey, Wilson, and Windom—19.

So the motion was not agreed to.

Mr. Sumner: "Mr. President, the resolution before the Senate commits Congress to a dance of blood. It is a new step in a measure of violence. Several steps have already been taken, and Congress is now summoned to take another.

"Now, sir, by this joint resolution the President is authorized to appoint three 'commissioners,' and also a 'secretary,' the latter to be versed in the English and Spanish languages, to proceed to the island of San Domingo, and to inquire into, ascertain, and report certain things. I say this is a legislative act creating three new offices, and the Senator says that it is simply a resolution of inquiry. Let me put a question to the Senator from Indiana. Suppose a joint resolution were brought forward authorizing the appointment of three commissioners to proceed to England in order to ascertain the condition of United States securities and the possibility of finding a market there; according to the suggestion of the Senator it would be a resolution of inquiry only. Would he allow it to pass without a reference to the Committee on Finance? Would he not say that it opened a most important question, which should be considered by the appropriate committee?

"The Senator is too experienced to be put aside by the suggestion that may be brought forward that the commissioners shall serve without compensation except the payment of expenses. Does this alter the case? Without those words in this joint resolution the general diplomatic law would take effect, and it would at least be a question if they would not be entitled to the salary of \$7,500 per annum. And yet a resolution of this character, creating three new offices, is called simply a resolution of inquiry! Sir, the Senator is mistaken; and his mistake in this matter illustrates other mistakes with reference to the important subject now before the Senate.

"The Senator, it seems to me, has not comprehended the object of this resolution. To my mind it is plain. It is simply this: it is to commit Congress to the policy of annexation. I insist upon this point: the object of the resolution, and I will demonstrate it, is to com-

mit Congress to the policy of annexation. Otherwise, why is the resolution introduced? The President does not need it. Under his general powers he is authorized to appoint agents, if he pleases, to visit foreign countries, and he is supplied with a secret-service fund by which their expenses may be defrayed. The President does not need this resolution. It is an act of supererogation so far as he is concerned, and it is also contrary, so far as I am informed, to the precedents of our history.

"Sir, others may do as they please; others may accept this policy; I will not. I have already set myself against it, and I continue now as firm against it as ever. The information which I have received since our discussions last year has confirmed me in the conclusions which I felt it my duty then to announce. In now presenting those conclusions I beg to say that I shall forbear from considering whether the territory of Dominica is desirable or not; I shall forbear from considering its resources, even its finances, even its debt—menacing as I know it is to the Treasury of our country—except so far as that debt is connected with the relations with Hayti. At some other time these other topics will be proper for consideration. For the present I prefer to confine myself to grounds on which there can be no debate.

"I object to this proposition, because it is a new stage in a measure of violence, which, so far as it has been maintained, has been propped by violence ever since. I use strong language, but only what the occasion requires. As a Senator, as a patriot, I cannot see my country suffer in its good name without an earnest effort to save it.

"The negotiation for annexation began with a person known as Buenaventura Baez. All the evidence, official and unofficial, shows him to be a political jockey. But he could do little alone; he had about him two other political jockeys, Cazneau and Fabens; and these three together, a precious copartnership, seduced into their firm a young officer of ours, who entitles himself 'aide-de-camp to the President of the United States.' Together they got up what was entitled a protocol, in which the young officer entitling himself aide-de-camp to the President proceeded to make certain promises for the President. Before I read what I shall of this document, I desire to say that there is not one word showing that at the time this 'aide-de-camp,' as he called himself, had any title or any instruction to take this step. If he had, that title and that instruction have been withheld; no inquiry has been able to penetrate it. At least the committee which brought out the protocol did not bring out any such authority. The document is called 'a protocol,' which I need not remind you, sir, is in diplomatic terms the first draft of a treaty, or the memorandum between two powers in which are written down the bases of some subsequent negotiation; but at the

time it is hardly less binding than a treaty itself, except, as you are well aware, under the Constitution of the United States it can receive no final obligation without the consent of the Senate. This document begins as follows:

The following bases, which shall serve for framing a definitive treaty between the United States and the Dominican Republic, have been reduced to writing and agreed upon by General Orville E. Babcock, aide-de-camp to his Excellency General Ulysses S. Grant, President of the United States of America, and his special agent to the Dominican Republic, and Mr. Manuel Maria Gautier, Secretary of State of the departments of the Interior and of Police, charged with the foreign relations of the said Dominican Republic.

"Here you see how this young officer, undertaking to represent the United States of America, entitles himself 'aide-de-camp to his Excellency General Ulysses S. Grant, President of the United States of America, and his special agent to the Dominican Republic.' Sir, you have experience in the Government of this country; your post is high, and I ask you do you know any such officer in our Government as 'aide-de-camp to his Excellency the President of the United States?' Does his name appear in the Constitution, in any statute, in the history of this republic anywhere? If it does, your information, sir, is much beyond mine. I have never before met any such instance. I believe this young officer stands alone in using this lofty designation. I believe, still further, that he stands alone in the history of free governments. I doubt whether you can find a diplomatic paper anywhere in which any person undertaking to represent his government has entitled himself aide-de-camp of the chief of the state. The two duties are incompatible, according to all the experience of history. No aide-de-camp would be commissioned as a commissioner; and the assumption of this exalted and exceptional character by this young officer shows at least his inexperience in diplomacy. However, he assumed it; and it doubtless produced a great effect with Baez, Cazneau, and Fabens, the three confederates. They were doubtless pleased with the distinction. It helped on the plan they were engineering.

"The young aide-de-camp then proceeds to pledge the President as follows:

I, His Excellency General Grant, President of the United States, promises *privately* to use all his influence in order that the idea of annexing the Dominican Republic to the United States may acquire such a degree of popularity among members of Congress as will be necessary for its accomplishment.

"Shall I read the rest of the document? It is somewhat of the same tenor. There are questions of money in it, cash down, all of which must have been particularly agreeable to the three confederates. It finally winds up as follows:

Done in duplicate, *in good faith*, in the city of San Domingo, the 4th day of the month of September, A. D. 1869.
ORVILLE E. BABCOCK,
MANUEL MARIA GAUTIER.

"In 'good faith,' if you please, sir.

"I have heard it said that Orville E. Babcock did not write 'aide-de-camp' against his name at the bottom of this protocol. This was not necessary. The designation of a person in such documents always appears at the beginning; as, for instance, in a deed between two parties, the party signs it, and in signing it he recognizes the designation.

"Therefore we have here a 'protocol,' so entitled, signed by a young officer who entitles himself 'aide-de-camp of his Excellency, the President of the United States,' and who promises for the President that he shall privately use all his influence in order that the idea of annexing the Dominican Republic to the United States may acquire such a degree of popularity among members of Congress as will be necessary for its accomplishment. There was the promise; Senators about me know how faithfully the President has fulfilled it, how faithfully he has labored, privately and publicly, even beyond the protocol—the protocol only required that he should work privately—privately and publicly, in order that the idea of annexing the Dominican Republic should be agreeable to Congress.

"The young officer, aide-de-camp of the President of the United States, with this important and unprecedented document in his pocket, returned to Washington. Instead of being called to account for this unauthorized transaction, pledging the Chief Magistrate to use his influence privately with Congress in order to cram down a measure that the confederates justly supposed to be offensive, he was sent back to this island with directions to negotiate a treaty. I would not allude to that treaty if it had not been made the subject of discussion by the President himself in his annual message. You know it. The treaty itself is not on your tables legislatively; it has never been communicated legislatively to Congress. The other House, which may be called to act upon this important measure, can know nothing of that treaty, and what we know of it we cannot speak of even in this debate. We can simply speak of its existence, for the President himself has imparted that to Congress and to the country. The treaty exists; and now the practical question is, by what means was it negotiated? I have described to you the three confederates who seduced into their company the aide-de-camp of the President; and now I have to aver, and I insist that the evidence will substantiate what I say, that, at the time of the signature of the treaty of annexation, Baez was sustained in power by the presence of our naval force in the waters of the Dominican Government. Go to the documents, and you will find that what I say is true. Confer with naval officers, confer with honest, patriot citizens who know the case, and they will all testify that, without the presence of our ships-of-war in those waters, Baez would have been obliged to flee.

"This is not all, sir; I broaden this allegation. Ever since the signature of the treaty, and especially since its rejection, Baez has been sustained in power by the presence of our naval force. Such I aver to be the fact. I state it with all the responsibility of my position and with full conviction of its truth. I ask you, sir, to do as I have done: go to the State Department and Navy Department, and read the reports there on file. I ask you to read documents printed confidentially for the use of the Senate, and I feel sure that what I state will be found to be substantially true. I ask you also to confer with any naval officer who has been there, or with any patriot citizen.

"Sir, this is a most serious business. Nothing more important to the honor of the republic has occurred for long years. How many of us now are hanging with anxiety on the news from Europe! There stand matched in deadly combat two great historic foes, France and Germany—France now pressed to the wall; and what is the daily report? That Bismarck may take Louis Napoleon from his splendid prison and place him again on the throne of France that he may obtain from him that treaty of surrender which the republic never will sign. Are we not all indignant at the thought? Why, sir, it was only the other day that a member of the Cabinet, a much-honored friend of mine, at my own house, in conversation on this question, said that nothing could make him more angry than the thought that Bismarck could play such a part, and that France might be despoiled by this device. And now, sir, this is the very part played by the American Government. Baez has been treated as you fear Bismarck may treat Louis Napoleon. You call him 'president;' they call him down there 'dictator;' better call him 'emperor,' and then the parallel will be complete. He is sustained in power by the Government of the United States that he may betray his country. Such is the fact, and I challenge any Senator to deny it. I submit myself to question, and challenge the Senator from Indiana, who, as I have already said, champions this proposition, to deny it. I challenge him to utter one word of doubt of the proposition which I now lay down, that Baez is maintained in power by the naval force of the United States, and that, being in power, we seek to negotiate with him that he may sell his country. It cannot be denied.

"The Senator asks if I am not aware that all persons there are in favor of annexation, and the inquiry is repeated by my friend the Senator from Vermont. I answer categorically, no; I am not aware of it. I understand the contrary. I have at least as good information as any accessible during the last week, and it is not four days old, just to the contrary. There are two chieftains in Dominica—one the political jockey with whom our Government has united and is now sustained in power by our naval force, and the other is Cabral, who,

as I have been assured by one who is bound to be well informed, represents the people of his country. Some time ago Cabral favored the sale of the bay of Samana to the United States; but I have been assured that he has never favored annexation to the United States. I am assured that his policy is to bring the two Governments of Dominica and Hayti once more together, as they were down to the revolution and war which lasted from 1846 to 1848, terminating in the uncertain independence of the Dominican part of the island.

"Now, the point which I wish to present to the Senate and to impress is, that Hayti, having claims on Dominica, is interdicted from their pursuit by an American commodore.

"But perhaps I may be told—I see my friend, the Senator from Indiana, is taking notes—that the American commodore was justified under the law of nations. I meet him on that point. How could he be right? How could the law of nations sanction such a wrong? The only ground would be that during the pendency of the negotiation, or while the treaty was under consideration, the Government of the United States would protect the territory to be transferred. I have seen that impossible pretension put forth in newspapers. I call it 'impossible.' It is unfounded in the law of nations. Our ships, during the negotiation of the treaty and during its consideration in the Senate, had no more right or power in those waters than before the negotiation. Only when the treaty was consummated by the act of the Senate, giving to it advice and consent, could we exercise any semblance of jurisdiction there.

"Again I return to the pending resolution, which I oppose as a new stage in the long-drawn machination. Am I wrong in holding up this negotiation, which has in it so much of violence—violence toward Dominica, violence toward Hayti? Of course, the proposed treaty assumed the civil war pending in the territory annexed. No prudent man buys a lawsuit; we should buy a bloody lawsuit."

Mr. Morton, of Indiana, said: "The argument of the Senator from Massachusetts throughout has demonstrated the necessity and the importance of this investigation. My friend has appeared upon the stand this afternoon as a witness. He has testified copiously, voluminously, and yet has scarcely produced testimony to sustain one of his assertions. He states these things, he says solemnly, because he knows them to be true; but he has not favored the Senate with any evidence to sustain the most of them. Perhaps the Senator thinks that what he does not know in regard to the republic of San Domingo is not worth knowing; but, while he may know it very well, he may not be able to satisfy all the rest of us; he may not be able to satisfy the country. And now we propose a commission that shall go upon the ground and make an examination so far as it can be made, and report

to us the facts, that we may judge for ourselves whether or not annexation is desirable; and, as I have said before, when I introduced this resolution I supposed it could not elicit debate; I supposed it would not be opposed, for, presuming that the Senator himself was desirous of full and complete knowledge, that he desired to be accurately informed, and believing that this was the very best possible method to get full information upon points which have been heretofore in dispute, I supposed this resolution would pass without opposition.

"Now, sir, allow me to say that nearly all the Senator's points are immaterial—immaterial to the purpose of this resolution. He has spent his force upon matters that, so far as the merits of this resolution are concerned, may be designated as frivolous, wholly unimportant. We are not now proposing to examine whether the treaty was correctly and properly negotiated. We have passed by the treaty; we are beginning *de novo*; we are proposing to examine this question as if a treaty had never been made, and we propose to go to the vital and material points in the matter, and to do that we propose to send a commission to the island, where this information is most accessible and can be most accurately obtained. We are proceeding, as I said before, as if there had been no treaty; and now, of what importance is it, in proposing to examine these questions and ascertain the facts, to go into a long, labored, ingenious, and, I may say, unfriendly examination of the mode in which that treaty was negotiated? The Senator has spent perhaps half an hour in commenting upon the way in which General Babcock had signed his name, alleging that he had styled himself aide-de-camp to the President. Why, Mr. President, if we were considering the treaty itself, if that were before us, it would be a mere frivolous objection; it would be a mere verbal complaint that the Senator would make, and could not possibly go to the merits of the case; but he brings that circumstance here as one of overwhelming importance that must override the value of the interrogatories that are to be answered by this commission.

"And as to the protocol that General Babcock entered into, he says that protocol provides that the President should privately use his influence with members of Congress or of the Senate to bring about its ratification. Sir, it provides no such thing. The protocol was privately made; was not attached to the treaty; was not part of the treaty; but it made no provision that the President should privately influence members of Congress or try to do so; but that was the interpretation the Senator gave to it—that the President agreed privately to influence members of Congress. No such thing; the protocol does not read that way. But, sir, what of the protocol? The Senator seemed to think it was a very im-

portant matter, a great lion in the way that could not be gotten over, and that rendered this resolution improper, and the interrogatories unimportant. Why, sir, he confessed himself, as I understood him, that General Babcock had made that protocol without authority; and he did do it upon his own motion, and there was nothing in his instructions that authorized him to do so; but, as all men familiar with diplomatic negotiations understand, protocols are of very common occurrence, and are always of a private character, and never constitute a part of the treaty. But, as the treaty is gone, as we have passed that by, as it is merely a relic of the past, where is the importance of dwelling upon this protocol and attempting to fix crime upon the President in consequence of it? Sir, the objection is frivolous, and I pass it by.

"Then the Senator from Massachusetts says that this commission will commit Congress to the policy of annexation. Is there one word of foundation for this statement? Is any Senator who may not favor the annexation of San Domingo under his present convictions to be frightened from voting for this resolution by the bald declaration that it commits Congress to annexation? Not one word like it in the resolution; but it simply provides for an examination; the commissioners are simply to report upon what terms San Domingo may consent to be annexed or desire to be annexed. That report is to be made to the President, and he is to lay it before Congress for its consideration. If the facts therein stated are favorable to annexation, well; if they are unfavorable, well; the commissioners are not authorized themselves to give their opinion upon the question. I was careful in drawing the resolution to provide that they should have no authority to give their opinion at all. They are simply to report the facts, and we are to pass upon them. So nobody need be frightened against the resolution by saying that it commits Congress to the policy of annexation.

"Then, again, he says the resolution is unnecessary because the President has full power to appoint the commissioners without it. Why, this is a most astonishing argument! After having pressed upon us with great force that the appointment of Babcock was a usurpation, and that his negotiation was a crime, the Senator comes back and tells us that this commission is wholly unnecessary, the President has power to appoint commissioners without any act of Congress to go there and do all that we propose they shall do, and even more!

"Why, sir, suppose the President had taken that authority without consulting us, would he not have been denounced fiercely for usurpation? Would this commission not have been denounced as a mere private agency on his part—and so it would have been—for the purpose of aiding him in a most iniquitous scheme? No, sir; we took a different view of it; and the President, allow me to say, has no power

to appoint a commission like this; he has no power to provide a secretary; he has no power to make the provisions that are contained in this resolution.

"But, then, he comes to the charge that we have kept Baez in power by three ships-of-war stationed upon that coast, and that the treaty was negotiated under the guns of that fleet. Admiral Poor has been denounced in the bitterest terms for his conduct in regard to Dominica and Hayti. Why, sir, I should regard this as a very serious statement, if it did not appear to me to be ridiculous. With all respect to the distinguished Senator from Massachusetts, it seems to me that he has overdrawn this thing in a manner that can only be described as ridiculous or ludicrous. These revolutionists are not sea-going people. They have no fleet. Their field of operations, small as it is, is inland and among the mountains. But they have been kept in subjection by the three frigates of Admiral Poor! We must understand that the admiral has marched those frigates across the island and through the mountains, doubtless with a large crew of horse-marines, that have kept this Cabral and his powerful army under subjection! Why, sir, the character of the danger, whatever it has been, that may have menaced Baez, has been inland among the mountains, where the guns of Admiral Poor could not reach and where his voice was never heard. And yet, sir, the country is to be startled, a wonderful sensation is to be created, by the statement that this treaty was negotiated under the guns of this fleet, and that Baez has been kept in power by its presence!

"Mr. President, the truth is simple; it lies upon the surface; I have been long satisfied with it; and I confess to you that, so far as I am concerned, I do not require the investigation on many of these points to satisfy my mind. But, while I may be satisfied, others may not be. The great truth is, that men of all parties in San Domingo are in favor of annexation. The evidence is, that the followers even of Cabral are for it, and that Cabral himself has been in favor, and is now in favor, of annexation. He undoubtedly would like to make the treaty or to conclude the negotiations, instead of Baez. But it has been the desire and the earnest desire of the great body of the people upon that island for years to be annexed to the Government of the United States, and it makes no difference, so far as that is concerned, whether Cabral or Baez is in power, or some other military adventurer that may rise to the surface. They will all be in favor of annexation, because nearly the entire people, with the exception of a few desperate military adventurers, are in favor of it.

"Mr. President, the annexation of San Domingo will come. I prophesy here to-night that it will come. It may not come in the time of General Grant, or in my time; but I believe it is destined to come; and with it,

too, the annexation of Cuba and Porto Rico. Why, sir, this thing was foreseen long ago.

"Now, Mr. President, I have said about all I desire to say on this subject. I have referred to every point made by the Senator from Massachusetts. In conclusion, I would say that his points, almost without exception, are wholly immaterial, considered with reference to the inquiry as a new thing. We are now proposing to start out on another basis. If we are to have a treaty, it is to be a new treaty. It may be that we would prefer a joint resolution, as in the case of Texas. But all these things are in the future. This resolution does not propose to determine any of those questions, but simply to get the facts and leave them for the consideration of Congress and the nation."

Mr. Thurman, of Ohio, said: "Mr. President, I shall occupy very little time. My purpose in rising is chiefly to put upon record in the fewest possible words the grounds of my opposition to the annexation of San Domingo, and rather to state propositions than to make an argument. But, before I do that, I wish to notice some few remarks that have fallen from different Senators in the course of this debate. Any stranger who should have come into this Chamber within the last two hours, unacquainted with the subject under discussion, and listening to the speeches that have been made, would naturally have come to the conclusion that it was once more the field of an impeachment trial; but at this time it was not a President of the United States who was arraigned and upon his trial, but a Senator of the United States, a Senator from the Commonwealth of Massachusetts.

"The Senator from Michigan (Mr. Chandler) was pleased to tell the Senator from Massachusetts that when he came to train this little body of Democrats here it would not be a very difficult task, that there were not so many of them but that he might dress them in line without any very great military genius to enable him to do so. When the Senator made that remark, my memory took me back eighteen years, to the memorable year 1852. There was a presidential election that year. There were two candidates, the Whig candidate, General Winfield Scott, the Democratic candidate, General Franklin Pierce. They stood upon platforms that in one particular had no essential difference whatever, platforms that have been proclaimed ever since the year 1861 to have been proslavery platforms; platforms that denounced in almost the same language and with precisely the same meaning any agitation whatever of the subject of slavery or the abolition thereof, which denounced it as unpatriotic in anybody in any part of this republic to seek to disturb by any agitation whatsoever that status of slavery which existed in the Southern States. Upon that platform the two great parties of the country went to battle in that year 1852; but there was one man in the Sen-

ate of the United States that day, and but one, who repudiated both platforms and would stand upon neither, who repudiated both candidates and would vote for neither; and that man was Charles Sumner. I see him standing in the Senate Chamber then without a single follower. He had no ten men, the number of the Democrats here, to dress into line then; he had nobody but himself; and I have lived to see the day when sixty Senators of the Republican party, the Senator from Michigan among them too, were following in his footsteps with the most implicit obedience. I have seen that which I never expected to see; I have seen the man who repudiated your candidature of 1852, who spit upon your platform then, at the head of your column for nearly ten years in the Senate of the United States.

"Where then were you who now talk of nothing but freedom? Where then were you who now boast of the enfranchisement of the African race? Where then were you who are so ready to denounce any man that ever stood up for the institutions of the country, or at least sought to prevent the country from being ruined by their disturbance? Where were you, Republican Senators, in the year 1852, when the Senator from Massachusetts stood, if not solitary, at least alone? Where were you? One half of you, or nearly so, voting for Franklin Pierce, and the rest of you for Winfield Scott.

"Now, I am not here to defend the Senator from Massachusetts. He is quite able to defend himself. I am not here to nominate him as commander-in-chief of this little body of Democrats. I do not think they want his leadership, and I do not think he seeks the command. But when he is reproached with the small number of his followers, with the number ten, I call the attention of the Senate to the fact that eighteen years ago he had not one-tenth of ten to follow him, although since that he has had six times ten to obey his commands.

"But, again, is there nobody in this Chamber who concurs in the opposition of the Senator from Massachusetts to the annexation of San Domingo but this little band of ten Democrats? Are we all? If that be the case, why was not the treaty ratified? You have six men here to our one; you have six-sevenths of the Senate; it requires but two-thirds to ratify a treaty. If the Senator from Massachusetts has none who concur in opinion with him here but the ten Democrats, how comes it that with six-sevenths of the Senate on your side that treaty was defeated? How comes it that the question is again before the Senate of the United States? Now, what has the Senator from Michigan to say to his Republican Senators who also dress in the line headed by the Senator from Massachusetts? What has he to say to them? If 'shoot the deserters' be the word, as it seems to me, or the alleged deserters; if 'scalp those who do not march with perfect fidelity at the command of the

President of the United States' be the order of the day, why is it that the Senator from Massachusetts alone is assaulted, and all those who concurred with him in opposing the ratification of the treaty and now concur with him in opposition to this resolution, members of the Republican party, Republican Senators, are left without assault, and that no scalp of theirs is taken from their heads?

"You are hurrying this thing so that the subject may be acted upon before the 4th of March next; and the question is, are you prepared to bring in as one of the States of this Union one hundred and twenty thousand people, not one hundred of whom can speak the English language; not one hundred of whom are white; not one out of ten thousand of whom, perhaps, can read in any language or ever had any education that could be called education at all? And when I speak of education, I do not speak simply of the education that is derived from books. There are thousands of men in the United States who are educated on the subject of government sufficiently to be safe depositaries of the right to vote. Your juries educate them; your courts educate them; your stump-speeches educate them; the debates in your legislative bodies educate them; and thousands and thousands of intelligent men, fully competent to judge of public affairs and to cast intelligent votes in the United States, are unable either to read or to write. But there has not been any such education as this in Dominica; nothing of the kind. It has been a land of throes and convulsions ever since the foreign rule was at an end; ever since it has been an independent country, with no civil order, no regular government, none of the education that attends a man in the United States from the time he can speak and understand until he is laid away in his grave; nothing of that kind, but rather a volcano of human passions and a river of human blood. That kind of people are the population there; and the question is whether here, this day, you are willing to take one hundred and twenty thousand of such people and make them the members of a State in this republic?"

The question being taken on the motion to refer, it was lost—yeas 13; nays 31.

On the adoption of the resolution, the vote was:

YEAS—Messrs. Abbott, Ames, Brownlow, Carpenter, Chandler, Cole, Conkling, Corbett, Cragin, Edmunds, Flanagan, Hamilton of Texas, Hamlin, Harlan, Howe, Howell, Morton, Nye, Osborn, Pomeroy, Pool, Ramsey, Revels, Ross, Sawyer, Scott, Sherman, Stewart, Thayer, Warner, Willey, and Williams—32.

NAYS—Messrs. Casserly, McCreery, Morrill of Vermont, Patterson, Schurz, Stockton, Sumner, Thurman, and Tipton—9.

ABSENT.—Messrs. Anthony, Bayard, Boreman, Buckingham, Cameron, Cattell, Davis, Fenton, Ferry, Fowler, Gilbert, Hamilton of Maryland, Harris, Howard, Johnston, Kellogg, Lewis, McDonald, Morrill of Maine, Pratt, Rice, Robertson, Saulsbury, Spencer, Sprague, Trumbull, Vickers, Wilson, Windom, and Yates—30.

So the joint resolution was passed.

In the House, on January 9th, on motion of Mr. Orth, of Indiana, the joint resolution was considered.

Mr. Ambler, of Ohio, moved to add to the third resolution the following:

Provided, That nothing in these resolutions contained shall be held, understood, or construed as committing Congress to the policy of annexing the territory of said Republic of Dominica.

Mr. Cox, of New York: "I call for the yeas and nays upon agreeing to that amendment."

The yeas and nays were ordered.

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Adams, Ambler, Archer, Asper, Axtell, Barnum, Beaman, Beatty, Beck, Biggs, Bird, Booker, Boyd, George M. Brooks, James Brooks, Burchard, Burr, Calkin, Coburn, Conger, Conner, Cook, Cox, Crebs, Dawes, Dickey, Dickinson, Dox, Duke, Ela, Eldridge, Farnsworth, Ferriss, Finkelburg, Fox, Garfield, Getz, Gibson, Griswold, Haight, Haldeman, Hale, Hamill, Hawkins, Hawley, Hay, Hoar, Holman, Hooper, Johnson, Judd, Julian, Kelsey, Kerr, Lewis, Manning, Marshall, Mayham, McCormick, McCrary, Morgan, Daniel J. Morrell, Morrissey, Mungen, Niblack, Palmer, Peters, Pomeroy, Potte, Randall, Reeves, Rice, Rogers, Sargent, Schumaker, Shanks, Lionel A. Sheldon, Sherrod, Shober, Slocum, John A. Smith, Joseph S. Smith, Starkweather, Stevens, Stone, Strong, Swann, Sweeney, Tanner, Tillman, Townsend, Trimble, Tyner, Upson, Van Auken, Van Trump, Voorhees, Cadwalader C. Washburn, Welker, Wells, Wheeler, Willard, Williams, Eugene M. Wilson, John T. Wilson, Winchester, Wolf, and Wood—168.

NAYS—Messrs. Armstrong, Arnell, Atwood, Ayer, Bailey, Banks, Barry, Benjamin, Bennett, Bingham, Bowen, Buck, Buffinton, Burdett, Benjamin F. Butler, Roderick B. Butler, Churchill, William T. Clark, Amasa Cobb, Clinton L. Cobb, Degener, Donley, Duval, Fisher, Fitch, Gilfillan, Hamilton, Harris, Hefflin, Hoge, Jenckes, Alexander H. Jones, Kelley, Kellogg, Ketcham, Knapp, Laffin, Lawrence, Loughridge, Maynard, McCarthy, McGrew, McKee, McKenzie, Mercier, Jesse H. Moore, William Moore, Morphis, Myers, Negley, O'Neill, Orth, Packard, Paine, Peck, Perce, Platt, Poland, Porter, Prosser, Rainey, Sawyer, Scofield, Porter Sheldon, William J. Smith, Stevenson, Stokes, Stoughton, Taylor, Twichell, Van Horn, Van Wyck, Wallace, Whitmore, Winans, and Witcher—76.

NOT VOTING—Messrs. Allison, Ames, Benton, Blair, Boies, Buckley, Cake, Cessna, Sidney Clarke, Cleveland, Covode, Cowles, Cullom, Darrall, Joseph Dixon, Nathan F. Dixon, Dockery, Dyer, Ferry, Hambleton, Hays, Hill, Holmes, Hotchkiss, Ingersoll, Thomas L. Jones, Knott, Lash, Logan, Lynch, McNeely, Milnes, Eliakim H. Moore, Morey, Samuel P. Morrill, Newsham, Packer, Phelps, Roots, Sanford, Worthington C. Smith, Stiles, Strader, Strickland, Sypher, Taffe, Ward, William B. Washburn, Wilkinson, and Woodward—50.

So the amendment was adopted.

The joint resolution, as amended, was then ordered to a third reading, and read the third time.

The question upon the passage of the joint resolution was taken; and it was decided as follows:

YEAS—Messrs. Allison, Ambler, Armstrong, Arnell, Asper, Atwood, Ayer, Bailey, Banks, Barry, Beaman, Benjamin, Bingham, Bowen, George M. Brooks, Buck, Buffinton, Burchard, Burdett, Benja-

min F. Butler, Roderick R. Butler, Churchill, William T. Clark, Amasa Cobb, Clinton L. Cobb, Coburn, Conger, Cook, Cowles, Dawes, Degener, Dick-ey, Donley, Duval, Farnsworth, Ferriss, Fisher, Fitch, Garfield, Gilfillan, Hale, Hamilton, Harris, Hawkins, Hawley, Hay, Hedin, Hoge, Hooper, Ingersoll, Jenckes, Alexander H. Jones, Judd, Julian, Kelley, Kellogg, Kelsey, Ketcham, Knapp, Ladlin, Lawrence, Loughridge, Maynard, McCarthy, McCrary, McGrew, McKee, McKenzie, Mercur, Jesse H. Moore, William Moore, Morphis, Daniel J. Morrell, Myers, Negley, O'Neill, Orth, Packard, Paine, Palmer, Peck, Perce, Phelps, Platt, Poland, Pomeroy, Porter, Prosser, Rainey, Roots, Sargent, Sawyer, Seofield, Shanks, Lionel A. Sheldon, Porter Sheldon, John A. Smith, William J. Smith, Stark-weather, Stevens, Stevenson, Stokes, Stoughton, Strong, Tanner, Taylor, Tillman, Townsend, Twich-ell, Tyner, Upson, Van Horn, Van Wyck, Wallace, Cadwalader C. Washburn, Welker, Wheeler, Whit-more, Williams, John T. Wilson, Winans, Witcher, and Wolf—123.

YEAS—Messrs. Adams, Archer, Axtell, Barnum, Beatty, Beck, Biggs, Bird, Booker, Boyd, James Brooks, Burr, Conner, Cox, Crebs, Dickinson, Dox, Duke, Eldridge, Finkelnburg, Fox, Getz, Gibson, Griswold, Haight, Haldeman, Hamill, Hoar, Holman, Johnson, Kerr, Lewis, Manning, Marshall, Mayham, McCormick, Morgan, Morrissey, Mungen, Niblack, Peters, Potter, Randall, Reeves, Rice, Rogers, Schu-maker, Sherrod, Shober, Slocum, Joseph S. Smith, Stone, Swann, Sweeney, Trimble, Van Auker, Van Trump, Voorhees, Wells, Willard, Eugene M. Wil-son, Winchester, and Wood—63.

NOT VOTING—Messrs. Ames, Bennett, Benton, Blair, Boles, Buckley, Cake, Calkin, Cessna, Sidney Clarke, Cleveland, Covode, Cullom, Darrall, Joseph Dixon, Nathan F. Dixon, Dockery, Dyer, Ela, Ferry, Hambleton, Hays, Hill, Holmes, Hotchkiss, Thomas L. Jones, Knott, Lash, Logan, Lynch, McNeely, Milnes, Eliakim H. Moore, Morey, Samuel P. Mor-rill, Newsham, Paeker, Sanford, Worthington C. Smith, Stiles, Strader, Strickland, Sypher, Taffe, Ward, William B. Washburn, Wilkinson, and Wood-ward—48.

So the joint resolution, as amended, was passed.

On January 11th, the joint resolution with the amendment of the House was reported in the Senate. Several amendments were offered and rejected, when the vote was taken on the amendment of the House, and resulted as fol-lows:

YEAS—Messrs. Abbott, Ames, Anthony, Bayard, Boreman, Brownlow, Buckingham, Cameron, Car-penter, Casserly, Chandler, Cole, Conkling, Corbett, Cragin, Davis, Edmunds, Fenton, Flanagan, Fow-ler, Gilbert, Hamilton of Texas, Hamlin, Harlan, Harris, Howell, Jewett, Johnston, Kellogg, Lewis, McCreery, Morrill of Vermont, Morton, Nye, Pool, Pratt, Ramsey, Revels, Rice, Ross, Salisbury, Saw-yer, Schurz, Scott, Sherman, Spencer, Stewart, Stockton, Sumner, Tipton, Trumbull, Vickers, War-ner, Willey, Williams, Wilson, and Yates—57.

ABSENT—Messrs. Cattell, Ferry, Hamilton of Mary-land, Howard, Howe, McDonald, Morrill of Maine, Osborn, Patterson, Pomeroy, Robertson, Sprague, Thayer, Thurman, and Windom—15.

So the amendment of the House of Repre-sentatives was concurred in.

In the Senate on January 18th, Mr. Morton, of Indiana, offered the following resolution:

Resolved, That a select committee of five Senators be appointed, to which shall be referred the docu-ments and papers recently laid before the Senate by

the President in reference to the condition of the Southern States; and that such committee have power to employ a clerk and stenographer, to send for per-sons and papers, administer oaths, and investigate the matters referred to in the documents and papers aforesaid; and the truth or falsehood of the crimes and outrages of a political character alleged to have been committed in the Southern States; and whether there be in those States security for persons and property.

Objection having been made to the imme-diate consideration of the resolution, Mr. Mor-ton moved to refer the papers before the Sen-ate to a special committee.

Mr. Morton: "I desire to avoid that objec-tion by moving to refer those papers to a select committee; and I will modify the resolution in that way. The papers are on the table."

Mr. Casserly, of California, said: "I move to refer these papers to the same committee which has thus far had charge of this subject since I have been in the Senate—the Judiciary Com-mittee."

Mr. Wilson, of Massachusetts, said: "I hope these papers will be referred to a special com-mittee, and that that committee will devote a great deal of time to the examination of this subject. These papers I know something about. They present an appalling record, but probably only about one-tenth part of the record of the terrible crimes that have been committed in this country, and which have dishonored not only the country, but the age in which we live. These crimes are going on; we get the account of but a small portion of them, per-haps a tenth of them."

Mr. Warner, of Alabama: "I hope this ref-erence will be made; and I concur with the Senator from Massachusetts in saying that the question involved in the consideration of the documents accompanying this message is the gravest one that is now before or that can be brought before this Senate. The condition of things in the South demands attention. The securing to all the citizens of the republic there of the rights which you have given them, and to which they are entitled under the Con-stitution of the United States, and the State constitutions, and under the laws of Congress and of the States, is the plainest and most sol-emn duty now resting upon this Senate, and upon this Congress; and I hope that this com-mittee may be excused, if appointed, from other labors, and that for the remainder of this ses-sion they may give their whole time and all their best energies and abilities to the investi-gation of the condition of things in the South, and to the devising of some remedy or some means by which security of life and property and the free exercise of the rights granted to every American citizen by the Constitution shall be guaranteed."

Mr. Casserly, of California, said: "I think we all understand this matter in its present phase. There is no man of any candor here who, whatever he may forbear to say in this public presence, would not admit elsewhere

that the result of the doings of a special committee to be constituted in reference to the papers now upon the table is already a foregone conclusion. Why, sir, is it not too palpable for anybody's doubt or contradiction? We had the whole subject here at the last session. Within a year the most distinguished men of the majority here, including the Senator from Indiana (Mr. Morton), who has offered this resolution, exhausted themselves and the subject, I will not say for the purpose, but with the result, of fanning into new life, as far as they could, the embers of a great civil war, the embers of sectional conflict and hate. And, sir, was there ever any thing that failed so signally as did that labored endeavor, whether you consider this body and the result here, or the result before the people at the recent elections? The mass of the charges, if I remember correctly, upon which the Senator from Indiana descanted then with so much vehemence, with so much power, I regret to say, considering the evils of his course, were stale charges, charges that had been gone over and over again until holes were worn through them. Certainly they were charges a great many of which were as old as 1867. Are there any new charges here to-day? If there are, why has not the country heard of them? What figure have they made in the press? Whence have they been dug up?

"Sir, I shall regret a controversy here; I shall regret any proceeding which will tend to open anew the flood-gates of hatred, even although that opening may serve to stay the doom of a perishing party. Here and now I say it, there is no party in this country, and there never was, which is worth so much to the country as to compensate in the smallest degree for the renewal of sectional and fratricidal animosities like those of the last ten years. I am attached to the political party to which I belong because of its excellent principles, of its great services in the past, and its great capacities for usefulness in the future. But if even that party could not be maintained except by arraying one part of the country against the other, except by slandering and maligning a part of the Union in order to fan into being again the flames of civil hatred, wellnigh extinguished by time and the better sense of the people, I would say, let it perish, let it go down; the best thing for it is speedy burial.

"I do not believe either in the accusations or in the policy that prompts them. I can well understand that there are in the South disorderly and violent men. They are the natural fruits of the war and of your own misgovernment. They are but a handful, easily dealt with by any government dealing with them in the right spirit. But what I do not believe is, that the mass of the Southern people are the barbarians they have been represented to be, over and over on this floor, by prominent Senators of the majority. It would be a great deal better for the dignity of this body, for the

peace of this country, for the good standing of the American people before the enlightened judgment of Christendom, to say at once what is the object of all this exaggerated outcry of outrages in the South; of all this hollow parade of investigations—far better to come directly to the point like men, and let it be understood that no one of the States lately in insurrection will be permitted to come back here until she sends to the Senate and to the House of Representatives men whose party politics shall be acceptable to the accidental party majority in each.

"Let that be understood; then will there be no need any more for the periodical performances here, for the demonstrations of passion or the torrent of studied vituperation poured out against the people of the South. If I thought the tenth part of such vituperation could be true, I should mourn over the land that had nursed such children as inevitably lost. What a gain that change would be for the proprieties of this body and for the general credit of the American people!

"I do not doubt that in parts of the South there are troubles. Considering the terrible ordeal, first of the war and then of your misgovernment, it would be wonderful if there were not. But why exaggerate them; why turn them into capital for a party?"

Mr. Warner, of Alabama, said: "I think the Senator and the Senate will understand that I occupy a standpoint in regard to the Southern people that entitles me to speak as to the condition of affairs there. I have offered to the Southern people, in my person, from the end of the war, from the time that I took off the uniform of a Federal soldier, the olive-branch of peace. I have said to them, again and again, individually, upon the rostrum in Alabama, and here, upon my responsibility as a Senator, that I was willing and anxious to forgive the past; that I fought as a Federal soldier only for the union of my country and for its peace and welfare, and liberty in the future. I say that to-day. I cherish no animosities for the past. I am as ready to-day, as I have been since the war, to rise above all the passions of the past, and, in a spirit of Christian statesmanship, to do that which shall seem to me best for the welfare of my country now and in the future."

Mr. Wilson, of Massachusetts, said: "Sir, it never entered my mind that an earnest, constitutional, legal effort here in Congress to investigate these murders, these outrages that are perpetrated by a class of lawless men in portions of the country, and to find a remedy if we could, would be met by any opposition here, or that it had any thing of political significance about it. I have no desire to drag in this question or any other question here to save what the Senator is pleased to call 'a perishing party.' I have heard a great deal during the last ten years about 'a perishing party,' but it has so happened (and I would remind the Senator from California that it

may happen again) that this expression, 'perishing party,' has been rather on the lip here in the Senate than in the ballot-boxes of the country. I have no anxiety about this 'perishing party;' I have not the slightest anxiety about the result of the next presidential election; and I have little more doubt about that result any more than I had in 1860, or 1864, or 1868.

"But, sir, I desire to say to the Senator from California that I think he went quite too far in imputing dishonorable motives to us. The record of the last dozen years does not justify such imputations. From the time of the invasion of Kansas, in 1855, to this hour, we have been sustained by the official record, and more than vindicated. The official records will prove and have proved that on every occasion where we have denounced these outrages they were larger than they were represented here. They are now, and many Senators know it. We have seen our friends mutilated; we have stood by their dead bodies; we have stood by their graves.

"Mr. President, I expected, when the war closed, with the great cause of all our woes, slavery, overthrown, that there would be some outrages in the South. But, sir, these outrages have vastly exceeded any thing that I expected. Hundreds of men, I may say thousands of men, have lost their lives. Crimes have been committed by organized, armed, lawless bands in portions of the South.

"Mr. President, I desire to put an end to all this; to put it down by a sound, rational public opinion throughout the nation. I would rally the good men and the order-loving men of the South against these outrages. I would try to execute the laws. I would have the people everywhere feel that the sympathy and the support of the Federal Government are behind the Constitution and behind the laws. This strength, going out from the capital into the lawless regions of the country, will awe and put down lawless men and strengthen the weak and the timid, and give courage to the men who would have law and order. It seems to me we all ought to strive to do this work of humanity.

"When these things are accomplished, as I trust they soon will be, perhaps we shall have a 'perishing party;' perhaps the party now in power will perish because it has not a great deal to do. A party must have some policy, something to do in this world, to live, unless it be one of those old conservative concerns that never has any thing to do but to oppose whatever is done. Such an organization may gain strength because it can stand still and do nothing. I suppose there have been such bodies of people.

"I say to the Senator from California that I think his remarks utterly unjustifiable; that his imputation is sustained by no facts in our previous history."

Mr. Bayard, of Delaware, said: "Sir, this

Administration commenced with words that were fair. 'Let us have peace,' was the incoming cry of the Administration; and on the sentiment embodied in those words they carried with them much of the popular feeling of this country. That sentiment gave to that party, probably more than any thing else in the canvass, the success which they achieved. Since the incoming of the Administration, however, we have seen but little action in accordance with that sentiment on the part of those to whom the Government of this country has been intrusted. There was in the President's message during the present session of Congress a most ominous silence on the subject of that part of our country where peace was supposed to be most needed.

"The air has been filled with rumors that some such scheme was on foot of patching up this wretched system of reconstruction as should in effect again place the entire Southern people under martial law, wielded by the present Administration and its followers. How is it that after the lapse of more than five years, with unlimited power of legislation, with unlimited power to fill all the offices in the Southern States, new committees, new investigations, new laws and measures must be resorted to in order to produce good government throughout the Southern States? What a confession of incapacity and error is here made!

"As I have said, I anticipate as a foregone conclusion the passage of this resolution. I anticipate the appointment of this committee. I anticipate the collection of evidence, almost cut and dried to order, for the purpose of justifying almost any such measures as we have seen in the past, or which may be even exceeded in the future. And yet that does not prevent me from giving warning to my fellow-countrymen all over this country of what I believe to be the truth of the dangerous attempts now being made.

"The object of this resolution, this special committee, in my solemn belief, is nothing in the world but to obtain some pretext by which you shall place the Southern people again under martial law. There is not to-day in any Southern State a single Federal officer who has not been nominated by the President of your choice and confirmed by this Senate. There is not a district judge who is to preside at trials; there is not a district attorney who is to prosecute for offences against the laws of the United States; there is not a marshal who has the sole discretion in selecting and summoning the jurors who are to try such cases, who is not a thick-and-thin partisan of your Administration. And yet in the face of all that you come here, disregarding the ordinary processes of the laws—and surely they are numerous enough, surely they are severe enough—and appeal to force."

The motion of Mr. Morton was agreed to. The committee consisted of Mr. Scott, of

South Carolina (chairman); Mr. Wilson, of Massachusetts; Mr. Bayard, of Delaware; Mr. Chandler, of Michigan; and Mr. Rice, of Arkansas.

In the Senate, on February 6th, Mr. Chandler, of Michigan, moved to consider the bill to promote commerce among the States, and to cheapen the transportation of the mails and military and naval stores.

Mr. Sherman, of Ohio, said: "The simple question now is, whether Congress has authority to authorize the construction of a railroad passing through different States, under the power to regulate commerce."

Mr. Casserly, of California, said: "But there are grave considerations, very grave considerations involved in this bill. First of all is the question as to the constitutional power of the Congress of the United States to grant a franchise for the building of a railroad within the territory of a State, and, connected with that, the right of eminent domain in Congress over lands within a State. These questions, whatever may be thought of them by gentlemen here, and however they may decide them, are among the greatest questions that can ever come before Congress, because they challenge directly two of the paramount powers of the States, and consequently a great part of the police and other government of the States.

"I have not examined the great subject of the right of eminent domain involved in this bill, nor, indeed, any of the important questions involved. I am not prepared to discuss any of them.

"I desired, however—and that was my chief purpose in the few words I have said—to make my protest in the most distinct and emphatic manner against what seemed to me to be the assumption of the Senator from Ohio, that this bill shall be passed without debate, because for any reason the debate had been exhausted and members had made up their minds. It is not the right of any member of the Senate to make up his mind upon a subject of such magnitude without examining it, without hearing it discussed, without aiding, if he can, in the discussion, if discussion is allowed. For myself, I should consider it a violation of duty to deny further discussion of a bill of this importance, although I had heard it discussed until it was threadbare, and although my mind was immovably fixed about it. I should not venture, even so, to discourage further examination, to forbid debate. On the contrary, I should be glad to invite both, not only for others' sake but for my own good; and what I say of this bill I mean to apply to all bills of a similar character."

Mr. Morton, of Indiana, said: "I am in favor of an air-line to New York; but I am not in favor of its being chartered by Congress. That involves the exercise of a dangerous power—the power to charter railroad companies through the States; and when Congress

begins that work it will have enough work of that kind without doing any thing else. There are inconveniences now connected with the travel between this city and New York. I hope they will be remedied. I have suffered as much from them as anybody else. I appreciate the necessity of such a road as this bill proposes; but, sir, I believe there is great danger connected with any attempt on the part of Congress to charter railroad companies running through the States, and I hope such a bill will not be passed, at least without the gravest consideration."

Mr. Bayard, of Delaware, said: "I am exceedingly glad to hear so influential a member of this body as the Senator who has just taken his seat express his desire and intent that this bill shall be discussed most thoroughly before it becomes a law. It is, treating it as a case of first impression, an attempt on the part of the United States to condemn the lands of the States in disregard of their laws, and to exercise that right known as the right of eminent domain, never heretofore attempted to be exercised by the Federal Government since its creation; a right which it has been adjudicated by its highest court not to possess; and if this bill shall become a law, and if we shall embark upon this system, it must be in violation of all judicial precedent upon the subject, of all historical precedent upon the subject, and, as I think, in violation of the plain limitations on the powers of the Federal Government imposed by the Constitution of the United States.

"I merely state this much to express my concurrence in the sentiment expressed by others as to the gravity of the bill."

Mr. Hamilton, of Maryland, said: "I never heard this bill debated, and, if it is to be considered, I shall be obliged to enter into a discussion upon it.

"This railroad is to pass through the States of Maryland, Delaware, Pennsylvania, and New Jersey, to New York. My people are interested in it. The sovereignty of Maryland is interested in this road, and the people of Maryland expect their representatives to do what they can to resist its becoming a law. I shall say no more, but I make another appeal to the honorable Senator from Michigan. It is now late in the evening. I know he has other business, in all probability unobjectionable business, to present to the Senate, and I suggest to him to pass over this bill as the unfinished business until to-morrow or the day after, so that gentlemen upon this floor may have an opportunity of discussing properly and thoroughly its provisions."

Mr. Wilson, of Massachusetts, said: "If we have the power to pass a bill of this character, if it be constitutional law, I trust the first thing we shall do will be to appoint a committee of the ablest jurists we have, or refer the subject to the Judiciary Committee, and have a general railroad bill prepared under which roads may be built and companies organized

and governed by general laws. I do not want to see the time when there shall throng about Congress a class of men looking to Congress for the organization of railroads. We have had enough of that concerning the land-grant and Pacific railroads.

"It is a fact well known and understood by the country, it is a subject of general anxiety and some alarm, that many of our State Legislatures are influenced, if not directed and controlled, by great railway corporations. This evil reaches almost every section of the country. The people everywhere want railroads, and the people will have railroads. To build railroads there must be large aggregations of capital, and it is a fact, and a lamentable fact, that many of the men who manage these railroads and control this vast amount of capital and wield this great power are unscrupulous. To carry their points they have in portions of the country resorted to corrupt practices to control legislative bodies.

"I am inclined to the opinion that Congress has the power to govern these railroads, because these railroads have become essential to the commerce of the country, and Congress can do it by general legislation. I would not do it by special legislation. I would do it by placing upon the statute-book a carefully devised general law that shall protect the people and hold and curb these railway managers. I do not know that we have that authority, but I am inclined to the opinion that we have. If it is settled that we have that power, I want to see it exercised; for I desire to put the power of this Government upon the giant corporations and the men who are wielding hundreds of millions of dollars (many of whom have shown themselves to be utterly unscrupulous), and protect the people of the country against their actions. If we have the power, we should stop the system of watering railway stocks and charging the people heavy fares in order to pay dividends upon capital that was never invested. That practice by which speculators rob the people has been carried to a fearful and shameful extent, and is oppressive to the people. Sir, this question that is before us to-day is a great question, one on which we ought to spend a few days to consider our powers, our rights, and our duties."

Mr. Stewart, of Nevada, said: "But let me suggest to the Senator that the only way to test the question whether we have the power or not is to pass some bill, not to be in favor of some other bill, but to pass the bill under consideration. Let us pass this bill, and then all the monopolies that are spoken of—the Pennsylvania Central, I believe, with the rest—that were alluded to so graphically by the Senator from Delaware (Mr. Bayard), will fight it. They will carry it to the Supreme Court of the United States, and the question will have to be settled there before they will be satisfied. But, if you do not pass any bill, you will never have any question settled."

The bill was finally laid aside.

Among the bills passed at this session of Congress was one to provide a territorial government for the District of Columbia. It was organized under the law as a territory of the United States during the year 1871. Another provides for celebrating the one hundredth anniversary of American Independence, by holding an international exhibition of arts, manufactures, and products of the soil and mines, in Philadelphia in the year 1876. This session closed on March 4th, 1871.

The first session* of the Forty-second Congress commenced on March 4th, immediately after the adjournment of the preceding session.

* The following is a list of members of the Forty-second Congress present at its first session.

SENATE.

Alabama—George E. Spencer, William Goldthwaite.
Arkansas—Benjamin F. Rice, Powell Clayton.
California—Cornelius Cole, Eugene Casserley.
Connecticut—Orris S. Ferry, William A. Buckingham.
Delaware—Thomas F. Bayard, Eli Saulsbury.
Florida—Thomas W. Osborn, Abijah Gilbert.
Georgia—Joshua Hill, T. M. Norwood.
Illinois—Lyman Trumbull, John A. Logan.
Indiana—Oliver P. Morton, Daniel D. Pratt.
Iowa—James Harlan, George G. Wright.
Kansas—Samuel C. Pomeroy, Alexander Caldwell.
Kentucky—Garrett Davis, John W. Stevenson.
Louisiana—William Pitt Kellogg, J. B. West.
Maine—Hannibal Hamlin, Lot M. Morrill.
Maryland—George Vickers, William T. Hamilton.
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Thomas W. Ferry.
Minnesota—Alexander Ramsey, William Windom.
Mississippi—Adelbert Ames, James L. Alcorn.
Missouri—Carl Schurz, Frank P. Blair, Jr.
Nebraska—Thomas W. Tipton, P. W. Hitchcock.
Nevada—James W. Nye, William M. Stewart.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—John P. Stockton, F. T. Frelinghuysen.
New York—Roscoe Conkling, Reuben E. Fenton.
North Carolina—John Pool, Zebulon B. Vance.
Ohio—John Sherman, Allen G. Thurman.
Oregon—Henry W. Corbett, James K. Kelley.
Pennsylvania—Simon Cameron, John Scott.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Frederick A. Sawyer, Thos. J. Robertson.
Tennessee—William G. Brownlow, Henry Cooper.
Texas—J. W. Flanagan, Morgan C. Hamilton.
Vermont—Justin S. Morrill, George F. Edmunds.
Virginia—John F. Lewis, J. W. Johnson.
West Virginia—Arthur I. Boreman, Henry G. Davis.
Wisconsin—Timothy O. Howe, Matthew H. Carpenter.

HOUSE.

Alabama—Benjamin S. Turner, Charles W. Buckley, W. A. Handley, Charles Hayes, Peter M. Dox, Joseph H. Sloss.
Arkansas—James M. Hanks, O. P. Snyder, John Edwards.
California—S. O. Houghton, A. A. Sargent, J. M. Coghlan.
Connecticut—Julius L. Strong, S. W. Kellogg, H. H. Starkweather, Wm. H. Barnum.
Delaware—Benjamin T. Biggs.
Florida—Josiah T. Walls.
Georgia—A. T. McIntyre, Richard H. Whitley, John S. Bigby, Thomas J. Speer, D. M. DuBose, William T. Price, Pierce M. B. Yeung.
Illinois—Charles B. Farwell, John F. Farnsworth, Horatio C. Burchard, John B. Hawley, Bradford N. Stevens, Henry Snapp, Jesse H. Moore, James C. Robinson, Thompson W. McNeely, Edward T. Rice, Samuel S. Marshall, John B. Hay, John M. Crebs. At large, John S. Beveridge.
Indiana—William E. Niblack, Michael C. Kerr, William S. Holman, Joseph M. Wilson, John Coburn, Daniel W. Voorhees, Mahlon D. Manson, James N. Tyner, John P. C. Shanks, William Williams, Jasper Packard.
Iowa—George W. McCrary, A. B. Cotton, W. G. Donnan.
Madison—M. Walden, Frank W. Palmer, Jackson Orr.
Kansas—D. P. Lowe.
Kentucky—Edward Crossland, Henry D. McHenry, Joseph

In the House, on March 13th, the Speaker stated the pending question to be the motion of the gentleman from Maine (Mr. Hale), to suspend the rules and pass the bill to repeal the duties on salt.

The bill, which was read, provided that, from and after its passage, salt shall be placed on the free list, and no further impost duties shall be collected on the same.

The question on the motion to suspend the rules and pass the bill was taken, and it was decided in the affirmative, as follows:

YEAS—Messrs. Acker, Adams, Archer, Arthur, Averill, Barber, Beatty, Beck, Bigby, Bingham, Bird, James G. Blair, Braxton, Bright, George M. Brooks, James Brooks, Buckley, Buffinton, Burchard, Burdett, Roderick R. Butler, Caldwell, Campbell, Cobb, Coburn, Comingo, Cook, Cotton, Crebs, Critcher, Crossland, Davis, Dawes, De Large, Donnan, Dox, DuBose, Duke, Dunnell, Eames, Eldridge, Elliott, Ely, Farnsworth, Finkelnburg, Forker, Charles Foster, Frye, Garfield, Garrett, Getz, Golladay, Haldeman, Hale, Handley, Hanks, Harper, George E. Harris, John T. Harris, Hawley, Hay, Gerry W. Hazleton, Hereford, Hoar, Holman, Kendall, Kerr, Ketcham, King, Kinsella, Lamson, Lamport, Leach, Lewis, Lynch, Manson, Marshall, McCormick, McCrary, McHenry, McIntyre, McKinney, Merrick, Benjamin F. Meyers, Monroe, Moore, Morey, Morgan, Morphis, Niblack, Orr, Packard, Pendleton, Perce, Eli Perry, Peters, Potter, Price, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Robinson, Roosevelt, Rusk, Shanks, Sheldon, Shellabarger, Shober, Slater, Slocum, Sloss, H. Boardman Smith, John A. Smith, Worthington C. Smith, Thomas J. Spear, Stevens, Stevenson, Storm, Stoughton, Swann, Sypher, Taffe, Terry, Tut-hill, Twichell, Tyner, Upton, Van Trump, Vaughan, Voorhees, Waddell, Wakeman, Walden, Waldron, Wallace, Warren, Wheeler, Whiteley, Whitthorne,

H. Lewis, William B. Read, Boyd Winchester, William E. Arthur, James B. Beck, George M. Adams, John M. Rice.

Louisiana—J. Hale Sypher, Lloy A. Sheldon, C. B. Dar-rall, James McClery, Frank Morey.

Maine—John Lynch, William P. Frye, James G. Blaine, John A. Peters, Eugene Hale.

Maryland—Samuel Hambleton, Stevenson Archer, Thomas Swann, John Ritchie, William M. Merrick.

Massachusetts—James Buffinton, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, George M. Brooks, George F. Hoar, William B. Wash-burn, Henry L. Dawes.

Michigan—Henry Waldron, William L. Stoughton, Austin Blair, Thomas W. Ferry, Omar D. Conger, Jabez G. Suther-land.

Minnesota—Mark H. Dunnell, John T. Averill.

Mississippi—George E. Harris, J. L. Morphis, Henry W. Barry, George C. McKee, Le Grand W. Perce.

Missouri—Erastus Wells, G. A. Finkelnburg, J. R. McCormick, H. E. Havens, Samuel S. Burdett, A. Comingo, Isaac C. Parker, James G. Blair, Andrew King.

Nebraska—John Taffe.

Nevada—C. W. Kendall.

New Hampshire—Ellery A. Hibbard, Samuel N. Bell, Hosea N. Parker.

New Jersey—John W. Hazleton, Samuel C. Forker, John T. Bird, John Hill, George A. Halsey.

New York—Dwight Townsend, Thomas Kinsella, Henry W. Slocum, Robert B. Roosevelt, William R. Roberts, Samuel S. Cox, Smith Ely, Jr., James Brooks, Fernando Wood, Clarkson N. Potter, Charles St. John, John H. Ketcham, Joseph H. Tut-bill, Eli Perry, Joseph M. Warren, John Rogers, William A. Wheeler, John M. Carroll, Elizar H. Prindle, Clinton L. Mer-riam, Ellis H. Roberts, William E. Lansing, R. Holland Duell, John E. Seely, William H. Lampport, Milo Goodrich, Horace B. Smith, Freeman Clarke, Seth Wakeman, William Williams, Waiter L. Sessions.

North Carolina—Clinton L. Cobb, Charles R. Thomas, Al-fred M. Waddell, Sion H. Rogers, James M. Leach, Francis E. Shober, J. C. Harper.

Ohio—Aaron F. Perry, Job E. Stevenson, Lewis D. Camp-bell, J. F. McKenney, Charles L. Lamson, John A. Smith,

Williams of Indiana, Williams of New York, Jere-miah M. Wilson, John T. Wilson, Wood, and Young —147.

NAYS—Messrs. Ambler, Austin, Blair, Conger, Creely, Dickey, Henry D. Foster, Goodrich, Grif-fith, Harmer, Havens, John W. Hazleton, Hooper, Kelley, Killinger, Lansing, Lowe, Maynard, McClel-land, McGrew, McJunkin, Merriam, Leonard Myers, Packer, Parker, Peck, Platt, Poland, Porter, Prin-dle, Rainey, Randall, Ellis H. Roberts, Rogers, Saw-yer, Scofield, Seeley, Sessions, Shoemaker, R. Mil-ton Spear, Sprague, Stowell, St. John, Sutherland, Thomas, Washington Townsend, Walls, and Wil-lard—47.

NOT VOTING—Messrs. Ames, Banks, Barry, Biggs, Benjamin F. Butler, Carroll, Clarke, Cox, Dar-rall, Duell, Farwell, Halsey, Hambleton, Hays, Hill, Mc-Kee, McNeely, Mercur, Mitchell, Negley, Palmer, Aaron F. Perry, Sherwood, Snyder, Dwight Town-send, Turner, Washburn, Wells, and Winchester—29.

So (two-thirds having voted in the affirma-tive) the bill was passed.

Mr. Farnsworth, of Illinois, said: "I move to suspend the rules and pass a joint resolution to repeal the duties on coal."

The joint resolution, which was read, pro-vided that, from and after its passage, no tax or duty shall be levied or collected upon for-foreign coal.

The question was taken, as follows:

YEAS—Messrs. Acker, Adams, Arthur, Averill, Barber, Beatty, Beck, Bingham, Bird, James G. Blair, Braxton, Bright, George M. Brooks, James Brooks, Buckley, Buffinton, Burchard, Caldwell, Campbell, Carroll, Clarke, Coburn, Comingo, Cook, Cotton, Cox, Crebs, Critcher, Crossland, Dawes, Donnan, DuBose, Duke, Dunnell, Eames, Eldridge, Ely, Farnsworth, Finkelnburg, Forker, Charles Foster, Frye, Garfield, Garrett, Golladay, Haldeman, Hale, Handley, Hanks, Harper, John T. Harris,

Samuel Shellabarger, John Beatty, Charles Foster, Erasmus D. Peck, John T. Wilson, Philadelphia D. Trump, George W. Mor-gan, James Monroe, William P. Sprague, John A. Bingham, Jacob A. Ambler, William H. Upton, James A. Garfield.

Oregon—Joseph H. Slater.

Pennsylvania—Samuel J. Randall, J. V. Creely, Leonard Myers, William D. Kelsey, C. Harner, E. L. Acker, Wash-ington Townsend, J. Lawrence Getz, Oliver J. Dickey, John W. Killinger, John B. Storm, L. D. Shoemaker, Ulysses Mercur, John B. Packer, Richard J. Haldeman, B. F. Meyers, E. Milton Spear, Henry Sherwood, Glenn W. Scofield, Samuel Griffith, Henry D. Foster, James S. Negley, Ebenezer McJun-kin, William McClelland.

Rhode Island—Benjamin T. Eames, James M. Pendleton.

South Carolina—Joseph H. Rainey, Robert C. De Large, Robert B. Elliott, Alexander S. Wallace.

Tennessee—Roderick R. Butler, Horace Maynard, A. E. Gar-rett, John M. Bright, E. J. Golladay, W. C. Whitthorne, Rob-ert P. Caldwell, W. W. Vaughan.

Texas—Wm. J. Herndon, John C. Conner, D. C. Giddings, John Hancock.

Vermont—Charles W. Willard, Luke P. Poland, Worthing-ton C. Smith.

Virginia—John Critcher, James H. Platt, Jr., Charles H. Porter, W. H. H. Stowell, R. T. W. Duke, John T. Harris, Elliott M. Braxton, William Terry.

West Virginia—John J. Davis, Frank Hereford, James C. McGrew.

Wisconsin—Alexander Mitchell, George W. Hazleton, J. Al-len Barber, Charles A. Eldridge, Philatus Sawyer, Jeremiah M. Rusk.

DELEGATES.

Arizona—Richard C. McCormick.

Colorado—Jerome B. Chaffee.

Dakota—Moses K. Armstrong.

District of Columbia—N. T. Chapman.

Idaho—Samuel A. Merritt.

Montana—Wm. H. Claggett.

New Mexico—E. W. Tiole.

Utah—Wm. H. Hooper.

Washington—Selucius Garfield.

Wyoming—Wm. T. Jones.

Hawley, Hay, Gerry W. Hazleton, Holman, Kendall, Kerr, Ketcham, King, Kinsella, Lamison, Leach, Lewis, Lynch, Manson, Marshall, McCormick, McCrary, McHenry, McIntyre, McKinney, Merriam, Benjamin F. Meyers, Monroe, Moore, Morey, Morgan, Niblack, Orr, Packard, Palmer, Pendleton, Eli Perry, Peters, Potter, Price, Read, Edward Y. Rice, John M. Rice, Ellis H. Roberts, William R. Roberts, Robinson, Roosevelt, Seeley, Shanks, Shellabarger, Shober, Slater, Slocum, Sloss, John A. Smith, Worthington C. Smith, Stevens, Stevenson, Storm, Stoughton, Sypher, Taffe, Terry, Tuthill, Twichell, Tyner, Upson, Van Trump, Vaughan, Voorhees, Waddell, Wakeman, Walden, Waldron, Warren, Wheeler, Whiteley, Whitthorne, Williams of Indiana, Williams of New York, Jeremiah M. Wilson, John T. Wilson, Wood, and Young—180.

YEAS—Messrs. Ambler, Archer, Bigby, Austin Blair, Burdett, Benjamin F. Butler, Roderick R. Butler, Cobb, Conger, Creely, Davis, De Large, Dickey, Dox, Elliott, Henry D. Foster, Getz, Goodrich, Griffith, Harmer, Havens, John W. Hazleton, Hereford, Kelley, Killinger, Lamport, Maynard, McClelland, McGrew, McJunkin, Merriek, Morphis, Leonard Myers, Packer, Parker, Platt, Poland, Porter, Prindle, Rainey, Randall, Ritchie, Sawyer, Scofield, Shoemaker, H. Boardman Smith, E. Milton Speer, Thomas J. Speer, Sprague, Stowell, St. John, Swann, Thomas, Washington Townsend, Wallace, Walls, and Willard—57.

NOT VOTING—Messrs. Ames, Banks, Barry, Biggs, Darrall, Duell, Farwell, Halsey, Hambleton, George E. Harris, Hays, Hill, Hooper, Hooper, Lansing, Lowe, McKee, McNeely, Mercur, Mitchell, Negley, Peck, Perce, Aaron F. Perry, Rogers, Rusk, Sessions, Sheldon, Sherwood, Snyder, Sutherland, Dwight Townsend, Turner, Washburn, Wells, and Winchester—36.

So (two-thirds voting in favor thereof) the rules were suspended, and the joint resolution was passed.

Mr. Randall, of Pennsylvania, said: "I move to suspend the rules, and put the following bill upon its passage:

Be it enacted, etc., That from and after the passage of this act, tea and coffee shall be placed on the free list, and no further import duties shall be collected on the same."

The question was taken, as follows:

YEAS—Messrs. Acker, Adams, Ambler, Archer, Arthur, Beatty, Bigby, Biggs, Bingham, Austin Blair, Braxton, Bright, Buckley, Buffinton, Burdett, Benjamin F. Butler, Roderick R. Butler, Caldwell, Campbell, Carroll, Cobb, Comingo, Conger, Crebs, Creely, Critcher, Crossland, Davis, De Large, Dickey, Dox, Duke, Dunnell, Eldridge, Elliott, Finkelnburg, Forker, Henry D. Foster, Garrett, Getz, Golladay, Griffith, Haldeman, Hale, Handley, Hanks, Harmer, Harper, John T. Harris, Havens, Hay, John W. Hazleton, Hereford, Holman, Kelley, Kendall, Killinger, King, Lamison, Lamport, Leach, Lewis, Manson, Marshall, Maynard, McClelland, McCormick, McGrew, McHenry, McIntyre, McJunkin, McKinney, Merriek, Benjamin F. Meyers, Moore, Morey, Morgan, Morphis, Leonard Myers, Niblack, Packard, Packer, Parker, Perce, Eli Perry, Platt, Porter, Price, Rainey, Randall, Read, John M. Rice, Ritchie, Ellis H. Roberts, William R. Roberts, Robinson, Rogers, Sawyer, Scofield, Seely, Shanks, Sheldon, Shober, Shoemaker, Slater, Slocum, Sloss, John A. Smith, Worthington C. Smith, R. Milton Speer, Thomas J. Speer, Stevens, Stevenson, Storm, Stowell, St. John, Sutherland, Swann, Sypher, Terry, Washington Townsend, Tuthill, Twichell, Tyner, Upson, Van Trump, Vaughan, Voorhees, Waddell, Waldron, Wallace, Walls, Whiteley, Whitthorne, Williams of Indiana, Williams of New York, John T. Wilson, Wood, and Young—139.

NAYS—Messrs. Averill, Barber, Bird, James G.

Blair, George M. Brooks, James Brooks, Burchard, Clarke, Coburn, Cook, Cotton, Cox, Donnan, Eames, Charles Foster, Frye, Garfield, Goodrich, Hawley, Gerry W. Hazleton, Hoar, Kerr, Ketcham, Kinsella, Lansing, Lynch, McCrary, Merriam, Monroe, Orr, Palmer, Peck, Pendleton, Peters, Poland, Potter, Prindle, Roosevelt, Rusk, Shellabarger, H. Boardman Smith, Stoughton, Taffe, Thomas, Wakeman, Walden, Warren, Wheeler, and Willard—49.

NOT VOTING—Messrs. Ames, Banks, Barry, Beck, Darrall, Dawes, DuBose, Duell, Ely, Farnsworth, Farwell, Halsey, Hambleton, George E. Harris, Hays, Hill, Hooper, Lowe, McKee, McNeely, Mercur, Mitchell, Negley, Aaron F. Perry, Edward Y. Rice, Sessions, Sherwood, Snyder, Sprague, Dwight Townsend, Turner, Washburn, Wells, Jeremiah M. Wilson, and Winchester—35.

So (two-thirds voting in favor thereof) the rules were suspended; and the bill (H. R. No. 174) was passed.

In the House, on March 27th, Mr. Hibbard, of New Hampshire, offered the following resolutions:

Resolved, 1. That the financial policy which aims merely at a rapid extinguishment of the public debt by perpetuating the burdens of taxation is inexpedient and impolitic; and that the faith and credit of the Government depend on the development of the resources of the country, and their relief from inordinate taxation.

2. That the economy requires that the annual taxation should not exceed two hundred and fifty millions of dollars, including interest, and twenty-five millions principal of the public debt.

3. That the tariff should be so reformed as to be a tax for revenue only, and not for the protection of class interests at the general expense.

4. That, in case this session adjourns without the appointment of the Ways and Means Committee, a special committee of seven be appointed to consider and report upon the reform of the revenue, and also report such bill or bills as will embody a revenue tariff without discriminating in favor of particular interests; and in case said Committee of Ways and Means be appointed at this session, that then said Committee of Ways and Means shall perform the duties required by this resolution.

Mr. Eldridge, of Wisconsin, moved to lay the resolutions on the table, saying that he did so "to get a test-vote."

The question was taken, and it was decided as follows:

YEAS—Messrs. George M. Brooks and Maynard—2.

NAYS—Messrs. Acker, Adams, Arthur, Barry, Beatty, Beck, Bird, Austin Blair, Braxton, Bright, James Brooks, Buffinton, Burchard, Burdett, Caldwell, Carroll, Clarke, Cobb, Coburn, Conger, Cook, Cotton, Cox, Creely, Critcher, Crossland, Davis, De Large, Donnan, DuBose, Duke, Dunnell, Eldridge, Elliott, Ely, Farwell, Finkelnburg, Forker, Charles Foster, Henry D. Foster, Frye, Garrett, Getz, Golladay, Goodrich, Griffith, Hale, Handley, Harper, Havens, Hawley, Hay, Gerry W. Hazleton, John W. Hazleton, Hereford, Hibbard, Holman, Hooper, Kelley, Kendall, Kerr, King, Lamison, Lamport, Leach, Lewis, Manson, Marshall, McClelland, McCormick, McGrew, McHenry, McIntyre, McJunkin, McKee, McNeely, Mercur, Merriam, Monroe, Moore, Morey, Morgan, Leonard Myers, Niblack, Packard, Packer, Palmer, Hosea W. Parker, Isaac C. Parker, Peck, Pendleton, Perce, Aaron F. Perry, Eli Perry, Peters, Platt, Poland, Porter, Potter, Price, Prindle, Rainey, Randall, Read, Edward Y. Rice, John M. Rice, Ellis H. Roberts, William R. Roberts, Rogers, Sawyer, Scofield, Sessions, Shanks, Sheldon, Sherwood, Shober, Shoemaker, Slater, Slocum, Sloss, H. Boardman

Smith, Worthington C. Smith, Snyder, Thomas J. Speer, Sprague, Stevens, Storm, Stoughton, Stowell, St. John, Sutherland, Swann, Taffe, Terry, Washington Townsend, Turner, Tutbill, Twichell, Tyner, Waddell, Walden, Waldron, Wallace, Walls, Washburn, Wells, Wheeler, Whiteley, Whithorne, Willard, Jeremiah M. Wilson, John T. Wilson, Wood, and Young—154.

The resolutions were then referred to the Committee of Ways and Means.

The following resolution, offered in the Senate by Mr. Anthony, of Rhode Island, was adopted, after a wide range of debate, on the 22d of March:

Resolved, That the Senate will consider at the present session no other legislative business than the deficiency appropriation bill, the concurrent resolution for a joint committee of investigation into the condition of the States lately in insurrection, and the resolution now pending instructing the Committee on the Judiciary to report a bill or bills that will enable the President and the courts of the United States to execute the laws in said States, and the report that may be made by the Committee on the Judiciary on that subject.

The vote was as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Brownlow, Caldwell, Cameron, Chandler, Cole, Conkling, Cragin, Fenton, Ferry of Michigan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Hitchcock, Howe, Lewis, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Sawyer, Scott, Sherman, Spencer, Stewart, West, Wilson, and Wright—38.

NAYS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Hamilton of Maryland, Johnston, Kelly, Saulsbury, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, Vickers, and Windom—18.

ABSENT—Messrs. Buckingham, Carpenter, Corbett, Edmunds, Ferry of Connecticut, Flanagan, Hill, Kellogg, Logan, Morrill of Maine, Nye, Rice, Robertson, Schurz, and Sprague—15.

In the Senate, on March 18th, the following resolution, offered by Mr. Sherman, of Ohio, was considered:

Resolved, That as organized bands of desperate and lawless men, mainly composed of soldiers of the late rebel armies, armed, disciplined, and disguised, and bound by oaths and secret obligations, have by force, terror, and violence, subverted all civil authority in large parts of the late insurrectionary States, thus utterly overthrowing the safety of persons and property, and all those rights which are the primary basis and object of all civil government and which are expressly guaranteed by the Constitution of the United States to all its citizens, and as the courts are rendered utterly powerless by organized perjury to punish crime: Therefore,

The Committee on the Judiciary is instructed to report a bill or bills that will enable the President and the courts of the United States to execute the laws, punish such organized violence, and secure to all citizens the rights so guaranteed to them.

Mr. Sherman said: "Mr. President, the condition of affairs in the Southern States is so extraordinary in its character, that I deem it my duty, after a somewhat patient examination for a few days of such testimony as was within my reach, to present to the Senate my view of a state of affairs unexampled, either in ancient or in modern times. It seems to

me that the evidence disclosed already by the recent examination made by the committee appointed by the Senate presents us a mass of testimony which, connected with such facts as we can gather from the newspapers of the South, and as are conveyed to us by telegram and by letter, demands at once attention by the Senate, and by the whole people of the United States. This resolution which I have drawn contains nothing but what is literally true. Every statement and every allegation contained in it, although it is a melancholy indictment, is, I am sorry to say, strictly true. No human language can convey the feelings of regret with which I have perused the evidence and become convinced that this state of affairs really exists. That the Ku-klux Klan, as it is called, under various names, is now a formidable military power in eleven States of this Union is shown by all contemporaneous history, as well as by the sworn proof of great numbers of witnesses given before one of the committees of this body. That it is a disciplined band, armed, equipped, disguised, mainly composed of soldiers of the rebel army, is sworn to by the members of the order."

Mr. Lewis, of Virginia, said: "The Senator says that this band exists in eleven States. Let me say to him that there is no such band in my State, and that there is as much law and order in Virginia as in any State in this Union. If there is a band of Ku-klux there, it is not known to me."

Mr. Sherman, of Ohio, said: "When I say that such bands exist in Virginia, it will be time enough to correct me. I intend that every statement I make this day shall be absolutely and strictly true. I said eleven States; and in Kentucky there is a state of horror unequalled almost by any of the late rebel States."

Mr. Davis, of Kentucky, said: "Allow me to say that that statement is simply the phantom of a distempered imagination."

Mr. Sherman, of Ohio, said: "I think I will show my honorable friend from Kentucky, and he will regret it as much as I do, testimony from sources that he will not controvert, that in Kentucky—"

Mr. Davis, of Kentucky: "You cannot do that."

Mr. Sherman, of Ohio, said: "I can show him from the Democratic organ in Kentucky, the Louisville *Courier-Journal*, a declaration of these facts and a denunciation of these outrages in Kentucky more violent in its tone and words than any language I shall utter this day."

Mr. Davis, of Kentucky: "Allow me to say one single word more, and I shall not trouble my honorable friend again. I do not care who makes the disclosure; to any thing like any considerable extent, it is not true. That there are disorders in Kentucky, rare and occasional, that ought to be put down by the proper authority, I admit, and it will be done sooner and

much more safely, if Congress does not interfere, by the proper authorities of Kentucky."

Mr. Johnston, of Virginia, said: "I desire to make a single statement. If I understand the resolution—I have not had an opportunity of reading it, and only heard it read—it declares that the state of things set forth in it exists in the late insurrectionary States. I presume the Senator who drew the resolution means to include the State of Virginia as one of the late insurrectionary States, and to declare by resolution that the Ku-klux Klan and organized perjury and resistance to the laws exist in that State. I do not desire to interrupt the Senator any further than to deny positively the statements of that resolution in regard to the State of Virginia, and to declare that they are utterly untrue.

Mr. Sherman, of Ohio, said: "Now, that these armed bands do exist in certain States is not denied. Senators seem in the outset to be anxious to disclaim that they exist in their own communities. I will first deal with the case of North Carolina, where we are fortified by proof that cannot be gainsaid, by an examination made by seven of the most intelligent members of this body, among whom were two members of the minority of this body. Before that committee, judges, lawyers, clerks, officers, and private citizens of every grade and condition of society were examined, and their sworn testimony is given in the report. And who now, in the face of this testimony, will deny that there are organized bands of lawless and desperate men, composed mainly of soldiers of the rebel army, in disguise, working with terror and violence, with murder, whipping, and scourging, and spreading terror over large parts of the State of North Carolina, sometimes embracing whole counties, and whose proceedings are set forth in the report with an amplitude of minutiae and detail that is perfectly startling?

"Sir, the witnesses show that many of the young men who were arrayed in the Confederate army joined this military organization, with all the benefit of the discipline they had gained while in armed hostility to the Government of the United States. They are there in violation of the very liberal terms granted them by General Grant, and in violation of the treaty of capitulation under which they surrendered themselves as prisoners of war. They are armed with the very weapons they used against our own soldiers, and arms have flowed freely into North Carolina since the war was over, arms of the best character. They are disciplined and organized, according to the testimony of these high officers, in almost every county of North Carolina; but in most of the counties, perhaps in a large majority of the counties, they have committed no outrages; but there they lie quiet, organized, ready at a moment's notice to spring to arms. In several of the counties of that State, as I will show you by the testimony of these wit-

nesses, they have brought about a condition of affairs that is revolting to every instinct of humanity.

"I have read their oath, showing that here is a political organization, with political ends, political aims; and, although the language is somewhat covert, it shows that the object and effect of that political organization is to prevent large masses of the people of the Southern States from enjoying a right which has been guaranteed to them by the Constitution of our country.

"These men are not only armed, disciplined, oath-bound members of the Confederate army, but they work in disguise; and their instruments are terror and crime. Why, sir, we are already familiar, and perhaps too familiar, with the common description of these Ku-klux Klans riding at night over a vast region of country, going from county to county, coming into a county town, and spreading terror all over a community; and not only that, but they endeavor to excite superstition. They pretended, I believe, in the outset to be the representative ghosts of the Confederate dead. That was the idea which they sought to give out; the ghosts of the Confederate dead were coming back to punish those who had been disloyal to the Confederate service; and they terrified men, women, and children, white and black. They excited the superstition of the ignorant negroes of the South, endeavored to frighten them first by superstition, and then by intimidation, by threats, by violence, and by murder.

"Mr. President, I do not know anywhere an organization similar to this Ku-klux Klan. I have thought of the Thugs of India. They murdered, and they murdered secretly; but they did not disguise themselves while they were in the act of murder. If any Senator now, in looking over the record of crime in all ages, can tell me of an association, a conspiracy, or a band of men, who combined in their acts and in their purposes more that is diabolical than this Ku-klux Klan, I should like to know where it was. They are secret, oath-bound; they murder, rob, plunder, whip, and scourge; and they commit these crimes, not upon the high and lofty, but upon the lowly, upon the poor, upon feeble men and women who are utterly defenceless. They go out at night, armed and disguised, under color of superstitious forms, and commit their work. They go over vast regions of country, carrying terror wherever they go. In all the record of human crime—and God knows it is full enough—where is there an organization against which humanity revolts more than it does against this? I know there is not a Senator here but feels that this thing ought to be put down.

"As to the extent of this organization, let me look at the testimony. One or two witnesses here state the number of this organization at forty thousand."

Mr. Morton, of Indiana: "In one State?"

Mr. Sherman, of Ohio, said: "In one State,

North Carolina. It seems to me that that must be an exaggeration, because it would be entirely out of proportion to the white voting population of North Carolina. But suppose there are but ten thousand, and no man can read this evidence without being convinced that there are at least ten thousand. In some counties, according to the testimony, seven or eight hundred of these men are in the Klan.

"It is also shown by conclusive evidence that this organization extends through every county of North Carolina. One of the judges of the Supreme Court of that State, who was examined by both sides, and who seems throughout to have testified fairly, said he believed the organization extended into almost every county in North Carolina, but that in many counties they had never committed any outrage; and he said that in some of the strongest Democratic counties they dared not show their heads in open violence. Wherever there is a strong Republican majority or a strong Democratic majority, this organization lies quiet; but wherever there is a close county, and terror is necessary to enable them to carry the election, there they rise. Wherever the negro population preponderates, there they hold their sway; for a few determined men, disciplined as these men are, can carry terror among ignorant negroes, uneducated, full of superstition, without arms, equipment, or discipline. The testimony shows that this organization is powerful in that State; and it extends to the other States, as I shall show you hereafter.

"Mr. President, it may be said that these cases of crime are only isolated cases; that they do not pervade large communities, and are not numerous. That is not so, unfortunately. This report contains, on pages 18-20, specific cases which show that they are general. For instance, in the single county of Lincoln, within eighteen months, there were twenty-one cases of whipping, murder, and other crimes of violence committed by the Ku-klux Klan. In another county, the county of Alamance, there were thirty-eight cases within the period of twenty-four months; and other testimony, to which I shall advert presently, shows that since this list was made up other crimes of a similar character have been committed in those counties.

"In Catawba County we find a list of twenty or thirty cases. I do not know precisely the number. Then there is here a list of outrages in other counties referred to."

Mr. Bayard, of Delaware, said: "Without interrupting the honorable Senator from Ohio, merely that there may be an intelligent comprehension of this evidence as we go along, I ask him if he knows within what dates that whole list of outrages has occurred? How long a period of time is embraced in the occurrence of that long list? There is something in that, I think."

Mr. Sherman, of Ohio, said: "I see in the

report of the Senator from Pennsylvania, from the 1st of December, 1868, to the 22d of December, 1870, a period of a little more than two years, a list of thirty-eight cases referred to as having occurred in Alamance County; and the same report says that they are only a portion of the cases occurring in that county."

Mr. Bayard, of Delaware, said: "Now, in the presence of the Senator from Pennsylvania, whom the Senator gives as his authority, I ask whether, from the testimony taken before that committee, he derives those dates and those facts?"

Mr. Scott, of Pennsylvania: "Those dates refer to the President's message."

Mr. Bayard, of Delaware: "I thought so. There was no testimony about them."

Mr. Sherman, of Ohio, said: "I think a gentleman so distinguished for candor as my friend from Delaware will hardly dispute the fact when he comes to reply to me (as he will, no doubt, in due time, as I shall have occasion to refer to his report after a while and he will have occasion to reply) that the multitude of these crimes, spreading over vast regions of country, occurring so frequently, shows a revolting state of society which no man can justify. But, instead of giving long lists of crime that have been committed from time to time, it is sometimes best to illustrate the nature of these crimes; and I propose to give now four or five specimen cases of the offenses that have been committed and are here reported to us by this sworn testimony. [Here Mr. Sherman stated several cases.—Ed.]

"Mr. President, these are all the cases that I shall bring before the Senate, not because there are not many more, for I have here, in the clearest and strongest testimony, in newspapers and in various forms, innumerable cases that would occupy me for days in merely reading a short abstract and statement of them. I appeal now to Senators whether there is not a condition of society in the South that calls for our action if we intend to retain a republican form of government, if we intend to hold up this Government of ours as a pattern for other nations. If we do, we must, without regard to party, in the language of the judge of Kentucky, put down this condition of things in some way or other.

"I have confined myself, thus far, to a simple delineation of the character of this organization, of the nature of its crimes, of the extensiveness of its crimes, and of the strength and power of the organization. There are two or three peculiarities about it which are as striking as are these other matters. The first is, that all these crimes are committed upon Republicans. The judge who made the charge to the grand-jury in Kentucky says this is not a political organization, but he had not at that time read the testimony here containing the oath, and all this multiplied testimony, showing that it is a political organization, not approved by all Democrats, I know. It is a

rebel organization; it is flaunting again the rebel flag in our faces; but, instead of open and manly warfare, it is assassination substituted for war.

"Mr. President, there is another remarkable feature of this whole proceeding, and that is, that from the beginning to the end, in all this extent of territory, no man has ever been convicted or punished for any of these offences, not one. The only claimed exception, and that is pointed out by the minority report, is where three or four negroes undertook to disguise themselves as Ku-klux, went around murdering and robbing other black people; but they were not genuine Ku-klux. They were arrested by the authorities, tried, and sent to the penitentiary, and are there now.

"But, sir, in all this numerous array of crimes there is not one man called to an account for murder, robbery, scourging, whipping. Why, sir, it is an appalling fact. In regard to Texas the matter was discussed here some time ago; and now from Texas to North Carolina how many crimes have been committed by this Ku-klux Klan? And yet here is the testimony of a judge in Kentucky that the grand-juries refuse to indict and the petit juries refuse to convict, and there is no punishment for this lawless outrage upon human society.

"I have culled out these cases to show that the broad statement I made is literally true, because, when we come to analyze the statements made by the honorable Senator from Tennessee and the honorable Senator from Georgia, they are cases of ordinary crime; they are not the political offences of which I have spoken; and I repeat now as conclusively true, and I assert they cannot be gainsaid, and I ask of my political adversaries to overthrow them if they can: first, that every man who has been outraged by these Ku-klux Klans is a Republican; next, that every man who did it was a Democrat; and next, that no man has been convicted for any of this class of offences.

"I have already consumed all the time on that branch of the case that I desire. I now turn to the report of the minority of the committee, signed by two gentlemen for whom I not only entertain high respect, but whose names ought to carry with them a great deal of respect in the country.

"In the first place, I do not understand these gentlemen to deny the material allegations made by the majority report. I do not understand them to deny, except in lawyer-like, general phraseology, the material allegations made by the majority, that this is a political organization, spreading terror and violence over a vast region of country, outraging its adversaries, and protecting its members from punishment in the courts; but they give a number of apologies, very plausibly stated.

"But, the chief point of this minority report is, to show that the Ku-klux outrages were

justified by the organization of secret leagues on the part of the negroes. Let us see what was the character of their secret leagues. Were they any other than ordinary associations of men bound together for a lawful purpose? What does this book show in regard to the Union Leagues or the secret leagues which it is said the negroes joined? Nothing but what they had a right to do."

Mr. Stevenson, of Kentucky, said: "Mr. President, when the Senator from Ohio (Mr. Sherman) rose to speak in support of his resolution, he made a most unjust and unfounded aspersion, as I think—wholly unintentional no doubt on his part—upon the Commonwealth which I have the honor in part to represent on this floor. The Senator was pleased to say that the lawlessness and violence of these armed, organized, sworn rebel soldiers were so great in Kentucky as to demand the passage of this resolution.

"Now, has my honorable friend made good his charge so repeatedly hurled at Kentucky in his speech, that there is a band of armed Confederate soldiers in that Commonwealth bound by secret oaths to overthrow the law and to commit robbery and murder? The charge was distinct. What has been its proof? He reads a charge to the jury made by William S. Prior, a circuit judge in one of the judicial districts of Kentucky. I know that gentleman well. His honor and his truth are as pure as the ermine that he wears. Does that judge say that the Ku-klux is a political organization? Does he intimate that the organization is composed of rebel soldiers? So far from it, he says it is not a political organization. The very charge of Judge Prior, who is a Southern man, and was for freedom of opinion, but for nothing else, ruthlessly banished by Federal power during the war, constitutes the highest proof of the injustice which the honorable Senator from Ohio seeks to heap upon the Commonwealth of Kentucky. Exiled during the war for the mere exercise of political opinion, when restored to the circuit bench by a most unprecedented majority, wherever he sees the least disorder, the least violence, he makes it the subject of a special charge, in order that these violators of law may be brought to justice.

"I do not deny the fact that occasional acts of violence have been committed in Kentucky. During my late administration of the executive affairs of that State, which I resigned on the 13th of February, it was my duty several times to call the attention of the Legislature, in as strong language perhaps as that used by the *Courier-Journal* of Louisville, to disorders of that sort, and to suggest that they should be put down at any cost and at every hazard. Perhaps, during the last three and a half years that I administered the government of that State, a dozen instances of violence did occur, not more; and what did they amount to? There was no evidence that they were the act

of any secret political organization in that State. I know there are bad men in both parties; bad men do wrong everywhere; but I aver that I do not believe that the organization committing these outrages amounted to fifty men, and they confined to one locality.

"What evidence is there that they were Confederate soldiers? There is no proof of it. That outrages have been committed I do not deny; but I undertake to say that if the gentleman will give me an investigating committee I can go to the great capital of Ohio, which the honorable Senator represents, and show more crime and more outrage committed in the single city of Cincinnati than have been committed in the entire Commonwealth of Kentucky for the last ten years. I might go to the State of Indiana and find vigilance committees who hang half a dozen at a time."

Mr. Thurman, of Ohio, said: "And not one of the men punished, either."

Mr. Stevenson, of Kentucky, said: "I might go to every State; but God forbid that I shall ever seek to seize isolated cases in the calendar of crime in order to obtain materials for a campaign speech for the next presidential election! I doubt whether my friend from Ohio would have done it so early in advance except for the recent family jars in his own party. Desperate diseases require desperate remedies; and I think that the honorable Senator felt that he had to give a slap at Kentucky in order to inflame the public mind and to revive the sinking fortunes of the Republican party."

Mr. Sawyer, of South Carolina, said: "Mr. President, I believe the existence of these outrages is in some degree indirectly due to the fact that, when the new State governments were formed in the South, men who by education, by previous social position, and by experience in such affairs were best fitted to become State officers, were by the laws and Constitution excluded from such positions. In South Carolina it is manifest that the discontent, the resistance to law, and the violations of private rights, do not necessarily imply hostility to the United States Government. Doubtless there are attempts there to evade the revenue laws; there have been, I believe, one or two cases where violent resistance has been made to officers attempting to suppress illicit distillation by seizures and destruction of stills. But the same thing has occurred in other parts of the United States where there was no disloyalty suspected, but simply a desire to get unlawful gains and to escape the payment of taxes. It is doubtless a species of disloyalty to evade the payment of whiskey taxes, income taxes, or any other taxes; but, if we reason from such attempts on the part of individuals that the community in which they live needs special legislation to protect loyal men, we shall make an egregious error.

"I believe that in South Carolina, at least, and probably in many other States, the turbulent and riotous spirit which induces these out-

rages comes from opposition to the local administration. I do not think the men who commit the atrocities of which we hear so much are more to be excused for their conduct because their action proceeds from the one cause rather than from the other. But I wish the fact to be clearly understood, that, while here and there the so-called Ku-klux Klan may declare their hostility to the national Government, it is generally against those who support and affiliate with the State officers that their blows are aimed. The pretext for their action is maladministration of State and county affairs. Their devilish doings are claimed by them to be in the interest of just punishment for crimes which otherwise would go unwhipped of justice.

"The monstrous character of such a policy needs no comment. All right-minded men see that it is anarchy, and that all the dearest rights of man and of society are sacrificed by its prevalence. When men, on never so plausible an excuse, take the administration of justice from the proper tribunals into their own hands, society is thrown back into a state of barbarism; government, in a proper sense, ceases to exist. If there be power under the Constitution to cure this evil, we cannot afford to refuse or postpone the labor of devising a remedy.

"I am not prepared to deny that maladministration has occurred in many of the Southern States. I know such to have been the fact. I do not think it would have been less likely to occur if the government had been in Democratic hands. On the contrary, other things being equal, I think quite the reverse would have been the case."

Mr. Thurman, of Ohio, said: "Mr. President, no one underrates the necessity of putting a stop to the outrages spoken of, so far as they exist. There may be a difference of opinion as to the extent to which they do exist; but no one, I am sure, of any party, desires that they should continue. Every one, at least, in this chamber, desires that they should cease. But, desirable as it is that these outrages should cease, important as any Senator may consider it to be that an end should be put to them, there is another thing of more importance than even that; and that is that you shall respect and obey the Constitution of the United States. These evils that exist, great as they may be, admit them to be as great as even exaggeration has depicted them, are not near so great as would be an overthrow of the fundamental law of the land and the assumption of all power by the Congress of the United States.

"There have been bills introduced in one or the other House of this Congress by Northern members, and, if any thing could more completely demonstrate than another the danger of proceeding in hot haste upon such a subject, it would be those bills. They are bills that shock every sense of constitutional law in any

lawyer's mind. I have one of them here before me now, introduced into the House of Representatives by a colleague of my own from the State of Ohio, a bill which assumes that Congress has as much power in a State over the criminal law of the State, as much power to punish crimes in a State as it has within the District of Columbia, or in any of the forts or arsenals of the United States; a bill which asserts for Congress just as absolute jurisdiction over every crime and offence, from the highest to the lowest, from murder to libel, from robbery to assault and battery, and the power to punish those crimes when committed in a State, as fully as Congress can punish them when committed within the District of Columbia. And now, when it is proposed that Congress shall assume this power, the entire jurisdiction over crimes and offences committed within a State; when this stride, that no mortal man ever before thought of, is advocated here, it is proposed that the Judiciary Committee in hot haste shall report some such bill, and that within the few remaining days of this session! Why, sir, it is simply madness, I would almost say, if I did not see that it is proposed by sane men.

"Now, Mr. President, I wish to say something further on this question. The constitutional question involved is as to the power of Congress to go into a State and punish offences, not against the laws of the United States, which Congress has any right to pass, but merely to punish ordinary murder, ordinary assault and battery, ordinary crimes, such as are punishable by the State law. Whenever that question shall come, if there is any respect left for the Constitution, if there is any respect left for the decisions of your Supreme Court, I will show you by the decisions of the Supreme Court of the United States, as well as by the plain text of the Constitution, that you have no such power at all. No question was ever more solemnly decided than was this very question in an opinion delivered by John Marshall himself, that you have no such power. That was under the Constitution before the fourteenth amendment was adopted, it is true; but will anybody tell me where he can find in this fourteenth amendment any power to invade the States, and take the entire punishment of crime, the entire jurisdiction of crimes committed within a State, into the hands of Congress? I do hope, that at least the lawyers of this body, whose education and habits ought to give them some reverence for law, some respect for precedent, some regard for the Constitution, will pause and consider before they are driven to such a pretension as this.

"I know it has been said that 'hard cases make shipwreck of principle.' It is an old maxim of the lawyer; and hard cases or supposed emergencies too often make shipwreck of constitutions. I know, that under a great clamor of excitement Congress may be induced to exercise powers that, in its sober moments,

and without excitement, it would shrink with horror from attempting to exercise. We have seen too much of that in the past history of the country; but I do hope that the time has not come when, for the purpose of curing one evil, the very law-making body of the Government, each member of which is sworn to support the Constitution, will commit the far greater evil of overthrowing that instrument!

"This is the state of this case. Here, sir, is a law, a law which has been in force now nearly a year, with Republicans everywhere in these States to execute that law, everywhere having power to execute it, the judges of your own appointment, the jurors selected by your own marshals, and they the appointees of the President of the United States, with every power with which Government can clothe a judiciary; and now we are told that we must have some more law of the same kind. Mr. President, if we can have no better law of the same kind than the bills which have been presented to us, I hold that the less of that law we have the better.

"The provision in the Constitution, in regard to the President putting down insurrection when called upon by the Executive or the Legislature of a State, relates to insurrection against the State; but that does not limit the power of the President to put down insurrections in the country. There is the power to put down insurrections against the Government of the United States; and although the act of 1795, Congress not anticipating such a case, failed to provide for it, yet, by the act of 1862, you did provide for it, and gave the power to the President to call out the militia whenever the necessity existed to put down insurrections against the Government of the United States. Then you have the judicial power which I have shown you, and you have the executive power, the President clothed with power under your act to even call out the militia to put down insurrection against the Government of the United States.

"My object in making these remarks is to show that this is not a subject that is to be decided in a day, unless your Judiciary Committee, instead of being a committee of lawyers, instead of being a committee to find out what the law and the Constitution is, and advise the Senate, is to be a mere scrivener, to put into the form of law what party, what clamor may demand. Then you may command them to report to-day or to-morrow, but if they are to be lawyers, if they are to exercise the learning that they are supposed to possess, and the brains which they are supposed to have, if they are conscientious men, you must give them time to do it, that they may report that which they can defend when reported, and which the Senate can adopt without bringing shame and confusion upon the face of every man here who claims to be a lawyer."

While the resolution was under considera-

tion, on March 23d, a message was received from the President of the United States.

Mr. Conkling, of New York: "I move that the message lie on the table and be printed."

The motion was agreed to.

Mr. Davis, of Kentucky, said: "I have two or three objections to the resolution. The first is, that Congress has no constitutional power whatever to pass such a law. The second is, that if Congress did pass such a law it would be as impotent to execute it as, and more so than, the State authorities and the State courts. In the third place, in view of the state of society existing in Kentucky after the termination of the great civil war, and after the people were deprived, without authority of the Constitution, by a usurped power of Congress, of a thousand millions of their property, though there had been a pledge to them, a positive, reiterated pledge to them, by Congress, by the Executive, by the members of the Cabinet, that the war was waged only to put down armed rebellion, and not to invade the States, or their governments, or their institutions, or their property; and after again they were pledged to the payment of \$10,000,000 for their property twice over, and you put a repudiation of this pledge in an amendment, a pretended and surreptitious amendment of the Constitution; I say as to a people thus outraged, as have been the people of Kentucky by their own Government, against all its professions of good faith, it is not strange that disorder should exist to some extent in that State, and that it should take time and reflection and sober reason to bring the people of the State to their correction; and that is the only corrective."

Mr. Blair, of Missouri, said: "I shall conclude what I have to say by expressing my opinion about this policy of the Republican party, not only in the reconstruction measures themselves, but in the continued series of aggressions in that line of policy which are never intermitted. One encroachment after another follows close upon the heels of its predecessor. They claim to go one point, and that they will be satisfied with that advantage; but it is only a stepping-stone to still further and greater usurpations. And, sir, I have to say that, in my judgment, this whole reconstruction business was a bald and flagrant usurpation and lawless outrage upon our written Constitution, intended to obliterate State lines, State power, and State pride, and to centralize the whole powers of Government here at the centre of the country. The contrivers of these measures have now thrown off the mask, and, emboldened by the result of the last presidential election, which they claim affirmed the measures which they had already passed, they by fraud imposed upon the people of the United States the fifteenth amendment. The laws by which that amendment are sought to be carried out are not warranted even by the amendment itself, nor is the present measure now

pending in Congress warranted by the fourteenth amendment, under which it seeks to shelter itself.

"I shall, perhaps, be told that these sentiments are revolutionary. Everybody who maintains that this Congress has not the power to sweep away the Constitution when it pleases is denounced as revolutionary. When they with one stroke, in the reconstruction measures, swept away the fifth and sixth amendments to the Constitution, securing persons and property, securing the right of trial by jury, securing a trial, according to due process of law, of every one charged with crime, and substituting in its place the drum-head court-martial, all who maintained that this was unconstitutional and that Congress had no power to do this act, that there was no authority in any public body in the United States to do it, were denounced as revolutionists. When we declared that Congress had no power to pass a bill of attainder, by which whole communities of people were convicted and punished without due process of law, although the Constitution of the United States declares in so many words that 'Congress shall pass no bill of attainder or *ex post facto* law,' we were denounced as revolutionists. And so also, when we proclaimed that Congress could not, in defiance of the express letter of the Constitution, pass an *ex post facto* law, a law fixing a different punishment than that which had been previously affixed for an offence after the offence was committed; when we declared that Congress had no power to pass such a law, that it was forbidden by the express language of the Constitution, that any law in defiance and in derogation of the express prohibitions of the Constitution was null and void, we were responded to, 'That is revolutionary.'

"Now, sir, let me tell the Senators that these rights belonged to the people of our blood before the Constitution was made. Every man who has read English history, and especially those who are descended from the people of that race, has pondered over the history of the struggle, which for a thousand years has lasted, to secure these rights and to guard them against tyranny and despotism. Men have suffered death on the battle-field and upon the scaffold and at the stake and in dungeons rather than yield up these rights to the arbitrary kings who reigned over those people; and they have always succeeded in maintaining them, though for a brief period they might be trampled under foot, and they often made their rulers pay the penalty for their crimes in attempting to destroy and take away these precious boons, these guarantees of their personal freedom and security. One king laid his head upon the block, and his race and descendants were exiled and died wanderers away from their homes because they attempted to rob the people of these precious charters of their liberties. We have always read those

pages of history that told of these deeds of our brave ancestors with a stern joy when they exacted this punishment from their oppressors, and now are we to yield up these rights which have come to us through so many historic struggles and which have been affirmed to us in the Constitution; are we to yield them up to a set of upstart tyrants, because, if we refuse to do it, we are to be denounced as revolutionists?"

Mr. Morton, of Indiana, said: "Mr. President, I propose for a short time to consider the legal question that is involved in this controversy. The first section of the fourteenth amendment declares that—

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

"The fifth section declares—

The Congress shall have power by appropriate legislation to enforce the provisions of this article.

"The clause to which I call especial attention is that which says that no State shall 'deny to any person within its jurisdiction the equal protection of the laws.' If a State fails to secure to a certain class of people the equal protection of the laws, it is exactly equivalent to denying such protection. Whether that failure is wilful or the result of inability can make no difference, and is a question into which it is not important that Congress should enter. The meaning of the Constitution is, that every person shall have the equal protection of the laws. It is in its nature an affirmative provision, and not simply a negative on the power of the States. Will it be pretended that the meaning would be changed if it read, 'every person in the United States shall be entitled to the equal protection of the laws?' It means to confer upon every person the right to such protection, and therefore gives to Congress the power to secure the enjoyment of that right. Whenever the Constitution confers a power or guarantees a right, it gives also the means of exercising the power and protecting the right.

"The Government can act only upon individuals. It cannot prevent the Legislature of a State from passing an act, or compel the passage of an act. If the effect of the amendment is simply that the United States shall exert a negative upon a State, it amounts to but very little, and in fact would result only in a lawsuit, and would, in effect, nullify the concluding section of the amendment, which gives to Congress the power to enforce the amendment by appropriate legislation. There can be no legislation to enforce it as against a State. A criminal law cannot be made against a State. A State cannot be indicted or punished as such. The legislation which Congress is authorized to enact must operate, if at all, upon individuals.

"The Constitution declares that the States

shall not have the power to coin money. How can that provision be enforced except by making it a penal offence for any person to coin money under color of the authority of a State?

"This principle was recognized by Congress in the act passed for the enforcement of the fifteenth amendment, which is in form like the fourteenth, a prohibition upon the States, declaring that no State shall deny or abridge suffrage on account of race, color, or previous condition of servitude. In that act Congress assumed the power to protect the right of suffrage, not only against any law that might be passed by a State, but against a mob, against any lawless individual, against the unauthorized act of any public officer or election board. It proceeded upon the hypothesis that the amendment conferred upon colored men an absolute right to vote upon the same terms and conditions with white men, and that Congress had the power to protect and enforce this right against individuals or organizations, whether acting in open violence or under color of State law.

"Believing that the fourteenth amendment intended to secure to every person the equal protection of the laws, it is competent for Congress to furnish such protection by appropriate legislation. If there be organizations in any of the States having for their purpose to deny to any class or condition of men equal protection, to deny to them the equal enjoyment of rights that are secured by the Constitution of the United States, it is the right and duty of Congress to make such organizations and combinations an offence against the United States, and punishable by such pains and penalties as may be prescribed. Whatever conspiracy may be formed having for its purpose to create a terror which shall deter any class of people from the exercise of those rights, it is a direct infringement of this amendment which may be punished by the laws of the United States."

Mr. Thurman, of Ohio, said: "It has been said here that it would be a good thing, and tend to produce peace in the South, if this body, by a unanimous vote, should show that it was disposed to exercise all the powers properly vested in it by the Constitution to produce peace in the country. Well, sir, if that is desired by Senators, they can have a unanimous vote very easily. All they have to do is to put this resolution in a proper shape, and they can have the unanimous vote, I think I may venture to say, of this Senate; and, if it is not put in a proper shape, what is the reason? There can be only one reason, it seems to me, why it is kept in a shape which is obnoxious to some of the Senators; and that is that it may not receive a unanimous vote, that it may go abroad to the country that the Democratic Senators on this floor are opposed to proper legislation. I wish to say that if the resolution is persisted in in its present form—and I for one shall not be able to vote for it in that form—that fact will furnish no reason whatso

ever to charge me with being any friend, any aider, any countenancer of disorder anywhere in the republic.

"I have only a word to add to what I said just now. I have spoken of the positive manner in which it is asserted in the resolution of my colleague that certain facts are proved, and have said that I presumed he referred for that proof to the report made by the select committee of this body on the subject of affairs in the State of North Carolina. I have glanced over that report as fully as I could do in the limited time I have had to examine it and the multitude of other things demanding my attention, and I undertake to say that the result of my investigation is this: that no man ever was convicted in a court of justice of the slightest offence known to the law upon such testimony as is found in that report.

"More than nine-tenths of all that I have read of the testimony it contains is mere hearsay, witnesses swearing, not to what they knew, not to what they had seen, but simply to what they had heard; and the testimony even of those witnesses who seem to be the most important and most relied upon, the common informers of these Ku-klux men, the men who have turned State's evidence, and some of them with the price of their apostasy in their pockets—the testimony even of those men is, more than nine-tenths of it, simple, unaltered hearsay; men who had seen nothing done, who knew of nothing of their own knowledge, but who retailed what they had heard."

The Vice-President: "The question recurs on agreeing to the resolution."

The question being taken, resulted as follows:

YEAS—Messrs. Anthony, Boreman, Brownlow, Caldwell, Chandler, Clayton, Cole, Conkling, Corbett, Cragin, Edmunds, Fenton, Ferry of Michigan, Frelinghuysen, Hamilton of Texas, Hamlin, Harlan, Hitchcock, Howe, Logan, Morrill of Vermont, Morton, Nye, Patterson, Pool, Pratt, Ramsey, Rice, Sawyer, Scott, Sherman, Spencer, Stewart, Sumner, West, Wilson, Windom, and Wright—38.

NAYS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Hamilton of Maryland, Kelly, Saulsbury, Stevenson, Stockton, and Thurman—12.

ABSENT—Messrs. Ames, Buckingham, Cameron, Carpenter, Ferry of Connecticut, Flanagan, Gilbert, Hill, Johnston, Kellogg, Lewis, Morrill of Maine, Osborn, Pomeroy, Robertson, Schurz, Sprague, Tip-ton, Trumbull, and Vickers—20.

So the resolution was agreed to as follows:

Resolved, That as organized bands of lawless and desperate men, mainly composed of soldiers of the late rebel armies, armed, disciplined, and disguised, and bound by oaths and secret obligations, are proved to exist in the State of North Carolina, and have, by force, terror, and violence, defied civil authority in that State, and by organized perjury have rendered the courts powerless to punish the crimes they have committed, thus overthrowing the safety of person and property, and the rights which are the primary basis of civil government, and which are guaranteed by the Constitution of the United States to all its citizens; and as there is good reason to believe that similar organizations exist, and have produced similar results in many parts of the late insurrectionary

States: *therefore*, the Judiciary Committee is instructed to report a bill or bills to enable the President and the courts of the United States to execute the laws, punish and prevent such organized violence, and secure to all citizens the rights so guaranteed to them; and that said committee be instructed to report as soon as practicable.

In the Senate, on March 17th, Mr. Anthony, of Rhode Island, said: "I offer a concurrent resolution, and I wish to state that this concurrent resolution covers the same ground as a resolution which passed the House of Representatives for investigating into the alleged disorders in the Southern States. An investigation has been ordered by the House of Representatives, I suppose it is not improper for me to state, as everybody knows it; and this is a concurrent resolution proposing that the Senate shall be represented upon that committee; and it will enable us to dispense, I suppose, with the committee we already have on that subject. The only difference between this and the resolution that has been adopted by the House of Representatives, and the committee that has now been appointed in the Senate, is to provide that there shall be one investigation in which both Houses shall participate, and of course the Senators upon both sides of the Chamber will be represented upon the committee. If there be no objection I should like to have it read, and I think it would facilitate business if it were put on its passage."

The Chief Clerk read the resolution, as follows:

Resolved by the Senate of the United States (the House of Representatives concurring), That a joint committee consisting of five Senators and seven Representatives be appointed, whose duty it shall be to inquire into the condition of the late insurrectionary States so far as regards the execution of the laws and the safety of the lives and property of citizens of the United States, with leave to report at any time the result of their investigation to the two Houses of Congress, with such recommendations as they may deem expedient; that said committee be authorized to employ clerks and stenographers, to sit during the recess, to send for persons and papers, to take testimony, and to visit at their discretion, through sub-committees, any portion of the said States during the recess of Congress, and to print and make public from time to time during the recess the results of their investigations; and the expenses of said committee shall be paid out of the contingent funds of the two Houses of Congress.

Mr. Trumbull, of Illinois, said: "I would suggest that, upon reflection, it seems to me that committee had better be seven on the part of the Senate, and nine on the part of the House, and I say seven on the part of the Senate because we now have a committee of seven, and I think it would be better to continue those same gentlemen. I suggest it, and perhaps the Senator from Rhode Island will agree to it."

Mr. Anthony: "I do not see any objection, if Senators around me do not."

The resolution was subsequently adopted.

In the House, on March 20th, the above resolution was considered.

Mr. Dawes, of Massachusetts, said: "I offer as an amendment what I send to the Chair, and call the previous question upon the resolution and amendment."

The amendment of Mr. Dawes was read, as follows:

Strike out all after the resolving clause, and insert the following:

That a joint committee consisting of seven Senators and fourteen Representatives be appointed, whose duty it shall be to inquire into the condition of the late insurrectionary States so far as regards the execution of the laws and the safety of the lives and property of the citizens of the United States, with leave to report, at any time during the next or any subsequent session of Congress, the result of their investigation to either or both Houses of Congress, with such recommendations as they may deem expedient; that said committee be authorized to employ clerks and stenographers, to sit during the recess, and to send for persons and papers, to administer oaths and take testimony, and to visit at their discretion, through sub-committees, any portions of said States during the recess of Congress; and all expenses of said committee shall be paid out of the contingent fund of the Senate, upon vouchers approved by the chairman of said committee.

Mr. Butler, of Massachusetts, said: "I desire to say that the reason why this resolution should be debated is this: it is charged upon us that there are no outrages at the South, and therefore it is quite necessary that we should have this committee to clear the skirts of the Southern people; it is quite necessary that we should have this committee in order to instruct the Republican party and the loyal people of the country how this matter stands. Upon that question I deem, for one, that the public mind is sufficiently instructed to know that there is legislation necessary. But, if it is not, we have got a report from a committee of the Senate. We have members here from every State in this Union who can tell us how these things are, and here upon this floor we can investigate the matter better than we can elsewhere.

"Now, let us see what will happen if we appoint this committee and send it down South. If the state of things exists that I believe exists there, no man can come before the committee without fear of his life. If he should come before the committee and tell the truth about the Ku-klux outrages, the moment the committee was withdrawn, that moment he would be run out of the country, and if he testified to any thing it would be shown that he was a vagabond because he had run away; whereas the Democratic party could bring every Democrat in the South before this committee, and they can testify to their version of the story, which the committee, a Republican committee with a Republican majority, will be bound to report as the state of things in the South. They will be bound to report it, because they cannot get any thing else. They will pile up before you and the country that evidence. I think the Democratic party did wisely, and they are pretty wise, when they voted on Wednesday to establish this committee. And here

is a singular spectacle, that without debate, except such as is prayed for in all the terms of entreaty that can be put to my colleague to get five minutes to say so much—without debate, without examination, for it has not been debated in either House, on a question upon which the Republican party is divided, at least in the middle on this floor—for there are plenty of gentlemen here to overcome the supposititious majority—the resolution is to be forced through by the aid of Democratic votes, and then it will be followed, as the former resolution was, by a motion to adjourn *sine die*, so as to cut off every other legislation."

Mr. Dawes: "Mr. Speaker, this is not a question of side. It is one that commends itself to the serious deliberation of every member of this House on either side. And he who attempts to make party capital of it, who puts party position before his country in the consideration of this the gravest of all questions that meet us here at the threshold of this Congress, comes short, in my opinion, of the full measure of his duty. And he, sir, who insists on some particular measure, who comes here and says *aut Caesar aut nullus*, will fail, in my apprehension, of working out the problem which is forced upon this Congress, whether or not out of all the *débris* and disintegration of the rebellion we are competent fully to rebuild this Union.

"Sir, I cannot feel that when we come to discuss the question of peace, of life and death, in ten or eleven States of this Union, we ought to talk about the question whether we are Democrats or Republicans, whether we are working with one side or the other. I marvel, sir, at the mind that can find food in these days from such husks as that.

"Sir, it is possible for us, in my opinion, with such a committee as these two bodies are capable of forming from the ablest and most impartial members of both branches of both political sides, to enter calmly and deliberately into an investigation not only of the questions of fact alleged and denied on the one side and on the other, but of those other questions which trouble all thoughtful men. What is the remedy for this evil in this diseased state of the public mind, in this unsettled and inflamed condition of the people in the Southern States? What is the remedy? What are the facts and what is the remedy? I am satisfied, sir, that such a committee can be selected, from both sides of this and the other branch of Congress, as shall command the respect and confidence of the country, and as shall give the assurance that it goes forth, not in the interest of any party, but in the interest of the country alone."

The question was taken on agreeing to the amendment offered by Mr. Dawes; and it was decided as follows:

YEAS—Messrs. Acker, Adams, Ambler, Archer, Arthur, Banks, Beck, Bigby, Biggs, Austin Blair, James G. Blair, Braxton, Bright, James Brooks, Buffinton, Burchard, Caldwell, Campbell, Carroll, Comingo, Conger, Cook, Cox, Crebs, Critcher, Cross-

land, Davis, Dawes, De Large, Dox, DuBose, Duke, Eldridge, Ely, Farnsworth, Farwell, Finkelnburg, Forker, Frye, Garrett, Getz, Golladay, Goodrich, Griffith, Hale, Hambleton, Handley, Harper, George E. Harris, Hawley, Hay, John W. Hazleton, Hereford, Hill, Holman, Kendall, Kerr, Ketcham, King, Lamson, Lamport, Lansing, Lewis, Lowe, Manson, McClelland, McCormick, McCrary, McGrew, McHenry, McIntyre, MoJunkin, McKinney, McNeely, Mereur, Merriam, Benjamin F. Meyers, Moore, Morey, Morgan, Morphis, Negley, Niblack, Eli Perry, Peters, Poland, Potter, Price, Prindle, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, Ellis H. Roberts, William R. Roberts, Robinson, Rogers, Scofield, Sheldon, Sherwood, Shober, Slater, Slocum, Sloss, R. Milton Speer, Stevens, Storm, Sutherland, Swann, Terry, Thomas, Washington Townsend, Tuthill, Van Trump, Vaughan, Waddell, Wake-man, Walden, Waldron, Wells, Wheeler, Whit-thorne, Willard, Williams of New York, Wood, and Young—127.

NAYS—Messrs. Averill, Barber, Beatty, Bingham, Bird, George M. Brooks, Buckley, Burdett, Benjamin F. Butler, Cobb, Coburn, Cotton, Creely, Darrall, Donnan, Dunnell, Eames, Elliott, Charles Foster, Garfield, Havens, Gerry W. Hazleton, Hoar, Hooper, Kelley, Killinger, Monroe, Orr, Packard, Palmer, Parker, Peck, Perce, Porter, Rainey, Rusk, Sawyer, Sessions, Shanks, Shellabarger, H. Boardman Smith, John A. Smith, Snyder, Thomas J. Speer, Sprague, Stevenson, Stoughton, Stowell, Sypher, Taffe, Turner, Twitchell, Tyner, Wallace, Walls, Whiteley, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—60.

NOR VOTING—Messrs. Ames, Barry, Roderick R. Butler, Clarke, Dickey, Duell, Henry D. Foster, Haldeman, Halsey, Hanks, Harmer, John T. Harris, Hays, Kinsella, Leach, Lynch, Marshall, Maynard, McKee, Merrick, Mitchell, Leonard Myers, Packer, Pendleton, Aaron F. Perry, Platt, Roosevelt, Shoemaker, Worthington C. Smith, St. John, Dwight Townsend, Upson, Voorhees, Warren, Washburn, and Winchester—36.

So the amendment of Mr. Dawes was agreed to.

In the Senate, on March 21st, the amendment of the House was considered.

Mr. Anthony, of Rhode Island, said: "I will move to amend the amendment by restoring the clause stricken out by the House, giving the committee authority to print and make public, from time to time, the results of their investigations during the recess."

Mr. Morton, of Indiana, said: "I think the amendment is a very important one, and virtually defeats one of the principal purposes of the resolution. I hope we shall not agree to it."

The Vice-President: "The Senator from Rhode Island moves to amend the amendment of the House of Representatives by adding 'and said committee shall have power to print and make public, from time to time during the recess, the results of their investigations.'"

Mr. Thurman, of Ohio, said: "That strikes me as a very novel proposition."

Mr. Anthony: "That is the way we passed it."

Mr. Thurman: "It entirely escaped my observation. If I had noticed it in the original resolution I should have submitted some remarks upon it and have asked the Senate to strike it out. The committee is to make pub-

lic from time to time during the recess of Congress the result of its investigations; it is to report to the people from time to time, to publish the results of the investigation; that is, they are at the public expense to make a set of electioneering documents to go before the public, not for the benefit of Congress—because they can make their report on the first day of the next session in ample time for it to be considered by Congress—but they are to print at the public expense, to be paid out of the contingent fund of the Senate, from time to time as political exigencies may require, such statements as a majority of the committee may declare to be the results of their investigation!

"I am not willing to trust the committee with any such power. I believe that almost the whole of this thing is a simple attempt to manufacture political and partisan capital; and I am not willing to trust any body of men, Senators or others, with the power to go travelling around and issuing from time to time political bulletins to affect the elections of the country. What business have we to do any such thing as that? Who has made us the publishers of partisan pamphlets at the public expense to influence elections? No, sir; if this investigation is in good faith, if it is for the purpose of enlightening the Senate and enlightening the House of Representatives, so that we may be enabled to pass such laws as we have constitutional power to pass, that object will be achieved by the committee making its report to the Senate and to the House of Representatives at the meeting of the next session of Congress."

Mr. Morton, of Indiana, said: "Mr. President, if it is true, as has been argued upon the floor of the Senate, and as is charged by the Democratic press generally, that the alleged outrages in the South have no existence in fact, are manufactured for a political purpose, the South is more interested than anybody else in having the truth known. The belief now exists that these outrages are occurring in the South, and it has the effect to keep emigration and to keep capital from the South, and is doing the South the deepest possible injury. But if these reports, of which the air is full, coming from many States, and all of the same character, and without concert with each other, be false, it is the interest of the South especially that that falsehood be made known.

"Now, I ask, why it is that this investigation has been opposed at every step? The Senator from Ohio (Mr. Thurman) says that we propose to have this investigation in order to make political capital. If the truth of these charges is established, the Senator seems to consider that that operates against his party. That is a concession on his part. If the truth of these things is not established, it goes for the benefit of his party. If, then, these things are true, he ought to be willing to have the investigation simply with a view to party advan-

tage. But I put it upon a higher ground: that the truth ought to be known, and, if these stories are false, the world should know it. If they are true, the whole country should know it.

"Mr. President, I understood that this resolution of investigation was accepted by our Democratic friends as a substitute for legislation; that, to prevent legislation with a view of putting down these outrages, they were willing, especially in the House of Representatives, to grant this investigation. That was my understanding; but the Senator from Ohio wants the results of the investigation locked up until next winter. Whatever may be the proof of murder and of outrage, however insecure the lives of Republicans throughout the South may be, the facts must be locked up and concealed until next winter! Now, I want to know what the object of that is. This committee is not to legislate, but is to diffuse information, to give us the true condition of the South; and I insist that as fast as that is obtained, as it goes from State to State, it should be published.

"If the investigation shows that there is peace and security in any one State of the South, let us know it as soon as the committee leaves there. If, on the other hand, it shows that there is no security for life and property, but that murder and crime are rampant, let the world know it at once. Why does the Senator want it locked up until next winter?"

Mr. Thurman, of Ohio, said: "Mr. President, the Senator from Indiana says that, if the South is guiltless of the enormities that are charged, in the interest of the South the result of this investigation should be published as soon as possible, because the reports that are made are prejudicial to the South, prevent immigration, and delay the achievement of the prosperity for which she seeks. I believe, too, that a perfectly fair and complete investigation, made under no bias to State results for partisan purposes, will be a benefit to the South, and that the sooner the true state of facts shall be known the better it will be, not only for the South, but for the whole United States. I believe that as firmly as anybody, not that I suppose it possible that this committee will not bring forth a mass of testimony showing that outrages have been committed here and there. Appoint a roving commission to go over the Northern States, with power to find and inquire whether person and property are safe, whether outrages are committed or not, and what a body of testimony could such a committee accumulate!

"But, if we are to have an investigation, let us have it. And when we do go into this investigation, and when it comes to be considered by the Senate, I beg Senators to look once more at history, and to find that by no armed tyranny, by no treading of people under the heel, has order ever been restored, unless it was the order of despotism, the silence of its reign. No, sir; if you want the people of the South to be

orderly, give them good government; let them govern themselves according to the nature and spirit of our free institutions; let the intelligence of the country have fair play; let the honesty and economy that everybody will admit existed in those States before the civil war, whatever faults they may have had, once more take place. Let mere adventurers retire to the background, or hide themselves in the holes from which they came; let once more the people feel that they have a Constitution that will be enforced, laws that they respect; and once more you will have peace and order there as well as you have anywhere."

Mr. Wilson, of Massachusetts, said: "Mr. President, it seems to me that, after the speech to which we have just listened, we might as well lay this resolution for a committee upon the table, and have the Committee on the Judiciary report a bill to carry out the fourteenth amendment, to go within the line of constitutional authority, and walk up to the extreme verge of constitutional power to protect the people of the country. Sir, I think we have made a mistake in proposing this committee of investigation. I see nothing to be gained by it, and I see that needed legislation is to be postponed by its adoption. We should legislate now.

"Talk about the facts, Mr. President! Men whose eyes are open, who have ordinary intelligence, who do not deny truths when truths are presented to them, know that we have facts enough upon which to base our legislation. The eyes and the ears of the world have been open for the last six years. If the Senator from Ohio has closed his eyes, if other Senators have closed theirs, there are some persons in the country that have some little knowledge of the history of the last six years.

"Now, Mr. President, open, read, and examine the reports made by the officers of the Freedmen's Bureau, and what do they disclose? They disclose scenes of violence, wrongs, outrages, murders, that dishonor and disgrace the whole country. Open the reports of your Army officers; take the reports of General Thomas, the grandest hero of the war. They are on file; they have been published. We can furnish copies to gentlemen who doubt. Read the reports of your officers in all the departments into which the South was divided after the war, and the evidence disclosed—"

Mr. Blair, of Missouri, said: "I hope the Senator from Massachusetts will not omit the report made by General Grant when he went down there."

Mr. Wilson: "I do not propose to omit the report of General Grant. It was a preliminary and rapid survey, and did not give a great deal of information. But, Mr. President, you will find that Sickles, and Meade, and Thomas, and Sheridan, and the officers under them who were stationed there, who had opportunities to know, reported the facts, and the facts are upon record, and they cannot be sneered at,

they cannot be denied any more than you can deny the rebellion itself."

Mr. Hill, of Georgia, said: "I was disposed, when it was proposed, to vote for this resolution; and I am not averse to doing it yet. I supposed the object of the resolution to be what it purports to be—to obtain information of the exact condition of the late insurrectionary States. That condition is but imperfectly exhibited to the Senate by the testimony that has been brought here by a very important committee who have been examining into the subject of late.

"I have my own impression as to what is the state of affairs in Georgia generally. I have very strong convictions upon my mind—they may be erroneous, but I do not think they are—as to the existence of any extensive organization in that State akin to the Ku-klux. If there be such an organization, it has certainly been kept wonderfully secret. It does not occur to me that there can be ten thousand of the citizens of Georgia, or five thousand, held together by a sort of *esprit de corps* for the purpose of committing wrongs, acts of lawlessness upon defenceless individuals, without having some common centre, some concert. It is difficult to see how any body of men engaged in any pursuit, whether it be laudable or otherwise, in any extended State like that, could carry on their operations successfully without having some common centre from which went forth orders that were to be obeyed and respected. Hence it occurs that even among so valuable an association of men as are the Masons—and it is so with most religious denominations, etc.—they find it necessary, for the dissemination of the great truths and principles they would inculcate, to have a common place of meeting, where they confer with each other.

"I do not think that in the State of Georgia there has ever been a State meeting on this subject. There may have been in a town or in some hamlet, some little insignificant locality; but I have no idea that there has ever been a great Ku-klux convention assembled in the State of Georgia. I do not believe any such thing. I have heard of outrages, of crimes that were very deplorable and very similar to those detailed in the testimony of the North Carolina witnesses, as having occurred in Georgia. Some of them at the time seemed too shocking to be believed, too lawless to be credited; but these instances were not general, and they were limited in their extent; they were confined to a few counties; and I do not think there is any general spirit of lawlessness abroad in that State.

"I surely have no objection, indeed I would prefer, that intelligent gentlemen appointed from the two Houses of Congress should visit Georgia, travel over the State, even if what was predicted by a distinguished member of the other House should be the result, namely, that they would be treated with such excessive

kindness by everybody they met that it would tend to dissipate the idea that there were lawless men there. If so, very well. I hope they will be met in that way. They certainly will be by myself and by my neighbors if they should come in the direction I live. I will welcome them, and I believe the people of that region will; and in a work of mere inquiry to ascertain how much of wrong, how much of lawlessness exists in the State, I am of the opinion decidedly, that a very overwhelming majority of the people of Georgia will see no impropriety in it."

Mr. Casserly, of California, said: "When this resolution for a committee of investigation was in the Senate, before it went to the House of Representatives, I voted for it. I voted for it cheerfully. I did not then notice the provision that the committee might from time to time report during the recess. Had I noticed it, I am not certain that I should have been restrained from voting for the resolution. There appeared to be at that time a sort of era of good feeling in the Senate on the general subject of the alleged outrages in the South. There were many circumstances which led me to the opinion, or at least the hope, that the majority here did really desire a candid and fair investigation, for the purpose of ascertaining the facts just as they are in the South in regard to the alleged disorders, and that upon facts so ascertained the Senate would then proceed to determine whether any legislation was necessary, and, if so, what legislation should be had, according to the exact exigency and within the limits of the Constitution.

"Sir, I voted for the resolution. It went to the House. A delay ensued there. A change without any sufficient cause meantime came over Congress. Many things have since occurred in this body in respect to the general subject of the condition of the South. Not one thing occurred that did not more and more shake my confidence in the action of the Senate, not one thing that did not disappoint my expectations. Every thing that happened occurred to satisfy me how grievous was the mistake as to the purposes of the Senate under which I voted for the new committee of inquiry. The last lingering shred of hope was rent away from me yesterday when the frank, manly offer made by the Senator from Ohio (Mr. Thurman) on behalf of the Democratic minority in the Senate was rejected almost with contempt by a nearly unanimous party vote of the Senate. What was that offer? It was upon the ground that the Democratic party here has never been disposed to excuse or even to connive at any disorders in the South, and that it was always for any honest investigation of them, however searching or unfriendly; that we did not object to the resolution of the Senator from Ohio (Mr. Sherman), in so far as it undertook to provide for a reference of the subject to the Judiciary Committee with instructions to report by bill; that our objection

lay, as stated by the Senator from Ohio (Mr. Thurman), to the assumptions of law and of fact contained in the preamble; to assumptions of facts which were unfounded as well as injurious to the States in question; to assumptions of law as to power in Congress for which there was no warrant. Yet was the Democratic minority here willing by its votes to unite with the majority and refer the whole subject generally to the Judiciary Committee here, made up largely of Senators of the majority.

"That offer was made under special circumstances. You professed to believe that the Democrats were not willing to unite with you in condemning and putting down at the South whatever disorders there were there and whatever lawless bands there were that caused them. You professed to call on us to unite with you in the good work in good faith and good feeling. We took you at your word. We made you the offer to join with you in your resolution to set your Judiciary Committee in motion. We asked you only to leave out the needless and irritating language and assumptions of the preamble. You refused our request. You rejected our offer to join with you.

"The resolution of the Senator from Ohio (Mr. Sherman) was passed in its most offensive form. You, the majority, said then and there, as distinctly as though you had said it in words, that you did not desire the coöperation of the Democratic party in the great work of pacification of the South; that you spurned such coöperation; that, though you had over and over declared here that, with the concurrent action of the Democratic party, peace in the South could be promptly and thoroughly restored, you preferred to reject that coöperation and imperil that result rather than yield up one word of the bitter assaults and aspersions upon eleven States of this Union with which the preamble to that resolution was filled, one tittle of your startling recitals of power over local crimes in the States. This was not all. In sending to the House your resolution for a joint committee of inquiry, you solemnly avowed that further inquiry was needed before further action. In passing the resolution of the Senator from Ohio (Mr. Sherman), you deliberately declared that you would legislate without further information.

"I shall not descant upon other circumstances which corroborate the opinions I have been obliged heretofore to express on this whole business. I rose simply to justify the change in my vote.

"You have already condemned nine or ten States of the South. You have passed judgment upon the people there, innocent and guilty alike. You have declared, so far as this Senate can, to the world, that by act or connivance the majority of the people of one State, and of many parts of the other States, are worse than savages, unfit to live, or fit to live only as the inmates of prisons; that not only

have they defied all civil authority, but by organized perjury they have rendered the courts powerless to punish such crimes. Sir, it is the most tremendous accusation that was ever deliberately made against a whole people by its own Senate. It is such an accusation as nowhere in the annals of the most insolent and cruel oppressor defaces and defiles the page of history."

The yeas and nays were ordered on the question of concurring in the amendment of the House of Representatives, and the result was announced as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Buckingham, Caldwell, Cameron, Clayton, Conkling, Corbett, Edmunds, Fenton, Ferry of Michigan, Frelinghuysen, Hamilton of Texas, Hamlin, Harlan, Howe, Lewis, Logan, Morrill of Vermont, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Robertson, Scott, Spencer, Stewart, Sumner, Tipton, Trumbull, West, Wilson, and Windom—37.

NAYS—Messrs. Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Hamilton of Maryland, Johnston, Kelly, Saulsbury, Stevenson, Stockton, and Thurman—12.

ABSENT—Messrs. Bayard, Brownlow, Carpenter, Chandler, Cole, Cragin, Ferry of Connecticut, Fianagan, Gilbert, Hill, Hitchcock, Kellogg, Morrill of Maine, Morton, Nye, Sawyer, Schurz, Sherman, Sprague, Vickers, and Wright—21.

So the amendment of the House of Representatives was concurred in.

The Vice-President: "This joint committee now authorized is to consist of seven Senators on the part of the Senate. How shall they be appointed?" ("By the Chair.") "If there is no objection, the Chair appoints as those Senators, Mr. Scott (chairman), Mr. Wilson, Mr. Chandler, Mr. Rice, Mr. Nye, Mr. Bayard, and Mr. Blair."

In the House, on March 23d, the following message was received from the President:

To the Senate and House of Representatives:

A condition of affairs now exists in some of the States of the Union rendering life and property insecure, and the carrying of the mails and the collection of the revenue dangerous. The proof that such a condition of affairs exists in some localities is now before the Senate. That the power to correct these evils is beyond the control of the State authorities I do not doubt; that the power of the Executive of the United States, acting within the limits of existing laws, is sufficient for present emergencies is not clear. Therefore, I urgently recommend such legislation as in the judgment of Congress shall effectually secure life, liberty, and property, and the enforcement of law in all parts of the United States. It may be expedient to provide that such law as shall be passed in pursuance of this recommendation shall expire at the end of the next session of Congress. There is no other subject on which I would recommend legislation during the present session.

U. S. GRANT.

WASHINGTON, D. C., March 23, 1871.

On March 28th, Mr. Shellabarger, of Ohio, from the select committee on this message of the President, reported a bill to enforce the provisions of the fourteenth amendment to the Constitution of the United States, etc. The bill was read the first and second time, and

ordered to be printed. Pending the motion for the engrossment and third reading, Mr. Shellabarger entered a motion to recommit the bill.

"I enter, Mr. Speaker, upon the consideration of this measure with unfeigned reluctance. The measure is one, sir, which does affect the foundations of the Government itself, which goes to every part of it, and touches the liberties and the rights of all the people, and doubtless the destinies of the Union. And more than that, Mr. Speaker, it involves questions of constitutional law of importance absolutely vital. And more still, there is a domain of constitutional law involved in the right consideration of this measure which is wholly unexplored. We enter upon it now for the first time in the history of the Government. And he would have an inadequate comprehension of the magnitude of the debate upon which we now enter who did not enter upon it with extreme hesitation, doubt, and misgiving, as to his ability to thoroughly explore and consider the questions we approach.

"I shall confine myself to a consideration of the qualities of this bill, its relations to the Constitution, our power to enact it, and, if I have time, the justness and wisdom of the measure.

"In the first section of this bill it is provided—

That any person who, under color of any law, statute, ordinance, regulation, custom, or usage of any State, shall subject, or cause to be subjected, any person within the jurisdiction of the United States to the deprivation of any rights, privileges, or immunities to which, as such citizen, he is entitled under the Constitution or laws of the United States, shall, any such law, statute, ordinance, regulation, custom, or usage of the State to the contrary notwithstanding, be liable to the party injured in an action at law, suit in equity, or other proper proceeding for redress; such proceeding to be prosecuted in the several district or circuit courts of the United States, etc.

"My first inquiry is as to the warrant which we have for enacting such a section as this. The model for it will be found in the second section of the act of April 9, 1866, known as the 'civil rights act.' That section provides a criminal proceeding in identically the same case as this one provides a civil remedy for, except that the deprivation under color of State law must, under the civil rights act, have been on account of race, color, or former slavery. This section of this bill, on the same state of facts, not only provides a civil remedy for persons whose former condition may have been that of slaves, but also to all people where, under color of State law, they, or any of them, may be deprived of rights to which they are entitled under the Constitution by reason and virtue of their national citizenship.

"The first inquiry, then, is naturally where is the constitutional authority, or, if you please, where is the constitutional impediment authorizing or preventing such legislation? It is absolutely plain that, if it was constitutional to

pass the second section of the civil rights bill, then it is equally competent to pass into law this first section of this bill. Why do I say that? Because the same exact right is involved in each case. The constitutional right upon which it was competent to enact the second section of the civil rights bill was this: the civil rights bill was passed to enforce the provisions of the thirteenth article of amendments to the Constitution of the United States—was passed in virtue of the two provisions of that thirteenth amendment, one of which reversed and overthrew the State constitutions creating slavery and prohibited the States from 'denying' the slaves citizenship, turned them into citizens; and the other, being the second section of that amendment, gave Congress power to enforce this first provision by 'appropriate legislation;' or, in other words, to enforce the rights of citizenship to which the slave was admitted by the act of his emancipation.

"That act, and I need not delay longer upon it, has already passed under the review of the Supreme Courts of at least three States of this Union, and I do not know of how many more; also under review of the Circuit Court of the United States of the district of Kentucky. Justice Swayne, in his opinion in that last-named case, an opinion exceedingly elaborate, exceedingly exhaustive, exceedingly able, surges up his conclusions by saying, 'We have no doubt of the constitutionality of every provision of this act.'

"The exact legal effect of these decisions, sustaining the constitutionality of the civil rights bill, is to declare that the result of two constitutional provisions, one saying that the States shall not make citizens slaves, and the other saying that Congress may, by appropriate legislation, enforce the first provision, is to authorize Congress to define and punish as a crime against the United States any act of deprivation of the rights of the newly-made American citizenship. That is the point, effect, and result, precisely of these adjudications. If that is law, then that is the end of the discussion as to the right of Congress to pass this first section, because, surely, if the thirteenth amendment did so much as this, the far more explicit, complete, and careful provisions of the fourteenth much more did it by declaring all our people United States citizens; declaring that no State shall make or enforce any law abridging their privileges or immunities as such; declaring that the States shall not deny them equal protection of these equal laws, and then declaring that Congress shall have power, by appropriate legislation, to enforce the enjoyment of these privileges of citizenship by seeing to it that the laws do not abridge them nor the States withhold protection to them.

"Then, Mr. Speaker, there is no doubt, there can be no rational doubt, of the right to enact the first section of this bill, provided the civil rights bill and the adjudications under that bill in the several States and in the Circuit Court

of the United States be in accordance with a just judicial interpretation of the Constitution in that regard. And how can there be a doubt about a question like that? To say in our Constitution that all our people in the States shall be United States citizens, and also citizens of the States; to add this as a curative, new and additional part of the instrument, and in it to say that State laws shall not be made or enforced to abridge these rights of United States citizens nor the States deny protection of these rights under law, and that Congress may enforce these provisions securing these rights, and then to say that Congress can do no such thing as make any law so enforcing these rights, nor open the United States courts to enforce any such laws, but must leave all the protection and law-making to the very States which are denying the protection, is plainly and grossly absurd.

"The section being in its terms carefully confined to giving a civil action for such wrongs against citizenship as are done under color of State laws which abridge these rights, it goes directly to the enforcement of that provision which says the State shall not make or enforce any law which shall abridge any privileges or franchises of citizens.

"With these remarks in regard to the constitutionality of the first section, I have a single remark to make in regard to the rule of interpretation of those provisions of the Constitution under which all the sections of the bill are framed. This act is remedial, and in aid of the preservation of human liberty and human rights. All statutes and constitutional provisions authorizing such statutes are liberally and beneficently construed. It would be most strange, and, in civilized law, monstrous, were this not the rule of interpretation. As has been again and again decided by your own Supreme Court of the United States, and everywhere else where there is wise judicial interpretation, the largest latitude consistent with the words employed is uniformly given in construing such statutes and constitutional provisions as are meant to protect and defend and give remedies for their wrongs to all the people. These provisions of the fourteenth amendment are wholly devoted to securing the equality and safety of all the people, as is this section, and, indeed, the entire bill. In deciding whether the section or the bill is warranted by this fourteenth amendment, ought not the fact that it is so eminently just and fair, so eminently in accordance with the spirit of our institutions, so wholly devoted to the single and sublime work of preserving the rights and liberties and government of all the people, and which gives not a power, except such as is, by the language employed, carefully confined and consecrated to the sacred duty of protecting the people and their Government, to have mighty weight in determining the question of the power to make it? Chief-Justice Jay and also Story say:

"Where a power is remedial in its nature there is much reason to contend that it ought to be construed liberally, and it is generally adopted in the interpretation of laws."—*1 Story on Constitution*, sec. 429.

"I now come to the second section of the bill. That section, in brief, is one which seeks to supply the alleged deficiencies of the sixth section of what is called the enforcement act of May, 1870, enforcing the provisions of the fifteenth amendment. It is alleged that that act, where it defines and punishes criminally a conspiracy of two or more persons to deprive a citizen of the United States of any right to which he is entitled under the Constitution and laws of the United States, falls worthless, because of its too great generality and vagueness in the description of the particular act that shall constitute the crime. It is any conspiracy to deprive a citizen of any right. It is also alleged as to that section, that, being found in the body of an act which is confined in its general scope to the enforcement of the fifteenth amendment and the right to vote, it will be construed in the light of the companionship in which it is found, on the principle *noscitur a sociis*; and that, being so construed, it will be held to apply only to rights of which the citizen is deprived in regard to the matter of voting. For the purpose of removing both those doubts and questions, if there be any (and I think there is a just and fair ground of doubt upon that matter), we have inserted this second section of the bill. It provides—

That if two or more persons shall, within the limits of any State, band or conspire together to do any act in violation of the rights, privileges, or immunities of another person, which, being committed within a place under the sole and exclusive jurisdiction of the United States, would, under any law of the United States then in force, constitute the crime of either murder, manslaughter, mayhem, robbery, assault and battery, perjury, subornation of perjury, criminal obstruction of legal process or resistance of officers in discharge of official duty, arson, or larceny; and if one or more of the parties to said conspiracy shall do any act to effect the object thereof, all the parties to or engaged in said conspiracy, whether principals or accessories, shall be deemed guilty of a felony, and, upon conviction thereof, shall be liable, etc., and the crime shall be punishable as such in the courts of the United States.

"I now proceed to the inquiry, where is the constitutional power to enact that section into law? To those members of the House of Representatives who are of opinion that the sixth section of the act of 1870, called 'the enforcement act,' is constitutional, I need make no argument. Every gentleman who voted for or approves that sixth section of the act of May, 1870, will need no persuasion to come to the conclusion that this second section is constitutional; for it rests upon exactly the same legal ground, and is in its constitutional aspects identical with it, the only difference being that the section of this bill defines the offence with greater exactness. It does so by requiring that the act conspired to be done must be an act which would, under the laws of the United States, within places where the United States

have exclusive jurisdiction, constitute some one of the following offences: either murder, manslaughter, mayhem, robbery, assault and battery, perjury, subornation of perjury, criminal obstruction of legal process or resistance of officers in discharge of official duty, arson, or larceny. That makes exact and definite the act which must be charged in the indictment.

"And now, Mr. Speaker, I proceed to the consideration for a few moments of the question whether either of those sections in the enforcement act of 1870, or section two of this bill, has warrant in the Constitution for enactment. I have written down and condensed into a single sentence what I believe to be the legal principle and idea upon which the enforcement act of 1870 and this section of this act may be based, and it is this: when the United States inserted into its Constitution that which was not in it before, that the people of this country, born or naturalized therein, are citizens of the United States and of the States also in which they reside, and that Congress shall have power to enforce by appropriate legislation the requirement that their privileges and immunities as citizens should not be abridged, it was done for a purpose, and that purpose was that the United States thereby were authorized to directly protect and defend throughout the United States those privileges and immunities which are in their nature 'fundamental'—and I use my words cautiously when I say 'in their nature fundamental'—and which inhere and belong of right to the citizenship of all free governments. The making of them United States citizens and authorizing Congress by appropriate law to protect that citizenship gave Congress power to legislate directly for enforcement of such rights as are fundamental elements of citizenship.

"This, sir, is the foundation idea on which this section and the whole bill rest for their constitutional warrant. If right, it solves every possible doubt and difficulty in every part of this great inquiry. The United States added to its Constitution what was not in it before; because never before was it found in the Constitution in express words that all people in this country were citizens of the United States as well as of the States. This was added, and added for a purpose.

"But the addition did not stop there. It was also added that no State should make or enforce any law abridging those rights of citizenship then first declared by express constitutional enactment. But they did not stop there. In the abundance of caution they added that no State should deprive them of life, liberty, or property, without due process of law. Nor did they stop there, but added that the State should not deprive any person within its jurisdiction of the equal protection of the laws. And they did not stop there yet, but in still more abundant caution added that Congress should have power by appropriate

legislation to enforce these provisions. What provisions? Why, sir, the provisions that we are all citizens of one, and but one, republic. More than that. That we all have, as such, privileges and immunities. More than that. These privileges and immunities shall not be abridged. More than that. That under the laws of the Union and the States there should be exact equality upon the face of the laws; they should not abridge rights. More than that. That under these laws, so equal, the States should not deny equal protection. More than that. That Congress should have power to make laws appropriate to secure all that was meant by and included in all this more than trinity of 'provisions' that we are all United States citizens; that our laws shall, as to us all, be equal; that we shall all have due process of law, and all equal protection under these equal laws.

"Putting all these constitutional elements together, Mr. Speaker, where is the doubt Congress may, by appropriate legislation, protect those rights of American citizenship so solicitously and so abundantly guarded and guaranteed and made eternal as the Constitution itself? If, after all this transcendent profusion of enactment in restraint of the States and affirmative conferment of power on Congress, the States still remain unrestrained, the complete, sole arbiters of power, to defend or deny national citizenship—to make laws abridging or not abridging, to protect or to destroy, by banded murder, these United States citizens as the State may please, and the United States must stand by, a powerless spectator of the overthrow of the rights and liberties of its own citizens, then not only is the profusion of guards put by the fourteenth amendment around our rights a miserable waste of words, but the Government is itself a miserable sham, its citizenship a curse, and the Union not fit to be.

"Such are plainly the general aspects of this question of power to defend by Federal law the essential franchises of national citizenship. I will go now into further detail.

"I have stated that Congress has power to protect those rights, whatever they may be, which inhere in citizenship. What are those rights? Here, Mr. Speaker, we tread upon ground that, fortunately, has been explored. From the beginning of the Government down, the words in the old Constitution, 'privileges and immunities of citizens in the several States,' have come under judicial notice and interpretation. I will read a single sentence, which expresses what 'the privileges and immunities of citizens' are with sufficient legal accuracy for the purpose of this debate. I read from 4 Washington Circuit Court Reports, page 380, *Corfield vs. Coryell*:

The inquiry is, what are the privileges and immunities of citizens in the several States? We feel no hesitation in confining these expressions to those privileges and immunities which are in their nature

fundamental, which belong of right to the citizens of all free governments, and which have at all times been enjoyed by citizens of the several States which compose this Union from the time of their becoming free, independent, and sovereign.

What these fundamental privileges are it would perhaps be more tedious than difficult to enumerate. They may, however, be all comprehended under the following general heads: protection by the Government;

“Mark that:

protection by the Government; the enjoyment of life and liberty, with the right to acquire and possess property of every kind, and to pursue and obtain happiness and safety, subject, nevertheless, to such restraints as the Government may justly prescribe for the general good of the whole.

“Now, Mr. Speaker, keeping these as the fundamental rights of citizenship in our minds, I point you once more to the terms of this second section. It makes criminal, attacks of conspirators. It punishes, not individual crime, but only banded, mastering, confederated violence. Then also it must be directed against the rights, privileges, or immunities of a citizen. Then the crime can be committed against no other rights than those which come clearly, plainly, and without controversy, within those rights defined by the authority I have read to belong to citizenship as such. In this regard the bill goes nowhere beyond the protection of rights clearly and unquestionably fundamental, and belonging to citizenship in every free government as an element and attribute of that national citizenship which he carries with him wherever he goes throughout the world.

“Of course, Mr. Speaker, the constitutional objection to this section is that the acts it seeks to punish, being committed within a State, can only be defined and punished as crime under State law. It assumes that in attempting this legislation Congress blots out the jurisdiction and power of the States. It also seems thereby to assume that there are no classes of acts which both the State governments and the national Government may define and punish concurrently as constituting a crime against each government. Mr. Speaker, I deny the soundness of each of these assumptions.

“Let me now state what my reply is to this charge that the second section invades the exclusive and reserved powers of the States. The major proposition of my reply I choose to state in the words of the Supreme Court of the United States in *Jones vs. Van Zandt* (5 Howard, 230), where the court uses these words: Congress is charged with the duty of ‘enforcing by legislation every constitutional provision. This grows out of the position and nature of such a Government as ours, and is as imperative in the cases not enumerated specially in respect to such legislation as in others.’ In shorter words, Congress is bound to execute, by legislation, every provision of the Constitution, even those provisions not specially named as to be so enforced.

“My next proposition is historical, and one simply in aid and support of the truth of the first. It is that the United States always has assumed to enforce, as against the States, and also persons, every one of the provisions of the Constitution. Most of the provisions of the Constitution which restrain and directly relate to the States, such as those in tenth section of first article, that ‘no State shall make a treaty,’ ‘grant letters of marque,’ ‘coin money,’ ‘emit bills of credit,’ etc., relate to the divisions of the political powers of the State and General Governments. They do not relate directly to the rights of persons within the States and as between the States and such persons therein. These prohibitions upon the political powers of the States are all of such nature that they can be, and even have been, when the occasion arose, enforced by the courts of the United States declaring void all State acts of encroachment on Federal powers. Thus, and thus sufficiently, has the United States ‘enforced’ these provisions of the Constitution. But there are some that are not of this class. These are where the court secures the rights or the liabilities of persons within the States, as between such persons and the States.

“These three are: first, that as to fugitives from justice; second, that as to fugitives from service (or slaves); third, that declaring that the ‘citizens of each State shall be entitled to all the privileges and immunities of citizens in the several States.’

“And, sir, every one of these—the only provisions where it was deemed that legislation was required to enforce the constitutional provisions—the only three where the rights or liabilities of persons in the States, as between these persons and the States, are directly provided for, Congress has by legislation affirmatively interfered to protect or to subject such persons. In the case of the two clauses in relation to fugitive slaves and fugitives from justice, by a law passed early in the morning of the republic’s life, four years after the Constitution was adopted, on 12th February, 1793, the Congress ‘enforced’ the requirements by prescribing the methods of such enforcement. In the other case also (*see* 6 United States Statutes at Large, 645) Congress passed a law, in admitting Missouri, enacting that the constitution of Missouri should ‘never be construed to authorize the passage of any law, and no law shall ever be passed in conformity thereto, by which any citizen of either of the States of the Union shall be excluded from the enjoyment of privileges or immunities to which such citizens are entitled under the Constitution of the United States.’

“Here is an express, direct law of Congress, enacting, in so many words, that Missouri should ‘never pass’ any law by which any citizen of the Union should be excluded from any of his privileges! And yet we are told that, even with the new provisions of the new

amendments, we cannot protect the privileges of United States citizens in the States, even as this bill does indirectly, though in 1821 Congress could do it directly, and that even by legislating out of existence part of the Missouri constitution!

"Thus, Mr. Speaker, by the unquestioned judgment of the Supreme Court of the United States, and by the whole legislative and judicial history of the republic, I make out absolutely, completely, and forever, the major premise of my reply. I repeat that premise, that it is the duty of Congress to enforce by appropriate legislation every provision of the Constitution where legislation is needed to secure the enforcement. My second proposition is that these three are each provisions of the Constitution: first, all persons born or naturalized in the United States, etc., are citizens of the United States; second, that no State shall make or enforce any law abridging their privileges and immunities; third, that such States may not deny them equal protection of the laws.

"And my conclusion from these is that Congress may, by legislation, 'appropriate,' 'enforce,' to use the Supreme Court's own word in *Jones vs. Van Zandt*, which is also the word of the fifth section of the fourteenth amendment, these 'privileges and immunities,' so by these 'provisions' to be protected, and hence, and lastly, may pass this bill, which surely is 'appropriate' within the sense of that 'wide discretion' which, as stated by uniform authority (1 Story on Constitution, sec. 432), Congress has in the choice of measures for enforcing its powers.

"Mr. Speaker, I now come to the third section. I will read it, so that I may get before the minds of those who listen to me the exact words, which are material to comprehend the legal propositions which I desire to submit.

"The section provides:

That in all cases where insurrection, domestic violence, unlawful combinations, or conspiracies in any State shall so far obstruct or hinder the execution of the laws thereof as to deprive any portion or class of the people of such State of any of the rights, privileges, or immunities named in and secured by this act, and the constituted authorities of such State—

"Notice these words:

and the constituted authorities of such State shall either be unable to, or shall, from any cause, fail in or refuse protection of the people in such rights, and—

"This also must happen:

and shall fail or neglect, through the proper authorities, to apply to the President of the United States for aid in that behalf, such facts shall be deemed a denial by such State of the equal protection of the laws to which they are entitled under the fourteenth article of amendments to the Constitution of the United States.

"Now, note, the provisions of the section are, first, that there must be a condition of public violence, etc., such as to deprive, not one individual merely, but a 'portion or a class

of the people,' of their rights, privileges, or immunities. They must also be deprived of the privileges and immunities secured by this act, which are the privileges and immunities of American citizens. And more than that, the constituted authorities must also have been unable to protect the people or have failed or refused to protect them. But this is not enough. They must also omit to apply to the President of the United States for aid in that behalf. Until all these things have occurred there is no authority under this bill (but existing law gives it in other cases) to send to the State the military aid of the United States.

"Now, the question is, may such aid be sent by the President, under the fourteenth amendment, without being invited by the Legislature or Executive of the States, when the things have happened which are described in that section? My answer is that the President may, under such circumstances, send military aid; and, to make this answer complete, I now again go back to the first section of the fourteenth article. That section provides two things which I wish to notice. The first provision is that—

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"This provision requires that the laws on their face shall not 'abridge' the privileges or immunities of citizens. It secures equality toward all citizens on the face of the law. It provides that those rights shall not be 'abridged;' in other words, that one man shall not have more rights upon the face of the laws than another man. By that provision equality of legislation, so far as it affects the rights of citizenship, is secured. But the section does not stop there. It contains two other provisions, only one of which I need now notice. It provides:

Nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

"The laws must be, first, equal, in not abridging rights; and second, the States shall equally protect, under equal laws, all persons in them. Therefore, under the provisions of the fourteenth amendment, when these clauses are put in juxtaposition, in order to bring the idea together, Congress shall have power to make and enforce all proper legislation which shall be necessary to require of the States that they shall not abridge the rights of citizenship, and also that they shall protect all persons equally. Nothing can be plainer. The thing is so absolutely self-evident that it admits of no enforcement by argument. Two things are provided—equal laws and protection for all; and, whenever a State denies that protection, Congress may by law enforce protection.

"I next come to the fourth section. I have not time, sir, left to go into the details of that section. I wish now to say this fourth section

finds in substance its warrant in the interpretation of the Constitution as furnished by the Supreme Court of the United States in the case *ex parte* Milligan (4 Wallace, 127). I will read a single sentence, and reading that I will have shown the House that this section describes the very state of things in substance, in which state of things the Supreme Court were of the opinion that the privileges of the writ of *habeas corpus* may be suspended and martial law declared. Let me read:

It follows from what has been said—

“And this is the opinion of Judge Davis, a man not now accused of being unduly radical, and who is threatened with the nomination for the President of the United States by the Democratic party—

It follows from what has been said on this subject that there are occasions when martial rule can be properly applied. If, in foreign invasion or civil war, the courts are actually closed, and it is impossible to administer criminal justice according to law, then, on the theatre of active military operations, where war really prevails, there is a necessity to furnish a substitute for the civil authority thus overthrown, to preserve the safety of the army and society; and, as no power is left but the military, it is allowed to govern by martial rule until the laws can have their free course. As necessity creates the rule, so it limits its duration; for, if this government is continued after the courts are reinstated, it is a gross usurpation of power. Martial rule can never exist where the courts are open, and in the proper and unobstructed exercise of their jurisdiction. It is also confined to the locality of actual war.”

Mr. Kerr, of Indiana, said: “First, I will reply to two or three of the points suggested by the gentleman who has just spoken (Mr. Shellabarger). Some of his assumptions of law, in my judgment, are quite as extraordinary in their character as are the provisions of this bill, and they are to me, with my ideas of constitutional law, quite as untenable and unjust. It was assumed by that learned gentleman, in the outset of his remarks, that there should be applied by us, in the construction of this bill, a rule of the utmost liberality; why, he has not informed us. This is a criminal law in most of its purposes. It should therefore be strictly construed. It is against the rights of the States of this Union. It should therefore be strictly construed. It is against personal liberty as guarded by the States of this Union. It should therefore be strictly construed. Upon every principle of constitutional construction, I say its novel, remarkable, and alarming provisions should be most strictly and rigidly scrutinized. Nothing should be assumed, but gentlemen should approach the consideration of this bill under the solemn oaths which we have all taken, with a determination that its every section, line, and purpose should find clear warrant in the Constitution itself.

“Another point suggested by the gentleman from Ohio (Mr. Shellabarger), by way of apology for the strange and startling nature of some of the propositions in this bill, is, that the

States of this Union have been held by the Supreme Court of the United States to have power to punish counterfeiting of the coin of the United States, and that Congress possesses the same power, but that it is not expressly given to either, but is derived by both from implication and construction. And then, with an air of triumph, he inquires, ‘Where does either obtain that power in terms any more clear than that which authorizes this bill?’ I am no more surprised at that inquiry, coming from the learned gentleman, than I am that he could at all conceive and pen such provisions as are contained in this measure. In their chief features they are pioneers, and have no precedents in our country, except in actual and fierce war. Many of them even there find no parallel. They strike to the very heart of free institutions and self-government. But I answer his question by reading from the Constitution itself. I may ask, why it is that he, with his conceded professional standing and learning, should have overlooked this important constitutional warrant? Article one, section eight, clauses five and six, says:

Congress shall have power to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures; to provide for the punishment of counterfeiting the securities and current coin of the United States.”

Mr. Shellabarger: “What I said in regard to that clause was that there was nowhere in the clause a provision authorizing the United States to punish the uttering, and yet by implication the United States have been held to be able to define and punish the uttering as well as the counterfeiting.”

Mr. Kerr: “The gentleman undertakes to modify his statement by narrowing very much his declaration. His own language stands and will answer for the truth of what I have said. And now I say to him, upon his amended declaration of his position, that the power in Congress to punish any crimes against the coin of the United States is express in the Constitution, and is so held by courts and commentators. It is not derived from implication; but it is an inquiry no way important here, because his assumptions touching this bill derive no support from it.

“But the gentleman stated also that there are but three provisions in the Constitution of the United States which refer to the personal rights of the citizens of this country; and he named those three.”

Mr. Shellabarger: “What I said was—that there were but three provisions where the Constitution of the United States, as between the States and persons in the States, protects the rights of persons.”

Mr. Kerr: “I ask the attention of every gentleman on this floor to the first eleven amendments of the Constitution of the United States, and I say that in them, as against the United States and the States and all the world, the Constitution guarantees to the people cer-

tain great personal rights. It is true these amendments are limitations on the powers of Congress as against the States; but yet they are fundamental guarantees to the people. Read those amendments. I may as well refer here to the case reported in 5 Howard, of *Fox vs. The State of Ohio*, referred to by my colleague. The decision there does not say that a State of this Union can by implication punish counterfeiting of the coin of the United States, but only that it may punish the passing or circulation of that coin.

"In that decision the court expressly recognize the true doctrine of the division of power between the Federal and the State governments, which concedes to all the States the exclusive regulation and control of all their domestic and police affairs in their own way, according to their own judgment, under their own constitutions and laws. The protection of their own citizens, of public morals in the respective States, of all the rights of person and property, of all the domestic relations, belongs to the States alone. All that vast *residuum* of power not granted to the United States, which embraces every element of local self-government, whether civil or criminal, whether to regulate local government or police, or popular privileges and immunities, or to punish offenders against them, belongs to the States.

"Now, Mr. Speaker, I must come to the consideration of the bases alleged for the enactment of this bill. I think I do not misunderstand the gentleman from Ohio (Mr. Shellabarger) when I state to the House that he assumes that the substantial authority for this enactment must be found in the first section of the fourteenth amendment of the Constitution; and I will therefore proceed briefly to analyze that section. I beg the attention of gentlemen on both sides of the House while I attempt this analysis.

"What, then, is the language of that section? I will, for convenience, break it into paragraphs, and consider them in their order. It declares that—

All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside.

"Now, does this provision confer upon the Congress of the United States any new or original grant of power? I say no. It is no grant of power; it gives no new power to Congress; it takes no preëxisting power from the State. It simply declares who shall be citizens of the United States. But the *fact* that certain persons are citizens, and the *number* of them, and the *definition* of citizenship or of its constituent elements, were just the same before the ratification of the fourteenth amendment that they are now. Neither is more certain or better settled than it was before.

"The thirteenth amendment had made all persons of color citizens of the United States if

they were not hitherto. Then the body of the citizens is in no way materially changed by this fourteenth amendment. On this point I do not wish to stand without great and worthy authority; and I shall therefore incorporate in my remarks an extract from Chancellor Kent directly sustaining my position in reference to this provision.

Citizens, under our Constitution and laws, mean free inhabitants born within the United States or naturalized under the laws of Congress. If a slave born in the United States be manumitted or otherwise lawfully discharged from bondage, or if a black man be born within the United States and born free, he becomes thenceforward a citizen, *but under such disabilities as the laws of the States respectively may deem it expedient to prescribe to free persons of color.*—2 Kent, 259; *Hobbs vs. Fogg*, 6 Watts, 553; *The State vs. Claiborne*, Meigs, 381; *Opinions of Attorneys-General*, vol. i., 382.

"I also invite attention to another opinion, which possibly may be better authority with some than Chancellor Kent. I refer to the opinion of the late Attorney-General of the United States, Mr. Bates, given to President Lincoln, at the request of the then Secretary of the Treasury, Mr. Chase, in 1862. In defining the meaning of the expression 'citizen of the United States,' Attorney-General Bates said:

The phrase "a citizen of the United States," without addition or qualification, means nothing more nor less than a member of the nation, and all such are politically and legally equals. The child in the cradle and its father in the Senate are equally citizens of the United States, and it needs no argument to prove that every citizen of the United States is a citizen of the particular State in which he is domiciled.

"In this connection I must be permitted to ask gentlemen to consider the suggestive language of the late venerable Chief-Justice Taney, in a very important case. I do not indorse all that was said or decided in that case, but this I do, as being in harmony with the spirit and philosophy of our Government:

We must not confound the rights of citizenship which a State may confer within its own limits and the rights of citizenship as a member of the Union. He may have all the rights and privileges of the citizen of a State, and yet not be entitled to the rights and privileges of a citizen of any other State. Nor have the States surrendered the power and privilege of conferring the rights and privileges of citizens by adopting the Constitution of the United States. Each State may still confer them upon an alien or any one it thinks proper, or upon any class or description of persons; yet he would not be a citizen in the sense in which the word is used in the Constitution of the United States, nor entitled to sue as such in one of its courts, nor to the privileges and immunities of a citizen in the other States. A State cannot make a man a member of the community of the United States by making him a member of its own.—*Scott vs. Sanford*, 19 Howard, 405.

"But I recur to the precise words of the fourteenth amendment, which I have quoted, and I say, neither does the paragraph under consideration define *citizen*, or the constituent elements of *citizenship* of the United States or of the States. It leaves both where it found them, to rest upon the common law and the

laws of the several States. These words are nowhere precisely defined in the Constitution, laws, or judicial decisions of our country; but in the uniform practice of the country, in many learned commentaries, and numberless judicial decisions touching the subject more or less directly, they have been so nearly defined as to remove all doubt as to their substantial meaning.

"I therefore hold that the first paragraph in question is merely declaratory in a more specific and authoritative form of what was law before. It gives no support, in my judgment, to the extraordinary propositions contained in this bill. It is manifestly intended only to remove all doubt, if any existed, upon the fact that nativity and naturalization confer, in the language of Justice Story, a *general* citizenship of the United States and give the country jurisdiction over them, and give rise to the correlative obligations of allegiance and protection; and also to declare all such persons citizens alike of the States wherein they reside. The latter citizenship must also be held to be of that same general character. It is not more specific or certain or better defined, and amounts in law to just what it did before this enactment. Ever since the organization of the Union, and just as much before as since this amendment, any citizen of the United States who voluntarily removed to and became a permanent resident of any State, that instant, and by virtue of that act and fact, became also a citizen of that State.

"But my colleague on this select committee (Mr. Shellabarger) claims that this paragraph contains a grant of power.

"Will it be pretended by any gentleman in this age of the world that a great nation can exist, and that in her midst children may be born, or persons may be naturalized, and yet not be citizens of that country? Is it needful that in the fundamental law it shall be declared in exact and precise words that they are citizens in order to make them citizens? Why, all the world knows, the most unlettered of our people understand, that every human being born within the jurisdiction of any nation, or naturalized under its laws, is, by virtue of those facts alone, a citizen of that country in the fullest and amplest sense of the term."

Mr. Dawes, of Massachusetts, said: "Does my friend mean to say that was the case before the adoption of the thirteenth amendment?"

Mr. Kerr: "I say frankly that I so said before the adoption of the thirteenth amendment; I say it since the adoption of the fourteenth and fifteenth amendments; and, if you please, I may as well say here, that, in my judgment, all these amendments are a part of the fundamental law of this country. But the gentleman manifestly refers to the decision of the Supreme Court of the United States in the case of *Dred Scott*, and it was to meet that very decision—and I am glad the gentleman has invited my attention to it—that this particular language was incorporated in this fourteenth

amendment. The court in that case, before the adoption of the thirteenth amendment, had decided that negroes, under certain circumstances, and for certain purposes, were not citizens of the United States, and that question was removed when that thirteenth amendment was ratified. Then, what is the next pretended grant of power in this first section? It is that—

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"This language does not distinctly refer to the 'privileges or immunities' of citizens of the States. The privileges or immunities which are to be enjoyed under this provision are those alone which inhere in and attach to the very idea of citizenship of the United States. I want gentlemen also to remember that section two of article four of the Constitution of the United States declares that—

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

"Observe that the privileges and immunities of citizens of the States, in the relations of the States to each other, are protected to them by the second section of the fourth article of the Constitution, and not by any thing in the fourteenth article of amendments.

"But I want also to invite attention to the meaning of the words 'privileges and immunities' as used in this section of the amendment. It appears to be assumed in the popular mind, and too often by the law-makers, that these are words of the most general and comprehensive nature, and that they embrace the whole catalogue of human rights, and that they confer the power and the obligation to enact affirmative and most dangerous laws. I insist that these words constitute a limitation on the power of the States as against any infringement of the rights of citizens of the United States. The provision needs no legislation to enforce it. It is better enforced by its own vigor and by judicial decisions than by legislation. Hitherto, in the history of our country, it has been so enforced in good faith, completely, adequately, without resistance or popular discontent, and our institutions flourished, and our people were protected by the courts against infractions of this guarantee.

"Yet we are told by gentlemen that the right of the people of this country to enjoy the equal protection of the laws is now for the first time guaranteed by the Constitution of the United States to the people. Need I say to the intelligent lawyers or others here that there exists in this country no constitution, no State government, no code of laws in any single State, which does not recognize these rights as fully and completely as they can be, or as they are now indicated by this fourteenth amendment? There is no language or formula of liberty and equality in the constitutional law of the country which our people have heard

more frequently, or better comprehend, or cherish more tenderly, or hold more sacred. It needed no reenactment in or out of the Constitution. It is common and conceded constitutional law.

"Mr. Speaker, I come now, perhaps, to the most important part of this section, and I refer to the words:

Nor shall any State deprive any person of life, liberty, or property, without due process of law.

"That language is not new in the constitutional history of our country. It is common to all the States. It is one of the most familiar of all the covenants between the people and the Government, whether State or Federal. Precisely the same form of words is found in the fifth amendment of the Constitution of the United States:

No person shall be deprived of life, liberty, or property, without due process of law.

"With this difference only: this section declares that no *State* shall deprive any person of life, liberty, or property, without due process of law, while in the fifth amendment it declares generally that no person shall be so deprived. But the Supreme Court of the United States, in several cases, has held that this amendment, and indeed the first eleven amendments, are intended to impose limitations and restrictions on the Federal power and to prevent interference with the rights of the States and of their citizens." (5 How., 410; 7 Peters, 469; 6 How., 507; 18 How., 71; *ibid.*, 591; 2 How., 84; 7 Wall., 321.) It was for this reason that this inhibition is here made to apply to the States, and out of abundant caution only.

"But what is the meaning of the language in the old Constitution that none of these things shall be done 'without due process of law'? Those words have been repeatedly construed by the different courts of the United States—by the Supreme Court of the United States and by the highest courts in the States—and in every instance they have been held to mean that no person shall be deprived of life, liberty, or property, except in the regular course of administration through courts of justice, or of legal proceedings under the laws of the land, which laws must be constitutional. If the prosecution is in the Federal courts, then this language entitles the citizen to such trial as shall accord with the existing law of the land, in the usual and regular course of administration, and that law itself shall be constitutional. When these words are used in a State constitution, they have the same application and construction. So that when any man is tried for crime in any of the States he shall not be deprived of life, liberty, or property, except in pursuance of trial under the forms and requirements of the laws of the States, which laws shall possess the essential requisite of constitutionality under the Constitution of the United States and of the particular State in which they are enacted.

"Such is the interpretation of this provision. Now, what State of the North or South, or what court of justice in any such State, has ever in one instance undertaken to deny this equal protection, which is involved in the idea of a trial with due process of law? Not one. There is no pretext that any thing of that kind has been attempted. These words give no power to Congress or to the United States to supersede State laws, or prescribe new codes for States, or in any way to tamper or interfere with the States in the administration of their own systems to the utmost extent of their local and reserved jurisdiction of that great *residuum* of power which, under the express language of the Constitution of the United States, 'is reserved to the States respectively, or to the people.'

"It might as well be insisted, upon the theory of the gentleman from Ohio (Mr. Shellabarger), that it is competent for Congress to legislate in this way against the States of the Union under section ten of article one of the Constitution, which declares:

No State shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make any thing but gold and silver coin a tender in payment of debts; pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts, or grant any title of nobility.

"And so of both the next succeeding clauses of the section. In reference to the provisions in the old Constitution, which are of precisely equal force with this one in the fourteenth amendment, it has never been assumed or believed by any person in this country that Congress has power to go into the States of the Union and subordinate State laws and State jurisdiction to the control of Federal courts, or officers, or of the President of the United States. At the very basis of our institutions, and vital to their safety and perpetuity, is the right of local self-government in the States. It is of supreme importance to the people. It is not and was not intended to be impaired by the fourteenth amendment. It is a priceless and cherished inheritance to all the States of this Union, and no power can rightly invade it. It may be overthrown or denied, as this bill proposes, but there is no warrant for it. It is brute force only, and the like has too often characterized the exercise of power in this country during the last six years.

"States in several instances have emitted bills of credit, and the courts have held them to be unauthorized and worthless. States have attempted to make something other than gold and silver coin a legal tender in payment of debts, and the courts have denounced it as unwarranted and ineffective. States have enacted bills of attainder and *ex post facto* laws, and laws impairing the obligations of contracts, and the courts, State and Federal, have promptly anathematized them all and effectually destroyed their power for mischief, and protected the people against their vicious principles and

prevented their repetition. Such is the high and sacred function of the judiciary, and in all these and like cases under the old Constitution or the first section of the fourteenth amendment it is more effective, practical, satisfactory, and beneficent in the enforcement of all these guarantees and the protection of the people than any law of Congress. In all our past history no man ever had the temerity to even propose any law to enforce these guarantees. The organization of courts in the States and the Union charged with the great duty of construction and enforcement of the laws was enough, and has been so demonstrated in our past experience. It will always be sufficient until the tribunals of justice, the last citadel of the people's safety, shall have become corrupt or corruptible. This fatal event will speedily happen if this and such laws are enacted by Congress. The courts will inevitably become partisan machines, and the instruments of despotism and oppression. Let us avoid these dangers if we would shun speedy national decay and the overthrow of our institutions. Such laws as this, in my opinion, can only bear evil fruit, beget disorder, bring bitter suffering, groans, and tears, not peace or protection.

"The last provision in section one of the fourteenth amendment is this:

Nor deny to any person within its jurisdiction the equal protection of the laws.

"I do not need further to refer to this provision than to say that it manifestly involves no grant of power. It is simply declaratory of the preëxisting law of the country, the preëxisting, fundamental, constitutional law declared by all the courts and tribunals of the entire country.

"And I take it every gentleman here knows that in every State of this Union, South and North, this same guarantee is contained, in some form, in its constitution, and vindicated habitually by its courts. If any laws are enacted in violation of it, they are held null and void, and set aside and disregarded by the courts. This is its surest, most certain, and effective mode of vindication, and no condition of things or society, in our country, demands any other. It was manifestly inserted in this fourteenth amendment out of abundant caution. It is no grant of affirmative power, demanding enforcement by legislation. Ever since the foundation of the Government, and in all the history of each State, and of the United States, it has always been considered, adjudged to be, and enforced as a vital part and principle of our system. It has, without one single exception, been held to be the constitutional and supreme law of the States, within themselves, and of the United States. No exception exists. No gentleman can point me to a single case to the contrary.

"Now, Mr. Speaker, I want to ask attention briefly to the fourth section of the fourth article of the Constitution of the United States. The language of the section is this:

That the United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive, when the Legislature cannot be convened, against domestic violence.

"The obligation of the Federal Government to protect the States of this Union against invasion is clear and obvious, and it interferes with no question of State jurisdiction or of State autonomy. It is external to the State itself; it is protection against dangers from without, not within.

"And the balance of that section relates to domestic violence within the State. And, on that subject, the language of the Constitution is very plain, and the purpose is very obvious. It is intended only to make it the duty of the Federal Government to go to the relief of the States of the Union, against domestic violence, when the States appeal for such aid, being unable by their own powers to maintain the public order, to protect themselves and their citizens, and enforce their laws, in the peaceful course of administration. But the great solicitude of the framers of the Constitution against Federal interference of any kind in the States is manifested in the cautious language used in this section. It forbids Federal interposition, except upon the call of the Governor or Legislature of the State. That inhibition is clear, salutary, and imperative. It is not repealed or modified by the fourteenth amendment. It is consistent and can well stand with it.

"But this bill disregards it utterly, and proposes that the President may intervene in the affairs of the States, at his own pleasure, for the most uncertain and insufficient, if not frivolous, causes. He needs not to wait for the request of the States in any form. He may himself decide when the facts or conditions named in this bill exist. His judgment on any such question is final, whether correct, hasty, reckless, dishonest, or wise. No tribunal can review it or stay his hand. He can command all the power of the Federal Government, of the Army, or Navy, or militia. Under it he goes into the State, not to aid and cooperate with, and in subordination to, the State authorities, as the Constitution plainly requires, but he goes there to supersede the State authority, to override its laws, and erect a different and strange power, to enforce arbitrary, summary, and oppressive laws. He goes there clad in the most absolute and despotic discretion. His own will and judgment will, in most matters, constitute his chief restraint. I denounce all such powers, no matter upon whom conferred, to be gross and monstrous usurpations, not countenanced by any thing in the letter or spirit of the Constitution. Speaking of this clause in the old Constitution, Mr. Justice Story well says:

It may not be amiss further to observe that every pretext for intermeddling with the domestic concerns of any State, under color of protecting it against domestic violence, is taken away by that part of the provision

which renders an application from the Legislature or executive authority of the State endangered necessary to be made to the General Government, before its interference can be at all proper.

"There is nothing in the language of the fourteenth amendment that is intended in any way to repeal this fourth section of the fourth article. When the States ratified that amendment, they did not entertain the insane purpose of transforming the Federal Government into an agent of despotism.

"Mr. Speaker, I must invite attention to one more provision of the Constitution, after which, I desire to refer to the bill itself. I refer to the second clause of section nine of the first article of the Constitution:

The privilege of the writ of *habeas corpus* shall not be suspended, unless when, in case of rebellion or invasion, the public safety may require it.

"Yet this bill proposes to authorize its suspension at the pleasure of the President, it may be, upon the most vague and partisan reasons, libels, or gross exaggerations of truth, and in cases of merely local and individual violations of law, not approximating in character or enormity the legal idea of rebellion, as used in this section and defined judicially. It seems to me to be trifling with the common intelligence, as well as with just legal principles, to pretend that the fourteenth amendment confers power to enact such a law.

"Now, Mr. Speaker, I wish briefly to invite attention to some of the remarkable provisions of the bill itself. It violates every principle to which I have referred, as hitherto understood in our country.

"This entire bill claims for its object the enforcement of the first section of the fourteenth amendment. But in that section the word 'rights' does not occur. Why insert it in the bill? Is it an attempt to extend the scope and aim of that amendment? If so, it is without authority and wrong. It is a vain effort to add to Constitution by a law. The descriptive words in the amendment are 'privileges and immunities,' and them I have defined in the light of authority and reason.

"This section gives to any person who may have been injured in any of his rights, privileges, or immunities of person or property, a civil action for damages against the wrongdoer in the Federal courts. It is a covert attempt to transfer another large portion of jurisdiction from the State tribunals, to which it of right belongs, to those of the United States. It is neither authorized nor expedient, and is not calculated to bring peace, or order, or domestic content and prosperity to the disturbed society of the South. The contrary will certainly be its effect.

"Look at the next section of this measure. This section is pregnant in every line with vice, usurpation, and danger. The offences here named need not be committed, as under the first section, *under color* of State laws. If they are calculated to infringe any of the

rights, privileges, or immunities of citizens, as construed by the Radical party, officers, or courts (and certainly all crimes have such effect), then the jurisdiction of Federal courts attaches. The crimes named are not even required to be committed, but, if two or more persons combine to commit any such crime, and any one of them *does any act to effect the object*, the guilt of all the parties is fixed, the jurisdiction is snatched from the State, and the work of centralization or anarchy goes on. I am perplexed to imagine a rational cause or justification for such a law. It looks to the complete subversion of the power of the States to enforce their criminal laws, adopt and execute their own policy, or protect their own citizens and society. This section attempts a very shabby evasion of an express limitation upon the power of Congress in this direction. Its criminal jurisdiction is rigidly confined to the punishment of crimes committed within places subject to its exclusive jurisdiction, like this District, or forts and arsenals, and to crimes against the revenue, or other clearly granted powers of general control and regulation.

"In the case of *Cohens vs. The State of Virginia*, Chief-Justice Marshall declared:

Connected with the power to legislate within this District (of Columbia) is a similar power in forts, arsenals, dock-yards, etc. *Congress has a right to punish murder in a fort, or other place, within its exclusive jurisdiction, but no general right to punish murder committed within any of the States.* * * *

So, in the same act (the act of 1790), section six, a person, who, having knowledge of the commission of murder, or other felony, on the high-seas, or within any fort, arsenal, dock-yard, magazine, or other place or district of country *within the sole and exclusive jurisdiction of the United States*, shall conceal the same, etc., shall be judged guilty of misprision of felony. *It is clear that Congress cannot punish felonies generally, and, of consequence, cannot punish misprision of felony.* It is equally clear that a State Legislature, the State of Maryland, for example, cannot punish those who, in another State, conceal a felony committed in Maryland.—6 *Wheat.*, 264.

"But the third section of this bill, Mr. Speaker, is worse in all its purposes and intents and policy than either of the others. It declares that—

In all cases where insurrection, domestic violence, unlawful combinations, or conspiracies in any State shall so far obstruct or hinder the execution of the laws thereof as to deprive any portion or class of the people of such State of any of the rights, privileges, or immunities named in, and secured by, this act, and the constituted authorities of such State shall either be unable to, or shall, from any cause, fail in or refuse protection of the people in such rights, and shall fail or neglect, through the proper authorities, to apply to the President of the United States for aid in that behalf, *such facts shall be deemed a denial by such State of the equal protection of the laws to which they are entitled under the fourteenth article of amendments to the Constitution of the United States; and in all such cases it shall be lawful for the President, and it shall be his duty to take such measures, by the employment of the militia or the land and naval forces of the United States, or of either, or by other means, as he may deem necessary, for the suppression of such insurrection, domestic violence, or combinations;*

and any person who shall be arrested under the provisions of this and the preceding section shall be delivered to the marshal of the proper district to be dealt with according to law.

"Observe the monstrous powers that are by this section proposed to be conferred on the Federal Government and its chief officer! Who is to determine when the combinations are so great as to obstruct or hinder the execution of the laws, or to deprive any persons of any of these rights, privileges, or immunities, or when the State authorities fail, or are unable to give protection, or what shall constitute a denial of equal protection? The President of the United States! What king, queen, or potentate, in any great nation on earth, possesses such power to-day? I know of none. Is it safe to commit such vital issues to any one human head or heart?

"But the President is not only invested with these unparalleled powers of determination and construction. He may enforce his conclusions by the use of every physical arm of the Government. He may use these agencies in any manner that pleases him. He may subvert civil law and State jurisdiction at his pleasure. Not content with these extraordinary powers, the bill further empowers him to *use any other means he may deem necessary*. Is not that the climax of liberality to a ruler? Are not such powers imperial? No. I say they are despotic and revolutionary. They go far to establish republican absolutism. There is no occasion for such reckless confidence in any man. No facts exist in testimony or in the country that justify or excuse its bestowal upon the President. It has no precedent or parallel. No such powers can be safely intrusted by a free people to any human being. I verily believe no patriot would care to possess them. I know full well that no tyrant could desire more. Human selfishness or ambition could ask no ampler opportunities for personal aggrandizement.

"Mr. Speaker, I must not take my seat without referring briefly to the fourth section. It is that section which attempts to give the President of the United States, on these frivolous grounds of assumption, power to suspend the writ of *habeas corpus*, establish martial law, and to declare war. It provides that—

Whenever in any State or part of a State the unlawful combinations named in the preceding section of this act shall be organized and armed, and so numerous and powerful as to be able, by violence, to either overthrow or set at defiance the constituted authorities of such State, or when the constituted authorities are in complicity with, or shall connive at the unlawful purposes of, such powerful and armed combinations; and whenever, by reason of either or all of the causes aforesaid, the conviction of such offenders and the preservation of the public safety shall become in such district impracticable, in every such case, such combinations shall be deemed a *rebellion against the Government of the United States*, and during the continuance of such rebellion, and within the limits of the district which shall be so under the sway thereof, such limits to be prescribed by procla-

mation, it shall be lawful for the President of the United States, when in his judgment the public safety shall require it, to suspend the privileges of the writ of *habeas corpus*, and to declare and enforce, subject to the Rules and Articles of War and other laws of the United States now in force applicable in case of rebellion, martial law, to the end that such rebellion may be overthrown: *Provided*, That the President shall first have made proclamation, as now provided by law, commanding such insurgents to disperse: *And provided also*, That the provisions of this section shall not be in force after the 1st day of June, A. D. 1872.

"Mr. Speaker, what I have said concerning the President's power of decision as to the existence or non-existence of the conditions indicated in the bill is as applicable to this as to the third section. He alone, and without appeal, review, or question, or responsibility of any kind, except at the hands of Congress, may determine when such unlawful combinations exist, and where and when the States are in complicity with them, and what organized resistance against the laws of any State shall constitute *rebellion* against the United States, the territorial extent of that rebellion, and when the citizens of the State may be denied the safeguard of the *habeas corpus*, and be subjected to the arbitrary and merciless, if not mercenary, hand of martial power and rule. Was such power ever intrusted to Washington, or any other Chief Magistrate, in peace or war, in our history? Is there any thing in the capacity or conduct of the present Executive to invite such unbounded trust in his wisdom and patriotism?"

Mr. Morgan, of Ohio, said: "Now, sir, before proceeding to discuss the bill under consideration, I desire to consider the action of the House prior to the date of the President's late message. Before the opening of the present Congress it was rumored that the President would send a message to Congress recommending legislation in reference to what are charged as Ku-klux outrages. At the very moment that this House was being organized, a whisper ran through the House, from seat to seat, 'We are to have a message from the President.' Why? 'General Butler, his confidential adviser, is closeted with the President, and under his dictation the message will come.' Sir, the message at that time did not come. The sentiment of the House was against any legislative action on the subject without information. The sentiment of the majority of the Republican members on the floor was against any such action, as was proved by their votes. A resolution was adopted to appoint a committee of investigation, a committee of thirteen. When it was announced, the member from Massachusetts (Mr. Butler), appointed chairman of the committee, rose in his place and refused to serve, and six out of eight of the Republican members of the committee asked to be and were excused.

"I propose to recur for a single moment to the calumny, to the reason given by the member from Massachusetts why he was not will-

ing to serve upon that committee. He gave among other reasons the following:

I shall not serve on that committee, being convinced, as I am, that no good, but harm only, can come of it to the Republican party.

"Why could harm come through investigation to the Republican party? Because he knew, and knows now, as the country knows, that these calumnies against the whole people of the South are manufactured falsehoods, and that investigation would prove them to be so.

"Well, sir, after the passage of the House resolution, and the refusal of six of the eight Republican members to serve on the committee of investigation, a resolution came from the Senate for the appointment of a joint committee, which also passed the House, thus again showing that this body was against legislation on this subject without investigation. Then, to the surprise of every one, there came a message from the President; and it was whispered about that Mr. Butler and Mr. Morton had been in council with him, and, contrary to the wishes of a majority of the Republicans in Congress, the message was the result. It was a great triumph for the gentleman from Massachusetts (Mr. Butler), a triumph which demonstrated that if he is not leader here he is master somewhere else.

"Now, sir, this message, which is the basis of the bill now before the House, charges, first, that life and property are insecure in some of the States, not one fact being given to sustain the charge. The second allegation in the message is that carrying the mails in the South is dangerous; no fact stated to sustain the charge. But it is known to the country that in one single instance, in Kentucky, and nowhere else, toward the latter part of the month of January, as stated by Senator Stevenson, four persons, supposed to have been soldiers in the Union Army, feeling outraged at the appointment of a negro to the position of route agent, for which they had applied and had not been appointed—that these four men, one of whom was armed, in violation of the laws, for which violation I hope they may be punished, rode up to the cars, and one of them assailed this negro mail-carrier.

"This was about the 26th of January last. What action was taken in the premises? During the month of January none. The fact was known at Washington, was known to the President, was known to the Postmaster-General, was known to the President's Cabinet. Yet January passed, February passed, and not until nearly the middle of the month of March were the mails withdrawn on the route from Lexington to Louisville. And on that late day, although no new offence had been committed, by order of the Postmaster-General the mail was stopped. Why? It has been determined to irritate the people of that State into some act of indiscretion. But, although trade suffered and business was embarrassed, the people bore the wrong with patience.

"In this connection let me ask another question: Why is it that Kentucky, and not Ohio, or Illinois, or Pennsylvania, was selected as the place where a negro route agent should be appointed? Will not the country believe that it was intended as an aggravation to the people of that State? I denounce the act of the man who assaulted the mail-carrier, but I think that every honest man within the sound of my voice must believe that the appointment of that negro mail-carrier was a premeditated means to create disturbance.

"Sir, we have seen that the judgment of a majority of the Republicans of this House was against legislation on this subject until facts could be obtained which would justify it; and if the charges against the South were found to be false then not to legislate at all. The question to be determined now is whether Congress is a coördinate branch of the Government; whether the Legislature is an independent branch of this Government, or whether we are living under the domination of a monarch who issues his edicts which we have to obey.

"Now, sir, if you want to preserve peace to the South, if you want to preserve peace and tranquillity to the whole country, if you are not determined to strike a blow which may end in the total subversion of our free institutions, change your policy to the South; instead of disabilities give amnesty; instead of vengeance offer reconciliation; instead of hostility tender the olive-branch, and peace, prosperity, and happiness will bless our whole country.

"Sir, I, with you, with every good citizen, denounce the violation of the law wherever the law is violated. But, to punish an individual crime or to punish a few crimes, do not strike down the institutions of our country. Stop sending to the South your tax-gatherers from Ohio and from Massachusetts and from other States of the North. When you know that the people of the North themselves are restive under the burdens of taxation, is it strange that the people of the South should be equally so when you require them to pay taxes to support the Government which has kept them under political disabilities during a period of six years after the close of the war, and sends strangers among them as conquerors and tax-gatherers?

"Change your policy, proclaim general amnesty, show that you are worthy to be the representatives of a great and free people. Change your policy, so that, in future times, the blessings and not the reproaches of posterity may rest upon your names."

Mr. Beck, of Kentucky, said: "I listened carefully to the gentleman from Ohio (Mr. Shellabarger), when he tried to find some warrant of authority for the third and fourth sections of his bill, as each is a link of the chain which is to bind the States and people to the chariot-wheels of the Executive. And after reading section four he announced, with an

air of triumph and in tones which he meant should carry conviction to all who heard him, that all the provisions in these sections were fully sustained and approved by the Supreme Court of the United States in the Milligan case, reported in 4 Wallace. I turned to that case, and, so far from supporting or in any way sanctioning the provisions of these sections, it is a withering rebuke to all who, even in time of war, dare thus to subordinate the civil to the military power, establish martial law, or deprive any citizen of the safeguards thrown around him by the Constitution of the United States. The audacity of the reference was based either upon the assumption of the gross ignorance of members or the belief that his word would go further with his party than any assertion which might be made in contradiction of it. To avoid that, I will read what the court say:

The Constitution of the United States is a law for rulers and people equally in war and in peace, and covers with the shield of its protection all classes of men at all times and under all circumstances.

The proposition is this: that in a time of war the commander of an armed force, if in his opinion the exigencies of the country demand it, and of which he is to judge, has the power, within the lines of his military district, to suspend all civil rights and their remedies, and subject citizens as well as soldiers to the rule of his will; and in the exercise of his lawful authority cannot be restrained, except by his superior officer or the President of the United States. If this position is sound to the extent claimed, then when war exists, foreign or domestic, and the country is subdivided into military departments for mere convenience, the commander of one of them can, if he chooses, within his limits, on the plea of necessity, with the approval of the Executive, substitute military force for and to the exclusion of the laws, and punish all persons, as he thinks right and proper, without fixed or certain rules.

The statement of this proposition shows its importance; for, if true, republican government is a failure, and there is an end of liberty regulated by law. Martial law, established on such a basis, destroys every guarantee of the Constitution, and effectually renders the military independent of and superior to the civil power, the attempt to do which by the King of Great Britain was deemed by our fathers such an offence that they assigned it to the world as one of the causes which impelled them to declare their independence. Civil liberty and this kind of martial law cannot endure together. The antagonism is irreconcilable, and in the conflict one or the other must perish.

But it is insisted that the safety of the country in time of war demands that the broad claim for martial law shall be sustained. If this were true it could be well said that a country preserved at the sacrifice of all the cardinal principles of liberty is not worth the cost of preservation. Happily it is not so.

Martial rule can never exist where the courts are open and in proper and unobstructed exercise of their jurisdiction. It is also confined to the locality of actual war.

From the first year of the reign of Edward III. when the Parliament of England reversed the attainder of the Earl of Lancaster, because he could have been tried by the courts of the realm, and declared that "in time of peace no man ought to be adjudged to death for treason or any other offence without being arraigned and held to answer, and that regularly when the king's courts are open it is time of peace in judgment and law," down to the present

day, martial law, as claimed in this case, has been condemned by all respectable English jurists as contrary to the fundamental laws of the land, and subversive of the liberty of the subject.—*Supreme Court in case of Milligan.*

"I put it to members on all sides of this Hall whether a more emphatic condemnation of all the principles and provisions of these sections could have been pronounced by the court, if it had been passing specially upon them; and whether the assumption that the Milligan decision sustains this bill is not flatly and positively contradicted by the language I have read. I can add nothing to its force by repetition or variation of the form of expression. The statement exhausts the argument. If in the better days of the republic a Representative in Congress had dared to introduce or support a measure authorizing the President, whenever he saw fit, to suspend the writ of *habeas corpus*, declare martial law, try, condemn, and hang citizens by drum-head court-martials 'organized to convict,' and composed of the President's subalterns, who, it may be, never opened a law-book and never heard of Magna Charta or the Bill of Rights, as this bill proposes, he would never have returned to his constituents; indeed, he could not have lived in the country. He would have been Ku-kluxed. If there is either virtue or love of liberty left, if the people have not become so debased and degraded that they are willing to wear the collar of their master, no man who votes for this bill will ever sit again as a Representative in this Hall, and he never ought to.

"But further, the fourth section is an attempt to confer authority on the President, whenever he thinks occasion requires it, to declare war on any State or people he may see fit, not only for no offence against the Constitution and laws of the United States, but because the authorities of the State have been unable to enforce the laws of the State against men who have combined to violate the State laws only. Can a more monstrous proposition be imagined? Under the Constitution Congress alone can declare war or suspend the writ of *habeas corpus*. The power cannot be delegated to the President or anybody else. The people have a right to have the action of their Representatives, under all their responsibilities, acting on the existing facts; and there is no warrant anywhere for the transfer of that authority to the President to act on such facts as may arise hereafter, and may, in his interested judgment, authorize him to carry out the delegated authority. If Congress can thus shift the responsibility, it can confer it on the Chief Justice, the General of the Army, or an executive committee sitting during recess, or on any man or set of men it pleases, and the carefully-guarded provisions of the Constitution may thus be set at naught.

"Scarcely less frightful or less fatal to liberty are the provisions of the first and second sections, which undertake to transfer to the Fed-

eral courts all mere questions of personal difficulty or personal rights between citizens of the same State, making simple assault and battery by two or more persons on others in the same town, village, or neighborhood, a felony punishable by fine of \$10,000 and imprisonment for ten years, if the Federal judge in his discretion sees fit to impose such punishment. Enact these provisions, and local State government is at an end; the States may as well make bonfires of their statute-books and barracks of their court-houses, for their laws will be a mockery and their courts a farce. The smallest modicum of common-sense would seem to me sufficient to enable any member to see the insane folly of conferring such jurisdiction on the Federal courts, even if the power to do so existed. With only one Federal court in some of our largest States, how could justice be administered, often five hundred miles from the venue, 'without sale, denial, or delay?'

"What conqueror even, either in ancient or modern times, ever destroyed the local tribunals and laws of their provinces? No Roman proconsul ever ventured to do it, no monarch in modern times ever thought of it; that supremacy of supreme folly is reserved for the (so-called) Representatives of the greatest, freest, and most enlightened republic on earth. Gentlemen will pardon me for again referring to the Constitution. My only apology is, you have all sworn to support it.

"The judicial power of the United States granted in the Constitution to this Government is defined by and limited in the third article. The first section declares that 'the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish.' There is no other way in which the judicial power can be exercised. It cannot be delegated to a star-chamber, a high commission, or a board of military officers, nor to any other special tribunal improvised for the conviction of particular individuals. All power to hear, decide, and adjudicate in civil or criminal cases is confined to the ordained and established courts; which I beg you to remember, especially when you are authorizing the President to try men by drum-head court-martial, or punish them, if the militia and the Army and Navy do not do it sufficiently, 'by such other means as he may deem necessary.'"

Mr. Bingham, of Ohio, said: "Mr. Speaker, no man is equal to the task of discussing, as it ought to be discussed, the issue before this House within the limits of a single hour. I scarcely hope that I shall have done more than touch the hem of the garment of the argument when my hour shall have expired. But, sir, whatever I may fail to do, the great people behind me will not fail to supply. They, sir, constitute the tribunal before whom this issue is on trial.

"The question as presented here and now

may be stated thus: is it competent for Congress to provide by law for the better enforcement of the Constitution and laws of the United States and the better security of the life, liberty, and property of the citizens of the United States in the several States of the Union? The Constitution is not self-executing, therefore laws must be enacted by Congress for the due execution of all the powers vested by the Constitution in the Government of the United States, or in any department or any officer thereof. No man can successfully deny the power of Congress so to legislate, for it is expressly provided in the Constitution that 'Congress shall have power to make all laws which shall be necessary and proper for carrying into execution' the powers therein expressly granted to Congress, 'and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.'

"My honorable friend from Indiana (Mr. Kerr) discussed this question, upon the Constitution as it was and not upon the Constitution as it is. In the progress of his remarks the gentleman (Mr. Kerr) did disclose to this House and to the country the fact that, under the Constitution as it was, it always was competent for the Congress of the United States, by law, to enforce every affirmative grant of power and every express negative limitation imposed by the Constitution upon the States. The great case from which the gentleman read in 6 Wheaton, pages 375-447 (*Cohens vs. Virginia*), is a judicial ruling that clearly, distinctly, and beyond all question, to the extent of all the affirmative grants of power in the Constitution, and of all the express negative limitations of power imposed by the Constitution upon the States, it is competent for Congress to legislate. From the opinion in this case, delivered by Marshall, C. J., I read the following:

America has chosen to be, in many respects and to many purposes, a nation; and, for all these purposes, her Government is complete; to all these objects it is competent. The people have declared that in the exercise of all powers given for these objects it is supreme. It can, then, in effecting these objects, legitimately control all individuals or governments within the American territory. The constitution and laws of a State, so far as they are repugnant to the Constitution and laws of the United States, are absolutely void. These States are constituent parts of the United States. They are members of one great empire. (6 Wheat., p. 414.)

"Mr. Speaker, I have not the time to read from that opinion further. I will state, however, to the House, that in this opinion, scarcely second in importance to any of the opinions that emanated from that matchless Chief Justice whose full-orbed intellect for thirty years illumined the jurisprudence of his country, you will find incorporated the words of Hamilton, who was second to no man, in gifts of mind, and second to no man in the service which he rendered to the people of his own day and to

the millions who have come after him in framing the Constitution of the United States. Marshall incorporates the words of Hamilton with approval, words in which Hamilton, while the Constitution was on trial for adoption or rejection before all the people of the States, referring to the dual system of government, national government and State governments, and the judicial powers of each for the administration of the laws of the Union, declared that 'the national and State systems are to be regarded as one whole,' and that 'the courts of the latter (the States) will, of course, be national auxiliaries to the execution of all the laws of the Union.'

"The States exercise their judicial power under the Constitution, and in subordination to the Constitution, and subject to the express limitations of the Constitution, but for the purpose of aiding its enforcement, not of breaking it. The Constitution declares:

This Constitution, and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made under the authority of the United States, shall be the supreme law of the land; and the judges in every State shall be bound thereby, any thing in the constitution or laws of any State to the contrary notwithstanding.

"By the legislation of the First Congress, passed by the votes of many of the eminent men who framed the Constitution, then members of Congress, and approved by Washington, the power was given to the humblest citizen, aggrieved by the final decision of State courts against his guaranteed rights under the Constitution and laws of the United States, to bring the same for review and reversal before the Supreme Court of the United States, and thereby set aside the usurpations of a State. The judiciary act of 1789 asserts this power of the Government of the United States fully and expressly.

"The act of 1789, the validity and constitutionality of which has never been challenged by a respectable court in America, ought to have satisfied gentlemen that it is too late to raise the question they are raising here to-day, the power of Congress to provide by law for the enforcement of the powers vested by the Constitution in the Government of the United States, both against individuals and States, as Marshall expressed it. I desire to read, merely for the purpose of recalling the recollection of the members of the House to its provisions, from the twenty-fifth section of that act, under which the case of *Cohens vs. Virginia*, to which the honorable gentleman from Indiana (Mr. Kerr) referred, came into the Supreme Court of the United States for review. That section is as follows:

A final judgment or decree in any suit, in the highest court of law or equity of a State in which a decision in the suit could be had, where is drawn in question the validity of a treaty or statute of, or an authority exercised under the United States, and the decision is against their validity; or where is drawn in question the validity of a statute of, or an authority exercised under any State, on the ground of their

being repugnant to the Constitution, treaties, or laws of the United States, and the decision is in favor of such, their validity; or where is drawn in question the construction of any clause of the Constitution, or of a treaty, or statute of, or commission held under the United States, and the decision is against the title, right, privilege, or exemption specially set up or claimed by either party, under such clause of the said Constitution, treaty, statute, or commission, may be reexamined and reversed or affirmed in the Supreme Court of the United States upon a writ of error, the citation being signed by the Chief Justice, or judge or chancellor of the court rendering or passing the judgment or decree complained of, or by a justice of the Supreme Court of the United States, in the same manner and under the same regulations; and the writ shall have the same effect as if the judgment, or decree, complained of had been rendered or passed in a circuit court; and the proceeding upon the reversal shall also be the same, except that the Supreme Court, instead of remanding the cause for a final decision, as before provided, may, at their discretion, if the case shall have been once remanded before, proceed to a final decision of the same, and award execution. But no other error shall be assigned or regarded as a ground of refusal in any such case, as aforesaid, than such as appears on the face of the record, etc.—1 *Brightly*, pp. 259, 260.

"Notwithstanding the express grant of power in the Constitution, and the rulings of Marshall, and this legislation of the First Congress, gentlemen still aver that Congress cannot constitutionally make laws to enforce the rights of the nation against either States or unlawful combinations of men. I answer that the power to suppress combinations to obstruct the execution of the laws of the United States was asserted under the administration of Washington by the Congress of the United States, and with his approval. I refer now to the act of 1795. The act provided—

That, whenever the United States shall be invaded, or be in imminent danger of invasion, etc., it shall be lawful for the President of the United States to call forth such number of the militia of the State or States as he may judge necessary to repel such invasion, and to issue his orders for that purpose to such officer or officers of the militia as he may think proper.

"In the second section of this act it is further provided:

Whenever the laws of the United States shall be opposed, or the execution thereof obstructed in any State by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, or by the powers vested in the marshals by this act, it shall be lawful for the President of the United States to call forth the militia of such State, or of any other State or States, as may be necessary to suppress such combinations and to cause the laws to be duly executed, and the use of the militia so to be called forth may be continued, if necessary, until the expiration of thirty days after the commencement of the then next session of Congress.

"In the third section it is provided that—

Whenever it may be necessary, in the judgment of the President, to use the military force hereby directed to be called forth, the President shall forthwith, by proclamation, command such insurgents to disperse, and retire peaceably to their respective abodes, within a limited time.

"Then, again, in a further provision of that act, which I shall not stop to read, it is provided that the militia, being called out, under

the discretion of the President, 'and employed in the service of the United States, shall for the time being be subject to the same Rules and Articles of War as the troops of the United States,' and liable, therefore, to trial, and punishment, and execution, even to death, by military commission, or court-martial. 'Whenever in the judgment of the President it is necessary,' says this act, approved by Washington, and never challenged until these controversies arose in these latter days, to which I have referred, by any patriot anywhere in the nation, all the arms-bearing population of the United States, at the discretion of the President, might be called and coerced into the service of the nation, and neither *habeas corpus* nor any other civil process known either to the State tribunals of justice, or to the national civil tribunals of justice, could interfere in the premises.

"In support of what I have just said I refer in passing to the ruling made in 12 Wheaton, page 19, by the Supreme Court of the United States, in the case of *Martin vs. Mott*, in which it was decided that the President is the exclusive and final judge whether the exigency contemplated by the law has arisen; a decision the legal soundness of which has never to this day been authoritatively questioned.

"What becomes, sir, in the light of this early legislation, this contemporaneous exposition of the Constitution, of that outcry of the gentleman from New York (Mr. Wood) about discretion confided to the President being usurpation? I can well understand the significance of an unlimited discretion in a monarchy, where, by the constitution of the state, the king can do no wrong, and no man may challenge his decree, which awes a prostrate and defenceless people into submission. But I do not understand what significance is to be attached to this clamor of the gentleman from New York about discretion being vested in a President of the United States by the people's laws, when the President is but the servant of the people, created by the breath of their power."

Mr. Wood: "You would make him their master."

Mr. Bingham: "Oh, the gentleman thinks that the people are not capable of being their own masters, that the servant may be greater than his lord! The significance of the gentleman's last remark, if there is any possible significance in it (and I say this with all respect), is that the system of civil polity known as the Constitution of the United States is a failure, that the people are incapable of self-government. The gentleman, I perceive, inclines to absolute power in a single hand! Discretionary power in a President is dangerous to the people who intrust it to him as their mere servant! The people cannot all assemble at the Capitol. The people cannot in person exercise the powers by them expressly delegated to their agents. If their agents abuse

the trust, the people are not without remedy. They can bring to trial and judgment either a recusant President or a recusant Congress. 'Discretion dangerous to the people!'

"Why, sir, the gentleman strikes at the essential features of your Constitution. The largest discretion under the Constitution of the United States is vested in a Congress, consisting of a Senate and House of Representatives, in which body the honorable gentleman himself holds a distinguished place. Consider the discretion which is vested in Congress. If any thing is to be proved by the gentleman's outcry, if indeed discretionary power is dangerous to the public liberty, the people, enlightened by the gentleman, should reform their Constitution and strip Congress of all discretionary power. That Congress is left to exercise all its great powers at discretion is undoubted. The Congress of the United States, under the Constitution, is invested with power to determine, in their discretion, the issues of life and death to the people of the republic.

"By the Constitution of the country you have the discretion, when, in your judgment it is needful and proper, to declare war. In pursuance of the exercise of that power you have the other great power to pass your description act, when, in your judgment, you deem it needful; to drag from his home every man capable of bearing arms in the republic, to subject him to the perils of the march or the greater perils of the battle, and also to the despotism, as the gentleman calls it, of martial or military law. After you have declared war, after you have summoned the whole able-bodied population of the country to the field, you have granted to you expressly the further power to provide by law to turn out of their homes the wives and children whom your citizens may have left behind, and quarter your soldiers upon the hearthstone. Who trembles at the magnitude of this power?

"The people are equal to the task of redressing all wrongs which may be inflicted upon them either by President or by Congress. If the President violate the discretionary powers vested in him, the people by their Representatives summon him to the bar of the Senate to answer for high crimes and misdemeanors, and on conviction not only depose him from his great office, but make him as one dead among living men, by pronouncing their irrevocable decree, from which there is no pardon on this side of the grave, that never again shall he hold office of trust, honor, or profit, in the United States.

"As for the members of this House, if they be false to their trust they must answer every second year at the bar of public opinion, and an offended, betrayed, and outraged people, having the power, know how to make such betrayers of their rights and their interests powerless for all the future. The gentleman cannot trust discretionary power to the President! The people grant discretionary power

to the President, they trust and confide in him, and have reason to believe that he will faithfully do his duty.

"Additional to this legislation of 1795, Mr. Speaker, is the act of 1861, which declares in express words that whenever, in the judgment of the President, there are unlawful obstructions, combinations, or assemblages of persons against the authority of the United States too powerful to be restrained or controlled by ordinary judicial process, it shall be lawful for the President to employ the Army, the Navy, and the militia of all the States to enforce the faithful execution of the laws of the United States. (2 Brightly, 191.) The President's power under these acts does not wait on the call of States, or Legislatures, or Governors. The President acts upon his own judgment and discretion under the law. I agree with the suggestion of my honorable and learned friend from Wisconsin (Mr. Eldridge), that the provision of the Constitution as to the protection of the States against invasion and insurrection, upon the call of their Legislature or their Governor, is in full force; but it in no wise touches this power of providing by law for the protection of all the guaranteed rights of the people, under the Constitution of the United States, without asking any favor of the Legislature or the Governor of any State.

"Mr. Speaker, having said this much on this subject, I refer to the bill under consideration to say, that I do not propose now to discuss the provisions of the bill in detail. The bill incorporates in general the provisions, adapting them, however, to the existing condition of things, which have been law from the foundation of the Government, and to which I have referred. There may be provisions in the bill pending which are not necessary or proper. If there be, I shall ask the privilege, and I have no doubt it will be accorded to me, to attempt to amend by the favor of the House."

Mr. Butler, of Massachusetts, said: "I do not propose in the fragment of an hour to enter upon the argument of this grave constitutional question. It could not be properly discussed if I devoted the whole time allotted to me; and I am specially debarred from such an undertaking by the learned and able discussion of the two gentlemen from Ohio (Messrs. Shellabarger and Bingham).

"I may be permitted, however, to give some conclusions to which I have arrived, without any considerable detail of the reasoning which led to them.

"There seem to me two controlling propositions on this question:

"1. If the Federal Government cannot pass laws to protect the rights, liberty, and lives of citizens of the United States in the States, why were guarantees of those fundamental rights put in the Constitution at all, and, especially, by acts of amendment?

"All agree that the mere constitutional assertions of affirmative guarantees, not made

operative by law, are ineffectual to aid the citizen. How, then, can the citizen avail himself of those constitutional guarantees and affirmative declarations of his rights, if Congress cannot pass laws to make them operative? How can it be an interference with the rights of the States for the laws of the United States to afford that protection to its citizens which the State fails or neglects to do for itself?

"Is it one of the rights of a State not to protect its citizens in the enjoyment of life, liberty, and property, and thereby deny him the equal protection of the laws, so that, when the General Government attempts to do for the protection of the citizen what the State has failed to do, it is to be held an interference with the rights of the State? Pardon me; it seems to me that such action is only a necessary and proper interference with the wrongs of a State. A State has no constitutional or other right reserved to itself to deny or neglect to its citizen the equal protection of the laws.

"2. If the General Government has not the constitutional power to protect the lives, liberty, and property of its citizens upon its own soil when such protection is needed, then, it ought to have such power; it should reside somewhere in the Government. For, without the power to protect the lives of its citizens, a republican government is a failure, and, if such be constitutional law, to be a citizen of the United States is to be the most unprotected of all mankind.

"Wherever a citizen of the United States may be, upon a foreign soil or upon a foreign sea, however remote, the Constitution and laws of the United States are around and about him, guarding him from outrage and injury as fully as the cherubim and the flaming sword kept the way of the tree of life. There is no nation so weak or savage, none so cultivated, rich, or powerful, that it can unjustly lay its hand upon an American citizen in arrest or anger without calling down upon it the whole power of the republic to protect him and redress his wrongs. 'I am an American citizen' is the passport of safety of all his rights throughout the world, save only in his own country. Can this be so?

"Can it be, then, that an American citizen is protected in his rights of person and property by the Constitution and laws of the United States, with the whole power of the Government, everywhere, except on our own soil, under his own roof-tree, and covered by our own flag? Does that proposition need more argument than the statement of it? If the converse be true, then again I repeat, the Government of the United States is a failure; and better monarchy, better despotism, better any thing than systematized anarchy, organized murder, outrage, and wrong, done at the will of remorseless bands upon defenceless citizens."

Mr. Cox, of New York, said: "Will such

vindictive legislation, without proof, succeed? To refuse inquiry, and to punish political offences, even under an established and legal mode, is to bury powder under the ground. Its explosion will tear up the very rocks on which our political foundations are founded. Better burn our powder on the surface, harmlessly.

"You have already failed in such legislation. We have had six years of that experience. Your powers here and in the South have been unshackled. You have reconstructed and re-reconstructed; you have disfranchised and disabled suffragan and officer; you have confiscated and harassed, and have had as allies the bureau and the bayonet. You had a new set of voters and their control; you had unlimited taxation and its collection in Federal and State affairs. You squandered revenues and you created debts; you fed your vampires and sent down your janizaries; you had negro militia and military governors; you made amendments to the Constitution and had them adopted under duress; you fed like vultures on the prey the war left for your hungry beaks; you have glutted yourselves and parasites with plunder; you have exercised your clemency only to add renegades to your recruits; in fine, you have had the President as the prime mover in these exercises of caprice and power; yet you have failed, and you fear to inquire into the causes!

"Indeed, you have had laws, and you have them now, on the statute, similar to one section of this law. The act of May 31, 1870, gives the Federal courts the jurisdiction you reenact in this bill. That act punishes bands and conspirators, disguised or not, who have the intent only to injure, oppress, threaten, or hinder the citizen in the free exercise and enjoyment of any right under the Constitution and laws of the United States, and you have had the judges and other officers South to execute it. Am I mistaken in this? Here is the law:

That if two or more persons shall band or conspire together, or go in disguise upon the public highway, or upon the premises of another, with intent to violate any provision of this act—

"It does not stop 'with intent to violate any provision of this act,' which was intended to secure the right to vote; it goes on to say—with intent to violate any provision of this act, or to injure, oppress, threaten, or intimidate any citizen with intent to prevent or hinder his free exercise and enjoyment of any right or privilege granted or secured to him by the Constitution or laws of the United States, or because of his having exercised the same, such persons shall be held guilty of felony, and on conviction thereof shall be fined or imprisoned, or both, at the discretion of the court, the fine not to exceed \$5,000 and the imprisonment not to exceed ten years, and shall, moreover, be thereafter ineligible to and disabled from holding any office or place of honor, profit, or trust created by the Constitution or laws of the United States.

"My statement is confirmed by one of the most respectable leaders of the Republican

party (Mr. Blair, of Michigan). He not only found similar laws of equal cogency with this in the statute of May 31, 1870, but under the law of 1793. He said:

My own judgment has been that this Congress ought to have adjourned immediately upon its organization, and my votes have so been steadily given. I wished that the laws as they stand might be thoroughly tested before we should attempt to enter upon new and untried fields of legislation. Many and very broad powers have been granted to the Executive by previous acts of Congress, for the preservation of order in the lately insurgent States, which do not seem to have been brought into requisition as yet. Why pile statute upon statute to sleep in your books unused? If a multitude of laws could bring order out of Southern confusion, there ought to have been a millennium there before this time.

"Quoting the law of 1870, he said further:

This seems to me broad enough, clear enough, and definite enough to meet every form of intimidation, injury, or oppression of the people by disguised bands or conspirators such as are proved to exist in many States. Neither are there wanting statutes to enable the President to enforce the laws of the United States. As early as 1792 Congress began to pass laws authorizing the President to use the military power in the performance of his duty, to take care that the laws be faithfully executed, and never since that day has he been without authority to call forth the militia 'whenever the laws of the United States shall be opposed or the execution thereof obstructed in any State by combinations too powerful to be suppressed by the ordinary course of judicial proceedings.' I do not stop now to refer to these laws in detail, but they will be found very full and ample, and will surprise many gentlemen, no doubt.

"And yet, Mr. Speaker, this able gentleman has consented to disturb public opinion out of this Hall, and the public business in it, by piling useless statutes of hate upon laws of vengeance, to make confusion worse confounded, to help the sinking fortunes of his party! You confess that you now come here for new laws to the same effect. You thereby confess that your laws are inoperative. If your statements are true, they are so flagrant a violation of liberty and law that they fall dead.

"It will not, therefore, be doubted that your Federal legislation and its execution have failed to produce content South. This much must be admitted. I doubt not, also, that the discontent has taken the form of secrecy. It has committed in many localities many heinous crimes and outrages. I admit and denounce these enormities, but as a legislator am I not bound to fix the cause, so as to remove the effect?

"Measures of repression and usurpation are, in their nature, revolutionary. The strain to keep freemen down is sure to rebound. This is one of those unvarying laws of human society which Buckle would delight to reveal. The statesman cannot overlook it.

"Sir James Mackintosh has laid down a wise rule for us when he says that in or after a civil conflict, when the passions and turbulence of men are aroused—

Little quiet is left for moral deliberation, yet by the immutable principles of morality, and by them alone, must the historian try the conduct of all men

before he allows himself to consider all the circumstances of time, place, opinion, example, temptation, and obstacle which, though they never authorize a removal of the everlasting landmarks of right and wrong, ought to be well weighed in allotting a due degree of commendation or censure to human actions.

"Denying that there is any morality in the conduct of the secret societies in the South, it is indispensable to consider the circumstances. What are they? First, of time. This unlawfulness did not appear immediately after the war. The South accepted the arbitration of arms. It began to grow and to grow contented. The people South embraced all the conditions proposed in 1867 for their State governments. They abolished slavery, annulled the secession ordinances and the rebel debt, accepted negro suffrage, came to Congress, and were received—how, we know. Then the discontent began. It dates from their repulse here and your breach of faith to them. The inferior race became, under the reconstructed governments and the bureau and Army, more or less troublesome in its new relation.

"It is a matter of fact that the Ku-klux was organized at first only to 'scare' the superstitious blacks. Horrid tales were told to frighten them from 'roaming about and pilfering.' The testimony collected in Mr. Maynard's speech of February 14th proves this. The Ku-kluxes visited houses 'talking their foolish talk.' They were 'mummicking' about, whatever that means. They carried a 'flesh flag in the shape of a heart,' and went about hallooing for 'fried nigger-meat' (page 21). One of them (page 8) represented that 'he had been killed six years before at Manassas, and since then they had built a turnpike over his grave, and he had to scratch like hell to get up through the gravel.' It was very common for a Ku-klux to carry an India-rubber stomach, to startle the negro by swallowing handfuls of water. It is also to be admitted, as stated on page 14 of the same speech, that 'political reasons had their influence after the Ku-klux were under way.' 'They were a disfranchised body,' as one witness says, 'and did not intend to submit to such laws.' They justified their orgies, their names, and their conduct, on political grounds. So that, on weighing their conduct, we perceive that owing to the conduct of the governments, State and Federal, these misguided men seemed to justify themselves. In fact, the worse the governments the worse would, *a priori*, be the outrages. The sparsely-populated condition of the South; the inflamed opinion consequent on subjugation and breach of Federal faith; the example of their rulers in lawlessness; the temptation to do in the dark what could not be found out, and the obstacles everywhere met with in their efforts, so often balked here, to arise from the ashes of civil war through amnesty, must all be considered in judging of the remedy to be applied.

"Let me illustrate by a reference to the model Radical State of South Carolina. The

President has pursued the Constitution in that case. He is called upon by the Governor, in the absence of the Legislature, though upon what proofs we have no showing. It is proper, however, to assume that he believes the disorders there are so prevalent as to be alarming. But to cure them, that is the question; and the question involves first a diagnosis and then a remedy.

"South Carolina has been infested by the worst local government ever vouchsafed to a people. Ignorance, bribery, and corruption are common in her Legislature. Bonds by the million are issued, the public debt increased, and nothing to show for it. The debt in 1860 was but \$3,691,574. It was last year \$11,429,711; and this year no one knows whether it is twenty or thirty millions, nor how much is counterfeit or genuine! Her rulers contrived new burdens in order to plunder more. On a full valuation of real and personal property of \$183,913,367 the people pay this year sixteen mills on the dollar as a State tax and four mills county tax. This is for 1870 and 1871, and amounts in all to \$4,095,047, to which \$300,000 is to be added for poll-tax. In other words, the value of the property is reduced from \$489,000,000, before the war, to \$183,000,000, and the tax raised from \$400,000 to \$4,250,000, or ten times as much. It is two and a half per cent. on a full valuation, and only chronic insecurity and disorder as the consideration! This is done by those who pay no taxes, who squander what is paid, who use the means to arm negro militia and create a situation of terror, from which men rush into secret societies for defence of homes, mothers, sisters, wives, and children.

"Add to these grievances the intolerable exactions of the Federal Government, not only in taxes, but in laws, and it should give us pause before we place that people at the mercy of an inferior race, a vindictive party, a court-martial, and a hostile President. The people in their agony in that State actually clamored for United States troops to save them from the rapacity and murder of the negro bands and their white allies. Can we not understand why men, born free, should rise, or, if not rise with safety, that they are compelled to hide in Ku-klux or other secret clans, and strike against this ruin and desolation, peculation and violence, and that, too, when it is done by those who are not of their race, and but lately in their midst?"

Mr. Shellabarger, of Ohio, said: "I withdraw the motion to recommit the bill, and offer an amendment, which I send to the desk to be read."

The Clerk read as follows:

Strike out the second, third, and fourth sections of the bill, and insert in lieu thereof the following sections:

SEC. 2. That if two or more persons within any State or Territory of the United States shall conspire together to overthrow, or to put down, or to destroy by force the Government of the United States, or to

levy war against the United States, or to oppose by force the authority of the Government of the United States, or by force, intimidation, or threat to prevent, hinder, or delay the execution of any law of the United States, or by force to seize, take, or possess any property of the United States against the will and contrary to the authority of the United States, or by force, intimidation, or threat to prevent any person from accepting or holding any office of trust or place of confidence under the United States, or from discharging the duties thereof, or by force, intimidation, or threat to induce any officer of the United States to leave any State, district, or place where his duties as such officer might lawfully be performed, or to injure him in his person or property on account of his lawful discharge of the duties of his office, or by force, intimidation, or threat to deter any witness in any court of the United States from testifying in any matter pending in such court fully, freely, and truthfully, or to injure any such witness in his person or property on account of his having so testified, or by force, intimidation, or threat to influence the verdict of any juror in any court of the United States, or to injure such person in his person or property on account of any verdict lawfully assented to by him, or shall conspire together for the purpose, either directly or indirectly, of depriving any person or any class of persons of the equal protection of the laws, or of equal privileges or immunities under the laws, or for the purpose of preventing or hindering the constituted authorities of any State from giving or securing to all persons within such State the equal protection of the laws, or to injure any person in his person or his property for lawfully enforcing the right of any person or class of persons to the equal protection of the laws, each and every person so offending shall be deemed guilty of a high crime, and, upon conviction thereof in any district or circuit court of the United States, or district or supreme court of any Territory of the United States having jurisdiction of similar offences, shall be punished by a fine not less than \$500 nor more than \$5,000, or by imprisonment, with or without hard labor, as the court may determine, for a period of not less than six months nor more than six years, as the court may determine, or by both such fine and imprisonment as the court shall determine; and if any one or more persons engaged in such conspiracy, such as is defined in the preceding section, shall do or cause to be done any act in furtherance of the object of such conspiracy, whereby any person shall be injured in his person or property, or deprived of having and exercising any right or privilege of a citizen of the United States, the person so injured or deprived of such rights and privileges may have and maintain an action for the recovery of damages occasioned by such injury or deprivation of rights and privileges against any one or more of the persons engaged in such conspiracy, such action to be prosecuted in the proper district or circuit court of the United States, with and subject to the same rights of appeal, review upon error, and other remedies provided in like cases in such courts under the provisions of the act of April 9, 1866, entitled "An act to protect all persons in the United States in their civil rights, and to furnish the means for their vindication."

SEC. 3. That in all cases where insurrection, domestic violence, unlawful combinations, or conspiracies in any State shall so far obstruct or hinder the execution of the laws thereof and of the United States as to deprive any portion or class of people of such State of any of the rights, privileges, or immunities named in and secured by this act, and the constituted authorities of such State shall either be unable to or shall, from any cause, fail in or refuse protection of the people in such rights, and shall fail or neglect, through the proper authorities, to apply to the President of the United States for aid in that behalf, such facts shall be deemed a denial by such State of the equal protection of the laws to which

they are entitled under the fourteenth article of amendments to the Constitution of the United States; and in all such cases it shall be lawful for the President, and it shall be his duty, to take such measures, by the employment of the militia or the land and naval forces of the United States, or of either, or by other means, as he may deem necessary for the suppression of such insurrection, domestic violence, or combinations; and any person who shall be arrested under the provisions of this and the preceding section shall be delivered to the marshal of the proper district to be dealt with according to law: *Provided*, That the President of the United States be, and he is hereby, authorized, if in his judgment it should be deemed expedient, to direct voluntary enlistments of any of the militia of the United States in lieu of all or any part of the forces herein authorized, to be employed for the purposes aforesaid, for a term of service not exceeding thirty days, after the final adjournment of the next session of Congress.

SEC. 4. That whenever in any State or part of a State the unlawful combinations named in the preceding section of this act shall be organized and armed, and so numerous and powerful as to be able, by violence, to either overthrow or set at defiance the constituted authorities of such State, and of the United States, within such State, or when the constituted authorities are in complicity with, or shall connive at the unlawful purposes of, such powerful and armed combinations; and whenever, by reason of either or all of the causes aforesaid, the conviction of such offenders and the preservation of the public safety shall become in such district impracticable, in every such case such combinations shall be deemed a rebellion against the Government of the United States, and during the continuance of such rebellion, and within the limits of the district which shall be so under the sway thereof, such limits to be prescribed by proclamation, it shall be lawful for the President of the United States, when in his judgment the public safety shall require it, to suspend the privileges of the writ of *habeas corpus*, to the end that such rebellion may be overthrown: *Provided*, That the President shall have first made proclamation, as now provided by law, commanding such insurgents to disperse: *And provided also*, That the provisions of this section shall not be in force after the 1st day of June, A. D. 1872.

SEC. 5. That nothing herein contained shall be construed to supersede or repeal any former act or law except so far as the same may be repugnant thereto; and any offences heretofore committed against the tenor of any former act shall be prosecuted, and any proceeding already commenced for the prosecution thereof shall be continued and completed, the same as if this act had not been passed, except so far as the provisions of this act may go to sustain and validate such proceedings.

Mr. Shellabarger: "I shall state, as well as I can in ten minutes, the effect of this amendment. It will have been observed by the reading of it that it leaves the first section of the bill as reported by the committee unaffected. The second, third, and fourth sections are stricken out, and are supplied by the amendment.

"That which is substituted in the place of the second section will be found in substance in what was printed and laid on the desks of members this morning as the proposition submitted yesterday by the gentleman from Illinois (Mr. Cook), with some verbal amendments, and striking out of Mr. Cook's proposed amendment that part of it which relates to the matter of voting, that being supplied now more

fully in the existing law of 1870. By looking, therefore, at the proposed amendment of the gentleman from Illinois the members of the House will have before them what is to be supplied in place of the second section of the bill of the committee, the two sections proposed by Mr. Cook being embodied in what is here the second section, and the two are put into one.

"Now, I shall not attempt, in the ten minutes allowed me, to analyze that section. I will first state that the first part of the section, down to the end of line fourteen, is now the law of the United States, having been enacted in 1861. Therefore the provisions of this section that are new are included in the portion following the fourteenth line.

"The change which the amendment proposes to make in section two of the original bill as reported by the committee, so far as it relates to disputed grounds, so far as it is not confined to infractions of right which are clearly independent of the fourteenth amendment, referable to and sustainable by the old provisions of the Constitution, is to be found in those portions of the section which are contained in the part beginning at line twenty-five, I think; I cannot state exactly the place now:

To influence the verdict of any juror in any court of the United States, or to injure such person or property on account of any verdict lawfully assented to by him, or shall conspire together for the purpose, directly or indirectly, of depriving any person or any class of persons of the equal protection of the law.

"There, sir, is brought into notice that which is supposed to be the distinction between the original second section as proposed by the bill and the section as proposed in this amendment. The object of the amendment is, as interpreted by its friends who brought it before the House, so far as I understand it, to confine the authority of this law to the prevention of deprivations, which shall attack the equality of rights of American citizens; that any violation of the right, the *animus* and effect of which is to strike down the citizen, to the end that he may not enjoy equality of rights as contrasted with his and other citizens' rights, shall be within the scope of the remedies of this section.

"Now, there is much other detail here that I need not allude to. But, so far as I now comprehend the effect of it, I have stated it. There is force in the point of distinction that is made; and, without undertaking to enter into it, I will now state some other changes proposed by the amendment.

"In the third section of the bill as reported by the committee, at the end of the third line, are added the words 'and of the United States;' so that the obstructions or combinations which effect the obstruction of the 'laws thereof' (meaning the State laws) shall be so extended as to include obstructions of the laws

of the United States. That is rather a verbal amendment.

"In the fourth section of the bill as originally reported by the committee is this, which is deemed an important change: As reported by the committee the section provides that the violence must be such as to set at defiance the constituted authorities of the State. To that is added by this amendment a provision that the violence must also be a defiance of the authorities of the United States that shall be present in the district, thus widening the state of violence and of danger required before the interposition provided for in the fourth section can be resorted to. It must be so very imposing as to defy both the authority of the State and the authority of the United States; that is, of the marshals of the United States present in the district.

"The amendment further strikes out that part of the section reported by the committee which authorized the declaration of martial law, and leaves no other express power granted except that express power which is found in the right of the President to suspend the privileges of the right of *habeas corpus*.

"These, then, are the changes made by the proposed amendment.

"I will repeat. The first section stands as reported by the committee. The second section is as reported in the proposed amendment of the gentleman from Illinois (Mr. Cook). The third section is so changed as to require that the authority of the United States must also be invaded and defied. The fourth section is so changed that the privileges of the right of *habeas corpus* cannot be suspended unless the authorities of the United States, as well as of the State, are unable to cope with the violence; and it excludes also the provision in regard to the declaration of martial law.

"I wish to make this general statement in explanation of the action of the members of the committee who are friendly to this bill. The amendment is not one proposed from the committee, but is one prepared simply upon consultation of those who desire to make the bill conform to the wishes of such members as believe that some such measure should be passed."

Several amendments were offered to the amendment of Mr. Shellabarger; some were adopted, and other rejected or withdrawn, and the original amendment as amended was agreed to, and the bill passed by the following vote:

YEAS—Messrs. Ambler, Averill, Banks, Barber, Barry, Beatty, Bigby, Bingham, Austin Blair, George M. Brooks, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Clarke, Cobb, Coburn, Conger, Cook, Cotton, Creely, Dawes, DeLarge, Dickey, Donnan, Eames, Edwards, Elliott, Farnsworth, Farwell, Finkelnburg, Charles Foster, Frye, Garfield, Goodrich, Hale, Halsey, Harner, George E. Harris, Havens, Hawley, Hay, Gerry W. Hazleton, John W. Hazleton, Hill, Hoar, Hooper, Kelley, Ketcham, Kilgling, Lamport, Lansing, Lowe, Maynard, McCrary, McGrew, McJunkin, McKee, Mercur, Merriam, Monroe, Moore, Morey, Leonard Myers, Negley, Orr,

Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Perce, Aaron F. Perry, Platt, Poland, Porter, Prindle, Rainey, Ellis H. Roberts, Rusk, Sawyer, Scofield, Seeley, Sessions, Shanks, Sheldon, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Worthington C. Smith, Snyder, Sprague, Stevenson, Stoughton, Stowell, St. John, Sypher, Taffe, Thomas, Turner, Twichell, Tyner, Upson, Wakeman, Walden, Waldron, Wallace, Walls, Washburn, Wheeler, Whiteley, Willard, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—118.

NAYS—Messrs. Acker, Adams, Archer, Arthur, Beck, Bell, Biggs, Bird, Braxton, Bright, James Brooks, Caldwell, Campbell, Carroll, Comingo, Cox, Crebs, Critcher, Crossland, Davis, Dox, DuBose, Duke, Eldridge, Ely, Forker, Henry D. Foster, Garrett, Getz, Golladay, Griffith, Haldeman, Handley, Hanks, Harper, John T. Harris, Hereford, Hibbard, Holman, Kerr, King, Kinsella, Lamison, Leach, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McIntyre, McKinney, McNeely, Merrick, Benjamin F. Meyers, Mitchell, Morgan, Niblack, Hosea W. Parker, Eli Perry, Potter, Randall, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Robinson, Rogers, Roosevelt, Sherwood, Shober, Slater, Slocum, Sloss, R. Milton Speer, Stevens, Storm, Sutherland, Swann, Terry, Van Trump, Vaughan, Voorhees, Waddell, Warren, Wells, Whitthorne, Williams of New York, Winchester, Wood, and Young—91.

NOT VOTING—Messrs. Ames, James G. Blair, Roderick R. Butler, Darrall, Duell, Dunnell, Hambleton, Hays, Kendall, Lynch, Morphis, Peters, Price, Read, Thomas J. Speer, Dwight Townsend, Washington Townsend, and Tuthill—18.

In the Senate, on April 11th, the above bill from the House was considered, together with the amendments proposed by the Committee on the Judiciary.

Mr. Edmunds, of Vermont, said: "I will say a word in respect to the scope of the bill as it stands, and as it will be, as to its general scope, if amended.

"The first section is one that I believe nobody objects to, as defining the rights secured by the Constitution of the United States when they are assailed by any State law or under color of any State law, and it is merely carrying out the principles of the civil rights bill, which have since become a part of the Constitution.

"The second section, it will be observed, only provides for the punishment of a conspiracy. It does not provide for the punishment of any act done in pursuance of the conspiracy, but only a conspiracy to deprive citizens of the United States, in the various ways named, of the rights which the Constitution and the laws of the United States made pursuant to it give to them; that is to say, conspiracies to overthrow the Government, conspiracies to impede the course of justice, conspiracies to deprive people of the equal protection of the laws, whatever those laws may be. It does not provide, as I say, for any punishment for any act which these conspirators shall do in furtherance of the conspiracy. It punishes the conspiracy alone, leaving the States, if they see fit, to punish the acts and crimes which may be committed in pursuance of the conspiracy. I confess that I thought myself it was desirable,

to make the bill complete, to make it completely logical and completely effective, that a section should have been added providing not only for punishing the conspiracy, but providing also in the same way for punishing any act done in pursuance of the conspiracy. This section gives a civil action to anybody who shall be injured by the conspiracy, but does not punish an act done as a crime.

"Then the third section is, as we think, one in entire conformity to precedents and in entire conformity to the principles of the Constitution and of the laws, authorizing the President, when the lawful rights of citizens of the United States shall be interfered with and overthrown by unlawful conspiracies, combinations, and insurrections, and when the State shall fail to protect the people in those rights and put down these insurrections, to bring to bear the power of the nation for the purpose of repressing such tumults and disorders, and handing the violators of the law over to justice.

"The fourth section provides that when these unlawful conspiracies and combinations shall have proceeded to that extreme extent as really to become general in a State, covering more than one combination and being so powerful as to be able to overthrow the State authorities and to set them at defiance, then it shall be treated as in the character of a local rebellion, and the President, in that case, shall be authorized, as the Constitution gives us the power to authorize him, to bring the military to bear upon it, and for the time being, within the district where the power of the courts and the power of the States are both set at defiance, to suspend the writ of *habeas corpus*. But even then the bill does not go so far in that direction as upon a mere reading it would be supposed it did, because there is attached to this suspension of the *habeas corpus* the provision that the act of 1863 relating to *habeas corpus* shall apply even to a case of this kind; and that provides that in all cases in States where the *habeas corpus* is suspended, and the Federal judiciary is still able to hold sway at the places where it holds courts, any person arrested and seized under the suspension of the *habeas corpus* shall be reported to the Federal judiciary within a limited time, or as soon as practicable, and if the Federal judiciary shall not deal with the offenders thus reported by finding indictments or other prosecution, then, upon the order of a judge, the persons thus seized under the suspension of *habeas corpus* shall be set at liberty.

"In substance and fact it leaves a Federal *habeas corpus* in effect, although not in precise form, still operating for a limited time. So that really the sharpest criticism, with this proviso, could scarcely say that in a substantial sense we authorize the President to suspend the writ of *habeas corpus* at all. About all that we do is to authorize him to proclaim that he has suspended it, and then, as soon as he has caught anybody, to report him and

nand him over to the Federal judge. It is much less than I should have wished for myself; but, as the House had chosen to so limit it, we though it not wise to undertake to change it.

"The fifth section of course explains itself, as to not repealing any former law.

"The sixth section provides for an inquiry into the character and conduct of persons who may be summoned to sit on juries in cases arising under the provisions of this act. There is an amendment which seems to be a mere verbal one, but which carries a great deal of effect in it, in the sixth section, which I did not call attention to in that connection.

"As the House passed the bill, this inquiry into the conduct of juries was only in suits or prosecutions based upon this act. All civil suits, as every lawyer understands, which this act authorizes, are not based upon it; they are based upon the right of the citizen. The act only gives a remedy. The suit, therefore, in the technical sense, instead of being based upon the statute, as it would be if it were debt for a penalty, is a suit arising under the statute, and the consequence would be, when you come to get before a judge and undertake to challenge a jury, without inserting the words 'arising under' the provisions of this act, as well as based upon it, any private party would find himself debarred of having this inquiry made for his protection at all, and it would be only in criminal prosecutions based upon the provisions of the statute that this challenging of jurors could occur. We thought it important, therefore, to use words which would enable a judge in all the cases of civil redress to see that the party aggrieved should have a pure and uncontaminated jury.

"The last clause of this last section is also of considerable importance, and I ought to explain it to the Senate. It provides that 'the act entitled "An act defining additional causes of challenge, and prescribing an additional oath for grand and petit jurors in the United States courts," approved June 17, 1862, be, and the same is hereby, repealed.' That act provides that it shall be a good cause of challenge, upon suitable and proper inquiry made in the way pointed out by the statute, to any grand or petit juror, that he has been engaged in the rebellion. This section repeals that act, so that it will be no disqualification in cases arising under this act, or arising under any other act in the courts of the United States, either criminal or civil, hereafter, that the person summoned as a juror and who is proposed to be put in the panel has been engaged in the rebellion; so that in no possible case can participation in the late rebellion be made the ground for setting aside a juror. I am bound to say that that does not meet with my individual approval, but I am instructed by the committee, and shall do so with pleasure, to report the bill in that respect as it stands.

"This, Mr. President, explains, I believe,

the general scope, and, perhaps I might say, the detailed operation of this bill. I feel some confidence in saying that, upon discussion, I think it will turn out that this bill is clearly within the provisions of the Constitution of the United States, and in respect to the matters upon which it operates, and over which it undertakes to exercise sway, it is much more moderate and limited in its application and in its remedies and punishments than the state of the case—if it be one-half as bad as the newspapers in the Southern States, of all parties, collating and putting together their facts, represent the case to be, it is much more moderate and limited than the case would justify."

Mr. Trumbull, of Illinois, said: "I am sorry that, while a bill of so much importance is under consideration, the Senate is so thin, and should give so little attention to the principles which are involved in it; principles which go to the foundation of the Government; principles which, if carried out, may change the character of the Government. Whether it may be best to change the character of the Government is a very serious question for the consideration of the American people. It should not be lightly done. Whether we have done so in the amendments which have been made to the Constitution of the United States since the war, is a question that deserves, and should receive, serious consideration, before, by legislation, we adopt a policy that virtually does make such a change.

"Mr. President, the Government of the United States was formed for national and general purposes, and not for the protection of the individual in his personal rights of person and property. The rights of individuals were left, when the Constitution was formed, to the protection of the States. It was thought by the men who made the Government that personal liberty could be more safely left to the protection of the local authorities of the States, than be conferred upon the General Government. Hence, when the Constitution of the United States was formed, it was formed for general purposes, for the purpose of establishing a nation with national authority—authority to make war, to conclude peace, to make treaties, to regulate commerce between the States and with foreign governments, and to do various things of a national character; but the protection of the individual citizen was left to the States, except that there is a clause in the Constitution of the United States which declares that the citizens of each State shall be entitled to all the privileges and immunities of citizens of the several States. That was a provision of a national character, too.

"After the Union was formed, the whole power of the Government was pledged to defend the rights of an American citizen against improper encroachments by foreign powers; and, inasmuch as the right of the States to protect their citizens outside of their limits was conceded to the Federal Government, the Fed-

eral Government undertook to see that the citizen of each State should have all the rights and privileges conceded to citizens of the several States; that is to say, a citizen of the United States in Germany, or France, or England, should receive the same protection that was granted to other foreigners in those countries, and the citizen of Massachusetts should be protected by the Federal Government in his rights when he went to Carolina in the same manner as the citizen of Carolina was protected by the laws of that State.

"This was the character of the Federal Government as originally formed. The personal rights of individuals were at the mercy of the State governments in the respective States. We all know that until 1808 the Constitution of the United States permitted the various States of the Union to bring persons from other countries into their borders and make them slaves. We know that, under the Constitution of the United States, previous to the war, every person of African descent born in certain States of the Union was a slave, deprived of all rights, and, in some, laws were passed reducing to slavery free persons of color. The Constitution in that respect has been changed by the thirteenth amendment, which declares that slavery shall no longer exist in the United States; and it is not competent now for any State to make a slave of any person within its jurisdiction, and the Federal Government is clothed with authority to prevent that being done.

"Under that authority, there was passed, shortly after its enactment, a law known as the civil rights act, which undertook to give effect to the thirteenth amendment and protect those who had been slaves in the same rights as were conceded to white citizens. The civil rights act did not undertake to protect those who had been slaves, nor whites, in particular rights; but it declared that the rights of the colored people should be the same as those conceded to the white people in certain respects, which were named in the act. The necessity for that legislation grew out of the laws in several of the then late slaveholding States, which denied to persons of color the ordinary and fundamental rights which were conceded to white citizens.

"Subsequently to the enactment of the civil rights act, the fourteenth constitutional amendment was adopted. That amendment in its first clause is but a copy of the civil rights act, declaring that all persons born in the United States, and not subject to any foreign jurisdiction, are citizens of the United States. This had been previously declared by act of Congress, and it was so without any act of Congress. Every person born within the jurisdiction of a nation must be a citizen of that country. Such persons are called subjects of the Crown in Great Britain, in this country citizens of the United States. It is an entire mistake to suppose that there was no such

thing as an American citizen until the adoption of the fourteenth amendment to the Constitution of the United States. American citizenship existed from the moment that the Government of the United States was formed. The Constitution itself prohibits any person from sitting in this body who has not been nine years a citizen of the United States, not a citizen of a particular State. By the terms of the Constitution he must have been a citizen of the United States for nine years before he could take a seat here, and seven years before he could take a seat in the other House; and, in order to be President of the United States, a person must be a native-born citizen.

"It is the common law of this country, and of all countries, and it was unnecessary to incorporate it in the Constitution, that a person is a citizen of the country in which he is born. That had been frequently decided in the United States. It has been acted upon by the executive department of the Government in protecting the rights of native-born persons of this country as citizens of the United States. It has been held in the judicial tribunals of the country that persons born in the United States were citizens of the United States.

"It was because of the idea which obtained before the adoption of the thirteenth amendment to the Constitution of the United States, that slaves were property and not persons, that it was thought proper to embody, in the civil rights bill, the declaration that all persons born in the United States were citizens. I did not think at that time that it was necessary. I recollect that I had a discussion on that very point with the then Senator from Maryland, Mr. Reverdy Johnson, as to the propriety of inserting in the civil rights act those words declaring that all persons born in the United States were citizens. We both agreed that after the abolition of slavery everybody born in and subject to the jurisdiction of the United States was a citizen of the United States; but we both thought that in consequence of the declaration which had been enunciated in the Dred Scott case, and also in order that there might be no cavil about it, it was better to declare it by law."

Mr. Edmunds, of Vermont: "That decision was flatly the other way, that they were not citizens, although free persons."

Mr. Trumbull, of Illinois: "Yes, sir, there is a decision, I think, that even free colored persons were not citizens. After the abolition of slavery and of the distinction in regard to colored persons, I do not think such a decision could have been maintained. It was advisable, at any rate, to put such an express declaration in the law. After that bill was passed it will be remembered that the President of the United States vetoed it, and one of the reasons that he gave for the veto was that Congress could not by law declare that these persons were citizens of the United States. I remem-

ber very well the answer which I gave to that suggestion of the President, which was twofold: first, that it was competent to make persons citizens by statute; second, that the statute was but declaratory of what the law already was. I agreed that they were citizens. The President said in his veto message that, if that was true, the law was of no use, and, if it was not true, the law could not make them citizens; the answer to which was that the statute was declaratory of what the law was before, and numerous statutes were referred to to show that it had been the practice, almost from the origin of the Government, to make persons citizens of the United States by act of Congress. It had been done in reference to Indian tribes; it had been done in regard to Mexicans; and different classes of persons had been made citizens by act of Congress before, and the act was a proper one to settle the question.

"Then, when we came to the adoption of the fourteenth amendment, it was suggested by some persons that there might still be a cavil upon this question as to whether all persons born in the United States were citizens, and it was thought advisable, for the purpose of putting that question once and forever at rest, to insert the words which are in the fourteenth amendment, declaring that all persons born within the United States and subject to its jurisdiction were citizens of the United States. In my opinion, that has not changed at all the fact that, after the abolition of slavery, and after the authority of the States to deprive persons of liberty ceased, every person born in the United States was a citizen of the United States. I do not think there could have been any question that they were all citizens without the declaration in the civil rights act, or without the declaration in the fourteenth amendment. Who believes any court would ever have held that a person born in the United States was not a citizen, if slavery had never existed?"

Mr. Scott, of Pennsylvania, said: "I have felt interested in the statement which the Senator has made, but I wish, in view of the question which he suggests was made as to the necessity of incorporating this clause in the fourteenth amendment, to make a statement with reference to an opinion upon that point, which might have been held to have very considerable weight upon it, and as justifying the declaration in the fourteenth amendment.

"Very considerable attention was being directed in the year 1834 to the status of the free colored population in Pennsylvania, both under the Constitution of the United States and under the constitution of Pennsylvania, in view of the fact that the calling of a convention to reform the constitution was being agitated. At that time a pamphlet was published, by a member of the Pennsylvania bar, elaborately discussing the question, and arriving at the conclusion that the free colored man

was not a citizen of the United States, and that he was not a citizen of Pennsylvania. I have a copy of that pamphlet in my possession. It is a rare pamphlet. It was submitted to Chief-Justice Marshall, and he addressed to the author of the pamphlet a letter indorsing and approving the conclusions at which he arrived; so that there was eminent authority at least—it was not judicially delivered, but the opinion of an eminent judge—that the free colored man was not a citizen of the United States."

Mr. Edmunds, of Vermont: "That was the very point in the Dred Scott case, where the Supreme Court flatly decided so."

Mr. Trumbull, of Illinois: "That has been so decided judicially; but that grew out of this same system of slavery. The Senator from Pennsylvania will see at once to what straits those who maintained slavery were driven. If the colored man in Pennsylvania was a citizen of the United States, he had a right to go to Carolina, and there to enjoy all the rights and immunities of a citizen of Carolina, under the protection of the national Government; and that was inconsistent, as was insisted, with another provision of the Constitution, which authorized, or tolerated, holding the African race in slavery; and, therefore, taking the whole Constitution together, the advocates of slavery insisted that a colored man could not be a citizen anywhere; a very illogical and unjust conclusion, in my opinion, and never warranted either by reason or by the Constitution.

"But the Senator from Pennsylvania will see that the whole force of that argument was destroyed when the authority to hold anybody in slavery was taken away. Then there was no conflict between different portions of the Constitution to be reconciled, even in the view of those who had before insisted that slavery was sustained by that instrument, a position which I do not admit at all, and never did admit; but I do not wish to go into that. I think all that the Constitution of the United States ever did in regard to slavery was simply to tolerate its existence in the States which by their laws authorized it. I think, then, the reason of the decision originally made, that a colored person could not be a citizen, fell when slavery was abolished, and I can hardly conceive that the decision would have been repeated afterward.

"The amendment further declares that they are also citizens of the States in which they reside. That was judicially decided to be so before. A person who was a citizen of the United States and resided in one of the States was a citizen of that State before the adoption of the fourteenth amendment; and so it had been judicially decided.

"I come now, Mr. President, to those clauses of the fourteenth amendment which, it is supposed, have changed the Constitution as it was originally formed. The next is:

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"That is substantially what the Constitution was before, and I do not know that it enlarged at all the provision of the Constitution as it before existed, which declared that—

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

"In my judgment, that amounts to the same thing. It is a repetition of a provision in the Constitution as it before existed. It states it in a little different language, by saying that 'no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.' The section, as it originally stood in the Constitution, read:

The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

"The protection which the Government affords to American citizens under the Constitution as it was originally formed is precisely the protection it affords to American citizens under the Constitution as it now exists. The fourteenth amendment has not extended the rights and privileges of citizenship one iota. They are right where they always were. The citizen of the United States was to be defended as against foreign aggression, as against foreign nations, in all his rights of a national character, under the old Constitution. The fourteenth amendment has not defined what the privileges and immunities of citizenship are. Was not Martin Van Buren, or Zachary Taylor, or James K. Polk, just as much a citizen, and a native-born citizen, of the United States before the fourteenth amendment as the Senator from Wisconsin is to-day since the adoption of the fourteenth amendment? They were citizens, and they were clothed with all the rights of American citizenship, and the Federal Government was bound to protect them in whatever immunity and privilege belonged to them as citizens of the nation; but that did not have reference to the protection of those persons in individual rights in their respective States, except so far as being citizens of one State entitled them to the privileges and immunities of citizens in every other."

Mr. Carpenter, of Wisconsin, said: "I understand him to maintain that a colored man born in Massachusetts, under the old Constitution, was a citizen of the United States."

Mr. Trumbull: "That was my opinion, but not the opinion of others."

Mr. Carpenter: "I am trying your opinions, nobody else's. The Senator says the colored man born in Massachusetts was a citizen of the United States under the old Constitution. If he moved from Massachusetts into South Carolina, he did not carry with him the rights of citizenship of the State of Massachusetts, and the Constitution in South Carolina only

protected him in the rights which belonged to a colored citizen of that State. If these rights which we are now speaking of are the rights of an American citizen, apart from the citizenship of the State, and they were protected by the old Constitution, then, whatever those privileges and immunities were, they would have been the same in South Carolina as they were in Massachusetts; and yet we all know that every privilege that can be assigned to a man—the right to be a party in court, the right to be a witness—all those privileges which are personal, and which pertain to every free man everywhere, were denied to that citizen just as soon as he got into South Carolina, and the Constitution of the United States did not reach him, and did not profess to reach him. It simply said to South Carolina, 'You shall give this colored man coming from Massachusetts just as much right as you give the colored men of South Carolina.' The Constitution now says to South Carolina, 'You shall no longer enforce a law that abridges the privileges of any citizen.'"

Mr. Trumbull, of Illinois, said: "The Senator is entirely mistaken. This Constitution says no such thing as that a State shall not abridge the privileges of any citizen. It speaks of citizens of the United States, and you have not advanced one step in the argument unless you can define what the privileges and immunities of citizens of the United States are. If the Senator from Wisconsin had honored me with his attention when I commenced, he would have observed that I stated at the commencement that this national Government was not formed for the purpose of protecting the individual in his rights of person and of property."

Mr. Carpenter: "That is what I understand to be the very change wrought by the fourteenth amendment. It is now put in that aspect, and does protect them."

Mr. Trumbull: "Then it would be an annihilation entirely of the States. Such is not the fourteenth amendment. The States were, and are now, the depositories of the rights of the individual against encroachment."

Mr. Carpenter: "And that Constitution forbids them to deny them, and authorizes Congress to legislate so as to carry that prohibition into execution."

Mr. Trumbull: "If the Constitution had said that the privileges and immunities of citizens of the United States embraced all the rights of person and property belonging to an individual, then the Senator would be right; but it says no such thing. In my judgment, the fourteenth amendment has not changed an iota of the Constitution, as it was originally framed, in that respect. I take the Senator's case of the colored man in Massachusetts. That colored man in Massachusetts before the fourteenth amendment was adopted, in my judgment, was a citizen of the United States as well as a citizen of Massachusetts. That

was my opinion about it then; and this amendment carries out what I believed to be the law of the land at that time. However, as I have already explained, others took a different view in consequence of the existence of slavery, which they held to be the normal condition of the colored man. The people of the Southern States always insisted that slavery was not established by statute law. Some of them insisted that the colored man was a slave by nature. They did not look to statutes to make him so. This amendment simply carries out the provisions of the law, as I understood it before, and makes it certain that all persons, of whatever color, born in the United States, are citizens.

"The difference between the Senator from Wisconsin and myself is, as to what are the privileges and immunities of citizens of the United States. I insist that the privileges and immunities belonging to the citizen of the United States as such are of a national character, and such as the nation is bound to protect, whether the citizen be in foreign lands, or in any of the States of the Union. The Government of the United States protects the citizen of the United States to the same extent in Carolina or Massachusetts as it protects him in Portugal or in England. National citizenship is one thing, and State citizenship another; and before this constitutional amendment was adopted the same obligation, in my judgment, rested upon the Government of the United States to protect citizens of the United States as now. The next clause of the fourteenth amendment is this:

Nor shall any State deprive any person of life, liberty, or property, without due process of law.

"That was the Constitution applicable to the Government of the United States before the adoption of the late amendments. The Federal Government had no authority under the Constitution as it was amended, in 1791 I think, to deprive any person of life, liberty, or property, without due process of law. That inhibition did not extend to the States, but all the States had adopted a similar clause in their State constitutions. Every one of them, as far as I have examined, had done so; but there was no clause in the Constitution of the United States binding them to carry out this provision. There is no change in that respect, so far as the States are concerned, and the Federal Government cannot interfere with the States so long as they do not deprive some person of life, liberty, or property, without due process of law. If they should, then the power is given to the Federal Government to correct that violation of the Constitution of the United States. It may now prevent any State from depriving any person of life, liberty, or property, without due process of law. I am not now speaking of the machinery for doing it; but the power is now in the Federal Government, under the fourteenth amend-

ment, to prevent a State doing what no State would undertake to do without a violation of its own constitution.

"Then follows the other clause:

Nor deny to any person within its jurisdiction the equal protection of the laws.

"That is a new provision, and the Federal Government is now vested with power to see to it that no State deprives any person of life, liberty, or property, without due process of law, or denies to any person within its jurisdiction the equal protection of the laws; just as, under the old Constitution, no State could pass a law impairing the obligation of contracts. The Federal Government was vested with power to see that no State did pass a law impairing the obligation of contracts. But suppose a State did do it? Suppose a State passed an *ex post facto* law or a law impairing the obligation of contracts? That act was void, and it was the duty of the State courts to pronounce it void, which, in some instances, they did. But suppose the State courts upheld this void act of the State Legislature, which impaired the obligation of contracts; what then? The Federal Government interfered and declared the law invalid, and afforded to the party the means to enforce his contract as it had been made.

"Now, suppose in the cases arising under the fourteenth amendment that a State attempts to deprive a person of life, liberty, or property, without due process of law; or suppose that a State denies to a person within its jurisdiction the equal protection of the laws, then the Federal Government has a right to set aside this action of the State authorities, and see to it that the person is protected in his life and his liberty and his property, unless they are taken from him by due process of law, and that he receives the equal protection of the laws, just as it furnished the means to give him the enforcement of his contract under the old Constitution."

Mr. Carpenter, of Wisconsin, said: "The prohibition in the old Constitution, that no State should pass a law impairing the obligation of contracts, was a negative prohibition laid upon the State. Congress was not authorized to interfere in case the State violated that provision. It is true that when private rights were affected by such a State law, and that was brought before the judiciary, either of the State or nation, it was the duty of the court to pronounce the act void; but there the matter ended. Under the present Constitution, however, in regard to those rights which are secured by the fourteenth amendment, they are not left as the right of the citizen in regard to laws impairing the obligation of contracts was left, to be disposed of by the courts as the cases should arise between man and man, but Congress is clothed with the affirmative power and jurisdiction to correct the evil.

"I think there is one of the fundamental, one of the great, the tremendous revolutions effected in our Government by that article of the Constitution. It gives Congress affirmative power to protect the rights of the citizen, whereas, before, no such right was given to save the citizen from the violation of any of his rights by State Legislatures, and the only remedy was a judicial one when the case arose."

Mr. Trumbull: "Mr. President, I am not specially upon the question of remedies at this moment, as to how the United States should afford the remedy; but let me say to the Senator from Wisconsin that the authority of the United States was just as positive under the Constitution, as originally framed, as it is under the fourteenth amendment. What says the Constitution of the United States? It says—this is the original Constitution—

No State shall pass any *ex post facto* law, or law impairing the obligation of contracts.

"That is what the Constitution said. What else did it say?"

The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"What was vested in the Government of the United States? The power to carry out the clause declaring that no State should pass a law impairing the obligation of contracts. This was a power conceded by the people to the Government of the United States when they made it, and with that concession went along the power to make all laws necessary and proper to carry it into effect."

Mr. Carpenter: "As I now understand his construction of the old Constitution, the authority conferred on Congress to pass laws to execute the powers conferred on the Government included the power to pass laws which should prevent the States from doing the things which they were prohibited from doing by the Constitution. With that admission, I do not think the fourteenth article, or any article, could add any thing to the old Constitution. But I never heard of that construction before; and, while I am not ready to make an affidavit that it is sound, it is satisfactory for all the purposes of this bill."

Mr. Trumbull: "Mr. President, as I have once or twice said to the Senator from Wisconsin, I am not upon the remedies. The Government of the United States did provide, in 1789, by a law, to give effect to that very clause of the Constitution, and the Senator knows it."

Mr. Edmunds, of Vermont, said: "I have no doubt my friend from Illinois wishes to get at the real point in this matter. Let me suggest to him whether the true construction of the clause he has read as to the power of passing laws to carry into effect the powers herein

granted, and also the powers granted to any department of the Government, would not oblige us to come to the conclusion that all the powers that the Constitution granted to Congress, Congress might carry out by legislation; all the powers that the Constitution granted to the judiciary to protect private rights (which was the case as against laws impairing the obligation of contracts), Congress might pass laws in aid of through the judiciary. So, too, it might be provided, as Congress did provide by the act to which my friend has referred, that if any man had the obligation of his contract impaired by State legislation he might have redress through the judiciary, either of the State in the first instance or of the United States in the first instance, as it might have been. But when you come to the other class of powers, which are granted powers to Congress, there you stand upon a different ground. If that is a just distinction, then let me submit to my friend whether this amendment does not make a wise advance in favor of the protection of private rights by affirmative legislation by Congress where those private rights are guaranteed by the Constitution, and that in connection with it Congress is authorized by the same Constitution to carry them into effect by affirmative law."

Mr. Trumbull: "Mr. President, in my judgment the Congress of the United States has authority to carry into effect the powers conferred upon the Government of the United States by affirmative law. What is it but affirmative law? Was not the act of 1789 an affirmative law?"

Mr. Edmunds: "Certainly, in aid of the judiciary. But in the old case, in the case of the obligation of contracts, could it have been done in any other way? That is my point."

Mr. Trumbull: "Perhaps it could have been done in no other way, properly, in the first instance; but suppose a case such as is supposed in this bill; suppose, under the Constitution as it originally stood, a conspiracy, a combination, had been formed to prevent the Senator from Wisconsin taking a case from the Supreme Court of Wisconsin to the Supreme Court of the United States, which involved the question of impairing the obligation of a contract by a law of Wisconsin. Suppose that conspiracy had been so formidable as to prevent the clerk of the court from certifying the record, and the Senator from Wisconsin from appearing as counsel, does the Senator from Vermont mean to say that the Government of the United States might not have passed a law for putting down that conspiracy in some other way than by means of the court? Could we not have done more? But that is a question of detail."

Mr. Edmunds: "If my friend asks me a question, I will answer it now or at any other time. I agree with him most perfectly that would have been the common case of provid-

ing for punishing people who impeded the course of justice belonging to the citizen, which the Constitution of the United States had guaranteed him the right to have; and so far I will go with him with the greatest pleasure; and on that same principle I hope he will stand by us on the similar provision in this bill."

Mr. Thurman, of Ohio, said: "The Constitution consists of certain delegations of power to the Government of the United States, and certain limitations upon the powers of the States. In regard to the grants of power to the United States, the clause read by the Senator is ample that the Congress shall have power 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers'—that is, the powers which are vested in Congress—and all other powers vested by this Constitution in the Government of the United States or in any department or officer thereof." That is simply a power to make laws which may be necessary for carrying into effect the powers of the Government of the United States, and has no reference whatsoever to the prohibitions upon the States that are contained in the Constitution."

Mr. Edmunds: "Yes, it has some."

Mr. Thurman: "Not the least in the world."

Mr. Edmunds: "We all agree that it has."

Mr. Thurman: "As to the act of 1789, that comes under the clause that 'the judicial power of the United States shall extend to all cases in law and equity arising under this Constitution.'"

Mr. Edmunds: "Cannot Congress pass a law in aid of that power?"

Mr. Thurman: "Certainly."

Mr. Trumbull: "The answer which I should make to the Senator from Ohio would be this: that when the Constitution of the United States imposes an inhibition upon the States, such as that they shall not coin money, and that they shall not enter into treaties of alliance with foreign powers, it does give to the Federal Government power to see that they do not do them. I think the Senator from Ohio will agree that, if the State of Massachusetts should to-morrow enter into an alliance with Great Britain to become a part of the kingdom of Great Britain, he would vote with me for the Government of the United States to interfere to prevent it."

Mr. Thurman: "But not under that clause of the Constitution."

Mr. Trumbull: "Where will you find the power?"

Mr. Thurman: "I will answer that at the proper time."

Mr. Trumbull: "So if a State, as is suggested to me, should undertake to keep ships-of-war in time of peace, I think we should find the power very quickly to interpose. If not, it was a great mistake that we were engaged in during the late rebellion, in undertaking to

prevent the late rebel States from forming alliances with foreign powers.

"Now, Mr. President, the Senator from Vermont admits (and I agree with him) that it was a very proper way to enforce through the courts the clause of the Constitution of the United States which inhibited the States from passing a law impairing the obligation of contracts; and I want to say to the Senator from Vermont that not only in regard to that right, but in regard to all the rights secured by the fourteenth amendment, however extended, in time of peace, the courts are established to vindicate them, and they can be vindicated in no other way. Sir, the judicial tribunals of the country are the places to which the citizen resorts for protection of his person and his property in every case in a free government."

Mr. Edmunds: "Suppose they fail?"

Mr. Trumbull: "If they fail by reason of organized opposition, resort, as in the case I supposed, and to which the Senator from Vermont agreed, is had to force, if necessary, in order to give the protection."

"I come now, Mr. President, to the bill under consideration, about which I shall make a few suggestions, and but few. The President of the United States has thought it questionable at any rate whether he had sufficient power to put down organizations which exist in some of the States of the Union, which are encroaching on the rights of person and property, which are committing outrages and sacrificing life. Now, sir, I want it understood that I am ready to go as far as he who goes farthest to maintain the authority of the Government of the United States."

"Show me that it is necessary to exercise any power belonging to the Government of the United States in order to maintain its authority, and I am ready to put it forth. But, sir, I am not willing to undertake to enter the States for the purpose of punishing individual offences against their authority committed by one citizen against another. We, in my judgment, have no constitutional authority to do that. When this Government was formed, the general rights of person and property were left to be protected by the States, and there they are left to-day. Whenever the rights that are conferred by the Constitution of the United States on the Federal Government are infringed upon by the States, we should afford a remedy. That was done in 1789 by the twenty-fifth section of the judiciary act, which afforded a remedy against a State statute in violation of the Constitution of the United States, as in the case of a State law impairing the obligation of contracts. I have no objection now to a law which shall protect a person in the same way against inequality of legislation in any of the States of the Union against any laws that deprive him of life, liberty, or property, except by the judgment of his peers or the law of the land. I am ready to pass appropriate legislation on

that subject; and I understand that this bill, as it passed the House of Representatives, was framed on this principle. As originally introduced, it went to the extent of punishing offences against the States; and there was objection to it on the part of some of the most thoughtful minds in the House of Representatives. Those provisions were changed, and, as the bill passed the House of Representatives, it was understood by the members of that body to go no further than to protect persons in the rights which were guaranteed to them by the Constitution and laws of the United States, and it did not undertake to furnish redress for wrongs done by one person upon another in any of the States of the Union, in violation of their laws, unless he also violated some law of the United States, nor to punish one person for an ordinary assault and battery committed on another in a State.

"To that extent I felt that I could give my support to the bill. I regretted that the Committee on the Judiciary thought it necessary to amend the bill; but a majority came to that conclusion, and I think (although I believe in that the Senator from Vermont who reports the bill with the amendments does not agree with me) that these amendments make the bill obnoxious to the very objection which was made to it in the House of Representatives in its original shape, that it does go to the extent of undertaking to punish persons for violating State laws, without reference to any violation of the Constitution or laws of the United States.

"I do not believe the Senator from Vermont entertains the opinion that the Congress of the United States has a right to pass a general criminal code for the States of the Union, and I am sure, if he does maintain that they have the right to do it, he would think it impolitic to exercise that power. I do not suppose there is a single person on this floor who would be in favor of Congress passing a law punishing larceny, assault and battery, and all sorts of crime in the different States of the Union, and taking control of all the contracts made between individuals, because that would be destructive at once of the State governments."

Mr. Edmunds, of Vermont, said: "Mr. President, inasmuch as this is an important public question, which involves, as Senators have said, delicate responsibilities between the States and the national Government, I think it right that we should examine a little in detail precisely what sort of a government we have, and precisely what its rights are; and if it shall turn out on such an examination that the bill which we have proposed is within the clear scope of constitutional authority, and is within the clear line of legislative precedent, and is a means to the preservation of private rights, then I shall hope that even our Democratic friends will be willing to agree that the crimes which have been committed, and which have added to them that other and greater

crime on the part of the tribunals and communities in which they occur of being suffered to go unpunished, shall be reached by every means of lawful legislation. They certainly ought not to deny that if crimes such as have been stated exist, and are unrepressed by existing laws and authorities, every measure of constitutional legislation which will have a tendency to preserve life and liberty, and uphold order, ought to be resorted to.

"I agree entirely, Mr. President, with the sentiment expressed by the honorable Senator from Missouri, who sits farthest from me (Mr. Blair), the other day, not entirely with his unlimited statement of it.

"We have been told, Mr. President, a good many times, and for a good many years, that this national Government of ours is, after all, not a Government of the people, but that it is merely a confederated Government of States, and that wherever and whenever the national authority undertakes to appeal to a citizen either to do or omit to do a thing, it transcends its authority; that all the rights and duties of a citizen are infolded in his State constitution, and that we, therefore, under the recent amendments or under the old Constitution, must act only upon that political body called the State, as we would act in the case of our relations with a foreign power. This was the doctrine of the Democratic party before the rebellion; it was a doctrine common to it and the powers of the rebellion during the war, and it has been so since. Sir, that is a mistake. It is a mistake which led to the rebellion; it is a mistake which has led to the fruits of that rebellion which we are now reaping in the last and basest form which the spirit that produced the rebellion can possibly assume.

"The honorable Senators over the way have thought fit to read from those excellent commentaries, upon the strength and stress of which the people of the United States, through their States, adopted this Constitution, to show what was the nature of this Government. So will I. Mr. Hamilton, in these publications, which were put forth, as I say, when this Constitution was about to be adopted, and when, as my friend from Wisconsin (Mr. Carpenter) so properly suggests, the temptation was entirely to diminish and belittle the powers of the Government—Mr. Hamilton, speaking of the difficulties between independent States and of the difficulties in the relations of the national Government to the States under the Confederation, says:

But if we are unwilling to be placed in this perilous situation; if we still will adhere to the design of a national government, or, which is the same thing, of a superintending power, under the direction of a common council, we must resolve to incorporate into our plan those ingredients which may be considered as forming the characteristic difference between a league and a government, we must extend the authority of the Union to the persons of the citizens, the only proper objects of government.

Government implies the power of making laws. It is essential to the idea of a law that it be attended with a sanction, or, in other words, a penalty or punishment for disobedience. If there be no penalty annexed to disobedience, the resolutions or commands which pretend to be laws will in fact amount to nothing more than advice or recommendation.

"Which is the redress and remedy our honorable friends desire to give to this existing evil, and which I see from the debates in the House they are to do by a sort of encyclical letter to their friends, whose excesses give them so much cause for mortification.

This penalty, whatever it may be, can only be inflicted in two ways: by the agency of the courts and ministers of justice, or by military force; by the coercion of the magistracy, or by the coercion of arms. The first kind can evidently apply only to men; the last kind must, of necessity, be employed against bodies politic, or communities, or States. It is evident that there is no process of a court by which the observance of the laws can, in the last resort, be enforced. Sentences may be denounced against them for violations of their duty, but these sentences can only be carried into execution by the sword.

"That, sir, is precisely the principle upon which this bill is framed. It does not seek by military power to invade any State, or the right of any State or any man; it seeks to denounce, by a declaration of what shall be a crime, an unconstitutional act; and it endeavors to enforce the penalty imposed upon that by the proper intervention of the judiciary; and then it proceeds to lend the strong arm of the nation to the assistance of that judiciary. But he proceeds, and says again:

The result of these observations to an intelligent mind must be clearly this, that if it be possible at any rate to construct a federal government capable of regulating the common concerns and preserving the general tranquillity, it must be founded, as to the objects committed to its care, upon the reverse of the principle contended for by the opponents of the proposed constitution. It must carry its agency of the persons of the citizens. It must stand in need of no intermediate legislation, but must itself be empowered to employ the arm of the ordinary magistrate to execute its own resolutions. The majesty of the national authority must be manifested through the medium of the courts of justice. The Government of the Union, like that of each State, must be able to address itself immediately to the hopes and fears of individuals, and to attract to its support those passions which have the strongest influence upon the human heart. It must, in short, possess all the means, and have a right to resort to all the methods of executing the powers with which it is intrusted, that are possessed and exercised by the governments of the particular States.

"This was the construction of the Constitution as it was by him who largely participated in the framing of it, by him whose counsels alone, through the publications embodied in this book, gave us the Constitution at all. To exercise these high duties is not, as the honorable Senator from Illinois (Mr. Trumbull) complained, to 'enter a State,' or, as a Senator on the other side said, to 'invade' a State; but it is to obey the will of the whole people expressed in the Constitution. The national Government never either enters or invades a State. It is always and everywhere in every State already.

It is among the people, and administered by the officers of the people whose Government it is.

"This is not all as to the nature of this Government. It is a Government, as our brethren on the other side have probably learned by this time, of separated powers, and among those is the department of the judiciary, to whose judgments, when they are on their side, they advise us with great solicitude to bow; and we always do.

"Now, Mr. President, I think it must be admitted—I had supposed that events had settled it until I heard this debate—that this Constitution, be it much or little (for I am not now on the point of its extent), if it gives us authority, or if it withholds it, is to the extent of its scope a Constitution of the people, and that it brings the people, in respect to every right which it secures to them, into direct communication with that Government which exists by the Constitution, and which only and solely has the paramount power to enforce it. The governments of the States cannot finally or independently enforce or decline to enforce the Constitution of the United States; it is not their Constitution in the sense that the constitution of the State is. It is the Constitution of the whole people as a national body, and the requirements of which they cannot finally pass upon; and therefore whatever rights are secured to the people under it must be guaranteed to them and made effectual for them at last through the instrumentality of the national Government, and through no other.

"I need scarcely occupy your time, Mr. President, and that of the Senate, in showing how perfectly the authority of Congress to execute this Constitution, and to choose the means by which it shall be executed, is recognized by the judicial department of the Government.

"It is a delusion, therefore, to imagine that at any time and in any way the faculties and functions enumerated in this Constitution, which have been given to the United States or have been denied to the States, are to be carried out solely through secondary means. Wherever the Constitution imposes a duty or a prohibition, and it becomes necessary to make it effectual, the Government always has, and it always must, short of warfare, go directly to the thing itself, take hold of the citizen.

"This Constitution has always been a Constitution of the people, and has in a thousand ways provided for the protection of the people, imposing duties, guaranteeing rights, regulating affairs, prohibiting action to States, and so it has, in a great variety of instances in the course of these powers and prohibitions, been applied to the people directly to effect its purposes, and to defend its powers, and wherever and whenever that occasion has arisen it has always been done precisely upon the principles that this bill contains, that of dealing with the people, that of enacting laws, and never that

of either by advice or protest, warfare, or proclamation, dealing with the States.

"That from the foundation of the Government, over this class of subjects—because the whole spirit of this discussion turns upon the question whether the national authority has a right to deal with its citizens as citizens, and not with States, or whether it must be left to the States alone to act upon her citizens in enforcing the national Constitution—embracing almost one half of all the business relations of men in the country, embracing a thousand different operations and a thousand different situations of society, the United States have had and administered a criminal code to protect the powers and to execute the duties which the Constitution has confided to them. And in doing this, they have not either 'invaded' or 'entered' any State, but they have exercised the constitutional omnipresence of sovereignty, and carried forward the beneficent sway of justice among the people, for the people, and by the people.

"The Government has had a criminal code that acted directly upon the people, upon whom alone it could act. That has not been an invasion of the rights of the States; on the contrary, it has been in aid of the good order and stability of the society of the States, and at the same time the States by their own laws, and in their own methods, and through their own courts, have punished the same classes of offenses; and the Supreme Court of the United States has more than once been called upon to decide whether a State could, in view of the fact that the United States had a code against a particular crime, also make the same act a crime; and it has always been decided that the sovereignty of the two governments was in these respects independent and concurrent; that they both could act over the subjects that were committed to them, and therefore that a citizen might properly be punished for violating a State law and a United States law in doing the same act.

"Now, sir, I think I have demonstrated, though I have taken, perhaps, too much time to do it, that over all the rights, and over all the duties, and over all the guarantees that the Constitution of the United States enumerates, the power of the United States, by legislation, by punishment, by any of the methods which legislation may resort to, to enforce constitutional duties and obligations may and must act directly upon the citizen; and that it is entirely immaterial whether the State may or can do the same thing for the same act or not; and, therefore, that it is no objection to the constitutional exercise of power by Congress that the States themselves, in the case of these disorders in the South, may, if they will, punish the same things according to their own laws. This has been carried so far in the statutes of the United States passed by the founders of the Government, that in cases of admiralty and maritime jurisdiction (which would seem by

the Constitution to have been exclusively confided to the national authority and the national courts), the ancient statutes, conferring jurisdiction and setting up courts to practise that law, expressly provided that the acts of Congress and the authority of the courts under them should not be construed to exclude the common law or prohibit the courts of the States to grant relief in all those cases in which the common law was competent to afford it. So that to-day, although the courts of the United States in one form of procedure—procedure *in rem*—have exclusive jurisdiction over maritime matters, the common-law courts of every State have ample jurisdiction of the same matters, by suits *in personam* between parties; and yet we are told that this attempt of the United States to punish crimes of this character is a new thing; that we are changing the character of the Government by endeavoring to repress tumults and insurrections which are levelled against citizens in order to deprive them of that equal protection and that right to seek justice which the Constitution, from the nature of it, guarantees to them, and which it in express words gives to them.

"Now, sir, let us see what rights these new amendments have given to citizens; and I am sorry to have troubled the Senate so long in discussing this general principle; but, inasmuch as the whole constitutionality of our legislation has been made to turn, as I have said, upon the denial of our right to exercise direct powers over the citizens as such, I have felt justified in demonstrating, as I think I have, from history, from the Constitution, from the statutes, and from the decisions, that this pretence is a sheer delusion.

"Now, what do these amendments provide?

"The thirteenth amendment provided that there should be neither slavery nor involuntary servitude except for crime. That was a prohibition. It did not name a State at all. Under the old decisions, to which I have referred, protecting life, liberty, and property, against invasion without due process of law, Democratic Senators and my friend from Illinois might have contended that this was only a prohibition against slavery under the authority of the United States, and that any State could now deprive a citizen of his liberty for the reason that the thirteenth amendment only operated as against the Government of the United States as it was held under the old one which I have read.

"But that has not been contended, and everybody knows that it would be scouted, for there is added—if there could have been any doubt about it before—the provision that 'Congress shall have power to enforce this article by appropriate legislation.' Therefore, when the prohibition against slavery was enacted, and the power was expressly put into the hands of Congress to carry out that enactment, to see that it was made effectual, was it not the right and the duty of Congress, too, to

the last point of its power, to protect the liberty of all people wherever it might be assailed by that form of crime? Nobody questions it.

"But the chief point now is, that here is, whether necessary or unnecessary, an express grant of power to us, the national Legislature, to defend the rights of citizens of the United States and of all inhabitants of the country, whether citizens or not, against slavery. Now, how are you going to do it? Are you going to do it by passing a proclamation to the State of Georgia when she may choose to reenslave her negroes? Or, are you going to do it by making war upon her? Or, are you going to do it, as we by this bill do it under the fourteenth amendment, by declaring that any man who infracts that article shall be punished?"

"But when you take the next step, and come to the next article of the Constitution, which secures the rights of white men as much as of colored men, you touch a tender spot in the party of our friends on the other side. If you wish to employ the powers of the Constitution to preserve the lives and liberties of white people against attacks by white people, against rapine, and murder, and assassination, and conspiracy, contrived in order to drive them from the States in which they have been born or have chosen to settle, contrived in order to deprive them of the liberty of having a political opinion, contrived for the purpose of driving them from a city or town where they have endeavored to carry on a peaceable and lawful business, or to cultivate the soil, then the whole strength of the Democratic party and all its allies is arrayed against the constitutionality and propriety of such an act.

"Therefore, I take it, Mr. President, that I need not occupy much time in saying that whatever this provision of the fourteenth article guarantees to a citizen, that the citizen is entitled to have; and if he is entitled to have it, how is he to have it? The section answers, he is to have it, in the language of the Constitution, which is the voice of the people, through the legislation of this body. The people have declared that he shall have this protection. The people have declared that the State authorities shall not deny it to him. The people have declared that it is the solemn duty of Congress to see that he has it, because they have decreed that 'Congress shall have power to enforce the provisions' of this section of this clause 'of this article by appropriate legislation.' Therefore, the Constitution contemplated that, whenever an occasion should arise where it was necessary to protect these rights, Congress should protect them.

"It is impossible to resist the conclusion. Suppose this did change the Government, as my friend from Illinois appears to fear, do you not rather think, Mr. President, that it is a good change? If the Constitution did not before, holding a sovereignty over its citizens, have the faculty of, through its legislative branch, protecting those citizens in the rights

that the Constitution gave them, the rights which a common human nature gives them, against any assault by any State or under any State, or through the neglect of any State, then it was high time, for the honor of the American name, and for the rights of humanity, that the institutions of this country should change.

"If, as under the thirteenth article, slavery was a constitutional institution, as it was claimed before, I am sure the people will not be alarmed that a great change has come over the spirit of this Government; and, instead of its being a Government of slavery, tolerated, or upheld, or winked at, it has become a Government of freedom; that, instead of its being a Government which should suffer the local authorities of a State to deny the common rights of citizens to any of its people, it has become a Government in which the national power has guaranteed it to them, and which it is the duty of the national power, in every honorable and in the most exhaustive sense, to see is fully and fairly enforced, and made a practical reality.

"If this is the Constitution (and how it can be otherwise, in the face of its history and what it says, is more than a puzzle to me, an amazement to me; if this is the Constitution) which gives to our people a right to the protection of law, and it is a Constitution which makes it our duty to see that they have the protection of law, what sin are we committing in endeavoring to legislate so that they shall have it? None, sir.

"And, now, what do we propose to do? Some people have imagined, have stated, or hinted, or insinuated in their observations that we were making war upon the States in this bill; that we were overturning the judiciary; that we were resorting to new methods. That is a mistake, a misrepresentation. The bill, like all bills of this character, in its first and second sections, is a declaration of rights and a provision for the punishment of conspiracies against constitutional rights, and a redress for wrongs. It does not undertake to overthrow any court. It does not undertake to make any war. It does not undertake to interpose itself out of the regular order of the administration of law. It does not attempt to deprive any State of the honor which is due to the punishment of crime. It is a law acting upon the citizen like every other law, and it is a law to be enforced by the courts through the regular and ordinary processes of judicial administration, and in no other way, until forcible resistance shall be offered to the quiet and ordinary course of justice.

"When you come to the later sections, which are in aid of the first, you have the simple and ordinary provision in the third that, when the laws are opposed, when the courts are in danger of being unable to carry out their decrees, to arrest and punish offenders, the executive arm is to go to their assistance, is

to oppose force to force, as is done in every city and county in the country every day, when the occasion for it occurs, under State laws and under national laws, as the Senator from California himself says he demanded to have done, in his own State, on one occasion, by the troops of the United States. When force is to be opposed to the quiet progress of the law, the arm of the nation is to resist force with force, is to gather up the offender and turn him over to the court of justice for trial. That is all there is to it. We are not attempting to overturn the judiciary; we are attempting to uphold it. We are not attempting to overthrow the Constitution; we are attempting to uphold it. We are not attempting to interfere with the liberty of the people, unless the liberty to commit crime is the liberty of the people; we are attempting to protect and uphold it.

"The fourth section troubles some of my honorable friends very much indeed. It is said, in the first place, that it is unconstitutional, because it authorizes the President, in certain cases named, to suspend the writ of *habeas corpus*. I feel very clear that it is constitutional in that respect. The Supreme Court of the United States have decided, contrary to what my friend from Ohio (Mr. Thurman) had supposed, that the Congress of the United States may delegate to the President the power to determine when an exigency occurs which shall call for the execution of some statute. They do delegate powers constantly; not legislative powers, but powers to act in a contingency which the Legislature prescribes, or provides for, or defines in advance. That was the case under the embargo laws. The President has no power to lay embargoes or to relieve embargoes; he has no power to make war; and yet, under the embargo laws, with universal acceptance in the case that was referred to and shown to gentlemen the other day, the Supreme Court of the United States unanimously decided that it was competent for Congress to vest in the President the discretion to determine in what contingency he should, in effect, repeal the embargoes, and in what contingency he could revive them again. So in 12 Wheaton is a case (Martin *vs.* Malt) which, perhaps, I ought to refer to for a moment. On the subject of exercising the military power in calling forth the militia, which is, in the language of the Constitution, confided to Congress in the provision authorizing it to provide for suppressing insurrections and repelling invasions, on the very point upon which we are now speaking, the Supreme Court of the United States unanimously decided that this power could be rightfully vested in the Executive. It says:

Is the President the sole and exclusive judge whether the exigency has arisen, or is it to be considered as an open question, upon which every officer to whom the orders of the President are addressed may decide for himself, and equally open to be contested by every militiaman who shall refuse to obey the orders of the President? We are all of opinion

that the authority to decide whether the exigency has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons. We think that this construction necessarily results from the nature of the power itself.

"And, again, which is perhaps a better authority with my learned friends on the other side, here is the opinion of a Democratic Attorney-General, given to a Democratic President, on the subject of lending military assistance to the Governor of California, on a certain occasion. Mr. Cushing, the Attorney-General, informed the President that—

It is the function of the President of the United States, indubitably, to decide, in his discretion, what facts existing constitute the case of insurrection contemplated by the statutes and by the Constitution.

"And he cites, to support that, the decision I have just read, and the case of Luther *vs.* Borden, the Rhode Island rebellion case, which also affirms it. So that we have not only the practice of the Government since its foundation, not only the action of its Executive departments, but two solemn decisions of that tribunal of final resort which is to determine such questions, that the power to determine what facts constitute an insurrection when powers are vested in the President, what facts constitute a rebellion, what exigency shall justify him in suspending the laws as to embargoes, in the nature of things belongs to, or certainly may by law be vested in, that department which gentlemen now seem to have forgotten, but which the Constitution has created for the protection and exercise of the power of the people—the President of the United States.

"Therefore, there is no good ground to maintain that this provision of this bill, which authorizes the President of the United States to suspend the writ of *habeas corpus* in the case of a rebellion, is open to any question as to its constitutionality; and let me suggest to my honorable friend from Ohio that the case of Bollman and Swartwout, which he referred to yesterday, does not decide or intimate that the President may not be clothed with that power. It only declares that it belongs to Congress to withdraw from the Supreme Court of the United States, if it chooses, the jurisdiction to hear a writ of *habeas corpus*, as in some cases has been done since that time. And Judge Story, whose commentaries the Senator read yesterday, instead of stating that Congress has not the power to delegate that authority to the President, speaks of Congress 'authorizing' the suspension of the writ of *habeas corpus*, using that term."

Mr. Bayard, of Delaware, said: "We are all cognizant of the honorable Senator's capacity both to ask and answer questions. He is here discussing a question of this gravity, nothing less than whether the Congress of the United States has the power to delegate its high judgment and discretion, reposed in it for the benefit of the people of this country, to be

exercised by a third party, whether an officer of this Government or not. It seems to me that there is a great principle attending that. The exercise of the discretion of suspending the writ of *habeas corpus*, of ascertaining whether the public safety requires it, is something, in my opinion, that cannot be delegated by the Congress of the United States to any one. They only can suspend that writ, the great safeguard of the people's liberty, when the public safety shall require it, and then, superadded to that, the two occasions of rebellion and invasion. Now I ask, this being a matter of discretion, when the public safety may require the raising of revenues to a greater grade than they were before, whether the Senator would consider it competent for Congress to delegate its discretion to the Secretary of the Treasury to increase the duties upon imports, should the public safety require it, and I will superadd, the existence of rebellion and invasion at that time?"

Mr. Edmunds: "Without going to the Secretary of the Treasury to find out what the law is, it is sufficient to say, what I have already said, I think, and that is that the authority which the Legislature may vest in the President of the United States to suspend the writ of *habeas corpus* is not the delegation of a legislative discretion at all, any more than it is the delegation of a legislative discretion to authorize him to expel intruders from the public lands by force, as has been done, whenever he shall think the interest of the United States requires it.

"Now, Mr. President, I have finished what I have to say about the validity of this bill, and I come to the objection that my honorable friend from Illinois (Mr. Trumbull) and my friend from Missouri (Mr. Schurz) have, that we are undertaking to create a case of constructive rebellion, and that we are going beyond the line of safe precedent, the line of constitutional consideration, in undertaking to say that such and such facts shall amount to a rebellion. I do not think it necessary to say that myself. I should be quite as well satisfied, and better satisfied, with the bill as an efficient and powerful measure in a great emergency if it simply declared that if, in the course of these disturbances, a case of rebellion should occur, then and in that case the President, if the public safety in his judgment should require it, might suspend the writ of *habeas corpus* for a limited time. The fact is, this section has accumulated much more in the statement of an existing condition of things than is necessary to make a case of rebellion."

Several amendments were now offered to the House bill, and agreed to. Among these was one offered by Senator Sherman, of Ohio, to add to the bill the following section:

SEC. —. That if any house, tenement, cabin, shop, building, barn, or granary shall be unlawfully or feloniously demolished, pulled down, burned, or destroyed, wholly or in part, by any persons riot-

ously and tumultuously assembled together; or if any person shall unlawfully and with force and violence be whipped, scourged, wounded, or killed by any persons riotously and tumultuously assembled together; and if such offence was committed to deprive any person of any right conferred upon him by the Constitution and laws of the United States, or to deter him or punish him for exercising any such right, or by reason of his race, color, or previous condition of servitude, in every such case the inhabitants of the county, city, or parish in which any of the said offences shall be committed shall be liable to pay full compensation to the person or persons damaged by such offence if living, or to his legal representative if dead; and such compensation may be recovered by such person or his representative by a suit in any court of the United States of competent jurisdiction in the district in which the offence was committed, to be in the name of the person injured, or his legal representative, and against said county, city, or parish; and execution may be issued on a judgment rendered in such suit, and may be levied upon any property, real or personal, of any person in said county, city, or parish; and the said county, city, or parish may recover the full amount of said judgment, cost, and interest from any person or persons engaged as principal or accessory in such riot, in an action in any court of competent jurisdiction.

Mr. Sherman: "I will simply say it is copied from the law of England that has been in force six hundred years."

The Vice-President: "The question is on the amendment of the Senator from Ohio."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Brownlow, Caldwell, Cameron, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Gilbert, Hamilton of Texas, Hamlin, Harlan, Howe, Lewis, Logan, Morton, Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Sawyer, Sherman, Stewart, Sumner, West, Wilson, Windom, and Wright—39.

NAYS—Messrs. Bayard, Blair, Buckingham, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Frelinghuysen, Hamilton of Maryland, Hill, Hitchcock, Johnston, Kelly, Morrill of Maine, Robertson, Saulsbury, Schurz, Scott, Spencer, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—25.

ABSENT—Messrs. Fenton, Ferry of Connecticut, Flanagan, Kellogg, Morrill of Vermont, and Sprague—6.

So the amendment was agreed to.

Mr. Trumbull: "I move now to strike out the fourth section of the bill, the *habeas corpus* section."

The Vice-President: "The question is on the motion of the Senator from Illinois, to strike out the fourth section of the bill."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Hamilton of Maryland, Hill, Johnston, Kelly, Morrill of Maine, Robertson, Saulsbury, Schurz, Stevenson, Stockton, Thurman, Tipton, Trumbull, Vickers, and Wright—21.

NAYS—Messrs. Ames, Anthony, Boreman, Brownlow, Buckingham, Caldwell, Cameron, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Hitchcock, Howe, Lewis, Morrill of Vermont, Morton,

Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Sawyer, Scott, Sherman, Spencer, Stewart, Sumner, West, Wilson, and Windom—48.

ABSENT—Messrs. Fenton, Ferry of Connecticut, Flanagan, Kellogg, Logan, and Sprague—6.

So the motion to strike out the fourth section did not prevail.

The bill was subsequently put upon its passage, and received the following vote:

YEAS—Messrs. Ames, Anthony, Boreman, Brownlow, Buckingham, Caldwell, Cameron, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Hitchcock, Howe, Lewis, Logan, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Sawyer, Scott, Sherman, Spencer, Stewart, Sumner, West, Wilson, Windom, and Wright—45.

NAYES—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Hamilton of Maryland, Hill, Johnston, Kelly, Robertson, Saulsbury, Schurz, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—19.

ABSENT—Messrs. Fenton, Ferry of Connecticut, Flanagan, Kellogg, Morrill of Maine, and Sprague—6.

So the bill was passed.

In the House, on April 15th, some of the amendments of the Senate were approved, and others not concurred in. A committee of conference was therefore appointed, consisting of Mr. Shellabarger, of Ohio, Mr. Scofield, of Pennsylvania, and Mr. Kerr, of Indiana. The Senate at the same time appointed Mr. Edmunds, of Vermont, and Mr. Sherman, of Ohio, as conferees on the part of the Senate.

In the House, on April 18th, Mr. Shellabarger, of Ohio, on presenting the report of the committee of conference, said:

"The first matter of difference between the two Houses is found on page 2, in lines seventeen and eighteen of section two of the bill. And I will state the effect of the report of the committee of conference upon that point of difference. The Senate had amended the House bill by inserting in line seventeen of section two of the printed bill the words 'or while engaged in the.' The effect of that amendment was, as will be noticed, to provide that 'if two or more persons within any State or Territory of the United States shall conspire together' 'to induce any officer of the United States to leave any State, district, or place where his duties as such officer might lawfully be performed, or to injure him in his person or property on account of, or while engaged in, the lawful discharge of the duties of his office,' that should be an offence against the laws of the United States.

"To that the objection made was, that an attack upon the property of an officer of the United States, however remote that property might be from the sphere of the duties of the officer, was to be an offence against the laws of the United States. It was objected that that should not be so provided; that there was no divinity that hedged around an officer or his property in such a way as that it could not be injured, unless the injury in some way pre-

judiced him in the exercise of official duties. That was the point of difference between the two Houses.

"That is avoided by what has been agreed to by the committee of conference—wholly avoided as I understand. The report leaves out the words inserted by the Senate, and inserts after the word 'office,' in the eighteenth line of the printed bill, the words which I will read: 'or to injure his person while engaged in the lawful discharge of the duties of his office, or to injure his property so as to molest, interrupt, hinder, or impede him in the discharge of his official duty.' If the section shall be so amended it will then provide, 'that if two or more persons' 'shall conspire together' 'to injure him' (an officer of the United States) 'in his person or property on account of his lawful discharge of the duties of his office, or to injure his person while engaged in the lawful discharge of the duties of his office, or to injure his property so as to molest, interrupt, hinder, or impede him in the discharge of his official duty,' it shall be an offence against the laws of the United States. I apprehend that no objection will be made in this House, as none was made in the Senate, to that portion of the report of the committee of conference.

"The next point of difference between the two Houses was the amendment of the Senate at the end of section four of the bill. In the provision relative to the time when this act should cease to be in operation, the Senate amended by striking out the words 'the 1st day of June, A. D. 1872,' and inserting in lieu thereof the words 'the end of the next regular session of Congress.' The committee of conference assented to this amendment in the form in which the Senate had made it, there being, as was believed, not much difference between the two provisions. The 1st of June, 1872, will no doubt be substantially the time of the close of the next session of Congress.

"The next amendment is in section six, line thirteen, of the printed bill. As agreed to by the committee of conference, the Senate amendment is changed by inserting after the word 'the,' where it occurs in brackets in line thirteen, these words, 'the first section of;' so that the repeal of the act in regard to the jurors' test-oath will be confined to the first section of that act, instead of repealing the entire act, as the House bill provided.

"The effect of this amendment will be seen by turning to the jury-oath law, which the House bill proposed to repeal and which the Senate amendment would wholly preserve. In that law there are but three sections. The first section (I will state its purport without reading it) gives to parties in any case in the courts of the United States the right of a peremptory challenge for the grounds set forth in that section, those grounds being, in short, that the person challenged has been engaged in some one of the disloyal practices named

in the section. Any one of these furnishes good ground for peremptory exclusion from the jury-box, the right of exclusion being placed by the section in the hands of the party to the suit; so that, under that section, any party to a suit may work the exclusion of a juror by asserting his right of challenge. The conference report proposes to repeal that section entirely, so that the right of challenge exercised in that way will be abolished. If the conference report be adopted, a party to a suit cannot of his own motion exclude anybody from a jury for any of the causes enumerated in the act.

"The second section, however, we propose to leave unpealed. What is the effect of that section? It provides—

That at every term of any court of the United States the district attorney, or other person acting in behalf of the United States in the court, may move and the court in their discretion—

"I call attention to this provision. First, the prosecutor may move, and, secondly, the court in their discretion—

may require the clerk to tender to each and every person who may be summoned to serve as a grand or petit juror the following oath or affirmation.

"Then follows the form of an oath declaring that the person has not engaged in any of the disloyal practices enumerated, which are substantially the same as those specified in the first section. In other words, if, in the first place, the prosecutor moves, and, secondly, if the court in its discretion sustains his motion, then, and then only, can this oath be tendered to a juror for the purpose of his exclusion. Then at the end of the section it is provided that any person or persons declining to take the oath shall be discharged from service on the grand or petit jury to which he may have been summoned. The third section simply declares that the taking of that oath falsely shall be perjury.

"It will thus be perceived that the effect of the amendment is to rest it wholly within the discretion of the officers of the court to determine whether any oath shall be required. The matter is placed completely under the control of the court. Now, as that is the existing law, we have believed it to be safe to rest that discretion where the existing law leaves it. It is believed that as the enactment of this bill may create a large class of cases which may become political cases, and in which the courts of the United States will have jurisdiction, this fact, instead of furnishing a reason for the repeal of the existing law giving such discretion to the court, furnishes a reason for continuing that provision.

"Induced by these reasons, the conferees on the part of the House so far yielded to the views of the Senate as to permit this matter to remain where it seems to me it is always safe and wise to leave challenges of almost any kind, and especially challenges of the kind provided for in this class of cases under exist-

ing law. This, I believe, is the last matter of difference between the two Houses, except that relating to what is known as the 'Sherman amendment.'

"I will now state, Mr. Speaker, accurately if I can, what the effect of this section will be as agreed to by the committee. First, it does make a liability for a class of damages or injuries which result from riotous disorders. It must be kept in mind no other damages except damages produced by riot are within the section. In all these other damages in the second section by conspiracy or any thing of that kind which do not amount to riot—and that has its well-known legal significance, and means two or more persons tumultuously assembled and doing unlawful acts and doing them in an unlawful way, by force and violence—if it comes short of that offence committed tumultuously in the face of the community, then it is not within the section at all. Nothing is in it but such disorder as that.

"Next, the amendment agreed to by the committee of conference completely changes the remedy granted for the mischief, by preventing a claimant, entitled to recover, from resorting to property of individuals at all, and confining his right of recovery to the county or city in which the mischief was done. If done in a city, then the action must be against the city. If in a county and outside of a city, the action must be against the county; and of course the people of a city as tax-payers in the county being to that extent liable. Then, as to the method of enforcement of the judgment when recovered, it provides they shall have the remedies applicable in cases of judgments against corporations of this municipal character. It does no more. It provides for enforcing judgments by *mandamus* or by any other appropriate remedy applicable in like cases. It goes to that extent exactly, that such judgments may be enforced in the known and usual methods of the law.

"It does more. It permits the parties who did the mischief to be united as defendants along with the municipality sued. It does still more; it requires the municipality shall not be made liable to pay that judgment until there is execution returned showing the money cannot be made out of the individual defendants. It requires two months to elapse before judgment can go against the municipality. It requires at first the exhaustion of the means of collecting the liabilities from the individuals doing the mischief. It puts the city or county in the position of guarantor, provided any other parties are sued. The county or city being interested in having such defendants can move to have any party made defendant to a suit for its own protection. Thus we have guarded, as well as it could be done, the county or city by appropriate proceedings.

"The Senate I need not say was exceedingly earnest and positive in insisting there should be something of the character retained in the

bill, and it was impracticable to procure the yielding of the Senate from that in some shape.

"Now, then, Mr. Speaker, this is the report. The question now of duty is of course before the House. It is entirely too late to enter on a discussion of a question so intricate in some of its aspects as well as so new in some of its aspects as the question made in regard to the right to pass this Sherman amendment as we call it."

Mr. Bingham, of Ohio, said: "I ask the attention of gentlemen of the House, especially those on the Republican side of it, to the statement which I make of some facts touching this bill. I desire, in the first place, to say that every part and parcel of the bill as reported from the committee of conference meets my entire approval, except the section known as the Sherman amendment, or the seventh section of the bill as reported by the conference committee. I am the freer to make that remark for the reason that, with the exception of that seventh section as reported, the bill is substantially the bill that received the vote of every Republican member of this House.

"They voted also upon the seventh section, now reported by the conference committee, not without due consideration. The principle involved in that section was printed and before this House for a month before we received this measure from the Senate. The learned special committee of the House ignored it, and would have nothing to do with it, for manifest and good reasons to them appearing. They reported a bill without that section; the House never entertained it, but proceeded to pass the bill as it is now substantially, without that section, by the vote of every Republican in the House. I stand for the bill to-day as it passed the House originally. I stand for it with the exception of the Sherman amendment, as it is called, in the form in which it is reported; for it is substantially in law and in fact the very bill which received the vote of every Republican member of the House, my own included.

"Something was due to the judgment of the House, under the circumstances, on the part of the Senate. But, in utter disregard of the recorded judgment of the House, with full knowledge of the fact that the very proposition they tender us had been presented to the consideration of the House for months, but had not been considered even by our committee, much less reported by it, and had not been accepted by the House, but the bill passed without it, the Senate ought to have considered before they undertook to throw that amendment in upon us by a vote of some thirty or thirty-two votes in the Senate against the votes of some one hundred and forty or more in the House who supported this bill without that amendment. A decent respect to the judgment of this House required some consideration.

"But this provision was sent to us attached to our bill; and what took place? The House

rejected it substantially as it comes back to us to-day; there being, on a division, 118 votes against it, and only 25 in its favor. The yeas and nays were then called; and 132 votes (at least seventy of them cast by Republicans) were recorded against this section, and only 35 votes in its favor. The bill went back to the Senate, who insisted upon the amendment. I now ask the House to reject this report for reasons which must be obvious to the mind of the House; and I hope that the vote of every Republican will be cast against it. It is useless, and worse than useless, to vote down this important measure with any doubtful voice. Let the House record its vote emphatically for the rights of all the people of every State and all the States in the Union.

"Gentlemen talk about finding precedents in the legislation of the States. With all respect, I deny it. My learned and accomplished colleague (Mr. Shellabarger) has referred this morning to the decision pronounced in the State of New York by Judge Denio, than whom none of the recent judges of that State was superior in all the attainments of a jurist; but that decision, instead of supporting any such legislation as this, in its very text and philosophy condemns it."

Mr. Farnsworth, of Illinois, said: "What have we now presented to us for our action? We have a section which authorizes suits to be brought against counties and cities in every case of destruction of property or injury of the person by two or more persons in a riotous or tumultuous manner, when it is done in derogation of the exercise of some constitutional right of the person, or done on account of color, or race, or previous condition of servitude; such, for instance, Mr. Speaker, as this: if a Chinaman should be mobbed by three or four miners in California or Nevada on account of being a Chinaman, he may sue the county in the United States courts and recover damages. Or, to take another case of a man mobbed in Illinois on account of race or color, suppose a colored and a white person get married, and some of the young men of the village get up a *charivari*, not for the purpose of preventing any right to vote, but because of color, then the person claiming that he is injured may sue the county and recover damages.

"The Supreme Court of the United States has decided repeatedly that Congress can impose no duty on a State officer. We can impose no duty on a sheriff or any other officer of a county or city. We cannot require the sheriff to read the riot act or call out the *posse comitatus*, or perform any other act or duty. Nor can Congress confer any power or impose any duty upon the county or city. Can we, then, impose on a county or other State municipality liability where we cannot require a duty? I think not."

The question on agreeing to the conference report was taken; and it was decided as follows:

YEAS—Messrs. Barber, Barry, Beatty, Bigby, George M. Brooks, Buckley, Buffinton, Burdett, Benjamin F. Butler, Coburn, Cotton, Creely, Dawes, DeLarge, Dunnell, Elliott, Halsey, Harmer, Havens, Gerry W. Hazleton, John W. Hazleton, Hill, Hoar, Kelley, Killinger, Lampert, Lansing, Lowe, Maynard, McKee, Mercier, Merriam, Monroe, Morey, Leonard Myers, Negley, Orr, Packard, Palmer, Peck, Pendleton, Perce, Aaron F. Perry, Platt, Porter, Rainey, Ellis H. Roberts, Rusk, Sawyer, Scofield, Seeley, Sessions, Shanks, Shellabarger, H. Boardman Smith, Snyder, Sprague, Starkweather, Stevenson, Stoughton, Stowell, St. John, Taffe, Twichell, Tyner, Wakeman, Walden, Waldron, Wallace, Walls, Wheeler, Whiteley, Jeremiah M. Wilson, and John T. Wilson—74.

NAYS—Messrs. Acker, Adams, Archer, Arthur, Averill, Banks, Beck, Bell, Biggs, Bingham, Bird, Austin Blair, Braxton, Bright, James Brooks, Burdard, Caldwell, Carroll, Conger, Cook, Cox, Crossland, Davis, Donnan, Dox, DuBose, Duke, Eames, Edwards, Eldridge, Ely, Farnsworth, Farwell, Finkelnburg, Forker, Charles Foster, Henry D. Foster, Garfield, Garrett, Getz, Golladay, Griffith, Hale, Handley, Hanks, Harper, George E. Harris, John T. Harris, Hawley, Hereford, Hibbard, Holman, Hooper, Kendall, Kerr, King, Kinsella, Lamson, Leach, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McIntyre, McJunkin, McKinney, McNeely, Merrick, Benjamin F. Meyers, Morgan, Niblack, Packer, Isaac C. Parker, Eli Perry, Poland, Potter, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Sheldon, Shober, Shoemaker, Slater, Slooem, Sloss, John A. Smith, Stevens, Storm, Strong, Sutherland, Swann, Terry, Washington Townsend, Turner, Vaughan, Waddell, Wells, Whitthorne, Willard, Williams of New York, and Wood—106.

NOR VOTING—Messrs. Ambler, Ames, Barnum, James G. Blair, Roderick E. Butler, Campbell, Clarke, Cobb, Comingo, Crebs, Critcher, Darrall, Dickey, Duell, Frye, Goodrich, Haldeman, Hambleton, Hay, Hays, Ketchum, Lynch, McCrary, McGrew, Mitchell, Moore, Morphis, Hosea W. Parker, Peters, Price, Prindle, Robinson, Rogers, Roosevelt, Sherwood, Worthington C. Smith, R. Milton Speer, Thomas J. Speer, Sypher, Thomas, Dwight Townsend, Tutthill, Upson, Van Trump, Voorhees, Warren, Washburn, Williams of Indiana, Winchester, and Young—50.

So the report of the committee of conference was rejected.

In the Senate, on April 18th, the report of the conference committee was considered.

Mr. Davis, of Kentucky, said: "The amendment offered by my honorable friend from Ohio (Mr. Sherman) authorizes any person whose house is burned by a riotous assemblage in any county, city, or parish, to institute a suit against that municipal corporation and to recover the value of the property, and after there has been a judgment against the corporation, and it has paid the amount of the judgment, this bill then authorizes the corporation to sue the wrong-doer. Where is the warrant in the Constitution that authorizes Congress to pass a law to empower any State corporation whatever to bring a suit for an injury done to that corporation? There are sundry very able and learned constitutional lawyers who advocate this bill, and among them the very astute and learned lawyer who has it in his management. I ask him to inform me and the Senate where there is any warrant

in the Constitution of the United States which authorizes Congress to pass a law allowing a State municipal corporation to maintain a suit for a wrong directly or indirectly done to that municipal corporation.

"I will proceed a step further. This bill makes it a penal offence against the United States for a combination of persons to violate a penal law of a State. Take the State of Kentucky or any other State; it has its penal laws; if they are violated, here is a provision of this bill which makes the violation by the people of a State of a State penal law a criminal offence against the United States. I ask the honorable Senator where does he derive the power for Congress to pass a law making a violation of a State penal law an offence against the United States? I say it is a solecism."

Mr. Sherman, of Ohio, said: "I ask my friend from Kentucky where is the authority in the Constitution of the United States for any municipal corporation or any other kind of a corporation to sue or be sued in the courts of the United States, and yet it is done every day?"

Mr. Davis, of Kentucky: "That is a very different matter, if my honorable friend will allow me to make the suggestion. It is an absurdity, it is a perfect solecism for one government to pass laws to enforce the criminal laws of another government. Suppose Congress should pass a law making it penal for any citizen of the United States to cross into her majesty's dominions on this continent and violate the penal law of the land, would not the idea of Congress passing a law thus to enforce the penal laws, and to punish the infraction of the penal laws of the British provinces in America, strike everybody as supremely absurd? It is only less absurd for Congress to pass laws to make the violation of a penal State law a criminal offence against the United States, and for it to be punished in the courts of the United States. But, Mr. President, I will go a step further in this line of thought. The Constitution provides that—

The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence.

"Here is a precedent condition expressed in plain and explicit language upon which the Government of the United States shall interpose in the affairs of a State, and that precedent condition is, that the Government of the United States shall be first applied to by the Legislature of a State in which there is domestic violence, if the Legislature be in session, and, if it be not in session, that the Executive or Governor of the State shall make the application."

Mr. Edmunds, of Vermont, said: "I ask the Senator whether he finds any such limitation upon the power of Congress and the President

in that other part of the Constitution which says that Congress may pass all laws to provide for suppressing insurrections?"

Mr. Davis, of Kentucky: "My answer to the very acute Senator from Vermont is this: that, where the Constitution makes an express provision for any case, it excludes every other provision in relation to that matter. Whenever the Constitution has provided an express remedy for a particular state of case, the application of that express remedy is the exclusion of every other remedy of the same matter; and that is a universal rule in the construction of the Constitution by all of our courts. My position is that the United States Government cannot interfere in the domestic concerns of a State under pretext of suppressing domestic violence, unless the State Legislature or the Governor has made express application to the Government of the United States. That position is as distinctly and as explicitly laid down by Mr. Justice Story, in his Commentaries upon the Constitution, as it is possible for a position to be.

"But there is stronger authority than that. This very matter of the interference by the General Government in the affairs of a State was the subject of long and anxious and repeated debate in the Convention which framed the Constitution. It was proposed by Mr. Pinckney and other members of that Convention again and again that the General Government should interfere whenever it was necessary for the purpose of establishing peace in a State without the application of the Legislature or of the Governor, and that proposition, as often as it was made, was distinctly, upon elaborate debate by some of the ablest members of the Convention, voted down, and the provision was made, after these repeated discussions, in the form in which I have read it from the Constitution; and Mr. Justice Story says in the Commentaries that there is no pretext—that is his language—for the interference by the United States Government in the affairs of a State for the purpose of establishing domestic peace in a State, or of repressing disorder, until express application has been made by the Legislature or the Governor of the State. That is the Constitution; and that provision of the Constitution is expressly recognized in the case of *Luther vs. Borden*, the Rhode Island case.

"I state it as a constitutional principle, expressly established by the language of the Constitution, that under no pretence whatever can the General Government interfere in the concerns of a State in order to repress domestic violence, until the General Government has been applied to by the Legislature or the Governor of that State for its interference. That is the Constitution; that is the Constitution which every man in this body has sworn to support; that is the Constitution as it is written; that is the Constitution as it is construed by the greatest commentator upon the instru-

ment, Judge Story; that is the Constitution as it is recognized by the Supreme Court in the case of *Luther vs. Borden*; that is the Constitution as it was settled by the wise men who framed it after full, repeated, and mature deliberation and judgment, and upon the gravest reasoning in the world.

"Sir, a usurper, the head of a great party in possession of the Government, if he was a man of vaulting ambition and of great capacity, would want no better opportunity than to have it in his power, unbidden by the Legislatures and Governors of the States, to interpose in their affairs for the purpose of repressing domestic violence. A Cæsar, a Cromwell, a Bonaparte, a man of great military capacity and of boundless ambition, would want no better opportunity than this *carte blanche* to interfere in the affairs of the States. In times like these, if the narrow-minded and puny intellect that now presides at the White House was a Marlborough, or a Wellington, or a Hannibal, or a Cæsar, or a Cromwell, he would want no better opportunity than that which this bill gives him to interfere in the affairs of the Southern States. It would be like putting the lamb in the custody of the wolf, and the Southern States would fare about as badly as the lamb would in the custody of the wolf.

"But, Mr. President, if my honorable friend from Indiana was here, I would state still another objection, constitutional in its character. I admit that I have something of a *penchant* to originate constitutional objections. I am devoted to the instrument. Abused, trampled under foot, violated, and despoiled from day to day, as it has been by the party in power, still 'around the dear ruin each wish of my heart entwines itself verdantly still.' I am for defending its fragments, for gathering them together, and, in the spirit in which it was made, I am for its reconstruction, and I hope the time will come when the people of America will all take up the same sentiment and act toward the same glorious resurrection.

"But, sir, I was about to bring the attention of the Senate to another constitutional objection to this bill. The Constitution provides that—

The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

"Now, Mr. President, what is my position? The terms 'rebellion' and 'invasion' in this clause have a fixed meaning. They mean the same that they meant when the Constitution was adopted by the people of the States, and Congress has no power to change their meaning. If Congress can change the meaning of these phrases and other phrases upon which the principles of this Government and the liberties of the people are based, at their pleasure, there is no stability in our Government at all; we have no fixed and stable Government; every thing is at sea; and the great funda-

mental principles of our Government, the great principles of personal and political liberty established by it, have no stability, no fixed meaning, but all will depend upon the various, fluctuating will of Congress, as factions and parties among our people rise and fall."

The Presiding Officer: "The question is, Will the Senate agree to the report of the committee of conference?"

The question being taken, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Caldwell, Cameron, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Gilbert, Hamilton of Texas, Hitchcock, Howe, Logan, Morrill of Vermont, Nye, Pomeroy, Pratt, Ramsey, Sawyer, Scott, Sherman, Spencer, Stewart, Wilson, Windom, and Wright—32.

NAYS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Fenton, Johnston, Kelly, Saulsbury, Schurz, Sprague, Stevenson, Stockton, Thurman, and Vickers—16.

ABSENT—Messrs. Brownlow, Buckingham, Ferry of Connecticut, Flanagan, Frelinghuysen, Hamilton of Maryland, Hamlin, Harlan, Hill, Kellogg, Lewis, Morrill of Maine, Morton, Osborn, Patterson, Pool, Rice, Robertson, Sumner, Tipton, Trumbull, and West—22.

So the report was concurred in.

A new committee of conference on the disagreeing votes of the House was subsequently appointed, which consisted of Mr. Shellabarger, of Ohio, and Mr. Poland, of Vermont, on the part of the House, and of Mr. Edmunds, of Vermont, and Mr. Carpenter, of Wisconsin, on the part of the Senate.

In the House, on April 19th, Mr. Poland, of Vermont, presented the report of the committee, and said:

"The report of the former committee of conference as to the first four amendments of the Senate, which were disagreed to, was, so far as I know, entirely satisfactory, the changes which were made by the committee meeting the approval of both Houses, and of members on both sides in the two Houses.

"The next point of disagreement was in relation to the time when the provision in regard to the suspension of the writ of *habeas corpus* should expire. The House had fixed upon the 1st day of June, 1872; the Senate had fixed as the time the expiration of the next regular session of Congress. The disagreement between the two Houses in this respect was merely as to this difference of time; and I did not understand that the objection on the part of the House to the report had reference particularly to this difference of time, or that it was a point upon which the House was disposed to make any stand; and inasmuch as the conferees on the part of the Senate represented the sentiment of that body as decided upon this point, and were unwilling to yield it, we did not deem it advisable to report a disagreement upon this question.

"The next, the third of the disagreements of the two Houses, was in relation to the jurors'

oath, the disability or cause of challenge of jurors that was provided by the act of 1862, I believe it was. The former conference reported an amendment to the amendment of the Senate, so as to provide for repealing the first section of that law, which provided that this should be an absolute and legal ground of challenge; and left the second section of that statute in force, which left it discretionary with the judge of the United States court whether the oath prescribed shall be tendered to the jurors or not.

"Upon this subject, the conferees on the part of the Senate were decided and absolute in adhering to that portion of the former act, leaving it discretionary with the judge to require the oath or not, but upon that subject as well as upon the one in relation to *habeas corpus*, we were compelled to accept that or report a disagreement. And, therefore, so far as these three amendments are concerned, we have concurred, not with the Senate amendments, but in the same report in reference to them that was made by the former committee of conference.

"This brings me to the last cause of disagreement—to what is known as the Sherman amendment. I did understand, from the action and vote of the House, that the House had solemnly decided that in their judgment Congress had no constitutional power to impose any obligation upon county and town organizations, the mere instrumentality for the administration of State law. We informed the conferees on the part of the Senate that the House had taken a stand on that subject and would not recede from it; that that section imposing liability upon towns and counties must go out, or we should fail to agree. At the same time, we said to them there was a disposition on the part of the House, in our judgment, to reach everybody who was connected, either directly or indirectly, positively or negatively, with the commission of any of these offences and wrongs.

"The result was this section, which we have reported in lieu of the Sherman amendment. The substance of it is that any person who has knowledge that any of the offences named, any of the wrongs already described, any of the conspiracies indicated in the second section about to be committed, it shall be his duty to use all reasonable diligence within his power to prevent it; and if he fails to do so, so much damage as is occasioned to anybody in consequence of his failure, for so much he shall be responsible in an action."

Mr. Kerr, of Indiana, said: "I desire now only to submit one or two remarks, and, in the first place, in addition to what I have hitherto said to say this, that, in my judgment, there has not been shown to exist in our country any such condition as justifies the enactment of this bill, either as originally passed by the House or as now proposed to be amended, and finally passed upon the report of this commit-

tee. I think there is no intelligent popular sentiment in the country which demands or justifies the enactment of a law of this kind. I think it is an attempt to force popular sentiment. It is addressed to the passions of the people of the country. It is based upon no existing necessities in the land. There is nowhere such a condition of insubordination as either calls for it, or can be relieved or cured by it."

Mr. Beck, of Kentucky, said: "If you adopt this report, you will to-day perpetuate a law which will exclude the Attorney-General of the United States from the jury-box, which will exclude men, however high in position, who have joined your party, pardon and amnesty to the contrary notwithstanding. General Longstreet, under this bill, if it shall become a law, will not be able to sit upon a jury to settle a controversy between his neighbors, although he may hold the highest office in the land. No man, Radical or Democrat, who ever fed a Confederate soldier, or one about to unite with that army, can, under this bill, sit in the jury-box. I say that there is not a Federal officer in this House, I do not believe I need except even the gentleman from Massachusetts (Mr. Butler), who, during all the years of war, did not do some act of kindness that he was not compelled to do to some poor, suffering Confederate soldier, and that would exclude him from every Federal jury from Maine to California, if the judge saw fit to do so.

"That is what this House now proposes to do by concurring in this report, and the country ought to know it. That is the known and obvious effect of this bill as it is now amended by the committee of conference. The bill originally never would have been passed by this House, as I have stated, but for the fact that that provision of law was struck out; and the gentlemen who now 'go back' on the House, and yield to the Senate, who succumb to the malignants in both branches of Congress, have, in my judgment, been recreant to their duty, and ought to be held up before the country as men who have abandoned the rights and privileges of this House and of the people. My experience as a lawyer may induce me to place a higher estimate on the importance of insisting on the repeal of this law. When the numerous classes of cases provided for in the bill become, for the first time, subjects of Federal jurisdiction, then many others may attach to it. I know that if you give a man a fair and an honest jury, and, if he has a good case, he is sure to be protected, no matter who is judge. But by this bill you propose to allow a corrupt judge (and the judge may be corrupt; there have been, as all Southern men know too well, corrupt judges) to strike down the jury-panel whenever he pleases; to discard and set aside any man, whether he sympathized during the war with the Federal or the Confederate cause, if years ago he gave a meal to a starving Confederate, to put him upon his oath in

order to ascertain that fact, and thus exclude him from a jury. Allow this to be done, I say, in the class of cases provided for in this bill, and there is an end of liberty regulated by law. The old, time-honored trial by jury, which men have regarded for centuries past as the great palladium of civil liberty, will be swept away."

Mr. Butler, of Massachusetts, said: "The bill now presents itself with three features which, in my judgment, are worth preserving. First, the right to punish through the courts of the United States crimes against citizens of the United States to prevent the exercise of their rights; second, the power of the President to use the strong arm of military power to suppress all outrages and wrong upon citizens; and, third, a definition of what are the powers of the General Government, because this amendment, as reported by the committee, has in it, in my judgment, some virtue in this: it goes further in the direction of interfering with the individual rights of citizens by law of Congress than ever I attempted to do or desired to do, and makes a precedent for us in the future. I attempted heretofore to report a bill which would allow men, who did the act of depriving a citizen of his right, to be punished in courts of the United States. I thought the constitutional power was with us to do that.

"Now, my friends, who have constitutional scruples about doing that, have reported an amendment to give a remedy by taking the property of a citizen of the United States because he knows somebody who has committed an offence, or is about to commit an offence, or happens to know about an offence about to be committed, and has not prevented it. For gentlemen who have constitutional scruples, this is going further than any thing I have done or know. I have known men in my time who mistook dyspepsia for conscience. (Laughter.) I have known men who mistook their doubts and qualms for constitutional law, who are quite willing to go very far, if they do not happen to go under the lead they do not like, and, if you give them their own head, will go farther than the farthest. So far as this particular provision is concerned, now substituted for what is known as the Sherman amendment, I look upon it as utterly useless, a mere illusion and delusion."

The question was taken upon agreeing to the report of the committee of conference; and it was decided as follows:

YEAS—Messrs. Averill, Barber, Barry, Beatty, Bigby, Bingham, Austin Blair, George M. Brooks, Buckley, Buffinton, Burchard, Benjamin F. Butler, Coburn, Conger, Cook, Cotton, Creely, Dawes, Donnan, Dunnell, Eames, Elliott, Farwell, Charles Foster, Garfield, Hale, Halsey, Harmer, George E. Harris, Havens, Hawley, John W. Hazleton, Hill, Hoar, Hooper, Kelley, Ketcham, Killinger, Lamport, Lansing, Lowe, Maynard, McJunkin, Mercur, Merriam, Monroe, Morey, Leonard Myers, Negley, Orr, Packard, Packer, Palmer, Peck, Pendleton, Perce, Aaron F. Perry, Platt, Poland, Porter, Rainey, Ellis H.

Roberts, Rusk, Sawyer, Scofield, Seeley, Sessions, Shanks, Sheldon, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Sprague, Starkweather, Stevenson, Stoughton, St. John, Taffe, Washington Townsend, Turner, Twichell, Tyner, Wakeman, Walden, Waldron, Wallace, Walls, Wheeler, Whiteley, Willard, Jeremiah M. Wilson, and John T. Wilson—93.

NAYS—Messrs. Acker, Adams, Archer, Arthur, Beck, Bell, Biggs, Bird, Braxton, Bright, James Brooks, Caldwell, Cox, Crossland, Davis, Dox, Du Bose, Duke, Edwards, Eldridge, Ely, Forker, Henry D. Foster, Getz, Gollady, Griffith, Handley, Hanks, Harper, John T. Harris, Hereford, Hibbard, Holman, Kendall, Kerr, King, Kinsella, Lamison, Leach, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McIntyre, McKinney, McNeely, Merrick, Benjamin F. Meyers, Morgan, Niblack, Eli Perry, Potter, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Shober, Slater, Slocum, Sloss, Stevens, Storm, Sutherland, Swann, Terry, Waddell, Warren, Whithorne, Williams of New York, and Young—74.

NOT VOTING—Messrs. Ambler, Ames, Banks, Barnum, James G. Blair, Bardett, Roderick R. Butler, Campbell, Carroll, Clarke, Cobb, Comingo, Crebs, Critcher, Darrall, De Large, Dickey, Duell, Farnsworth, Finkelnburg, Frye, Garrett, Goodrich, Haldeman, Hambleton, Hay, Hays, Gerry W. Hazleton, Lynch, McCrary, McGrew, McKee, Mitchell, Moore, Morphis, Hosea W. Parker, Isaac C. Parker, Peters, Price, Prindle, Robinson, Rogers, Roosevelt, Sherwood, Worthington C. Smith, Snyder, R. Milton Speer, Thomas J. Speer, Stowell, Strong, Sypher, Thomas, Dwight Townsend, Tutill, Upson, Van Trump, Vaughan, Voorhees, Washburn, Wells, Williams of Indiana, Winchester, and Wood—63.

So the report of the committee of conference was agreed to.

In the Senate, the report of the conference committee was concurred in by the following vote:

YEAS—Messrs. Ames, Anthony, Boreman, Caldwell, Carpenter, Clayton, Cole, Conklin, Cragin, Edmunds, Fenton, Ferry of Michigan, Frelinghuysen, Gilbert, Hamilton of Texas, Harlan, Hitchcock, Howe, Lewis, Logan, Morrill of Maine, Morrill of Vermont, Nye, Osborn, Patterson, Pomeroy, Ramsey, Rice, Sawyer, Scott, Sherman, Spencer, Stewart, West, Wilson, and Wright—35.

NAYS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Hill, Johnston, Kelly, Robertson, Saulsbury, Stockton, and Vickers—15.

ABSENT—Messrs. Brownlow, Buckingham, Cameron, Chandler, Corbett, Ferry of Connecticut, Flanagan, Hamilton of Maryland, Hamlin, Kellogg, Morton, Pool, Pratt, Schurz, Sprague, Stevenson, Sumner, Thurman, Tipton, Trumbull, and Windom—21.

The following is the bill as it passed Congress, and was approved by the President:

AN ACT to enforce the Provisions of the Fourteenth Amendment to the Constitution of the United States, and for other purposes.

Be it enacted, by the Senate and House of Representatives of the United States of America in Congress assembled, That any person who, under color of any law, statute, ordinance, regulation, custom, or usage of any State, shall subject, or cause to be subjected, any person within the jurisdiction of the United States to the deprivation of any rights, privileges, or immunities secured by the Constitution of the United States, shall, any such law, statute, ordinance, regulation, custom, or usage of the State to the contrary notwithstanding, be liable to the party injured in any action at law, suit in equity, or other proper proceed-

ing for redress; such proceeding to be prosecuted in the several district or circuit courts of the United States, with and subject to the same rights of appeal, review upon error, and other remedies provided in like cases in such courts, under the provisions of the act of the ninth of April, eighteen hundred and sixty-six, entitled "An act to protect all persons in the United States in their civil rights, and to furnish the means of their vindication;" and the other remedial laws of the United States which are in their nature applicable in such cases.

SEC. 2. That if two or more persons within any State or Territory of the United States shall conspire together to overthrow, or to put down, or to destroy by force the Government of the United States, or to levy war against the United States, or to oppose by force the authority of the Government of the United States, or by force, intimidation, or threat to prevent, hinder, or delay the execution of any law of the United States, or by force to seize, take or possess any property of the United States, contrary to the authority thereof, or by force, intimidation, or threat to prevent any person from accepting or holding any office or trust or place of confidence under the United States, or from discharging the duties thereof, or by force, intimidation, or threat to induce any officer of the United States to leave any State, district, or place where his duties as such officer might lawfully be performed, or to injure him in his person or property on account of his lawful discharge of the duties of his office, or to injure his person while engaged in the lawful discharge of the duties of his office, or to injure his property so as to molest, interrupt, hinder, or impede him in the discharge of his official duty, or by force, intimidation, or threat to deter any party or witness in any court of the United States from attending such court, or from testifying in any matter pending in such court fully, freely, and truthfully, or to injure any such party or witness in his person or property on account of his having so attended or testified, or by force, intimidation, or threat to influence the verdict, presentment, or indictment, of any juror or grand-juror in any court of the United States, or to injure such juror in his person or property on account of any verdict, presentment, or indictment lawfully assented to by him, or on account of his being or having been such juror, or shall conspire together, or go in disguise upon the public highway or upon the premises of another for the purpose, either directly or indirectly, of depriving any person or any class of persons of the equal protection of the laws, or for the purpose of preventing or hindering the constituted authorities of any State from giving or securing to all persons within such State the equal protection of the laws, or shall conspire together for the purpose of in any manner impeding, hindering, obstructing, or defeating the due course of justice in any State or Territory, with intent to deny to any citizen of the United States the due and equal protection of the laws, or to injure any person in his person or his property for lawfully enforcing the right of any person or class of persons to the equal protection of the laws, or by force, intimidation, or threat to prevent any citizen of the United States lawfully entitled to vote from giving his support or advocacy in a lawful manner toward or in favor of the election of any lawfully qualified person as an elector of President or Vice-President of the United States, or as a member of the Congress of the United States, or to injure any such citizen in his person or property on account of such support or advocacy, each and every person so offending shall be deemed guilty of a high crime, and, upon conviction thereof in any district or circuit-court of the United States or district or supreme court of any Territory of the United States having jurisdiction of similar offences, shall be punished by a fine not less than five hundred nor more than five thousand dollars, or by imprisonment with or without hard labor,

as the court may determine, for a period of not less than six months nor more than six years, as the court may determine, or by both such fine and imprisonment as the court shall determine. And if any one or more persons engaged in any such conspiracy shall do, or cause to be done, any act in furtherance of the object of such conspiracy, whereby any person shall be injured in his person or property, or deprived of having and exercising any right or privilege of a citizen of the United States, the person so injured or deprived of such rights and privileges may have and maintain an action for the recovery of damages occasioned by such injury or deprivation of rights and privileges against any one or more of the persons engaged in such conspiracy, such action to be prosecuted in the proper district or circuit court of the United States, with and subject to the same rights of appeal, review upon error, and other remedies provided in like cases in such courts under the provisions of the act of April ninth, eighteen hundred and sixty-six, "An act to protect all persons in the United States in their civil rights, and to furnish the means of their vindication."

SEC. 3. That in all cases where insurrection, domestic violence, unlawful combinations, or conspiracies in any State shall so obstruct or hinder the execution of the laws thereof, and of the United States, as to deprive any portion or class of the people of such State of any of the rights, privileges, or immunities, or protection, named in the Constitution and secured by this act, and the constituted authorities of such State shall either be unable to protect, or shall, from any cause, fail in or refuse protection of the people in such rights, such facts shall be deemed a denial by such State of the equal protection of the laws to which they are entitled under the Constitution of the United States; and in all such cases, or whenever any such insurrection, violence, unlawful combination, or conspiracy shall oppose or obstruct the laws of the United States or the due execution thereof, or impede or obstruct the due course of justice under the same, it shall be lawful for the President, and it shall be his duty, to take such measures, by the employment of the militia or the land and naval forces of the United States, or of either, or by other means, as he may deem necessary for the suppression of such insurrection, domestic violence, or combinations; and any person who shall be arrested under the provisions of this and the preceding section shall be delivered to the marshal of the proper district, to be dealt with according to law.

SEC. 4. That whenever in any State or part of a State the unlawful combinations named in the preceding section of this act shall be organized and armed, and so numerous and powerful as to be able, by violence, to either overthrow or set at defiance the constituted authorities of such State and of the United States within such State, or when the constituted authorities are in complicity with, or shall connive at the unlawful purposes of, such powerful and armed combinations; and whenever, by reason of either or all of the causes aforesaid, the conviction of such offenders and the preservation of the public safety shall become in such district impracticable, in every such case such combinations shall be deemed a rebellion against the Government of the United States, and during the continuance of such rebellion, and within the limits of the district which shall be so under the sway thereof, such limits to be prescribed by proclamation, it shall be lawful for the President of the United States, when in his judgment the public safety shall require it, to suspend the privileges of the writ of *habeas corpus*, to the end that such rebellion may be overthrown: *Provided*, That all the provisions of the second section of an act entitled "An act relating to *habeas corpus* and regulating judicial proceedings in certain cases," approved March third, eighteen hundred and sixty-three, which relate to the discharge of prisoners other than prisoners of war, and to the penalty for refusing to obey the order of

the court, shall be in full force so far as the same are applicable to the provisions of this section: *Provided further*, That the President shall first have made proclamation, as now provided by law, commanding such insurgents to disperse: *And provided also*, That the provisions of this section shall not be in force after the end of the next regular session of Congress.

SEC. 5. That no person shall be a grand or petit juror in any court of the United States upon any inquiry, hearing, or trial of any suit, proceeding, or prosecution based upon or arising under the provisions of this act who shall, in the judgment of the court, be in complicity with any such combination or conspiracy; and every such juror shall, before entering upon any such inquiry, hearing, or trial, take and subscribe an oath in open court that he has never, directly or indirectly, counselled, advised, or voluntarily aided any such combination or conspiracy; and each and every person who shall take this oath, and shall therein swear falsely, shall be guilty of perjury, and shall be subject to the pains and penalties declared against that crime, and the first section of the act entitled "An act defining additional causes of challenge and prescribing an additional oath for grand and petit jurors in the United States courts," approved June seventeenth, eighteen hundred and sixty-two, be, and the same is hereby, repealed.

SEC. 6. That any person or persons, having knowledge that any of the wrongs conspired to be done and mentioned in the second section of this act are about to be committed, and having power to prevent or aid in preventing the same, shall neglect or refuse so to do, and such wrongful act shall be committed, such person or persons shall be liable to the person injured, or his legal representatives, for all damages caused by any such wrongful act which such first-named person or persons by reasonable diligence could have prevented; and such damages may be recovered in an action on the case in the proper Circuit Court of the United States, and any number of persons guilty of such wrongful neglect or refusal may be joined as defendants in such action: *Provided*, That such action shall be commenced within one year after such cause of action shall have accrued; and if the death of any person shall be caused by any such wrongful act and neglect, the legal representatives of such deceased person shall have such action therefor, and may recover not exceeding five thousand dollars damages therein, for the benefit of the widow of such deceased person, if any there be, or if there be no widow, for the benefit of the next of kin of such deceased person.

SEC. 7. That nothing herein contained shall be construed to supersede or repeal any former act or law except so far as the same may be repugnant thereto; and any offences heretofore committed against the tenor of any former act shall be prosecuted, and any proceeding already commenced for the prosecution thereof shall be continued and completed, the same as if this act had not been passed, except so far as the provisions of this act may go to sustain and validate such proceedings.

Approved, April 20, 1871.

The following resolutions, relative to the employment of the navy at St. Domingo, were offered in the Senate, by Mr. Sumner, of Massachusetts. On March 27th they were called up, and Mr. Sumner addressed the Senate:

Resolutions regarding the employment of the Navy of the United States on the coasts of St. Domingo, during the pendency of negotiations for the acquisition of part of that island.

Whereas, Any negotiation by one nation with a people inferior in population and power, having in view the acquisition of territory, should be above all suspicion of influence from superior force, and in testimony to this principle Spain boasted that the rein-

corporation of Dominica with her monarchy in 1861 was accomplished without the presence of a single Spanish ship on the coast, or a Spanish soldier on the land, all of which appears in official documents; and whereas the United States being a republic founded on the rights of man, cannot depart from such a principle, and such a precedent, without weakening the obligations of justice between nations, and inflicting a blow upon republican institutions: therefore—

Resolved, That in obedience to correct principle, and that republican institutions may not suffer, the naval forces of the United States should be withdrawn from the coasts of St. Domingo during the pendency of negotiations for the acquisition of any part of that island.

Resolved, That every sentiment of justice is disturbed by the employment of foreign force in the maintenance of a ruler engaged in selling his country, and this moral repugnance is increased when it is known that the attempted sale is in violation of the constitution of the country to be sold; that, therefore, the employment of our navy to maintain Baez in usurped power while attempting to sell his country to the United States, in open violation of the Dominican constitution, is morally wrong, and any transaction founded upon it must be null and void.

Resolved, That since the equality of all nations, without regard to population, size, or power, is an axiom of international law, as the equality of all men is an axiom of our Declaration of Independence, nothing can be done to a small or weak nation that would not be done to a large or powerful nation, or that we would not allow to be done to ourselves; and therefore any treatment of the Republic of Hayti by the Navy of the United States inconsistent with this principle, is an infraction of international law in one of its great safeguards, and should be disavowed by the Government of the United States.

Resolved, That since certain naval officers of the United States, commanding large war-ships, including the monitor Dictator, and the frigate Severn, with powerful armaments, acting under instructions from the Executive, and without the authority of an act of Congress, have entered one or more ports of the Republic of Hayti, a friendly nation, and, under the menace of open and instant war, have coerced and restrained that republic in its sovereignty and independence under international law; therefore, in justice to the Republic of Hayti, also, in recognition of its equal rights in the family of nations, and in deference to the fundamental principles of our institutions, these hostile acts should be disavowed by the Government of the United States.

Resolved, That under the Constitution of the United States the power to declare war is placed under the safeguard of an act of Congress; that the President alone cannot declare war; that this is a peculiar principle of our Government by which it is distinguished from monarchical governments, where power to declare war, as also the treaty-making power, is in the Executive alone; that in pursuance of this principle, the President cannot, by any act of his own, as by an unratified treaty, obtain any such power, and thus divest Congress of its control; and that, therefore, the employment of the navy without the authority of Congress, in acts of hostility against a friendly foreign nation, or in belligerent intervention in the affairs of a foreign nation, is an infraction of the Constitution of the United States, and a usurpation of power not conferred upon the President.

Resolved, That while the President, without any previous declaration of war by act of Congress, may defend the country against invasion by foreign enemies, he is not justified in exercising the same power in an outlying foreign island, which has not yet become part of the United States; that a title under an unratified treaty is at most inchoate and contingent, while it is created by the President alone, in which respect it differs from any such title created by act of Congress; and since it is created by the President

alone, without the support of law, whether in legislation, or a ratified treaty, the employment of the navy in the maintenance of the Government there is without any excuse of national defence, as also without any excuse of a previous declaration of war by Congress.

Resolved, That whatever may be the title to territory under an unratified treaty, it is positive that after the failure of the treaty in the Senate all pretext of title ceases, so that our Government is in all respects a stranger to the territory, without excuse or apology for any interference against its enemies, foreign or domestic; and therefore any belligerent intervention, or act of war on the coasts of St. Domingo after the failure of the Dominican treaty in the Senate is unauthorized violence, utterly without support in law or reason, and proceeding directly from that kingly prerogative which is disowned by the Constitution of the United States.

Resolved, That in any proceedings for the acquisition of part of the island of St. Domingo, whatever may be its temptations of soil, climate, and productions, there must be no exercise of influence by superior force, nor any violation of public law, whether international or constitutional; and therefore the present proceedings, which have been conducted at great cost of money, under the constant shadow of superior force, and through the belligerent intervention of our navy, acting in violation of international law, and initiating war without an act of Congress, must be abandoned, to the end that justice may be maintained, and that proceedings so adverse to correct principles may not become an example for the future.

Resolved, That instead of seeking to acquire part of the island of St. Domingo by belligerent intervention, without the authority of an act of Congress, it would have been in better accord with the principles of our republic, and its mission of peace and beneficence, had our Government, in the spirit of good neighborhood, and by friendly appeal, instead of belligerent intervention, striven for the establishment of tranquility throughout the whole island, so that the internal dissensions of Dominica and its disturbed relations with Hayti might be brought to a close, thus obtaining that security which is the first condition of prosperity, all of which, being in the nature of good offices, would have been without any violation of international law, and without any usurpation of war powers under the Constitution of the United States.

Subsequently, on April 5th, the President of the United States sent a message to Congress with the report of the commissioners who had been sent out to St. Domingo. (For the message and report, see PUBLIC DOCUMENTS.)

In the Senate, on April 17th, Mr. Stewart, of Nevada, offered the following resolution, proposing an amendment to the Constitution:

A joint resolution proposing an amendment to the Constitution of the United States.

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of both Houses concurring therein), That the following article be submitted to the Legislatures of the several States, and when adopted by three-fourths of the States shall become a part of the Constitution of the United States, and known as article sixteen of amendments to said Constitution:

ARTICLE XVI.—Section 1. There shall be maintained in each State and Territory a system of free common schools; but neither the United States, nor any State, Territory, county, nor municipal corporation, shall aid in the support of any school wherein the peculiar tenets of any religious denomination are taught.

Sec. 2. Congress shall have power to enforce this article by appropriate legislation.

The resolution was read for information, but objection was made to its introduction.

The first session of the forty-second Congress was adjourned on April 20, 1871.

CONNECTICUT. In the following table is given the entire population of the State, according to the census of 1870, together with the attendance at its schools:

COUNTIES.	POPULATION.					School Attendance.	10 yrs. and over who cannot read.
	Aggregate.	White.	Colored.	Native.	Foreign.		
Fairfield.....	95,276	93,582	1,690	77,400	17,876	15,343	2,957
Hartford.....	109,007	107,252	1,752	82,716	26,291	20,920	3,711
Litchfield.....	48,737	47,643	1,092	41,655	7,072	7,847	1,119
Middlesex.....	86,099	85,732	367	28,545	7,554	6,962	1,552
New Haven.....	121,257	118,517	2,734	91,415	29,842	23,989	2,767
New London.....	66,570	65,010	1,419	53,668	12,902	13,157	3,129
Tolland.....	22,000	21,801	199	18,469	3,531	4,286	624
Windham.....	38,518	38,017	460	29,947	8,571	7,161	3,821
Total for State.....	537,454	527,549	9,668	423,815	113,639	99,663	19,680

The following table shows the population of the chief cities of the State:

New Haven.....	50,883	New London.....	9,580
Hartford.....	37,810	New Britain.....	9,480
Bridgeport.....	29,876	Danbury.....	8,754
Norwich.....	16,653	Greenwich.....	8,027
Waterbury.....	13,689	Enfield.....	6,323
Norwalk.....	12,123	Stonington.....	6,320
Middletown.....	11,143	Killingly.....	5,712
Meriden.....	10,521		
Stamford.....	9,738		

According to the above census, there are 29,616 persons of 10 years old and over, that cannot write, of whom 5,678 are native, and 23,938 foreign. Of those who cannot write, 8,990 are males, and 13,683 females, 21 years old and over. The assessed value of real estate is \$204,110,509; of personal estate, \$221,322,728; true valuation of real and personal estate, \$532,951,061; total taxation, not national, \$6,064,843; public debt, county, town, city, etc., \$9,813,006. The number of acres of improved land is 1,646,752, of woodland, 677,333, of other unimproved land, 140,331; cash value of farms, \$124,241,382; of farming implements and machinery, \$3,246,599; total amount of wages paid during the year, including value of board, \$4,405,064; value of all live-stock, \$17,545,038; of orchard products, \$535,954; of produce of market-gardens, \$599,718; of forest products, \$1,224,107; of slaughtered animals, \$4,881,858; estimated value of all farm products, including betterments and additions to stock, \$26,482,150. The State contains 34,935 horses, 98,889 milch-cows, 89,639 working-oxen, 79,485 other cattle, 83,884 sheep, and 51,983 swine. The productions were, 38,144 bushels of wheat, 289,057 of rye, 1,570,364 of corn, 1,114,595 of oats, 26,458 of barley, 148,155 of buckwheat, 13,058 of peas and beans, 2,789,894 of potatoes; 8,328,798 pounds of tobacco, 254,129 of wool, 6,716,007 of butter, 2,031,194 of cheese, 14,266 of maple-sugar, 32,158 of honey; 27,414 gallons of wine, 6,253,259 of milk sold, and 563,328 tons of hay.

The births registered during the year 1870 in Connecticut amounted to 13,136, which was 665 more than the largest number registered in any previous year. Of 13,057 births, in which the sex was stated, 6,876

were males, and 6,181 females. There were 105 births reported as illegitimate.

The deaths reported for the same period of time were 8,895, of which 4,899 were males, and 4,183 females. As to colored persons, the total number of deaths returned was 196, males 105, females 90; the sex of one was not stated.

The number of marriages was 4,871, an increase of 117 over the preceding year. Of these marriages 91 were contracted among colored persons, and two among parties respectively white and black.

There were 408 divorces granted, or in the proportion of one marriage dissolved for every 11.9 marriages granted. Yet the number of divorces last year was less than it had been for several years preceding.

The general State election, on April 3d, caused a very animated contest between the two political parties, both before and after the voting. The Democrats held their State Convention at New Haven on January 17th, and without a dissenting voice the State officers were renominated, as follows: for Governor, James E. English, of New Haven; for Lieutenant-Governor, Julius Hotchkiss, of Middletown; for Secretary of State, Thomas M. Waller, of New London; for Treasurer, Charles M. Pond, of Hartford; for Comptroller of Public Accounts, Seth S. Logan, of Washington. The following platform was then adopted by the convention:

Resolved, That the present Federal Administration is unworthy of the confidence of the people: because it has failed to establish and sustain a proper financial policy, and thereby restore the currency of the Constitution: because it has failed to reform the abuses of the tariff, permitting still the principle of protection and favoritism to override the idea of revenue: because it upholds and maintains taxes to an extent onerous to the people, and largely in excess of the amount necessary to protect public credit, and pay the expenses of the Government: because its foreign policy is weak and vacillating, and unworthy the past history of our Government; and, because, by its improper interference in the elections, it seeks the utter destruction of the rights of the States, thereby subverting the principles upon which the Government is based, building up a great central power, which, if unchecked, will override the liberties of the people.

Resolved, That the Democracy of Connecticut, following the footsteps of their illustrious predecessors,

are unalterably devoted to the principle and practice of territorial expansion, and the consequent extension of our American inheritance of free, enlightened, and constitutional government; that they are nevertheless sternly opposed to any such expansion of the territorial area of the republic in any direction, north or south, by fraud, violence, or intimidation; and that the acquisition of San Domingo, in the manner and by the means now in progress by the present Administration, is justly liable to the gravest suspicions, fraught with danger to the stability of our institutions, and meets with our unqualified condemnation.

Resolved, That, reiterating a time-honored principle of the Democratic party, we adopt the words of the resolution introduced into the United States Senate by the Hon. Carl Schurz, of Missouri, in regard to the disfranchisement of sixty thousand citizens of that State; that due regard for the fundamental principles of our system of government, as well as every consideration of sound statesmanship, demands the removal of the disqualifications and disabilities of citizens; and further, we indorse the assertion of this eloquent leader of the reformers, that the party which still attempts to proscribe and disfranchise its opponents merely for the purpose of maintaining itself in power, and of monopolizing the offices, will lose all moral influence over public opinion, and will be bound to go to the bottom.

Resolved, That the source of power being in the people, free schools and general education are essential to good government and the perpetuation of free institutions.

Resolved, That the appropriation by the Radical party of near two hundred millions of acres of the public domain to railroad corporations and speculators deserves condemnation. The territory thus given away is greater than the entire area of Germany, embracing a population of forty-five millions; and this wasteful extravagance is crippling our resources, and lessening the ability of the Government to provide free homesteads. They have parted with lands which would have provided in the future two hundred acres for each of one million families.

Resolved, That we approve of the judicious management of the Executive department of the State, and are gratified to learn that five hundred thousand dollars of the State debt is to be paid within the present fiscal year.

Resolved, That in Governor James E. English, and the gentlemen associated with him, on the ticket, we have the fullest confidence. We pledge to them a united and cordial support.

The Republicans met in State Convention in the same city, on January 25th. Marshall Jewell, of Hartford, was again nominated for Governor; for Lieutenant-Governor, Morris Tyler, of New Haven; for Secretary of State, Hiram Appelman; for Treasurer, David P. Nichols; for Comptroller of Public Accounts, James W. Manning. Before adjourning, the members of the convention unanimously adopted a series of resolutions, as follows:

1. *Resolved*, That we gladly renew our allegiance to the principles and policy of the Republican party, and we challenge the history of political organizations to parallel the record of its ten years of national rule. A gigantic rebellion has been suppressed, armies of a million raised and disbanded, four millions of slaves set free, labor made free and honorable, free homesteads offered to all settlers, the Pacific Railroad built, universal liberty and equal civil and political rights for the first time secured by constitutional amendments, the States that broke their connection reconstructed and restored, taxation frequently reduced, the last reduction being eighty millions a year, the national debt greatly reduced,

two hundred millions of the reduction taking place under the present Administration, the national credit raised at home and abroad, the price of gold brought steadily downward, the revenues vigilantly collected and honestly disbursed, the perfect citizenship of all adopted citizens for the first time protected by settling the doctrine of expatriation, the Monroe doctrine vindicated in the case of the French invasion of Mexico, peace maintained and the national character kept in the highest respect throughout the world. We know no way of judging the future but by the past. The Republican party has never made a pledge to liberty and union which it has not redeemed. From beginning to end, it has met the desperate opposition of the Democratic party.

2. That the Republican party can be trusted in the future as in the past to deal wisely and honestly with finance, taxation, and currency, its opponents showing by their congressional votes and various conventions that they favor measures which, if adopted, tend to result in repudiation and bankruptcy. We renew our approval of legislation seeking the resumption of specie payments, the permanent establishment of a sound national currency, and a tariff sufficient for revenue carefully adjusted to the tax-paying abilities of all classes, and promoting and encouraging the great industrial interests of this country.

3. That it is the duty of the Government to enforce the strictest economy in all its expenditures, and to refuse all appropriations, direct or indirect, which may be solicited in aid of private schemes and enterprises.

4. That the Republican majority in Congress, by its courage in considering and its energy in handling the difficult questions which it has encountered, and by the wisdom and thoroughness of the measures whereby it has thus far disposed of those questions, has deserved well of the republic.

5. That President Grant, by his integrity, his patriotism, his directness and vigor of action, his unwavering fidelity to the principles of the Republican party, his just deference to the opinions of Congress and of the people, and by his firmness in the discharge of his high duties, has commanded the confidence of the nation; that under his administration we may be sure that, so far as he can accomplish such result, the laws will be faithfully executed at home, and the honor of the republic fully maintained abroad; and that we especially approve the calm and temperate spirit in which he has made manifest his determination to secure a settlement of the Alabama question and the fishery question, in such a manner as to maintain peace and exact justice at the same time.

6. That we shall heartily approve such a reform in the civil service, with such tenure of office in the subordinate departments of the Government, as may be most likely to secure competent and faithful officers in every branch of the administration.

7. That the legislation of this State for the past fifteen years is honorable to the Republican party, in whose hands it has steadily been. The war was energetically sustained, and in peace the taxes have been annually reduced, large payments have annually been made upon the State debt, the demands of educational and humane institutions liberally met, and the character of the State, in all respects, maintained.

Whereas, The statistics of this Commonwealth show that intemperance, violence, and crime, are alarmingly on the increase: therefore—

1. *Resolved*, That it is the duty of the Legislature, as the guardians of the public weal, seriously to inquire what further legislation may be necessary to give efficiency to existing laws, so that the peace, security, and health of the community may be protected.

2. That general education is essential alike to the preservation and prosperity of the republic, the

source of thrift in peace and power in war, the cheapest defence of the nation, the wisest police agency, seeking the prevention rather than the punishment of crime; that the wealth of the State consists in its men and in its treasures of mind; that education tends to economy, thrift, and virtue, while ignorance means waste and weakness if not pauperism and vice; that it is the duty and interest of this State to secure a good common-school education free to their children of all classes, the poor as well as the rich; and that we commend the growing harmony and coöperation between labor and capital, and the recent liberality and interest of our manufacturers and capitalists in promoting the education of the children of the State, and congratulate the people on the encouraging progress of this great interest.

3. That we pledge to the gentlemen whom we have this day nominated our hearty support, and we cordially commend them as worthy to receive the suffrage of the freemen of this State.

Immediately after the close of the polls on the day of election, and long before the result was officially declared, the Democrats announced Mr. English to be elected Governor by a majority of a few votes. The Republicans claimed that Mr. Jewell was the Governor elected, averring that the Democrats, with a view to turn the result of the election in their favor, and to defeat the will of the people, had by manifestly illegal action, and even downright fraud, made the number of the Republican votes appear to be less, and that of their own more than were actually cast: in one place, by arbitrarily striking out from the list 23 Republican votes already counted by the proper officers; in another, by fraudulently abstracting from the ballot-box a whole package of 100 Republican votes tied and marked; and, to make the contents of the ballot-box correspond with the check-list, as fraudulently inserting into it a similar package containing a like number of spurious Democratic votes; besides that, in another place, a package of 76 Democratic votes was erroneously returned to contain 96 votes, or 20 more than it really did; the error having been occasioned by the circumstance that the first of the two figures (76), written on the outside of the package to mark the number of those votes, was so shaped (by inadvertence or intentionally) that the reader might easily take it for a 9, as it was in fact taken and returned. Three distinct petitions were officially addressed to the Legislature, giving notice of these things, and indicating the places in which they had respectively occurred.

On the 3d of May, which was the first day of the annual meeting of the General Assembly, both Houses adopted a resolution appointing a joint select committee "to examine the returns and canvass of votes given by the electors;" and inquire into the truth of the allegations specified in the said petitions, with power to send for papers and persons; and with the injunction that "all sessions of the committee at which testimony should be taken or votes counted should be public and open to any elector of the State." This last clause

was an amendment to the resolution appointing the said committee of investigation, and was carried upon the motion offered by a Democrat in the Lower House; but the resolution itself was not adopted without a long and warm debate, occasioned by the decided opposition of the Democratic members. They contended that the General Assembly had no power of appointing a committee for any such investigation, its authority being limited by the constitution to the declaring of the persons elected from the result of the election, as it appeared from the official returns presented to it. The Republicans, on the contrary, maintained that the constitution empowered the General Assembly not only to declare the result of the election upon the official returns, but also, and in express terms, to examine the returns themselves; and that an indispensable part of this examination evidently was to inquire and ascertain that the returns were legal and in such condition as to warrant the General Assembly to proclaim those persons elected whom the returns designate; more especially when, as in the present instance, irregularities and frauds, designed to change the result of the election were distinctly pointed to in memorials presented to the Assembly. Otherwise, this body should be regarded as bound by the constitution itself to sanction a fraud, whenever the officers of election should think fit to perpetrate one themselves, or connive at it in others, though the Assembly were warned beforehand, and there were means to discover that it was a fraud.

Three Democratic members, appointed to form part of the said committee, moved, each for himself, to be excused from serving on it; and, when these motions were severally put to vote, they were not excused, and each of them declared that he refused to serve, and did not serve.

The committee entered upon their work and continued it a week, during which time they inspected papers and every thing having reference to the facts inquired into; examined witnesses under oath, as also voters and other persons concerned in them; and not only held their sessions public and open to everybody, but invited all who knew any thing connected with the matters under consideration to furnish information. Having concluded their labors, they submitted their report to the General Assembly on the 10th of May, which concluded as follows:

The committee find, that the whole number of votes actually and legally given and cast for Governor of this State is 94,860, of which number 47,473 were given for Marshall Jewell, and 47,373 (including one for James English, one for J. English, and one for J. E. English) were given for James E. English, and 14 are scattering, and do find that Marshall Jewell, having a majority of all the votes given as aforesaid, is duly elected Governor of this State for the year ensuing.

That the whole number of votes actually and legally given and cast for Lieutenant-Governor of this State is 94,861, of which number 47,598 were given

for Morris Tyler, and 47,263 for Julius Hotchkiss; and do find that Morris Tyler, having a majority of all the votes given as aforesaid, is duly elected Lieutenant-Governor of this State for the year ensuing.

That the whole number of votes actually and legally given and cast for Treasurer of the State is 94,890, of which number 47,641 were given for David P. Nichols, and 47,243 (including one for C. M. Pond, and one for Chas. Pond) were given for Charles M. Pond, and six were scattering; and do find that David P. Nichols, having a majority of all the votes given as aforesaid, is duly elected Treasurer of this State for the year ensuing.

That the whole number of votes actually and legally given and cast for Secretary of State was 94,861, of which 47,580 (including the votes returned to the State canvassers for Hiram Appelman and Hiram Appleton) were given for Hiram Appelman.

The committee find that the votes returned for Hiram Appelman and Hiram Appleton were actually given and cast for Hiram Appelman.

And that 47,276 (including one for T. M. Waller) were actually given and cast for Thomas M. Waller, and five were scattering; and do find that Hiram Appelman, having a majority of all the votes cast as aforesaid, is duly elected Secretary of this State for the year ensuing.

That the whole number of votes actually and legally given and cast for Comptroller of Public Accounts was 94,891, of which 47,642 (including the votes returned to the State canvassers for James W. Leonard) were given for James W. Manning.

The committee find that the 327 votes returned from Suffield for James W. Leonard were actually given and cast for James W. Manning.

And that 47,249 were actually given and cast for Seth S. Logan; and that James W. Manning, having a majority of all the votes cast as aforesaid, is duly elected Comptroller of Public Accounts for the year ensuing.

Whereupon your committee recommend the passage of the accompanying resolutions.

All of which is respectfully submitted.

GEORGE A. FAY, Chair'n on part of Senate.

AMOS S. TREAT, Chair'n on part of House.

JOHN T. WAIT.

JAMES T. PRATT,

JOHN M. HALL,

GEORGE MAXWELL.

GENERAL ASSEMBLY, MAY SESSION, A. D. 1871.

Resolved, That Marshall Jewell is, and he is hereby declared to be, duly elected Governor of this State for the year ensuing.

The resolution offered by the committee, "to declare Marshall Jewell legally elected Governor of the State," was in the Assembly adopted—yeas 123, nays 100. Sixteen members were absent, or did not vote. Resolutions, declaring the Republican candidates for the other State offices elected, were also severally passed. On these the Democratic representatives abstained from voting. The report was then accepted.

In the Senate, eight Democratic Senators objected to the whole proceeding, as being out of the competence of the General Assembly, and presented against it a written protest, signed by all of them, and asked that "this protest be entered upon the journal of the Senate, and become a part of the records of the General Assembly." The resolution, declaring Marshall Jewell elected Governor of the State, was then passed; as were also the several resolutions respecting the other State officers, and the entire Republican ticket was

declared elected. A debate ensued in reference to entering the above-mentioned protest upon the journal; which proposition was finally put to vote, and lost—yeas 9, nays 11.

On the 11th of May, Mr. Jewell was officially informed of his election, and on the 16th he entered upon the duties of his office.

In his address to the Legislature, the Governor represented the condition of married women, as regards their property, to be unfair, and urged that body to enact such laws as would secure to them perfect justice; namely, "that the laws should be so amended as to make the rights of the wife to her property in all respects equal to those of the husband in his, and that the same interest be secured to either survivor in the property of the other."

He also warmly recommended a change in the divorce laws, as being disreputable to the State, and rendering the obtaining a divorce less easy, saying: "They are notoriously loose, more so than those of any other State except Indiana and Illinois. Divorces may be granted in this State for too many causes; in fact, for almost no cause at all. Discontented and vicious people come here from other States to get divorces which the more strict legislation of their own States denies, thus creating much scandal, and tarnishing the fair fame of our State. Some marked cases of this kind have occurred the past year, which loudly call for a reform in our laws."

In behalf of the laboring classes he recommended the passage of an act declaring the earnings of any person exempt from attachment for debt, to the extent of fifty dollars, or one-twelfth part of his yearly earnings; that sum representing the average monthly wages paid to workmen in Connecticut. "Such an exemption," he said, "would, in many cases of sick or unfortunate workmen, prevent great distress to their families, and much annoyance to their employers." In this connection he suggested, for the security of laborers on new railroads, that they "should be protected by law against loss of wages consequent upon the failure of contractors, or companies, either by a lien upon the work done, or in some other way."

A law was enacted by the General Assembly of 1867, exempting all railroad securities of the State from taxation, the corporations paying, instead of such tax, one per cent. on all stock-bonded and floating debt into the Treasury of the State." This law having been so construed as to include the exemption of all railroad bonds, whether the road was located in or out of the State, the Governor assumed such not to have been the meaning of that bill, and suggested, at all events, "that an act be passed which shall be uniform in its application, and not uncertain in its language."

The law now in force in the State, fixing the legal rate of interest on money at six per cent. per annum, was regarded as injurious to the best interests of the State, as well as to

the citizens, both because it was not practically observed between lender and borrower, "very little money being, in fact, loaned at that rate, except from the School-Fund," and because it drives out of the State large amounts of money seeking markets, not safer, but of better legal returns. The Governor advised that the present law should be repealed, or modified, by increasing the rate of interest, or leaving its determination to the agreement of the parties concerned.

Another amendment to the organic law was to be submitted to the people by legislative enactment at this session, declaring that there shall be but one capital in the State, and fixing its location. The seat of government had been heretofore divided, as it were, between the cities of Hartford and New Haven.

This question is of long standing, and has been often discussed by the citizens, and repeatedly proposed to the General Assembly for final settlement. It came to the latter this year from a resolution adopted for that purpose at the last session; and their action excited the most intense interest in the members generally, and in the people. After long and warm debates, the proposition of submitting the amendment to the people was put to vote in the Senate, on May 31st, when the vote stood—yeas 13, nays 8; and the amendment was lost by one vote, the concurrence of two-thirds being requisite for its passage. In the Lower House, the voting took place on June 14th, with a similar result—yeas 145, nays 87, or 10 short of the two-thirds. Six members were absent.

The common belief in the State appears to be, that by far the largest portion of the people are decidedly in favor of one permanent capital, except the residents of New Haven city and county, who seem resolved to let the present system of two semi-capitals continue until a certain event shall take place, when they feel confident the people will declare New Haven to be the one capital. Meantime, whenever the proposition has been made to the Legislature to submit the one-capital question to the people, they have done their utmost to defeat the measure. In this they have been so far successful—at the session of 1871 for the third time.

The one-capital question having thus ended at this session, a resolution was soon after offered in the House of Representatives appropriating half a million dollars for the purpose of erecting in Hartford a new State building; the old one now used there being, on account of its age, smallness, unhealthiness, and other great inconveniences, not only utterly unfit for the holding of the sessions of the Legislature, as well as for the transaction of the public business of the Executive department, and the several offices necessarily connected with it, but in such a condition as not to be worth remodelling or repairing.

The object of this resolution was not less

strenuously and firmly opposed, chiefly by the New Haven representatives, than the proposition of submitting the one-capital question to the decision of the people. In consequence of, and, as it were, in connection with it, whenever it was taken up for action, they successively moved, first to refer it to the Judiciary Committee, then to append to it a resolution appropriating \$600,000 instead of \$500,000, one-half of that sum to be expended for a State-house in Hartford, the other half for a State-house in New Haven, and remit both to the said committee; then to amend the original resolution so as to couple the two cities together in it, and appropriate \$500,000 for a State building in each; finally, they introduced a separate resolution appropriating \$500,000 for the erection of a new capitol in New Haven, to be acted upon at the same time with the like resolution pending in behalf of Hartford. All these, and other incidental motions, were severally, some of them repeatedly, discussed at length and voted upon, so that the debates on them and on the original resolution occupied almost every day of the session in the House for the space of a month. The opposition was this time unsuccessful. The erection of a new capitol in Hartford appeared absolutely indispensable. In the course of those frequent debates the opposers of the passage of the resolution, as well as its advocates, admitted the fact that the present building in Hartford was utterly inadequate to meet the requirements of the State.

The resolution came up for a third reading and discussion on June 20th, when the representative who had introduced it proposed three other resolutions as connected with and dependent on it, but to be acted upon only in the event of its passage. Their objects were, respectively, these: The first appointed a State Board of six commissioners, with power to contract for and erect to its full completion, in the city of Hartford, "a building suitable for the use of the State as a State-house," and bound the city to appropriate and place, subject to the order of the president of the board, the sum of \$500,000 of her own money, to be expended, together with the \$500,000 of the State, in the erection of the said building, and furnish also, at her own expense, a site (valued at \$400,000 more), for the determination of which the board are to confer with the city authorities. The second authorized the city to raise the money necessary for carrying out the two purposes mentioned in the preceding resolution, by issuing her bonds to the amount of \$1,000,000, to be called "capitol bonds of the city of Hartford," bearing interest at six per cent., and be free from taxation. The third authorized the city of Hartford "to hold a special city meeting for the purpose of authorizing the said city to issue bonds mentioned in the foregoing resolution; the vote of the said meeting to be by ballot, and the ballots, having the word "yes" or "no"

printed on them, to be "cast by the freemen of the said city in their respective wards."

The final voting on the resolution took place in the Lower House on July 14th, when, after a very hot and protracted debate, it passed—yeas 100, nays 86; members absent or not voting, 53. The three other above-cited resolutions dependent on it were also separately voted upon and passed at the same sitting. The Senate had previously passed these resolutions by a vote of two to one.

On the 18th of July a bill was proposed to the House, authorizing the Common Council of the city of Hartford to take land for the erection of a capitol, and providing for the settlement of damages before the courts by appraisals. Under a suspension of the rules, the bill was immediately voted upon and passed, and sent to the Senate, who also passed it.

The holding of the special election in Hartford, designed to ascertain whether the people of that city would accept the conditions of the General Assembly, took place on the 16th of August, 1871, when 1,250 citizens voted "yes," and 45 "no."

Immediately after the appropriation for a new State-house at Hartford, on July 14th, a member called up the resolution previously offered, making a like appropriation for New Haven. It was made the order of the day for the 19th. Meantime the Common Council of New Haven held a meeting on the 17th, in which a resolution was adopted "that, whenever the Legislature should appropriate \$500,000 for a State-house in New Haven, this city will furnish a site, and will make such other appropriations as may be deemed necessary."

The matter came up for discussion on July 19th, as appointed, when a long and most animated debate ensued.

The resolution was finally put to the vote, and lost by a large majority—yeas 83, nays 119; members not voting, 34.

The Senate passed this resolution on a later day by a majority of one. The vote was taken at a time when some Senators, known to be adverse to it, were absent, and were of equal number on each side; but the president of the Senate, who was from New Haven, cast his own vote in the affirmative, which made the yeas one more than the nays. The resolution was thus sent to the Lower House, where, on July 26th, a representative from Hartford called it up, and moved that the House, which had rejected the resolution by a decided majority on the 19th, should now vote to adhere to its rejection. The House adhered to its previous vote, which ended the question.

Among the subjects acted upon by the General Assembly in this session, the greatest importance was attached to the bill consolidating the New York & New Haven and the Hartford & New Haven Railroad Companies. These roads, taken together, make a continuous line, extending from the city of New York to

Springfield, in the State of Massachusetts, a distance of about one hundred and thirty-six miles. The Hartford & New Haven Railway Company was incorporated in 1833, and the Hartford & Springfield Company in 1835. These two corporations were united by act of the Legislature in 1845, thereby becoming one company, under the name of the New Haven, Hartford & Springfield Railroad Company. In the same year, 1845, the New York & New Haven Railway Company was chartered, the charter giving this corporation full power to make joint stock with any other connecting railroad; that is, to merge and consolidate with it, thus making of both a single corporation. The Hartford & New Haven and the New York & New Haven Companies were hostile to each other in regard to their respective interests from the first, by reason of the steamboat connection which the former road had established before the latter was built. In order to remedy this evil, the New York company engaged by contract to pay \$30,000 for five years to the Hartford company, to have a direct connection; which contract, except the bonus, was continued for twenty years. As each of these roads was controlled exclusively by New York and Connecticut men respectively, dissensions still arose between the two companies about the construction of the contract and the fares, which involved them in litigation before the courts of either State to a heavy amount. With a view to put an end to these contests, the New York company, some five years ago, placed its road under the control of Connecticut men, who, having the management of both roads in their hands, and seeing their interests to be not only common, but the same, endeavored to bring them into an harmonious operation, and finally resolved to unite them. For the purpose of effecting this union, the General Assembly was applied to in behalf of the two roads for permission to consolidate, which was done for three successive years, yet always in vain, though all the committees, to whom the matter was severally referred, reported in favor of the consolidation, and the Senate voted each time for it. At the session of 1869, the Boston, Hartford & Erie Railroad Company, having asked the General Assembly to pass an act covering the perpetual lease which they had just made of the Norwich and Worcester road, which they had no right to do by their charter, the companies of the other roads in the State also came forward and urged on the Legislature that, in this matter, a general law should be enacted, giving the right of lease to all the roads in common, and not a privilege given in favor of one road. This request was granted by the legislative body, and a general law was accordingly passed in that year, "permitting any one railroad company in the State of Connecticut to make any lawful contract with any other company, if their railways connect or intersect, in relation to the business or prop-

erty of either road; and to make or take the lease of its property or franchise; and such leases and contracts were by this law ratified and confirmed;" providing, by way of exception, that, by this act, "city railroad companies were not authorized to merge or consolidate stocks."

Under the authority of this law, the New York & New Haven and the Hartford & New Haven Railroad Companies engaged to unite.

The introduction of a bill at the present session, permitting these two companies to consolidate, created no little excitement, and met with strong opposition within the halls of the General Assembly. Prominent grounds of opposition were the dangers of concentrating too much power in the hands of one moneyed public body having immediate, as it were, necessary relations with the people at large. They said that, to allow these already powerful companies to consolidate in a single corporation must prove highly injurious to the State and citizens in a pecuniary point of view and otherwise, and more especially to the other railway companies in the State, who were likely, in such an event, to be gradually absorbed by the consolidated one, or obliged in their operations to be wholly dependent on it.

The Legislature adjourned *sine die* on July 28th, having continued sitting little less than three months. The first two weeks of its meeting were spent almost entirely in clearing the election of April from the difficulties which rendered its result uncertain, and contributed to make the session one of the longest on record in Connecticut. During that period, a vast amount of business was transacted, a very large number of subjects having been deliberated and acted upon in matters of local and private as well as public interest; of which a brief general summary is stated as follows:

Eight savings-banks, five trust companies, seven manufacturing companies, four railroad companies, three horse-railroad companies, and three insurance companies, have been chartered; two new towns have been incorporated—Bacon Falls and Newington; new charters to two cities—Norwich and Waterbury; new charter to one borough—Ansonia. A new military law, and a new insurance law have passed. Nine convicts have been released from State-prison. About 550 bills, resolutions, and petitions, have been acted upon, 150 chapters of public acts passed and 210 resolutions and private acts.

Two laws concerning negroes were passed by the General Assembly, affecting them financially and politically. The one repealed the previously-existing law which exempted negroes from taxation; the other authorized negroes to vote in town meetings.

The material condition of Connecticut, financially and in other respects, appears to be in a remarkable degree prosperous. The statements made by the State Treasurer show that the public debt, which was \$6,560,304.95 on April 1, 1870, is now reduced to \$5,804,610.93; the sum of \$755,694.02 having been paid on it.

The taxable property in the State assessed

for October, 1870, amounted to \$328,436,601; little less than six millions above the assessment for the previous year. A State tax of two mills on the dollar was collected on the grand list for that year, and the same rate has been laid for 1871.

The number of savings-banks in the State in 1870 was 66, and the aggregate sum of their deposits, \$55,297,705.40, which is nearly seven millions and a half in excess of their deposits in the preceding year.

The fire and life insurance companies are very numerous in Connecticut, and carry on business to an exceedingly large amount. No diminution, but rather an increase of custom in their respective branches, seems likely to take place for the future.

Sixty-five fire-insurance companies, chartered in other States, with five American branches of similar companies established in England, do business in Connecticut. The condition of the former, taken together, is stated in the commissioner's report for the past year as follows: Total capital, \$25,780,000; gross assets, \$54,191,993; gross receipts, \$30,171,559; gross payments, \$28,227,830; amount insured, \$2,284,148,912; losses paid, \$16,272,036; required to reinsure, \$12,409,751. Twenty-one of these companies are marked "short" in the item of receipts over payment.

Of life-insurance companies incorporated by other States and doing business in Connecticut, there are 31, of which 8 are purely mutual. The general statement relating to them in the said report is: Total cash capital, \$3,878,000; gross assets, \$154,574,197; gross cash liabilities, \$133,838,104; amount insured, \$1,084,945,630; required to reinsure, \$122,258,316; total income, \$49,047,441; total paid out, \$28,385,308.

The number of miles of railroads completed and in actual operation, with ample supply of rolling-stock, is 667; 250 more miles are under construction, mostly far advanced toward completion. The length of railway communication within the State, as compared with the extent of her territory and the number of her inhabitants, is reckoned to be in the ratio of one mile of railroad for every 5.3 square miles of the former, and one mile of railroad to every 614.1 of the latter. The amount of gross earnings was reported in 1869-'70 at \$8,874,117.59; in 1870-'71 the amount is \$9,672,946.77, showing an increase of \$798,829.18. The net earnings, in 1869-'70, were \$2,390,664.64; in 1870-'71, \$2,525,702.69; increase, \$135,038.05.

During the past eighteen years the roads in this State have carried 78,158,086 passengers; and there have been 943 accidents, of which 515 were fatal and 423 not fatal. In 1860, 2,967,440 passengers were carried; in 1870 over 8,000,000—an increase in ten years of five millions. During the past year there were 75 accidents. Of these accidents, 2 only were to passengers; 22 were employés; 28 were walk-

ing on the track; 13 were intoxicated, and 9 each were at crossings, and jumping on and off trains.

To provide that all minor children, even those employed in factories, might partake of the advantages of school instruction, a special law, "concerning the employment of children under fourteen years of age," was enacted in a former session, having in view to conciliate the interests of the State and all parties concerned in the matter. From the report last made to the State Board of Education by their agent, who is himself one of the board, it appears that, having conferred with the manufacturers about the law, they were ready to coöperate on their part to its success; but that some of the parents were unwilling to take their children out of the factories for that purpose, and positively refused to send them to school if relieved of employment. The agent further stated that, on subsequent consultations held with the manufacturers, these had consented to divide such children in their employ into two or three classes, and let them out of the factory at different times by turns; and that the better to secure the enforcement of the law, and in a manner compel the parents to obey it, they had unanimously signed the following agreement: "We hereby agree that, from and after the beginning of the next term of our public school (or schools) we will employ no children under fourteen years of age, except those who are provided with a certificate from the local school-officers of actual attendance at school the full term required by law." He suggested "an amendment to the factory law, compelling the attendance at school of all the children within its jurisdiction three months in each year, except in cases of extreme destitution, which may be decided by the selectmen." A like amendment was suggested by the Board of Education, and also recommended by the Governor in his message. The amendment passed, and the law applies to other children besides those employed in factories.

The normal school for the education and training of future teachers in the public schools is in successful operation. The number of persons in attendance there last year was 148. A change was effected during the year, by act of the Legislature, in the management of Yale College. Its corporation heretofore consisted of eleven gentlemen who fill vacancies in their own number, and the Governor, the Lieutenant-Governor, and six senior Senators of the State. As it rarely occurred that any of the Senators attended the meetings of the corporation, for this and some other reasons of expediency, the Governor suggested, as agreeable to the interests of all parties concerned, that the State should surrender part of her representation in the board of that corporation, the new members to be elected by the alumni. An act was passed by the General Assembly of 1871,

giving the graduates of Yale College the right to choose, at the commencement of 1872 and thereafter, six persons from their own number to take the place of the six senior Senators of the State who have been heretofore members of the corporation by virtue of their offices. Prof. Noah Porter was elected president of the institution during the year.

The charitable institutions are well cared for by the State. They seem to be under very efficient management and conduct for the realization of the purpose severally intended in their establishment.

The organization of the military force of Connecticut has been changed by act of the Legislature, objections and complaints having been raised against encampments and other features of the former system. The General Assembly of 1870 appointed a committee to inquire into the whole subject; the committee reported the result of their labors at the session of 1871, presenting to the Assembly the draft of a new military law; and, after discussion, this law, with some amendments and alterations made in it, was passed and is now in force. It retains the encampment system of the former law, somewhat modified, but greatly diminishes the number of men and officers, reducing the whole military body into four regiments of infantry and two sections of artillery; the regiments to be severally located in the four congressional districts of the State.

Fish-culture is cared for in Connecticut with remarkable solicitude, and bids fair to add largely to the material resources of the State by furnishing her people with abundant and new articles of food as well as trade. The design is to introduce in the Connecticut waters new varieties of well-known and marketable fish, as bass and others; and also to replenish them with a greater abundance of fish belonging to the best varieties already existing there. The State commissioners of fisheries who were appointed five years ago to attend to that interest, and for the prosecution of whose labors and experiments an annual appropriation is made by the Legislature, have given in their last report a good account of the efforts which they have made in those directions, and which they intend to continue in future, especially with regard to salmon, which "was formerly plentiful in the Connecticut and other rivers of the State, but disappeared many years ago." During the summer of 1871 the commissioners placed several thousand young salmon in the smaller streams emptying into the Housatonic and other rivers, and propose to introduce fry every year until 1875 or 1876, by which time they confidently anticipate "that the true salmon will be permanently colonized in the rivers of the State." They seem to have been particularly successful in their endeavors to repeople the Connecticut waters with shad, the extraordinarily abundant catch last year,

reckoned the largest since 1850, being apparently the result of the artificial hatching in 1867, when the commissioners, in connection with those of Massachusetts, caused forty millions of young fry of that species to be put into the Connecticut at Holyoke. In 1868, sixty millions more of young shad artificially hatched were put at the same place under the direction of the commissioners of Massachusetts; and over fifty-four millions were put there in 1870 by those of Connecticut. Shad, most plentiful once, had in a very large proportion disappeared.

COREA. Among the few countries which have thus far succeeded in preventing the intercourse of their inhabitants with the civilized world, and in continuing an isolated position, Corea is the most important in point of number and intelligence of population, favorable situation, and fertility of soil.

Corea is a large peninsula in Northeastern Asia, bounded on the north by the Yaluh and Tumen Rivers, on the east by the Sea of Japan, on the south by the Strait of Corea, and on the west by the Yellow Sea and the Gulf of Leao-tong. It was formerly called by the Chinese Tchow-sien, which in Corea was pronounced Tsio-sien, and in Japan Tsyoo, or Tsyow-sien. Its present name among the natives is Gaoli, in Chinese Kao-lee, in Japanese Ko-rai, from which latter form Corea has been derived.

The length of the peninsula is about 600 miles, and the width less than 140—the total area, 87,764 square miles. The country is divided into 7 tows, which are subdivided into 41 koon, with 33 towns of the first class, 88 of the second, and 70 of the third. According to the French reports, the name of the capital is Séoul; in former geographical works Han-yang is called the capital. The population, which in 1793 amounted to 7,843,000, is now estimated at 9,000,000. Of the strength of the Korean army but little is known. The fleet is reported to consist of about 120 large and 90 smaller war-vessels. The entire length of the country is traversed by a mountain-range, which forms a gentle slope on the west, and rises abruptly and precipitously on the east. The coast is, for the most part, so rocky as to be practically inaccessible, although there are a few good harbors. The climate of Corea is very cold in winter, while in summer rain falls so abundantly that the great variety of fruits which grow on the peninsula yearly become so soaked that to the taste they are rendered insipid. But, notwithstanding the usual severity of the seasons, the soil of Corea is rich and productive, and barley, wheat, cotton, rice, millet, etc., are grown extensively and in great quantities. Fruit-trees also flourish with tropical luxuriance. The mineral wealth of the country has scarcely been attended to, although gold, silver, copper, iron, coal, etc., are found there. The domestic animals are oxen, pigs, goats, dogs and cats, and a small race of horses

called *mon-k-neat*, famous for their strength and spirit. It is said that there is a royal prohibition against the rearing of sheep, and, consequently, that animal is almost unknown. The tiger and the panther are so numerous that the traffic in their skins forms an important branch in their commerce with foreign nations. The manufactures comprise cloths, silk, pottery, and arms, the latter being the best made. The Korean sabres and daggers are much sought for by the Chinese, because of the exquisite manner in which they are made. The foreign commerce is trifling, and is confined mainly to China and Japan.

The inhabitants of Corea are said to be far superior to the Chinese in mental and physical resources. The government consists of a king, whose ministry is divided into five departments, which form the centre of all civil and military authority. The royal power is held sacred and inviolable, from the union in his own person of the hierarchal and secular sovereignty. He divides his government into circles or provinces, each under the rule of special governors, all appointed by the king, to whom they are responsible. The revenues of the Korean monarch are immense, and are derived mainly from the letting out of land, and a tithe of produce. The prevailing religion is Buddhism, which was introduced about the year 372 of the Christian era, but there appears to be another religion (Shamanism)—evidently the original faith of the people—and the doctrines of Confucius are held in high esteem. The Roman Catholic missionaries, who have been laboring in Corea since 1632, have gained many converts (15,200 in 1857), but, on account of the stringent laws against Christianity, the missionaries have to keep themselves concealed, and several of them have been put to death. The mission is directed by a vicar-apostolic.

In 1865 the Koreans became, for the first time, involved in difficulties with a Christian nation, in consequence of their having put to death several French missionaries. The French sent an armed expedition to Corea to avenge the death of the missionaries, but the badly-prepared and badly-conducted enterprise ended in an inglorious retreat of the expedition, leaving no permanent result, except the careful survey of several tracts of the coast. (*See AMERICAN ANNUAL CYCLOPEDIA* for 1866, art. COREA.)

In 1871 a new expedition was sent out against Corea by the United States of America. The difficulty leading to this expedition dates as far back as 1866.* In the early days of October, 1866, a trading-junk arrived at the Chinese port of Chee-foo, having crossed the Yellow Sea from the Korean coast. Her pilot brought reports of the burning by the Koreans

* The following account of the progress of the complication between the United States and Corea, from 1866 to 1870, is condensed from a very thorough article in the *New York Tribune*.

of a ship bearing American papers, and of the massacre of her crew. According to his account, his junk, while lying at the mouth of a very large river which entered the Yellow Sea from the Korean peninsula, was joined by a trading-vessel, the General Sherman, coming from Chee-foo, and he consented to act as her pilot. He conducted her for four tides, which occupied three days, up the river, and then left her to find her way to Ping-yang city, a large trading-mart, about six days' journey from the river's mouth. He left her about mid-day, on the third day of the eighth moon (11th of September, 1866), because her appearance had created alarm, and all trading was stopped between the Koreans and the Chinese. The Koreans asked him about the General Sherman and her intentions. He replied that she was a peaceful trader, but they were not convinced. He offered, as an excuse for deserting the vessel, that his junkmen refused to return to China without him, saying that they dared not leave him and face his family. The pilot also related that, on again reaching the mouth of the river which the General Sherman had ascended, the natives had told him that their sovereign would by no means trade with foreigners. Regarding the General Sherman, her passengers, and intentions, the following is the sum of the information which the American consul at Che-foo was able at the time to obtain: She had been loaded at that port in July or August, 1866, with a general cargo for a trading-voyage to the coast of Corea. She sailed with the following-named persons on board: Mr. Preston, her owner; Mr. Page, her master, both said to be Americans; Mr. Neilson, her mate, said to be a naturalized American citizen; Mr. Hogarth, her supercargo, an English subject; Mr. Thomas, an English missionary; two Portuguese, who accompanied the missionary, and a crew of Malays and Chinese. Of the fate of passengers and crew no certain information has ever been obtained.

On the return of the first French expedition in the latter days of September, 1866, as was afterward ascertained, a rumor was circulated of the burning of an American ship and the murder of her crew, but no attention was paid to it until the return of the Chinese pilot in the following month.

Additional information of the loss of the General Sherman was brought in October, 1866, by two French missionaries who had escaped from Corea in a junk, and arrived at Chee-foo, twelve days after the sailing of the second French expedition under Admiral Roze. Previous to their leaving Corea they had heard the rejoicing in the capital for the murder of the passengers and crew of the American vessel. Sacrifices of thanksgiving were offered up by the Korean ministers at being rid of the foreigners, and prayers were said that they might be able to overcome all other intruders in a similar manner.

Admiral Bell, U. S. N., then commanding

the Asiatic Squadron, in communicating to the Government the details concerning the loss of the General Sherman, suggested one of the capitals of the kingdom, Séoul, as the proper place to seek redress. He, however, reported his force as insufficient, and, considering the French defeat, that no less than 2,000 troops should be landed. These the admiral recommended should be brought from San Francisco, together with some light-draught boats suitable to ascend the rivers Salée and Séoul. The admiral wrote: "Until the Government takes efficient action on this case, our countrymen lawfully navigating the seas adjacent to Corea will be in peril of life and liberty of person from the barbarities of the people and the authorities of the country, who aim at the exclusion of strangers."

Admiral Bell reported that as soon as the repairs of the Wachusett, then in progress, could be completed, she would be sent to the locality of the General Sherman's loss to demand that her survivors, if any, should be given up. In November, 1866, Minister Burlingame addressed the Chinese Government, demanding redress for the murder of the crew of the General Sherman; but the authorities of that empire replied, disavowing any responsibility for affairs in the Korean peninsula and all jurisdiction over its people.

On January 10, 1867, the United States steamer Wachusett, Commander Shufeldt, sailed from Shanghai for Che-foo and Corea. At Che-foo were secured the services of the Chinese pilot who was in the General Sherman a few days before her loss, and also of the Rev. Mr. Corbett, an American missionary, to act as interpreter. Commander Shufeldt's instructions were, to demand of the chief authorities at the Ping-Yang River to deliver on the deck of the Wachusett such of the unfortunate men of the schooner General Sherman as may have been spared, whether they were American, Portuguese, British, Malays, or Chinamen, and to make such further investigation of the case as was practicable. On January 23, 1867, the Wachusett reached the Korean coast, and anchored near the mouth of the Pa-tong River, 50 miles to the south of the Ping-Yang, up which the General Sherman had proceeded. The Pa-tong River was found to be frozen, and the pilot was extremely reluctant to take the vessel farther north. Commander Shufeldt, therefore, determined to communicate from that anchorage with the authorities. It was also ascertained that the capital of the province of Chang-Yuen, embracing the scene of the loss of the General Sherman, was about midway between the two rivers. A number of fishing villages were found in the vicinity of the anchorage, and an inhabitant of one of them was induced to bear a communication to the King of Corea, accompanied by a letter to the official of Chang-Yuen. In the former, Commander Shufeldt assured his Majesty of the peaceful nature of his mission, and prayed

that any survivors of the General Sherman might be delivered to him. The latter contained the same assurance, and a request that the former should be immediately delivered to the King. In the mean time, pains were taken to cultivate friendly feelings with the natives. They seemed to be kindly disposed, but in great dread of their Government, and came as little in contact as possible with the crew of the Wachusett. They spoke with great reserve when questioned in reference to the General Sherman, but all told the same story: that the vessel had been burnt up the Ping-Yang River, and all her people, 27 in number, killed in a *mêlée* on shore by the natives, and not by order of the mandarins. On the morning of January 29th a Corean officer who said he came from the capital city of the province, 50 miles up the Pa-tong River, came on board the Wachusett. In reply to Commander Shufeldt's queries, his answers were very unsatisfactory. He denied all knowledge of the loss of the General Sherman, and prayed that the Wachusett should immediately leave the coast. Commander Shufeldt says: "I have no doubt that this man lied systematically from the beginning to the end. * * * The manner of this officer was haughty and imperious, and he presented in his person the most perfect type of a cruel and vindictive savage." Nothing further was heard of the messenger sent from Commander Shufeldt to the King, and, as it was judged that no satisfactory termination of the mission of the Wachusett could be obtained, she returned to Shanghai. Commander Shufeldt was informed that the Wachusett was the first foreign vessel of any description that had ever anchored on that portion of the Corean coast.

On January 20, 1868, the commander of H. B. M. ship *Dove* informed the commander of the American squadron that a report had been received that two men, supposed to be of the crew of the General Sherman, remained in confinement in Corea. It was determined to investigate the above reports, and on April 1, 1868, Commander Febiger, in the United States steamship *Shenandoah*, sailed for the Corean coast. He was so fortunate as to secure the services of the pilot who had accompanied the General Sherman, and afterward the Wachusett. The services of an American missionary in China, and of our consul at Che-foo, Mr. Sanford, were secured as interpreters. Considerable difficulty was experienced in entering the Ping-Yang River, and, taking soundings as they advanced, the *Shenandoah* proceeded cautiously in the endeavor to reach the point where the General Sherman had been burnt.

On the 19th of April a communication addressed to the commander of the Wachusett was brought on board the *Shenandoah* by a Corean boat's crew. This was in answer to the communication addressed a year previous, by Commander Shufeldt, to the Corean chief magistrate, but failed to reach the coast until after

the Wachusett had sailed. On the 21st of April the survey of the river had been carried about 25 miles, the *Shenandoah* dropping up with the tide. On the afternoon of this day one of the United States surveying-boats was fired upon, but fortunately no one was hurt. Commander Febiger demanded of the district magistrate the cause of the outrage, and was informed that nothing less could be expected if the ascent of the river was persisted in. Commander Febiger deemed it best to in no way provoke hostilities, and so determined to drop down the river and await at its mouth an answer to his letter, addressed to the Corean King, demanding the release of the survivors of the General Sherman, supposed to be held in confinement. From the new anchorage of the *Shenandoah* a series of letters and replies passed between Commander Febiger and the district magistrate. The fact of any survivors of the General Sherman being confined within Corean territory was denied, and an old prisoner, bearing a heavy *cangue* around his neck, was produced, who, it was charged, had related the story of the survivors to the Chinese pilot who bore it to Chee-foo, and was thus punished for his perjury.

Soon after, Commander Febiger was shown a communication addressed by the Chinese Board of Rites to the Corean chief magistrate, explaining the reasons of the visit of the *Shenandoah*. To this the Corean Government forwarded to Peking a reply, repeating their story of the loss of the General Sherman; again denying that any survivors of that vessel were alive; and praying his Imperial Majesty at Peking "to grant a public proclamation, setting forth his mandate for the dissolving of suspicions and doubts, that there may not be again a wilful seeking of difficulty." Commander Febiger awaited at the mouth of the Ping-Yang, until May 2d, an answer to the communication which he had addressed to the Corean sovereign, and he was then informed by the district magistrate that he could not venture to forward to his sovereign a dispatch from a subordinate of another nation. Commander Febiger, therefore, deemed his further stay upon the coast useless, and the *Shenandoah* returned to Chee-foo. In reporting the results of his expedition, Commander Febiger expressed himself of the opinion that "none of the crew or passengers of the General Sherman are now living, but I do not think that the statements given by the Corean authorities as leading to the destruction of the Sherman are at all probable. A schooner of 60 tons, whose object was trade, would hardly dare to proceed slowly up such a river as the Ping-Yang, destroying and robbing junks and murdering their crews. It is probable that they seized upon and confined the official spoken of for their own protection, and that they were fired upon first, and by retaliating brought on the result."

On the 9th of April, 1870, Admiral Rodgers

sailed from New York harbor, in the Colorado, to assume command of the Asiatic Squadron. The United States squadron left Nagasaki on the 16th of May, and arrived at Farrier's Island, at the southern point of the Korean peninsula, on the 18th. The squadron consisted of the flag-ship Colorado (first rate, screw), 45 guns; the steamship Benicia (third rate, screw), 12 guns; the steamship Monocacy (fourth rate, paddle-wheel), 6 guns; steamer Palos (fourth rate, screw), 2 guns. Proceeding cautiously up the west coast, carefully verifying the soundings and general observations of the French chart, they arrived in Jerome Gulf on the 20th. From this point commenced a thorough survey of the channels between the various islands which stud the coast northward, which occupied ten days, so that it was the 30th of May when the squadron came to a rendezvous in a bay inside of what appears in the French chart as Boisée (Woody) Island, which affords capital anchorage. This island stands near the mouth of that outlet of the river leading to the capital, Séoul, which at the northeast corner of Kanghoa Island turns sharp south from the previous northwest course of the river, and is marked on the French chart as Fleuve de Sel (Salt River).

The twelve days spent in advancing from Farrier's Island to Boisée Island had afforded the Korean authorities, who appear to have been fully informed of the intended expedition, ample notice of their approach. It was, therefore, no matter of surprise when, shortly after coming to anchor, a junk, with some official-looking persons on board, came within hail of the Colorado (flag-ship), and those on board raised a shout and displayed a letter. In response, a boat's crew conveyed Commissioner Drew, who went as one of the interpreters of the expedition, on board the junk. The three officials handed him the letter, and, as they at once began to talk in Chinese, the conversation was carried on without difficulty. The following is a translation of the letter of the Korean King:

In the year 1868 a man of your nation whose name was Febizer came here, and communicated, and went away. Why cannot you do the same? In the year 1865 a people called the French came here, and we refer them to you for what happened. This people and kingdom have lived in the enjoyment of their own civilization 4,000 years, and we want no other. We trouble no other nations. Why should they trouble us? Our country is in the farthest East; yours in the farthest West. For what purpose do you come so many thousand miles across the sea? Is it to inquire about the vessel destroyed (the General Sherman)? Her men committed piracy and murder, and they were punished with death. Do you want our land? That cannot be. Do you want intercourse with us? That cannot be.

The three officials represented themselves as sent by the King of Corea to ascertain the nature and objects of such a squadron. Commissioner Drew said that they could best ascertain these by coming on board the flag-ship;

and, having invited them to do so, he returned to the Colorado.

The three officials went on board. But, as they had no credentials, nothing to indicate their rank, nothing even to show that they came from the King, minister and admiral alike declined to see them, directing the interpreters to inform them that the minister and admiral would treat only with some high officer bearing proper credentials as the King's plenipotentiary. The interpreters were also directed to inform them that their mission was peaceable and friendly; that they would take nothing and hurt no one; would not even land; that, though they came with such a strong armament, they would not fire a shot unless they were first fired at. Their desire was to reach the capital, with the view of establishing friendly relations with the government. With this view they would send out a party to survey the river in the direction of Séoul. But, in order to give the officials ample time to apprise all the people of the neighborhood of their peaceable intentions, they would delay the survey for two days. The officials professed themselves greatly relieved, and made no objection to the proposed survey.

Next day, May 31st, a party of eight Coreans, apparently men of some standing, came on board the flag-ship and remained fully two hours. They were shown all over the ship, and inspected wistfully her powerful armament. They were very social and communicative—told the name of the King, and explained their form of government. They also were told of the intended survey of the channel up to the capital, and were asked to let the friendly character of the expedition be generally known. They seemed perfectly satisfied, departing with many friendly assurances.

All, therefore, seemed tranquil and satisfactory, and, at twelve o'clock on June 1st, the Monocacy and Palos, preceded by four steam launches, got under way to survey the "Salt River" up to the sharp bend where it leaves the main river to Séoul. It was flood-tide. The four launches went in line some hundred yards ahead, taking soundings and hoisting signals indicating their water to the gunboats behind. In the launches were Captain Boswell, the local pilot of the expedition, and Mr. Cowles, joint interpreter with Commissioner Drew. The launches had each a 12-pounder Dahlgren brass howitzer on the bow. The party told off was about 160 strong. The command of the party was given to Captain Blake, of the Alaska, with instructions to use every effort to execute his survey in a peaceful manner, and on no account to resort to force unless he was attacked; in which case he was directed to use his means of defence and destroy the attacking force. About four miles above the anchorage they passed a fort, on a small island, close to the channel, on the west side. Three miles farther up, on the sharp headland which forms the southeast

corner of Kanghoa Island, there was another fort commanding the channel. Both these forts were built of stone, and have been erected since the French expedition of 1866. From this point upward the channel narrowed to about three hundred feet between the mainland of Corea on the east and Kanghoa Island on the west, the current being deep and strong. About two miles above the last-named fort is a place marked on the French chart "difficult passage." Here a peninsula about one hundred and fifty feet high projects in the form of a horseshoe into the river, while from its base a shoal ledge of rocks runs nearly half-way across the stream. As the launches approached this place it was observed that at a height of about one hundred feet above the river there was a crenelated wall, from embrasures in which were seen the muzzles of from forty to fifty guns. Above this battery the hill narrowed as it rose, till it ended in a flat circular top, about forty feet in diameter. Around this there ran a wall about six feet high, an awning over the top of which transformed the place into a tent, from the centre of which rose a pole on which was floating a large yellow flag, the characters on which were interpreted to mean "the commander-in-chief." Between this tent and the battery below were observed large numbers of soldiers bearing matchlocks, and displaying an immense array of flags. At a moderate estimate there were not less than 2,000, and the demonstration seemed intended to induce the surveying-party to retire. The launches, however, steamed on, and, as they began to sweep round the bend of the river caused by the projection of the peninsula, they observed, on the main-land on their right, a small fort so situated that its fire would converge with that from the battery on the opposite side. They had scarcely noted this ominous fact when the report of a gun was heard from the commander's tent on the hill-top. It was a signal-gun. Next moment fire opened on the United States flotilla from the main-land and island simultaneously. The cannon seemed to be the old-fashioned long small bores, carrying balls of six or eight pounds or so. There seemed to be half a dozen of them securely fixed side by side on a log of wood, and, from the simultaneousness of their discharge, appeared to have a common touchhole. After the first startled surprise, a sensation of eager enthusiasm took possession of the surveying-party. As the launch of the *Benicia* had got four or five miles behind, there were thus only three launches within range when the Coreans opened fire. They were about two hundred yards from the island battery, and only one hundred from the one on the mainland. It seemed as if they must be at once cut to pieces. The *Palos* and *Monocacy* had difficulty in coming into position on the flood-tide, but only a minute or two elapsed when their eight-inch shells were seen tearing vast rents in the wall of the battery, and the flames

and smoke of their explosion inside came rolling out. For ten minutes only the struggle lasted, and then both forts were silent. But, from the peculiar style in which the Corean guns were lashed together and fired, the fire, while it lasted, was so rapid that the water was dented with the shot as if a gigantic hail-shower had been falling. Captain Blake declared that, though he had his vessel sunk under him in the late war with the South, he never witnessed such a tremendous fire. And yet, the casualty of the surveying-party was one man wounded. The fact seems to be that the Corean guns were fixed to sweep a certain point, and the launches, not happening to pass at that particular spot, escaped almost unscathed. When the smoke cleared away, not a Corean was to be seen, though the yellow flag still floated over the commander's pavilion.

The *Monocacy* sustained some damage, though not from the enemy, and began to leak. But a little temporary arrangement soon made her water-tight, and she followed the *Palos* and the three launches up to the northern side of the peninsula hill, where they anchored. The launch of the *Benicia*, which was commanded by Ensign Schroeder, when coming up, also ran the gantlet of the two Corean forts, and rejoined the party, being hit in many places by shot, though not seriously damaged.

At 3.50 p. m. the party weighed anchor and proceeded down-stream. Not a Corean was to be seen, and without further incident they reached the anchorage and reported to the admiral what had occurred. The latter expressed great satisfaction with the manner in which they had conducted themselves. At nine in the evening, the landing-order for next day was countermanded, and the *Palos* was ordered to proceed to Chee-foo with Captain Boswell and others, with dispatches for America and orders for the supply of coal and other stores.

The following ten days were used for repairing the damages suffered by the ships, while the admiral was waiting for an apology from the Corean Government. As the force was insufficient to advance as far as the capital and to capture it, it was resolved to punish the Coreans as severely as possible for their treacherous attack upon the surveying-party. Admiral Rodgers, therefore, gave orders to take the forts, from which the Coreans in June had fired upon the launches, and to demolish them. For this purpose, the *Palos*, accompanied by the *Monocacy* and the steam-launches, left, on June 10th, the anchorage. The force of the expedition numbered 945 men, of whom 644, with 7 guns, were to be landed. A landing was effected below the first forts, in order not to expose the crowded boats to the fire from the shore. After occupying a few forts which the Coreans had abandoned almost without resistance, the troops during the night bivouacked on

land. On the morning of June 11th, the Americans destroyed the captured forts, burned the neighboring houses, and continued to advance. The Monocacy smoothed the way for the landed troops, as her shells cleared away all the shore batteries and the works of fortification. Thus, without encountering serious resistance, they reached the fort from which fire had been opened on June 1st. After a brief fire on both sides, the Americans stormed the fort, and on the first onset took it, with a loss of three killed and seven wounded. Lieutenant McKee was killed as he entered the intrenchments.

A number of prisoners were taken, including the officer second in command, who was badly wounded, the commander-in-chief having been killed. The fleet returned to the Boisé anchorage two days later. The Coreans sent on board a letter filled with the most insulting and abusive language, to which no reply was made. Admiral Rodgers, however, sent to the Coreans to know what he should do with the prisoners. The Coreans answered he might do what he liked with them. Two days later he set them at liberty, and sent two messages ashore; the local authority refused to receive them, saying it was as much as his head was worth to send them, and it was no use to attempt to communicate further with the court. Mr. Low, the American minister, then sent a formal protest that his mission was peaceful, and that the American attack was not for a refusal to negotiate, but because the Coreans had treacherously fired on the boats. The Coreans fought like men. Their weapons are wretched old firelocks, and their cutlasses made of soft iron, which bent like old hoop. They were dressed in armor of nine thicknesses, cotton-padded, so that only rifle-balls could penetrate them. Their swords produced no effect. Documents captured showed that the Corean Government had planned the surprise of the American fleet, and were astonished at the failure of the forts to annihilate the foreign vessels at the first fire.

Twelve native Christians came alongside the admiral's flag-ship in a junk, and begged to be taken to Shanghai, and that their junk be burnt to prevent its falling into the hands of the native authorities, who would thereby discover from what village they came, and punish their relatives. The request was granted.

On July 3d the American squadron left the coast of Corea, the Monocacy and the Palos returning to Shanghai to repair their damages, and the other vessels to Che-foo.

COVODE, JOHN, an energetic politician and political leader of Pennsylvania, long a member of Congress, born in Westmoreland County, Pa., March 17, 1808; died at Harrisburg, Pa., January 11, 1871. He was of Dutch descent, and his early years were spent on a backwoods farm in Westmoreland County; but before attaining his majority he abandoned the farm, and, after a short apprenticeship to a blacksmith, left the forge to enter upon the then

newly-developed but rapidly-growing coal-trade. To this he subsequently added a large woollen manufactory, and was also a stockholder and director in several of the railroad lines which traversed his native county. Restless in the life of money-making thus suddenly opened to him, he eagerly sought political activity, and by the wise discrimination of his neighbors was elected to the Legislature, and displayed a zeal so honest and persistent that he was returned again. Upon the conclusion of his term he was sent to the Thirty-fourth Congress, serving on one of the most important committees then organized. He was re-elected to the Thirty-fifth Congress. Mr. Covode made a national reputation on his re-election to the Thirty-sixth Congress, when, as chairman of the special committee appointed to investigate certain charges against President Buchanan, he displayed a vigor and decisive penetration which subsequently gained full recognition from Congress and the country. Mr. Covode's constituents proved their appreciation of his services to them, by reelecting him to the Thirty-seventh Congress. He entered into the measures of the war with great ardor, and strained every nerve to put the most effective weapons in the hand of the military power. He sent three sons into the army, the youngest but fifteen years old. The eldest became colonel of the Fourth Pennsylvania Cavalry, and was killed near Richmond. Mr. Covode was an active member of the "Joint Committee on the Conduct of the War," and gave undying offence to the friends of the Confederacy in the North. When President Johnson began his term of office, he sent Mr. Covode south to aid in the reconstruction of the disaffected States. He did not see matters as the President desired, and was hastily recalled. He was thereafter a bitter thorn in the side of the President, and aided largely in restraining his executive power. In 1868 the friends of Mr. Covode urged him again to accept a nomination to Congress, as there was danger of losing the district to a Democrat. He entered the contest with such a dauntless energy that the Democratic preponderance was reversed, and, although the Governor refused to give either candidate a certificate—because of the confusion in the returns—Congress at once admitted him to his seat. In 1869 he was appointed chairman of the Republican State Committee of Pennsylvania, and was very active in the struggle for the election of Grant and Geary. In 1870 he declined a renomination to Congress, and the district, in consequence, was carried by a Democrat. With all his impetuous energy, Mr. Covode had the impassiveness of his ancestors' Dutch nature, which made him as tenacious of conviction as the heir of a Corsican vendetta. He was recognized in his State as a strong political power. His unthinking impetuosity and the very energy of his action and speech made him many bitter enemies, as

his honest, genial friendliness won him innumerable ardent friends. He was returning home from a trip to Philadelphia, and with his wife stopped in Harrisburg for medical treatment, when his sudden death occurred.

CRAWFORD, NATHANIEL MACON, D. D., an American clergyman, scholar, and college president, born near Lexington, Oglethorpe County, Ga., March 22, 1811; died at his residence near Atlanta, Ga., October 27, 1871. He was a son of Hon. William Crawford, a cabinet officer and Vice-President under Madison and Monroe. He graduated from Franklin College (University of Georgia) in 1829, and commenced the study of law with his father, and was admitted to the Georgia bar, but did not enter upon the practice of his profession. In 1837 he was elected Professor of Mathematics in Oglethorpe University, and retained the position till the end of 1841. About this time he was led to change his denominational views, and, though brought up a Presbyterian, he became from conscientious conviction a Baptist. He soon determined to enter the ministry in that denomination, was licensed to preach in 1843, and ordained in 1844. He was pastor, successively, of Baptist churches in Washington, Ga., and Charleston, S. C. In 1847 he was elected Professor of Biblical Literature in Mercer University, Penfield, Ga., and seven years later was chosen president of the university. He resigned at the beginning of 1857, and accepted temporarily the chair of Mental and Moral Philosophy in the University of Mississippi, but in the autumn of that year accepted a professorship in the Western Baptist Theological Seminary at Georgetown, Ky. The pressure upon him was so strong to return to the presidency of Mercer University, that he at last consented, and in the autumn of 1858 resumed his old place and duties. In 1857 he was elected president of the Bible Revision Association. The occurrence of the war disabled, where it did not entirely destroy, most of the Southern colleges, and Mercer University did not escape the general ruin. Dr. Crawford maintained a nominal connection with it for some years, but on the death of Rev. Dr. Campbell, president of Georgetown College, Ky., he was elected to the presidency of that thriving institution, and continued to preside over it until the beginning of 1871, when, his health failing, he returned to his native State to die. Dr. Crawford ranked as a pulpit orator among the most eloquent of Southern preachers. He had not published many books, though a very fluent and graceful writer. A work, entitled "Christian Paradoxes," from his pen, published in 1857, was favorably received, and, with a number of small books on denominational topics, and several occasional sermons, addresses, etc., constitutes the sum of his published works.

CROSWELL, EDWIN, an influential journalist and politician of New York for many years, born at Catskill, N. Y., May 29, 1797; died at

Princeton, N. J., June 13, 1871. He was of a family of editors, his father and his uncle, the famous Rev. Dr. Harry Crosswell, being both engaged in editing and publishing newspapers long before his birth. Mr. Crosswell received a good education, and on leaving school entered at once into journalism, becoming assistant editor of the *Catskill Recorder*, his father's paper. His first article was a defence and vindication of the soldiers who were drafted for the defence of New York during the war with Great Britain. His management of the *Recorder* after the retirement of his father was such as to attract the attention of the most prominent leaders of the Democracy, and place Mr. Crosswell in the position of an influential leader of his party. In 1824 he was invited to Albany by Martin Van Buren, Benjamin F. Butler, and others, to assume the editorial control of the *Argus* of that city, as successor to Judge Cantine, its editor, and also State printer. He accepted the invitation, and for thirty years after was a resident of the State capital. Mr. Crosswell's career as editor of the *Argus* was a notable success, both in its journalistic and political sense. "He converted the paper from a semi-weekly into a daily journal," says one of his biographers, "increased its circulation very largely, and made it one of the chief organs of the Democracy, not merely in the State, but in the country." These were the palmy days of the famous "Albany Regency," when the organization of the Democratic party had reached a state of perfection never before equalled by any political party in the United States, and only equalled since by the Tammany Society. As a member of the "Regency," Mr. Crosswell's work was delicate and important. The duty devolved upon him of putting an end to difficulties which arose in the ranks of the Democracy of the State, and of preserving order in the party. These were done through the columns of the *Argus*, and to his ability, tact, and energy, were due, to a considerable extent, the long ascendancy maintained by the Democrats in New York. All the leading articles which appeared in the *Argus* were copied in the minor party papers throughout the State as embodying all that was sound of Democratic principles; and the fact speaks for itself of the great influence wielded by Mr. Crosswell through his paper, that for many years it was regarded as equivalent to political apostasy to question or discredit the authority of the *Argus*. Of course, an end came to the vast power wielded by the Regency, and when it fell Mr. Crosswell fell with it. In 1840 the Whigs obtained possession of the State, and he, after having been State printer for sixteen years, was succeeded in that office by Thurlow Weed. Four years later he obtained the position again, and kept it for three years more, when the Democracy were once more driven from power, and did not return for many years after. Intestine difficulties, rigidly repressed by the discipline of the Regency, broke out with great fury in

the ranks of the party. Van Buren, one of the earliest political associates of Mr. Croswell, headed one faction, which was opposed by the *Argus*, and, as a consequence, the political influence of the editor declined. The *Argus*, however, was still a power in the State, and it invariably supported the Democratic candidates for national offices. In 1854, after an editorial career of forty years, Mr. Croswell retired from the *Argus*, and from all connection with journalism. His public life had been most eventful. Few men who have wielded his influence have been less ambitious of personal aggrandizement than he was. One of the Warwicks of the State, he sought no office excepting that of State printer, although

it is certain that, had he desired personal promotion, he could readily have obtained it. He was, however, content with his position as a journalist, who could make and unmake public men with an editorial article, and whose mandates no leading Democratic politician ventured to disobey for more than sixteen years. On his retirement from journalism, Mr. Croswell came to New York City and engaged in business pursuits. Not long ago we saw it stated that he had been unsuccessful, and had lost all his fortune. Personally, Mr. Croswell was a man of strict integrity, genial, hospitable, and generous, one of the gentlemen of the old school, of whom so few now remain among us.

D

DARBOY, Most Rev. GEORGES, D. D., Archbishop of Paris, a Roman Catholic prelate, author, and Senator of France, born at Fayl Bilot (Haute Marne), France, January 16, 1813; was shot by order of the leaders of the Commune, May 24, 1871. He was educated at the seminary of Langres, whence he graduated with high honors; was ordained priest in 1836, and appointed vicar of St. Dizier, near Vassy. In 1839 he was made Professor of Philosophy in the large seminary of Langres, and in 1841 Professor of Dogmatic Theology in the same institution. In 1844, the seminary being put in charge of one of the religious orders, M. Darboy left the diocese and came to Paris, where Archbishop Affre made him almoner of the College of Henry IV., and honorary canon of the metropolis. Archbishop Sibour, who succeeded Affre, assigned to him the direction of the *Moniteur Catholique*, appointed him first almoner of the College of Henry IV., and honorary vicar-general, with a commission to inspect the religious instruction of the collegiate schools (*lycées*) of the diocese. In November, 1854, he accompanied the Archbishop to Rome, where the Pope conferred on him the title of prothonotary apostolic. He was named the next year titular Vicar-General of Paris, and in 1859 Bishop of Nancy. On January 10, 1863, he was designated as the successor of Archbishop Malot in the Archiepiscopal See of Paris; he was publicly announced the 16th of March and installed the 22d of April in the same year. On the 8th of January following, he was appointed grand-almoner of the Emperor (Napoleon III.), and called to the Senate October 5, 1864. In 1866 he was made a member of the Imperial Council of Instruction, and had passed through the various grades of advancement in the Legion of Honor till he was made Grand-Officer in 1868. His murder was one of the many atrocious crimes committed by the Commune, and was one of their latest acts of malignity when they found that the power was passing from their grasp. He had

been seized as a hostage by the Commune on the 5th of April; but, though with his feeble health his imprisonment was an act of cruelty, it was not supposed that his life was in danger until the fatal day, when he with about sixty other hostages was called out and shot down in cold blood, the ruffians cursing him as they murdered him. The Archbishop was a somewhat prolific writer. He had translated in 1845, with introduction and notes, the works of St. Dionysius, the Areopagite; had published "Women of the Bible," 2 vols. (1848-'49); "Holy Women" (1850); a translation of a Kempis's "Imitation of Jesus Christ," illustrated (1852); "Life of St. Thomas à Becket" (1859); and had contributed to "The Lives of the Saints," etc. He had also published many controversial pamphlets.

DEGUERRY, or DU GUERRY, the Abbé GASPARD, an eminent French scholar and pulpit orator, curé of the Madeleine, born at Lyons in 1797; shot by order of the leaders of the Commune at Paris, May 24, 1871. He was of a Swiss family, and obtained his education first at the schools of his native city, and in 1812 at the College of Ville Franche. He studied theology at the same college, and in 1820 was ordained priest. From 1820 to 1824, he was Professor of Philosophy, Eloquence, and Theology, and from that time devoted himself to his calling as a preacher. He possessed rare powers as a pulpit orator, and his eloquence had the unusual characteristic of so impressing itself on the minds of his hearers as to be remembered for years. In 1824 he preached in Lyons, in 1825-'27 in Paris, and the latter year he was appointed by Charles X. chaplain and almoner of the Sixth Regiment of the Royal Guard, which he accompanied at Orleans, Rouen, and Paris, for the next three years. In 1828 he delivered an oration at Orleans on Jeanne d'Arc; and, twenty-eight years after, so vividly was it remembered, that he was called to pronounce another to her memory in that city at the inauguration of an

equestrian statue in her honor. He continued to preach in Paris from 1830 to 1840, and in the latter year visited Rome. On his return he became a canon of Notre-Dame; was appointed arch-priest in 1844, Priest of St.-Eustache in 1845, and Priest of the Madeleine in 1849. The latter post he retained till his death. He was appointed Bishop of Marseilles in 1861, but declined to accept the honor. In 1868 he was selected to superintend the religious education of the Prince Imperial. He held the rank of Commander of the Legion of Honor. He was seized, at the same time with Archbishop Darboy, as a hostage by the leaders of the Commune (April 5th), and brought out at the same time with him and shot; neither his age, his learning, nor his well-known philanthropy, availing him any thing with the madmen of the Commune. The Abbé Degueury had published two orations on Jeanne d'Arc (1828 and 1856); "La Trappe better known" (1844); "History of the Old and New Testament" (1846); "Lives of the Saints" (1845); "Biography of the Count de Clocheville" (1853); "Retreat, preached at the Conferences of St.-Vincent de Paul" (1859); "*L'Oraison Dominicale*, Sermons preached at the Chapel of the Tuilleries" (1866).

DEHAVAN, EDWARD C., an American philanthropist and temperance reformer, born, we believe, in Schenectady County, N. Y., in 1793; died in Schenectady, January 15, 1871. He acquired by his enterprise and industry a considerable fortune, and at one time owned a large amount of real estate in Albany, including the Delavan House, which he erected. In the prime of manhood, more than forty years ago, he entered with great zeal and energy into the cause of temperance reform, devoting his ample means to its promotion, and exerting vigorous personal effort in speaking, lecturing, and writing on the subject, and employing others in all these ways to further the cause. He met with great opposition in this work, and was more than once prosecuted by brewers and distillers, whose manufactures of ale and spirits he had denounced as "rat-soup." He procured, about 1840, several drawings of the human stomach when diseased by the use of alcoholic drinks, from *post-mortem* examinations made by Prof. Sewall, of Washington, D. C. These he had engraved and printed in colors, and made very effective use of them. He also published for years, at his own expense, a periodical advocating, often with illustrations, the temperance cause; this was subsequently merged in the *Journal of the American Temperance Union*, to whose funds he was a most liberal contributor. He had trained himself to public speaking, and became a very efficient advocate of the cause he had so much at heart. He had, within a few years past, lost a large portion of his property.

DELAWARE. The Legislature of this State meets biennially; the Governor holds office for four years, and other officers shorter terms.

The last (1871) was a legislative year. The session opened early in January and closed in April, having continued for thirteen weeks. The body was unanimously Democratic in both branches. The new Governor, James Ponder, Democrat, elected in 1870 by a majority of 2,517 over Thomas B. Coursey, the Republican candidate, was inaugurated on the 17th of January. His inaugural address was entirely devoted to a discussion of State rights, and denunciation of Congress for extending the suffrage to uneducated negroes, which he considered "unwise in policy, unsound in principle," and said would "be found to be in practice greatly detrimental to the public interest." He declared the measures adopted to secure its establishment "the most fatal assaults which have been made upon our complex systems of government, Federal and State, since their organization. They were the unwarranted enlargement of the powers of the former, and the practical destruction of the inherent and essential powers of the latter." On the same day, Eli Saulsbury was elected to the United States Senate, for a term of six years, beginning March 4th, to succeed the Hon. Willard Saulsbury, his brother, whose term expired at that time. The contest was between the friends of the three brothers, Willard, Eli, and Gove Saulsbury (the latter the ex-Governor), and it culminated in the nominating caucus the night preceding the election. Four ballots were taken before a nomination was effected. The first two showed only three ballots for Eli, against 14 for Gove, and 13 for Willard Saulsbury; the next, one for Eli, 15 for Gove, and 14 for Willard Saulsbury; but the fourth, by the union of the supporters of Willard and Eli Saulsbury, showed 16 for the latter against 14 for Gove Saulsbury, and secured him the nomination and consequently the election.

In February Robert H. Davis was elected State Treasurer by the Legislature, and Dr. R. G. Ellegood, State Auditor; and John H. Paynter, of Georgetown, was made Secretary of State by appointment of the Governor.

There were but few notable acts of the Legislature of 1871. One of the most important related to the fisheries. Its chief provisions are as follows: No person not a citizen of the State shall fish within its boundaries without a license; such license shall cost \$20, and be limited to one year; the penalty for the violation of this provision shall be \$50, and forfeiture of the vessel, nets, and other tackle engaged, which, if condemned, shall be sold, and the proceeds, after paying costs, be divided among the captors. Any sheriff or constable shall have power to seize and detain any vessel violating the oyster-law without warrant, and, in the performance of his said duty, may, if necessary, summon a *posse comitatus*, armed with fire-arms and ammunition, and use the same, if forced to do so, in execution of the law, and if maiming or death follows it shall be considered justifiable, and

the officer and his *posses* be free from legal responsibility; he may also require the assistance and use of any other boat or vessel, its owners or crew receiving compensation; and it shall be an offence, punishable by a fine, for any sheriff or constable to refuse to act, or any person to refuse to serve on a *posse*, or refuse the use of boats; and it shall involve a similar penalty to fish between sunset on Saturday night and midnight on Sunday, throughout the year; to fish for shad nearer than one mile from shore, or the mouth of any creek within the limits of the State after the 15th of June of each year; and to have in possession, or exposed for sale, any shad caught in the river Delaware or its tributaries, within the jurisdiction of this State, above the southern point of Reedy Island, between the 11th day of June and the 10th day of August in any year.

A law was passed prescribing some new regulations in regard to the rights of married women. It provides for the protection of property belonging to the wife in a case where, after she has been deserted by her husband, she shall engage in business on her own account. Under the old law the husband could return and claim her earnings.

The school system of Delaware has remained unchanged for more than forty years, and consequently the progress of popular education has been exceedingly slow. For the past five years several districts have been entirely without public schools, and many which have had such schools have had incompetent teachers. In the rural districts the teachers are paid but about \$100 a year, and the schools are in session only four or five months. The education of the colored people depends entirely on their own resources, unaided by any State assistance, and upon such help and oversight as are given by a voluntary organization of philanthropic citizens called "The Delaware Association for the Moral Improvement and Education of the Colored People." This has thirty schools under its supervision at different points in the State, which have given instruction at one time to as many as 1,200 children. The last Legislature did nothing toward an improved school system. Its acts concerning education were very few. The most important amended the charter of the Delaware College, so as to admit ten students from each county free of tuition; and repealed the charter of the State Normal University. The latter created considerable indignation, the assertion being repeatedly made that it was impelled by personal pique and malice, occasioned by the statements made by the principal of the University to the National Commissioner of Education, denunciatory of the school system of the State, and incorporated in his formal report. Soon after the passage of the bill, the students of the university held an indignation meeting, and passed a series of resolutions, the most important of which were as follows:

Whereas, This institution has given instruction to several hundred students, aiding many in securing better qualifications for mercantile, mechanical, and agricultural pursuits, and has qualified at least twenty-five persons for the business of school-teaching, including the graduating class of 1871, and has subscriptions of money pledged to nearly the amount of \$50,000; and—

Whereas, The State of Delaware was paid its fee for the act of incorporation; and—

Whereas, The State has never given any appropriations of money or other aid to this institution: therefore—

Resolved, That we regard the recent act to repeal the charter of the Delaware State Normal University, dictated by a United States Senator and passed by the State Legislature, as severely unjust and cruel to those of our number who have been pursuing a laborious course of study with a view to securing their degrees, as insulting to our honorable trustees and instructors, as unwise, impolitic, and entirely unworthy of the supposed wisdom and appropriate dignity of legislators.

Resolved, That we thank the trustees for so promptly conferring degrees upon the graduating class of 1871, previous to the passing of said act.

Resolved, That we have never heard any political, partisan, or sectarian remark in this institution from any instructor.

Resolved, That, without disparagement to any school or teacher, we have received the most thorough, progressive, interesting, and satisfactory instruction in this institution that it has ever been our privilege to enjoy.

The university was incorporated in 1867, to confer all degrees customary to be conferred by universities and to grant diplomas; to confer, in addition to other degrees, the degree of Bachelor of School-teaching upon such of the students in the Normal Department as, upon examination, shall be found qualified to act as teachers, and the degree of Master of School-teaching upon those who shall have been engaged in the business of teaching three years from the time of graduation.

The railroads of the State are yearly increasing in value, influence, and number. Work on the new road known as the Wilmington & Western was begun on July 8, 1871, and it is to be completed in July, 1872. The line as originally surveyed runs from Wilmington to Landenberg, there to connect with the Pennsylvania & Delaware Railroad, which crosses the Baltimore Central and extends to the Pennsylvania Central; but, in order to secure a connecting link between the West and the commerce of the Delaware River, it is proposed to extend it to Oxford, from which place a narrow-gauge road is assured, connecting with the lines leading to the West. Other important railroad projects are under way. A connecting line between the Wilmington & Reading and the Lehigh Valley Railroads is in progress, which will give Wilmington a direct line into the extensive Lehigh and Schuylkill districts; and a new road is proposed from Elktown to Middletown, which will bring the agricultural and fruit-growing section into as direct communication with Baltimore, and make it as accessible to the peach-growers as Philadelphia and New York now are.

Another important project carried forward during 1871 is the Chesapeake & Delaware Ship-Canal, which is to connect the Chesapeake River and Delaware Bay, and which was projected many years ago. It is proposed to begin somewhere about Bombay Hook, on Delaware Bay, near Smyrna, and cut through to the Sassafras River. The Sassafras now has a depth of seven feet, which it is claimed can easily be increased to twenty-five, and by this route the canal would only be thirty-two miles in length.

The canal between Salem Creek and the Delaware, begun nearly a century ago, was completed in the fall of 1871. By this the rich interior region will be open to drainage and to navigation.

The condition of the Junction & Breakwater Railroad, at the close of the year, was precarious. It had no funds to meet the interest on the State lien due on the 1st of January, amounting to at least \$12,000; a petition had been filed in the United States District Court, by a Philadelphia firm of locomotive-builders, holding a note for about \$11,000, protested some months before, asking that it be declared a bankrupt under the general act; and other proceedings against it were pending. This road is a branch of the Delaware Railroad. It extends from Harrington, a station of the Delaware road, about sixteen miles south of Dover, the capital of the State, eastward to Milford, then south to Georgetown, then again eastward to the Delaware Bay at Lewes, near the "Breakwater"—hence its name. Its object is to furnish transportation of freights, chiefly fruit and oysters, from the interior to Lewes, there to be transhipped to New York. It was built mainly by the State, which loaned it \$400,000, payable in 1890. The stock subscription amounted to only about \$150,000 in cash, of which parties in New York subscribed nearly one-third. It has encountered, from the start in 1867 to the present time, all manner of obstacles. Anticipating the possibility of its sale for default of interest payment, a general law was passed by the Legislature, authorizing the State Treasurer to bid on be-

half of the State at public sales of railroads or of railroad stocks.

In 1864 an act was passed by the Legislature, levying a tax of ten cents per head upon every passenger travelling by steam-routes in the State. The collection of this tax the Philadelphia, Wilmington & Baltimore Railroad persistently resisted, on the ground of its unconstitutionality, and a suit of the State Treasurer to recover it from the Company has long been pending. At length the case came before the Court of Errors and Appeals, the highest tribunal of the State, and a unanimous decision against the act, so far as it imposes a tax upon passengers travelling through, into, or out of the State, was rendered. The court, accepting the decision of the Supreme Court of the United States, in the case of *Crandall vs. State of Nevada*, as settling the principle that a tax by a State upon what is known as *inter-state* travel is invalid under the Federal Constitution, concluded that the tax imposed by the act in question was a tax upon the passenger, to be collected by the carrier, and *not* merely a tax upon the *business* of the carrier, to be measured by the number of passengers, as was urged upon the part of the State. The Chief Justice also delivered an opinion fully concurring in the conclusions above named, but adding thereto his dissent from the grounds upon which the majority of the Supreme Court had based their decision in the Nevada case—preferring, with the minority of the Supreme Court, to basethe principle, by which both that case and the present one are settled, upon the "commercial clause of the Constitution" giving Congress power to regulate commerce between States. The amount involved was about \$75,000. Notwithstanding this decision, the tax was not repealed by the Legislature of 1871; and a bill was passed exacting a tax, including this ten cent capitation tax, from the Philadelphia, Wilmington & Baltimore Railroad Company, amounting to about \$55,000.

The following table gives the population of the State for the year 1870, together with the assessed value of all property, school attendance, etc. :

COUNTIES.	POPULATION.					School attendance.	Ten and over who cannot read.	Total assessed value of property.
	Aggregate.	White.	Colored.	Native.	Foreign.			
Kent.....	29,804	22,640	7,164	29,284	520	4,868	4,685	\$12,892,138

Total for State.....	125,015	102,221	22,794	115,879	9,136	19,965	19,356	\$64,787,223

Of the whole number attending school in the State, 1,195 were colored. Of those 21 years and over who cannot write, 3,466 are white males; 4,566 white females; 3,763 colored males; 4,205 colored females. Value of farm productions, including betterments and additions to stock, \$8,171,667; 58,316 pounds

of wool were produced. True value of property, \$97,180,833.

Wilmington, the only city in the State, had at the close of 1871, according to the statistics of the Board of Trade, about 35,000 inhabitants, an increase of more than 2,000 during the year. The real estate in the city and sub-

urbs was valued at \$25,000,000, and the personal property at \$22,000,000. In 1871, 404 new houses, valued at \$1,200,000, were erected. The following are statistics of the manufacturing industries of the city:

ARTICLES.	Capital.	Val. produced.
Powder and chemicals.....	\$1,400,000	\$1,800,000
Paper.....	1,000,000	1,000,000
Cotton.....	1,030,000	1,100,000
Cars.....	605,000	1,526,000
Iron ships.....	650,000	1,000,000
Machine-work.....	1,000,000	1,400,000
Morocco.....	610,000	1,800,000
Carriages.....	751,000	1,118,500
Flour, corn-meal, etc.....	390,000	1,100,000
Leather, other than morocco.....	370,000	500,000
Iron.....	750,000	1,200,000
Foundry-work.....	250,000	1,500,000
Tobacco, snuff, spices, and par- lor matches.....	435,000	680,000
Sash, blinds, etc.....	141,500	290,000
Bricks.....	200,000	250,000
Boots and shoes.....	100,000	350,000
Woolen goods.....	200,000	300,000
Barrels, etc.....	100,000	125,000
Fertilizers.....	175,000	350,000
Miscellaneous, not included in the above.....		
Total.....	\$11,597,500	\$18,519,000

The following table gives the taxation and public debt of the State for the year 1871:

COUNTIES.	Taxation, not national.	Public debt, county, town, city, etc.
Kent.....	\$55,961	\$34,500
New Castle.....	298,009	460,625
Sussex.....	64,122	31,000
Total for State.....	\$418,092	\$526,125

It is claimed that Wilmington enjoys advantages for building iron ships superior to those of any place in the United States. Some of these advantages are natural and others the result of well-directed efforts of those engaged in the business of iron-ship building. These advantages are proximity to the mines of iron and coal, with various competing lines of transportation to bring these materials, as well as the lumber required, and proximity to the great commercial marts of the country, where the less important materials can be easily and speedily procured, and whence skilled and cheap labor can be obtained. The difference between the cost of production of iron ships here and on the Clyde is steadily growing less, and the Board of Trade regard the day as not far distant when "the Delaware or the Christiana, and not the Clyde, shall rule the iron-ship building interest of the world." The increase of the business of Wilmington is indicated by the increase of trade on the water-freight lines. This business, which was at one time carried on by four sloops, making semi-weekly trips, now requires four steam-barges and daily trips; while the line between Wilmington and New York, which was begun with one steamer, a little more than a year ago, now has two of the largest steamers which pass through the Delaware & Raritan Canal, but is yet inade-

quate to the requirements of the trade. One barge has been purchased and another built, to aid in the transportation of the freight.

One of the main interests of Delaware is peach growing and distributing. The crop of 1871 was the largest ever obtained—over 3,500,000 baskets being sent to market, an increase of about 500,000 over the supply of 1869, known as the "champion peach year." Of these about 2,655,000 baskets were sent to the distant markets by rail, and the remainder by water. In 1870 the quantity sent out by rail was 1,410,079 baskets. The net receipts of the growers were between 30 and 40 cents a basket. Estimated at 35 cents, the crop of 1871 brought into the State over \$1,225,000. From 300,000 to 500,000 new trees were planted during the year.

DEMORGAN, AUGUSTUS, D. C. L., F. R. A. S., an English mathematician, professor, and author, born in the island of Madeira, on the northeast coast of Java, in 1806; died in London, March 18, 1871. He was educated at Trinity College, Cambridge, where he took his B. A. degree in 1827 as fourth wrangler. He entered at Lincoln's Inn the same year, and prosecuted his legal studies until 1828, when he was elected Professor of Mathematics in the then newly-founded University of London, now University College. He resigned in 1831, but returned to it in 1836, on the death of his successor, and retained his position until 1866. More, perhaps, than any man of the present generation, Prof. De Morgan deserved the title of a mathematical philosopher. He was not only profoundly versed in all departments of mathematical science, but was thoroughly familiar with the history and philosophy of the mathematical and physical sciences, and had so fully developed and reorganized the science of logic as to make it seem almost like a branch of algebra. He was a fellow of the Royal Astronomical Society, for thirty years on its council, and for eighteen years one of its secretaries. He was also a fellow of the Cambridge Philosophical Society. He had been for many years one of the most industrious and hard-working students in Great Britain, and was a very voluminous writer on the principles and history of mathematics, and on points connected with the profession of an actuary, which he had practised for many years, although not attached to any office, and has published works on arithmetic, algebra, trigonometry, double algebra, the differential calculus, the calculus of functions, the theory of probabilities, life contingencies, the gnomonic projection, the use of the globes, formal logic, arithmetical books (bibliographical), and a book called the "Book of Almanacs," by which the whole almanac of any year, past, present, or future, in either style, may be turned to at once. He wrote the articles on mathematics and some on astronomy in the *Penny Cyclopædia*, and many biographies in that work, his contributions to it constituting about one-sixth of the

twenty-seven volumes of that work; he also wrote many biographies for the "Gallery of Portraits," and in the uncompleted Biographical Dictionary of the Useful Knowledge Society, with lives of Newton and Halley in "Knight's British Worthies;" a series of articles in the "Companion to the Almanac," 1833-'57; many memoirs and papers in the Transactions of the Cambridge Philosophical Society, the *Philosophical Magazine*, the *Cambridge and Dublin Journal*, *Notes and Queries*, etc. He also contributed to the publications of the Society for the Diffusion of Useful Knowledge, of the committee of which he was a member. He had for many years written in favor of the system of decimal coinage, which was recommended by a committee of the House of Commons, and, beginning with 1846, advocated large extensions of logic, and propounded a system, of which the most condensed view is to be found in his "Syllabus," published in 1860. A somewhat angry controversy sprang up on this subject between Prof. De Morgan and Sir William Hamilton and his followers, which continued for many years, hinging principally on the question of *logical quantity*.

DENIO, HIRAM, LL. D., an American jurist, born at Rome, N. Y., May 21, 1799; died in Utica, N. Y., November 5, 1871. His early academical education was very thorough, and before he had completed his seventeenth year he entered upon the study of law, first with Judge Hathaway at Rome, and afterward with Messrs. Storrs & White, eminent lawyers of Whitesboro. He was admitted to the bar in 1821, and entered into partnership with Mr. W. Barnes, then practising in Rome. In 1825 he was appointed, by the Court of General Sessions, District Attorney, and held that office nine years. In the mean time, in July, 1826, he became a resident of Utica, and a partner with his life-long friend, E. A. Wetmore, Esq., in the law firm of Wetmore & Denio. Mr. Denio was appointed, in 1834, a Circuit Judge for the Fifth Circuit, and then began the judicial career in which he won eminence, serving about four years. About 1836 Judge Denio entered into partnership with the Hon. Ward Hunt. In June, 1853, he was appointed to fill a vacancy on the bench of the Court of Appeals, and twice afterward was elected to the same position, closing his career in 1866. He held other honorable positions, such as Bank Commissioner and Clerk of the Supreme Court, and was from 1835 a useful and efficient trustee of Hamilton College. In politics Judge Denio was a Democrat, but he was still more a patriot. He favored the Union cause during the war, voted for Lincoln for President, and supported the war measures of the Government. His legal fame will rest upon the services which he rendered as Judge of the Court of Appeals. His decision on the Metropolitan Police Law offended extreme Democrats at the time, but it illus-

trated his independent and non-partisan character, and the party was compelled to recognize his fairness and his integrity by a renomination. Judge Denio was regarded by his associates and the most eminent members of the bar as one of the ablest jurists that had ever sat on the bench of the Court of Appeals. He received the honorary degree of A. M. from Union College in 1829, and that of LL. D. from Hamilton College a few years since.

DENMARK, a kingdom in Europe. King, Christian IX., born April 8, 1808; succeeded King Frederick VII., November 15, 1863. Heir, Prince Frederick, born June 3, 1843; married to Princess Louisa of Sweden, July 28, 1869; oldest son born at Copenhagen, September 27, 1870. A new Cabinet was appointed May 28, 1870, composed of the following members: Count Holstein-Holsteinborg, President of the Council; Rosenørnlehn, Foreign Affairs; Haffner, War and Marine, *ad interim*; Fonnesbech, Interior; Krieger, Justice; Fenger, Finance; Hall, Public Worship. Area of Denmark Proper, 14,698 English square miles; of the dependencies, Faroe, Iceland, Danish settlements in Greenland, the islands of St. Croix, St. Thomas, and St. John, in the West Indies, 40,214 square miles. Minister of the United States in Denmark, M. J. Cramer (November, 1870). Minister of Denmark in the United States, F. E. de Bille, appointed in 1867. According to the official census of February 1, 1870, the population of Denmark was as follows:

Zealand, Möen, Samsøe.....	637,711
Fühnen, Langeland, Arroe.....	236,311
Lolland, Falster.....	90,706
Bornholm.....	31,894
Fätland.....	788,119

Total..... 1,784,741

The population of the Danish dependencies was, in 1860, 124,020. The Faroe Island in 1870 had 9,992 inhabitants; Copenhagen on February 1, 1870, had 181,291 inhabitants.

The religious statistics of the kingdom in 1870 were as follows: Lutherans, 1,770,759; Reformed, 1,430; Catholics, 1,585; Baptists, 3,157; other Protestant sects, 791; Mormons, 2,069; Jews 4,400.

In the budget for the year 1871-'72, the revenue is estimated at 20,954,063 rix-dollars; the expenditures at 20,568,526. The public debt, on March 31, 1869, amounted to 116,370,350 rix-dollars. The army, in 1869, was composed as follows:

	First Call (Line and Reserve).		Second Call.	
	Officers.	Men.	Officers.	Men.
Infantry.....	730	26,750	287	12,127
Cavalry.....	126	2,122
Artillery.....	139	6,523	37	2,291
Engineers....	36	590	22	740
Total...	1,031	35,975	346	15,258

On a war-footing the total army numbered 52,656.

The fleet, in 1870, consisted of 32 steamers,

inclusive of 7 iron-clads, with an aggregate of 813 guns, 2 sailing-vessels, 8 gunboats, and 21 transports.

The imports in the year 1869-'70 amounted to 18,280,000 hundred-weight; the exports, to 8,220,000 hundred-weight.

The emigration from Copenhagen has been developed only during the last few years. In 1869 it amounted to 12,141 persons (against 5,600 in the year 1868); among the former, 4,360 emigrants were Danes, while 6,514 were Swedes, etc. In 1870 the number of emigrants was 7,844, of whom 3,525 were Danes. The emigrants, with few exceptions, were bound for the United States.

The movement of shipping from 1868 to 1870 was as follows:

YEAR.	INLAND COURSE.		OUTWARD COURSE.	
	Vessels.	Tons Foreign Vessels.	Vessels.	Tons.
1868-1869.....	43,175	602,424	40,292	1,080,962
1869-1870.....	43,026	622,374	36,113	1,023,178

The merchant navy, exclusive of vessels of less than four tons:

	Vessels.	Tons.
1868.....	2,770	174,348
1869.....	2,842	175,304
1870.....	2,808	178,646

The railroads in operation in 1870 numbered 415.7 miles. The length of the telegraph-lines in 1869 amounted to 1,214.86 miles, while the length of the wires was 3,268.3 miles. Number of telegraph-offices, 89; number of internal telegrams, 186,979; foreign telegrams, 160,697; telegrams passing through the country, 61,491: in all, 409,167.

A great change has commenced in the sentiments entertained by the Danish people with regard to Germany. Hitherto all political parties have favored a close alliance with France against Germany, for the purpose of recovering the northern (Danish) part of Schleswig. In 1871 several remarkable pamphlets were published, earnestly advocating the abandonment of this policy, and even advising the Danish people to seek an alliance with Germany. The pamphlet which attracted the greatest attention was one written by J. H. Bagger, a procurator of the Supreme Court ("Zeitbetrachtungen über Dänemark und Deutschland," Bremen, 1871). The author says: "It is evident that in future Denmark must look for its support to no other place than Berlin. I know this harsh word will offend the sensibilities of many thousands of my fellow-citizens, but this shall not hinder me openly to declare what I believe to be right and true." He undertakes to prove two points: 1. That the traditional alliance with France has never been for Denmark a blessing, but always a calamity, and that no other result can be expected from any future combination, however favorable. 2. That whatever Denmark in future may hope for or aim at, can be attained only by continuing on good terms with the powerful German Empire, and ad-

hering to the modesty which does not plan or undertake any thing for which her resources are not sufficient. "Whosoever," he continues, "will learn from history, ought to know that the Danes belong to the same race as the Germans, namely, the Gotho-Germanic. The relationship may every day be traced in language, customs, natural disposition, and has never failed to show itself in past centuries, especially in the circumstance that Denmark, and through her the North in general, has derived the main portion of its civilization from Germany." In view of the power of Germany, the author advises the Government to reduce its military and naval budget, as, from the heavy annual expenses which are now made every year for the army and the navy, no result can be expected except the bankruptcy of the state. Honest peace and friendship with the German Empire must henceforth be the guiding principle of the foreign policy of Denmark. Not to be effaced from the map of Europe must be the chief aim of the Danish people, and, to accomplish this, the Danes would do well to be contented if they are permitted to live in peaceful retirement.

The Danish branch of the International Society was fully organized in 1871. It then numbered about 1,500 members. Its chief organ, *Socialisten*, had about 3,000 subscribers.*

DIAMONDS. Prof. von Jeremejew, of St. Petersburg, announces the discovery of diamonds in great abundance, but of microscopic dimensions, in xanthophyllite, a rock occurring exclusively in the Schischimskian Mountains, in the Urals. For a long time he had made foliated minerals a special object of study, and on directing his attention to xanthophyllite he found that it enclosed crystals which in form, by brilliancy of color, and marked convexity of crystal faces, reminded him of the diamond. On being burnt in oxygen, it was rendered certain that free carbon was present in the mineral. Every precaution was taken to remove carbonates, carbonic acid, or hydrocarbons, that might possibly be associated with it. The diamonds are very irregularly distributed through the rock; at one spot being in large numbers, at another wholly wanting, the color of the mineral forming a good test of the relative quantity. Xanthophyllite is most generally yellow, but sometimes colorless, brown, gray, or green. It is in the green variety that the most diamonds occur, and especially when the mineral is found in contact with the steatite or talcose slate. Both the latter likewise enclose microscopic diamonds, but less distinct and numerous than those in the xanthophyllite. When these diamonds are magnified 30 diameters, they are readily recognizable, and with 200 diameters their crystalline form is seen to be that of the hexatetrahedron, combined with the tetrahedron, the faces of the first form

* See INTERNATIONAL SOCIETY.

being distinctly convex, those of the latter flat. Most of the crystals are colorless and quite transparent; some have a pale-brown tint. They are symmetrically disposed in the matrix.

Three analyses by Meitzendorff indicate the following as the composition of the mineral: Silica, 16.30; alumina, 43.95; iron oxide, 2.81; magnesia, 19.31; lime, 13.26; soda, 0.61; water, 4.33; total, 100.57. Some of the numbers are those of the American mineral, din-tonite.

"As long as the diamond was only found in alluvial deposits, in land associated with metals and minerals of various kinds, the most varied theories have been held regarding the mode of its formation. Since, however, it has been met with in the Brazilian itacolumite, the scientific views as to its origin have been confined within much narrower limits. The explanation, however, which has gained acceptance is that ascribing its production to the Neptunian process by the slow decomposition of hydrocarbons. The presence of the diamond in xanthophyllite, lying in beds of talcose slate and steatite, fully supports the earlier expressed opinion that the gem was of aqueous origin. Though we as yet know nothing of the means whereby free carbon has been converted into crystallized diamond, we cannot avoid regarding the water and carbonic acid, occupying cavities in xanthophyllite, talc, and other minerals, as taking an important part in the last stage of that mysterious process to which this beautiful gem owes its origin."

Diamond-hunting continued to be prosecuted with great success in South Africa during the year. Several fine gems, ranging from 60 to 100 carats (uncut), were reported to have been found. A large number of the South African diamonds which had arrived in London were of an inferior description, compared to the Indian or the Brazilian gems. Full returns of the diamond production of South Africa for 1871 are delayed; but the figures of shipments for the previous two years are as follows: Shipped in 1869, 141 diamonds, valued at £7,405; in 1870, 5,661 diamonds, valued at £124,910, to which must be added the "Star of South Africa" and others sent to Europe by private hands, and worth (estimated) about £15,000. Toward the close of 1871 the most extravagant reports came from the diamond-fields—among others, that two gems, weighing 1,000 carats each, had been found.

DIMICK, Brevet Brigadier-General JUSTIN, colonel First Artillery, U. S. A., born in Hartford County, Conn., in 1800; died in Washington, D. C., October 13, 1871. He received his military education at West Point, where he graduated in 1819, and was immediately appointed second-lieutenant of light artillery. In 1824 he was promoted first-lieutenant, and in 1834 received the brevet of captain for

faithful service ten years in one grade. In 1835 he was promoted to the rank of captain, and in 1836 was brevetted major for gallant and meritorious conduct in the war against the Florida Indians. He was engaged in the suppression of the Canada-border disturbances at Rouse's Point, New York, in 1838-'39. In 1845 he was ordered to Texas as lieutenant-colonel, Artillery Battalion of the "Army of Occupation." During the war with Mexico he was engaged in the battles of Palo Alto, Resaca de la Palma, Contreras, Churubusco, and Chapultepec, where he was wounded. He was in the skirmish at La Hoya, in the assault and capture of the city of Mexico; and afterward was given the command of Vera Cruz. For gallant and meritorious conduct in these actions, he was brevetted lieutenant-colonel, August 20, 1847, and colonel, September 13, 1847. He served in the Florida hostilities of 1849-'50. April 1, 1850, he was promoted major. In 1854-'55 he was a member of the board on the armament of fortifications. October 5, 1857, he was made lieutenant-colonel of the Second Artillery. In 1859 he was ordered to the Western frontier, and the same year was placed in command of the Artillery School for Practice, at Fortress Monroe. October 26, 1861, he was appointed colonel of the First Artillery. From 1861-'64 he was in command of the depot of prisoners of war at Fort Warren, Massachusetts. In 1864 he was appointed governor of the Soldiers' Home, near Washington, D. C., where he remained until 1868. He was honorably retired from active service, August 1, 1863, being over "the age of sixty-two years." May 13, 1865, he was brevetted brigadier-general for long, gallant, and faithful service to his country.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. GREAT BRITAIN.—The most important portion of the diplomatic correspondence of 1871, on the part of the United States, embraces the correspondence and relations with Great Britain. As early as January 26th, Sir Edward Thornton, the British minister at Washington, under instructions from his Government, writes to Secretary Fish, proposing a joint commission, as follows:

Her Majesty's Government deem it of importance to the good relations which they are ever anxious should subsist and be strengthened between the United States and Great Britain that a friendly and complete understanding should be come to between the two Governments as to the extent of the rights which belong to the citizens of the United States and her Majesty's subjects, respectively, with reference to the fisheries on the coasts of her Majesty's possessions in North America, and as to any other questions between them which affect the relations of the United States toward those possessions.

As the consideration of these matters would, however, involve investigations of a somewhat complicated nature, and as it is very desirable that they should be thoroughly examined, I am directed by Lord Granville to propose to the Government of the United States the appointment of a joint high commission, which shall be composed of members to be named by each Government, shall hold its sessions

at Washington, and shall treat of and discuss the mode of settling the different questions which have arisen out of the fisheries, as well as those which affect the relations of the United States toward her Majesty's possessions in North America.

I am confident that this proposal will be met by your Government in the same cordial spirit of friendship which has induced her Majesty's Government to tender it, and I cannot doubt that in that case the result will not fail to contribute to the maintenance of the good relations between the two countries, which I am convinced the Government of the United States, as well as that of her Majesty, equally have at heart.

On the 30th the Secretary replies by a reference to the preceding note, and says :

I have laid your note before the President, who instructs me to say that he shares with her Majesty's Government the appreciation of the importance of a friendly and complete understanding between the two Governments with reference to the subjects specially suggested for the consideration of the proposed joint high commission, and he fully recognizes the friendly spirit which has prompted the proposal.

The President is, however, of the opinion that, without the adjustment of a class of questions not alluded to in your note, the proposed high commission would fail to establish the permanent relations and the sincere, substantial, and lasting friendship between the two Governments which, in common with her Majesty's Government, he desires should prevail.

He thinks that the removal of the differences which arose during the rebellion in the United States, and which have existed since then, growing out of the acts committed by the several vessels which have given rise to the claims generally known as the "Alabama claims," will also be essential to the restoration of cordial and amicable relations between the two Governments.

He directs me to say that, should her Majesty's Government accept this view of this matter, and assent that this subject also may be treated of by the proposed high commission, and may thus be put in the way of a final and amicable settlement, this Government will, with much pleasure, appoint high commissioners on the part of the United States, to meet those who may be appointed on behalf of her Majesty's Government, and will spare no efforts to secure, at the earliest practicable moment, a just and amicable arrangement of all the questions which now unfortunately stand in the way of an entire and abiding friendship between the two nations.

On the 1st of February Mr. Thornton sent an approval of the suggestions of the President through Secretary Fish, to include the "Alabama claims" among the subjects to be considered; thus:

With reference to that part of your note in which you state that the President thinks that the removal of the differences which arose during the rebellion in the United States, and which have existed since then, growing out of the acts committed by the several vessels, which have given rise to the claims generally known as the "Alabama claims," will also be essential to the restoration of cordial and amicable relations between the two Governments, I have the honor to inform you that I have submitted to Earl Granville the opinion thus expressed by the President of the United States, the friendliness of which, I beg you to believe, I fully appreciate.

I am now authorized by his lordship to state that it would give her Majesty's Government great satisfaction if the claims commonly known by the name of the "Alabama claims" were submitted to the consideration of the same high commission by which her Majesty's Government have proposed that the questions relating to the British possessions in North

America should be discussed; provided that all other claims, both of British subjects and citizens of the United States, arising out of acts committed during the recent civil war in this country, are similarly referred to the same commission. The expressions made use of in the name of the President in your above-mentioned note, with regard to the "Alabama claims," convince me that the Government of the United States will consider it of importance that these causes of dispute between the two countries should also at the same time be done away with, and that you will enable me to convey to my Government the assent of the President to the addition which they thus propose to the duties of the high commission, and which cannot fail to make it more certain that its labors will lead to the removal of all differences between the two countries.

The reply of the Secretary, dated February 3d, was as follows :

I have laid your note before the President, and he has directed me to express the satisfaction with which he has received the intelligence that Earl Granville has authorized you to state that her Majesty's Government has accepted the views of this Government as to the disposition to be made of the so-called "Alabama claims."

He also directs me to say, with reference to the remainder of your note, that if there be other and further claims of British subjects or of American citizens growing out of acts committed during the recent civil war in this country, he assents to the propriety of their reference to the same high commission; but he suggests that the high commissioners shall consider only such claims of this description as may be presented by the Governments of the respective claimants at an early day, to be agreed upon by the commissioners.

On February 9th President Grant sent a message to the Senate, in which were nominated the following gentlemen as the commissioners on the part of the United States, viz.; Hon. Hamilton Fish, Secretary of State; Hon. Samuel Nelson, Associate Justice of the United States Supreme Court; Hon. Robt. C. Schenck, Minister to England; Hon. E. Rockwood Hoar, late Attorney-General of the United States; and Hon. George H. Williams, United States Senator from Oregon.

On the part of Great Britain and Ireland Queen Victoria appointed the members of the commission, and designated them as follows: George Frederick Samuel, Earl de Grey and Earl of Ripon, Viscount Goderich, Baron Grantham, a baronet, a peer of our United Kingdom, President of our Most Honorable Privy Council, Knight of our Most Noble Order of the Garter, etc., etc.; our right-trusty and well-beloved councillor, Sir Stafford Henry Northcote, Baronet, a member of Parliament, Companion of our Most Honorable Order of the Bath, etc., etc.; our trusty and well-beloved Sir Edward Thornton, Knight Commander of our Most Honorable Order of the Bath, our Envoy Extraordinary and Minister Plenipotentiary to our good friends the United States of America; our trusty and well-beloved Sir John Alexander Macdonald, Knight Commander of our Most Honorable Order of the Bath, a member of our Privy Council for Canada and Minister of Justice and Attorney-General of our Dominion

of Canada; and our trusty and well-beloved Montague Bernard, Esquire, Chichele Professor of International Law in the University of Oxford.

To each one of the commissioners on the part of the United States the following letter of instructions was addressed by the writer as Secretary of State:

DEPARTMENT OF STATE, }
WASHINGTON, February 22, 1871. }

SIR: Your high character and experience in public affairs, and the familiarity which your long service under the Federal Government has given you of the questions to be discussed and treated by the Joint Commission, of which you have been appointed a member, seem to render unnecessary any instructions upon the questions that will come under the consideration of that body. Another consideration, more personal to the undersigned, forbids an attempt on his part to give instructions to his associates on the commission. You will receive herewith a confidential memorandum, embodying a reference to correspondence of this Department, and to the history of several of the questions which may be discussed by the Commission, viz:

1. The fisheries.
2. The navigation of the St. Lawrence.
3. Reciprocal trade between the United States and the Dominion of Canada.
4. Northwest water-boundary and the island of San Juan.
5. The claims of the United States against Great Britain on account of acts committed by rebel cruisers.
6. Claims of British subjects against the United States for losses and injuries arising out of acts committed during the recent civil war in the United States.

It is hoped that this memorandum, which has been prepared in this Department, may aid you, by its references, in the consideration of the several questions on which it treats. The President commits the discussion and treatment of the several questions to the joint discretion of yourself and your associates. The sittings of the Commission being in this city, you will have the opportunity, of which he expects you to avail yourself, of consulting with him from time to time, and upon any points in which you may have serious doubts, and you can also cautiously and confidentially ascertain the views and opinions of Senators to whom, in case your negotiations shall result in a treaty or convention, that result must be submitted for their constitutional advice and consent.

One point not referred to in the accompanying memorandum will probably be brought to the consideration of the Joint Commission, viz., some agreement between the two Governments defining their respective rights and duties as neutrals in case the other Government be engaged in war with a third power. It is enough that the subject be indicated and your attention to it asked as one of the important questions that may engage the considerations of the Commission. The President hopes that whatever principles may be established or recognized in connection with this subject shall be considered equally applicable to the period covered by the late civil war in this country and the future.

I have the honor to be, sir, your obedient servant,
HAMILTON FISH.

The commissioners first assembled in Washington on February 27th, when their full powers were respectively produced, and found to be satisfactory, and copies thereof were exchanged.

It was proposed by the British commissioners that Mr. Fish, Secretary of State of the

United States, should preside. The United States commissioners stated that, although appreciating the proposal, they did not consider it necessary that a president should be named. The commissioners, on the suggestion of Mr. Fish, requested Lord Tenterden, secretary to the British Commission, and Mr. Bancroft Davis, Assistant-Secretary of State of the United States, acting as secretary to the United States Commission, to undertake the duties of joint protocolists. The commissioners then agreed that the subjects for discussion should be those mentioned in the above correspondence, dated in January and February, which had taken place between the two Governments.

On March 4th, the commissioners having met, the protocol of the conference held on the 27th of February was read and confirmed. At the commencement of the conference the United States commissioners called attention to the provision in the Constitution of the United States, by which the advice and consent of the Senate is required for the ratification of any treaty which may be signed under the authority of the President. The British commissioners stated that they were acquainted with this provision. The commissioners then proceeded with the consideration of the matters referred to them.

All the protocols, from the third to the thirty-fourth inclusive, are precisely the same, and read as follows:

The High Commissioners having met, the protocol of the conference held on the — of — was read and confirmed. The High Commissioners then proceeded with the consideration of the matters referred to them. The conference was adjourned to the — of —.

J. C. BANCROFT DAVIS,
TENTERDEN.

On May 3d, the commissioners having met, the American commissioners produced the following further full power, under the seal of the United States, authorizing them to conclude and sign a treaty:

Ulysses S. Grant, President of the United States of America, to all to whom these presents shall come, greeting:

Know ye that whereas, by my power, bearing date the 10th day of February last, Hamilton Fish, Secretary of State, Robert C. Schenck, envoy extraordinary and minister plenipotentiary to Great Britain, Samuel Nelson, an associate justice of the Supreme Court of the United States, Ebenezer R. Hoar, of Massachusetts, and George H. Williams, of Oregon, were authorized to meet the commissioners appointed, or to be appointed, on behalf of her Britannic Majesty, and with them to treat and discuss the mode of settlement of the different questions which should come before them;

And whereas that meeting and discussion have taken place, and the said mode of settlement has been agreed upon:

Now, therefore, I, Ulysses S. Grant, President of the United States, do hereby appoint the said Hamilton Fish, Robert C. Schenck, Samuel Nelson, Ebenezer R. Hoar, and George H. Williams, jointly and severally, plenipotentiaries for and in behalf of the United States, and do authorize them, and any or either of them, to conclude and sign any treaty or

treaties touching the premises, for the final ratification of the President of the United States, by and with the advice and consent of the Senate, if such advice and consent be given.

In witness whereof I have caused the seal of the United States to be hereunto affixed.

Given under my hand at the city of Washington, the second day of May, in the year of our [L. s.] Lord one thousand eight hundred and seventy-one, and of the Independence of the United States of America the ninety-fifth.

By the President: U. S. GRANT.
HAMILTON FISH, Secretary of State.

This full power was examined by the British commissioners, and found satisfactory.

The joint commissioners determined that they would embody in a protocol a statement containing an account of the negotiations upon the various subjects included in the treaty, and they instructed the joint protocolists to prepare such an account in the order in which the subjects are to stand in the treaty.

XXXVI. — *Protocol of Conference between the High Commissioners on the part of the United States of America and the High Commissioners on the part of Great Britain.*

WASHINGTON, May 4, 1871.

On May 4th, the commissioners having met, the statement prepared by the joint protocolists, in accordance with the request of the joint high commissioners at the last conference, was then read as follows:

ARTICLES I. TO XI.

At the conference held on the 8th of March the American commissioners stated that the people and Government of the United States felt that they had sustained a great wrong, and that great injuries and losses were inflicted upon their commerce and their material interests by the course and conduct of Great Britain during the recent rebellion in the United States; that what had occurred in Great Britain and her colonies during that period had given rise to feelings in the United States which the people of the United States did not desire to cherish toward Great Britain; that the history of the Alabama, and other cruisers, which had been fitted out, or armed, or equipped, or which had received augmentation of force in Great Britain, or in her colonies, and of the operations of those vessels, showed extensive direct losses in the capture and destruction of a large number of vessels, with their cargoes, and in the heavy national expenditures in the pursuit of the cruisers, and indirect injury in the transfer of a large part of the American commercial marine to the British flag, in the enhanced payments of insurance, in the prolongation of the war, and in the addition of a large sum to the cost of the war and the suppression of the rebellion, and also showed that Great Britain, by reason of failure in the proper observance of her duties as a neutral, had become justly liable for the acts of those cruisers and of their tenders; that the claims for the loss and destruction of private property which had thus far been presented amounted to about fourteen

millions of dollars, without interest, which amount was liable to be greatly increased by claims which had not been presented; that the cost to which the Government had been put in the pursuit of cruisers could easily be ascertained by certificates of Government accounting officers; that, in the hope of an amicable settlement, no estimate was made of the indirect losses, without prejudice, however, to the right to indemnification on their account in the event of no such settlement being made.

The American commissioners further stated that they hoped that the British commissioners would be able to place upon record an expression of regret by her Majesty's Government for the depredations committed by the vessels whose acts were now under discussion. They also proposed that the Joint High Commission should agree upon a sum which should be paid by Great Britain to the United States in satisfaction of all the claims and the interest thereon.

The British commissioners replied that her Majesty's Government could not admit that Great Britain had failed to discharge toward the United States the duties imposed on her by the rules of international law, or that she was justly liable to make good to the United States the losses occasioned by the acts of the cruisers to which the American commissioners had referred. They reminded the American commissioners that several vessels, suspected of being designed to cruise against the United States, including two iron-clads, had been arrested or detained by the British Government, and that that Government had in some instances not confined itself to the discharge of international obligations, however widely construed, as, for instance, when it acquired, at a great cost to the country, the control of the Anglo-Chinese flotilla, which, it was apprehended, might be used against the United States.

They added that although Great Britain had, from the beginning, disavowed any responsibility for the acts of the Alabama, and the other vessels, she had already shown her willingness, for the sake of the maintenance of friendly relations with the United States, to adopt the principle of arbitration, provided that a fitting arbitrator could be found, and that an agreement could be come to as to the points to which arbitration should apply. They would, therefore, abstain from replying in detail to the statement of the American commissioners, in the hope that the necessity for entering upon a lengthened controversy might be obviated by the adoption of so fair a mode of settlement as that which they were instructed to propose; and they had now to repeat, on behalf of their Government, the offer of arbitration.

The American commissioners expressed their regret at this decision of the British commissioners, and said further that they could

not consent to submit the question of the liability of her Majesty's Government to arbitration unless the principles which should govern the arbitrator in the consideration of the facts could be first agreed upon.

The British commissioners replied that they had no authority to agree to a submission of these claims to an arbitrator with instructions as to the principles which should govern him in the consideration of them. They said that they should be willing to consider what principles should be adopted for observance in future; but that they were of opinion that the best mode of conducting an arbitration was to submit the facts to the arbitrator, and leave him free to decide upon them after hearing such arguments as might be necessary.

The American commissioners replied that they were willing to consider what principles should be laid down for observance in similar cases in future, with the understanding that any principles that should be agreed upon should be held to be applicable to the facts in respect to the Alabama claims.

The British commissioners replied that they could not admit that there had been any violation of existing principles of international law, and that their instructions did not authorize them to accede to a proposal for laying down rules for the guidance of the arbitrator; but that they would make known to their Government the views of the American commissioners on the subject.

At the respective conferences on March 9th, March 10th, March 13th, and March 14th, the Joint High Commission considered the form of the declaration of principles or rules which the American commissioners desired to see adopted for the instruction of the arbitrator, and laid down for observance by the two Governments in future.

At the close of the conference of the 14th of March the British commissioners reserved several questions for the consideration of their Government.

At the conference on the 5th of April the British commissioners stated that they were instructed by her Majesty's Government to declare that her Majesty's Government could not assent to the proposed rules as a statement of principles of international law which were in force at the time when the Alabama claims arose, but that her Majesty's Government, in order to evince its desire of strengthening the friendly relations between the two countries, and to make satisfactory provision for the future, agreed that, in deciding the questions between the two countries arising out of those claims, the arbitrator should assume that her Majesty's Government had undertaken to act upon the principles set forth in the rules which the American commissioners had proposed, viz.:

That a neutral government is bound, first, to use due diligence to prevent the fitting out, arming, or equipping, within its jurisdiction,

of any vessel which it has reasonable ground to believe is intended to cruise or carry on war against a power with which it is at peace; and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted, in whole or in part, within such jurisdiction, to warlike use.

Secondly. Not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms, or the recruitment of men.

Thirdly. To exercise due diligence in its own ports or waters, and, as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties.

It being a condition of this undertaking, that these obligations should in future be held to be binding internationally between the two countries.

It was also settled that, in deciding the matters submitted to him, the arbitrator should be governed by the foregoing rules, which had been agreed upon as rules to be taken as applicable to the case, and by such principles of international law, not inconsistent therewith, as the arbitrator should determine to have been applicable to the case.

The Joint High Commission then proceeded to consider the form of submission and the manner of constituting a tribunal of arbitration.

At the conferences on the 6th, 8th, 9th, 10th, and 12th of April, the Joint High Commission considered and discussed the form of submission, the manner of the award, and the mode of selecting the arbitrators.

The American commissioners, referring to the hope which they had expressed on the 8th of March, inquired whether the British commissioners were prepared to place upon record an expression of regret by her Majesty's Government for the depredations committed by the vessels whose acts were now under discussion; and the British commissioners replied that they were authorized to express, in a friendly spirit, the regret felt by her Majesty's Government for the escape, under whatever circumstances, of the Alabama and other vessels from British ports, and for the depredations committed by those vessels.

The American commissioners accepted this expression of regret as very satisfactory to them and as a token of kindness, and said that they felt sure it would be so received by the Government and people of the United States.

In the conference on the 13th of April the treaty articles I. to XI. were agreed to.

ARTICLES XII. TO XVII.

At the conference on the 4th of March it was agreed to consider the subjects referred to the Joint High Commission by the respective Governments in the order in which they ap-

peared in the correspondence between Sir Edward Thornton and Mr. Fish, and to defer the consideration of the adjustment of "all other claims, both of British subjects and citizens of the United States, arising out of acts committed during the recent civil war in this country," as described by Sir Edward Thornton in his letter of February 1st, until the subjects referred to in the previous letters should have been disposed of.

The American commissioners said that they supposed that they were right in their opinion that British laws prohibit British subjects from owning slaves; they therefore inquired whether any claim for slaves, or for alleged property or interest in slaves, can or will be presented by the British Government, or in behalf of any British subject, under the treaty now being negotiated, if there be in the treaty no express words excluding such claims.

The British commissioners replied that by the law of England British subjects had long been prohibited from purchasing or dealing in slaves, not only within the dominions of the British crown but in any foreign country; and that they had no hesitation in saying that no claim on behalf of any British subject, for slaves or for any property or interest in slaves, would be presented by the British Government.

Referring to the paragraph in Sir Edward Thornton's letter of January 26th, relating to "the mode of settling the different questions which have arisen out of the fisheries, as well as all those which affect the relations of the United States toward her Majesty's possessions in North America," the British commissioners proposed that the Joint High Commission should consider the claims for injuries which the people of Canada had suffered from what were known as the Fenian raids.

The American commissioners objected to this, and it was agreed that the subject might be brought up again by the British commissioners in connection with the subjects referred to by Sir Edward Thornton in his letter of February 1st.

At the conference on the 14th of April, the Joint High Commission took into consideration the subjects mentioned by Sir Edward Thornton in that letter.

The British commissioners proposed that a commission for the consideration of these claims should be appointed, and that the convention of 1853 should be followed as a precedent. This was agreed to, except that it was settled that there should be a third commissioner instead of an umpire.

At the conference on the 15th of April, the treaty articles XII. to XVII. were agreed to.

At the conference on the 26th of April, the British commissioners again brought before the Joint High Commission the claims of the people of Canada for injuries suffered from the Fenian raids. They said that they were instructed to present these claims, and to state that they were regarded by her Majesty's Gov-

ernment as coming within the class of subjects indicated by Sir Edward Thornton, in his letter of January 26th, as subjects for the consideration of the Joint High Commission.

The American commissioners replied that they were instructed to say that the Government of the United States did not regard these claims as coming within the class of subjects indicated in that letter as subjects for the consideration of the Joint High Commission, and that they were without any authority from their Government to consider them. They therefore declined to do so.

The British commissioners stated that, as the subject was understood not to be within the scope of the instructions of the American commissioners, they must refer to their Government for further instructions upon it.

At the conference on the 3d of May, the British commissioners stated that they were instructed by their Government to express their regret that the American commissioners were without authority to deal with the question of the Fenian raids, and they inquired whether that was still the case.

The American commissioners replied that they could see no reason to vary the reply formerly given to this proposal; that in their view the subject was not embraced in the scope of the correspondence between Sir Edward Thornton and Mr. Fish under either of the letters of the former; and that they did not feel justified in entering upon the consideration of any class of claims not contemplated at the time of the creation of the present commission, and that the claims now referred to did not commend themselves to their favor.

The British high commissioners said that under these circumstances they would not urge further that the settlement of these claims should be included in the present treaty, and that they had the less difficulty in doing so, as a portion of the claims were of a constructive and inferential character.

ARTICLES XVIII. TO XXV.

At the conference on the 6th of March, the British commissioners stated that they were prepared to discuss the question of the fisheries, either in detail or generally, so as either to enter into an examination of the respective rights of the two countries under the Treaty of 1818 and the general law of nations, or to approach at once the settlement of the question on a comprehensive basis.

The American commissioners said that with the view of avoiding the discussion of matters which subsequent negotiation might render it unnecessary to enter into, they thought it would be preferable to adopt the latter course, and inquired what, in that case, would be the basis which the British commissioners desired to propose.

The British commissioners replied that they considered that the reciprocity treaty of June 5, 1854, should be restored in principle.

The American commissioners declined to assent to a renewal of the former reciprocity treaty.

The British commissioners then suggested that, if any considerable modification were made in the tariff arrangements of that treaty, the coasting-trade of the United States and of her Britannic Majesty's possessions in North America should be reciprocally thrown open, and that the navigation of the river St. Lawrence and of the Canadian canals should be also thrown open to the citizens of the United States on terms of equality with British subjects.

The American commissioners declined this proposal, and objected to a negotiation on the basis of the reciprocity treaty. They said that that treaty had proved unsatisfactory to the people of the United States, and consequently had been terminated by notice from the Government of the United States, in pursuance of its provisions. Its renewal was not in their interest, and would not be in accordance with the sentiments of their people. They further said that they were not at liberty to treat of the opening of the coasting-trade of the United States to the subjects of her Majesty residing in her possessions in North America. It was agreed that the questions relating to the navigation of the river St. Lawrence, and of the Canadian canals, and to other commercial questions affecting Canada, should be treated by themselves.

The subject of the fisheries was further discussed at the conferences on the 7th, 20th, 22d, and 25th of March. The American commissioners stated that, if the value of the inshore fisheries could be ascertained, the United States might prefer to purchase, for a sum of money, the right to enjoy, in perpetuity, the use of these inshore fisheries in common with British fishermen, and mentioned one million dollars as the sum they were prepared to offer. The British commissioners replied that this offer was, they thought, wholly inadequate, and that no arrangement would be acceptable of which the admission into the United States, free of duty, of fish, the produce of the British fisheries, did not form a part, adding that any arrangement for the acquisition by purchase of the inshore fisheries, in perpetuity, was open to grave objection.

The American commissioners inquired if it would be necessary to refer any arrangement for purchase to the colonial or provincial Parliaments.

The British commissioners explained that the fisheries within the limits of maritime jurisdiction were the property of the several British colonies, and that it would be necessary to refer any arrangement, which might affect colonial property or rights, to the colonial or provincial Parliaments; and that legislation would also be required on the part of the Imperial Parliament. During these discussions the British commissioners contended

that these inshore fisheries were of great value, and that the most satisfactory arrangement for their use would be a reciprocal tariff arrangement, and reciprocity in the coasting-trade; and the American commissioners replied that their value was overestimated; that the United States desired to secure their enjoyment, not for their commercial or intrinsic value, but for the purpose of removing a source of irritation; and that they could hold out no hope that the Congress of the United States would give its assent to such a tariff arrangement as was proposed, or to any extended plan of reciprocal free admission of the products of the two countries; but that, inasmuch as one branch of Congress had recently, more than once, expressed itself in favor of the abolition of duties on coal and salt, they would propose that coal, salt, and fish, be reciprocally admitted free; and that, inasmuch as Congress had removed the duty from a portion of the lumber heretofore subject to duty, and as the tendency of legislation in the United States was toward the reduction of taxation and of duties in proportion to the reduction of the public debt and expenses, they would further propose that lumber be admitted free from duty from and after the first of July, 1874, subject to the approval of Congress, which was necessary on all questions affecting import duties.

The British commissioners, at the conference on the 17th of April, stated that they had referred this offer to their Government, and were instructed to inform the American commissioners that it was regarded as inadequate, and that her Majesty's Government considered that free lumber should be granted at once, and that the proposed tariff concessions should be supplemented by a money payment.

The American commissioners then stated that they withdrew the proposal which they had previously made of the reciprocal free admission of coal, salt, and fish, and of lumber after July 1, 1874; that that proposal had been made entirely in the interest of a peaceful settlement, and for the purpose of removing a source of irritation and of anxiety; that its value had been beyond the commercial or intrinsic value of the rights to have been acquired in return; and that they could not consent to an arrangement on the basis now proposed by the British commissioners; and they renewed their proposal to pay a money equivalent for the use of the inshore fisheries. They further proposed that, in case the two Governments should not be able to agree upon the sum to be paid as such an equivalent, the matter should be referred to an impartial commission for determination.

The British commissioners replied that this proposal was one on which they had no instructions, and that it would not be possible for them to come to any arrangement except one for a term of years and involving the concession of free fish and fish-oil by the Ameri-

can commissioners, but that, if free fish and fish-oil were conceded, they would inquire of their Government whether they were prepared to assent to a reference to arbitration as to money payment.

The American commissioners replied that they were willing, subject to the action of Congress, to concede free fish and fish-oil as an equivalent for the use of the inshore fisheries, and to make the arrangement for a term of years; that they were of opinion that free fish and fish-oil would be more than an equivalent for those fisheries, but that they were also willing to agree to a reference to determine that question and the amount of any money payment that might be found necessary to complete an equivalent, it being understood that legislation would be needed before any payment could be made.

The subject was further discussed in the conferences of April 18th and 19th, and, the British commissioners having referred the last proposal to their Government and received instructions to accept it, the treaty articles XVIII. to XXV. were agreed to at the conference on the 22d of April.

ARTICLES XXVII. TO XXXIII.

At the conference on the 6th of March the British commissioners proposed that the reciprocity treaty of June 5, 1854, should be restored in principle, and that, if any considerable modifications in the tariff arrangements in force under it were made, the coasting-trade of the United States and of her Britannic Majesty's possessions in North America should be reciprocally thrown open, and that the navigation of the river St. Lawrence and of the Canadian canals should be thrown open to the citizens of the United States on terms of equality with British subjects.

The American commissioners declined this proposal, and in the subsequent negotiations the question of the fisheries was treated by itself.

At the conference on the 17th of March the Joint High Commission considered the subject of the American improvement of the navigation of the St. Clair Flats.

At the conference on the 18th of March the questions of the navigation of the river St. Lawrence and the canals and the other subjects connected therewith were taken up.

The American commissioners proposed to take into consideration the question of transit of goods in bond through Canada and the United States, which was agreed to.

The British commissioners proposed to take into consideration the question of opening the coasting-trade of the lakes reciprocally to each party, which was declined.

On the proposal of the British commissioners, it was agreed to take the question of transshipment into consideration.

The British commissioners proposed to take into consideration the reciprocal registration

of vessels, as between the Dominion of Canada and the United States, which was declined.

At the conference on the 23d of March the transshipment question was discussed and postponed for further information, on the motion of the American commissioners.

The transit question was discussed, and it was agreed that any settlement that might be made should include a reciprocal arrangement in that respect for the period for which the fishery articles should be in force.

The question of the navigation of the river St. Lawrence and the canals was taken up.

The British commissioners stated that they regarded the concession of the navigation of Lake Michigan as an equivalent for the concession of the navigation of the river St. Lawrence.

As to the canals, they stated that the concession of the privilege to navigate them in their present condition, on terms of equality with British subjects, was a much greater concession than the corresponding use of the canals offered by the United States.

They further said that the enlargement of the canals would involve the expenditure of a large amount of money, and they asked what equivalent the American commissioners proposed to give for the surrender of the right to control the tolls for the use of the canals, either in their present state or after enlargement.

The American commissioners replied that, unless the Welland Canal should be enlarged so as to accommodate the present course of trade, they should not be disposed to make any concessions; that in their opinion the citizens of the United States could now justly claim to navigate the river St. Lawrence in its natural state, ascending and descending, from the forty-fifth parallel of north latitude, where it ceases to form the boundary between the two countries, from, to, and into the sea; and they could not concede that the navigation of Lake Michigan should be given or taken as an equivalent for that right; and they thought that the concession of the navigation of Lake Michigan and of the canals offered by them was more than an equivalent for the concessions as to the Canadian canals which were asked. They proposed, in connection with a reciprocal arrangement as to transit and transshipment, that Canada should agree to enlarge the Welland and St. Lawrence Canals, to make no discriminating tolls, and to limit the tolls to rates sufficient to maintain the canals, pay a reasonable interest on the cost of construction and enlargement, and raise a sinking fund for the repaying within a reasonable time the cost of enlargement; and that the navigation of the river St. Lawrence, the Canadian canals, the canals offered by the United States, and Lake Michigan, should be enjoyed reciprocally by citizens of the United States and by British subjects. This proposal was declined by the British commissioners, who repeated that they did not regard the equivalent offered by the

United States as at all commensurate with the concessions asked from Great Britain.

At the conference on the 27th of March the proposed enlargement of the Canadian canals was further discussed. It was stated on the part of the British commissioners that the Canadian Government were now considering the expediency of enlarging the capacity of the canals on the river St. Lawrence, and had already provided for the enlargement of the Welland Canal, which would be undertaken without delay.

The subject of the export duty in New Brunswick on American lumber floated down the river St. John was proposed for consideration by the American commissioners.

At the conference on the 22d of April the British commissioners proposed that the navigation of Lake Michigan should be given in exchange for the navigation of the river St. Lawrence; and that her Majesty's Government should agree to urge upon the Dominion of Canada to give to the citizens of the United States the use of the Canadian canals on terms of equality with British subjects; and that the Government of the United States should agree to urge upon the several States to give to British subjects the use of the several State canals on terms of equality with citizens of the United States. They also proposed, as part of the arrangement, a reciprocal agreement as to transit and transshipment, and that the Government of Great Britain should urge upon New Brunswick not to impose export duties on the lumber floated down the river St. John for shipment to the United States.

The American commissioners repeated their views as to the navigation of the river St. Lawrence in its natural state.

The British commissioners replied that they could not admit the claims of American citizens to navigate the river St. Lawrence as of right; but that the British Government had no desire to exclude them from it. They, however, pointed out that there were certain rivers running through Alaska which should on like grounds be declared free and open to British subjects, in case the river St. Lawrence should be declared free.

The American commissioners replied that they were prepared to consider that question. They also assented to the arrangement as to the canals, which was proposed by the British commissioners, limiting it, as regarded American canals, to the canals connected with the navigation of the lakes or rivers traversed by or contiguous to the boundary-line between the British and American possessions. They likewise agreed to give the right of navigating Lake Michigan for a term of years. They desired, and it was agreed, that the transshipment arrangement should be made dependent upon the non-existence of discriminating tolls or regulations on the Canadian canals, and also upon the abolition of the New Brunswick export duty on American lumber intended for

the United States. It was also agreed that the right of carrying should be made dependent upon the non-imposition of export duties on either side on the goods of the other party passing in transit.

The discussion of these subjects was further continued at the conferences of the 24th, 25th, and 26th of April, and the treaty articles XXVI. to XXXIII. were agreed to at the conference on the 3d of May.

In the course of these discussions, the British commissioners called attention to the question of the survey of the boundary-line along the forty-ninth parallel, which still remained unexecuted from the Lake of the Woods to the Rocky Mountains, and to which reference had been made in the President's message.

The American commissioners stated that the survey was a matter for administrative action, and did not require to be dealt with by a treaty provision. The United States Government would be prepared to agree with the British Government for the appointment of a boundary-survey commission in the same manner as has been done in regard to the remainder of the boundary along the forty-ninth parallel, as soon as the legislative appropriations and other necessary arrangements could be made.

ARTICLES XXXIV. TO XLII.

At the conference on the 15th of March the British commissioners stated that it was proposed that day to take up the northwest water-boundary question; that the difference was one of long standing, which had more than once been the subject of negotiations between the two Governments, and that the negotiators had, in January, 1869, agreed upon a treaty. They then proposed that an arbitration of this question should be made upon the basis of the provisions of that treaty.

The American commissioners replied that, though no formal vote was actually taken upon it, it was well understood that that treaty had not been favorably regarded by the Senate. They declined the proposal of the British commissioners, and expressed their wish that an effort should be made to settle the question in the Joint High Commission.

The British commissioners assented to this, and presented the reasons which induced them to regard the Rosario Straits as the channel contemplated by the treaty of June 15, 1846.

The American commissioners replied, and presented the reasons which induced them to regard the Haro Channel as the channel contemplated by that treaty. They also produced, in support of their views, some original correspondence of Mr. Everett with his Government, which had not been alluded to in previous discussions of the question.

The British commissioners replied that they saw in that correspondence no reason to induce them to change the opinion which they had previously expressed. They then asked wheth-

er the American commissioners had any further proposal to make.

The American commissioners replied that, in view of the position taken by the British commissioners, it appeared that the treaty of June 15, 1846, might have been made under a mutual misunderstanding, and would not have been made had each party understood at that time the construction which the other party puts upon the language whose interpretation is in dispute; they therefore proposed to abrogate the whole of that part of the treaty, and rearrange the boundary-line which was in dispute before that treaty was concluded.

The British commissioners replied that the proposal to abrogate a treaty was one of a serious character, and that they had no instructions which would enable them to entertain it; and, at the conference on the 20th of March, the British commissioners declined the proposal.

At the conference on the 19th of April, the British commissioners proposed to the American commissioners to adopt the Middle Channel (generally known as the Douglas Channel) as the channel through which the boundary-line should be run, with the understanding that all the channels through the Archipelago should be free and common to both parties.

The American commissioners declined to entertain that proposal. They proposed that the Joint High Commission should recognize the Haro Channel as the channel intended by the treaty of June 15, 1846, with a mutual agreement that no fortifications should be erected by either party to obstruct or command it, and with proper provisions as to any existing proprietary rights of British subjects in the island of San Juan.

The British commissioners declined this proposal, and stated that, being convinced of the justice of their view of the treaty, they could not abandon it except after a fair decision by an impartial arbitrator. They, therefore, renewed their proposal for a reference to arbitration, and hoped that it would be seriously considered.

The American commissioners replied that they had hoped that their last proposal would be accepted. As it had been declined, they would, should the other questions between the two Governments be satisfactorily adjusted, agree to a reference to arbitration to determine whether the line should run through the Haro Channel, or through the Rosario Straits, upon the condition that either Government should have the right to include in the evidence to be considered by the arbitrator such documents, official correspondence, and other official or public statements, bearing on the subject of the reference, as they may consider necessary to the support of their respective cases. This condition was agreed to.

The British commissioners proposed that the arbitrator should have the right to draw the boundary through an intermediate chan-

nel. The American commissioners declined this proposal, stating that they desired a decision, not a compromise.

The British commissioners proposed that it should be declared to be the proper construction of the Treaty of 1846 that all the channels were to be open to navigation by both parties. The American commissioners stated that they did not so construe the Treaty of 1846, and, therefore could not assent to such a declaration.

The discussion of this subject was continued during this conference, and in the conference of the 22d of April the treaty articles XXXIV. to XLII. were agreed to.

The joint high commissioners approved this statement, and directed it to be entered on the protocol.

On May 6th, the high commissioners having met, Lord de Grey said that, as the Joint High Commission would not meet again after to-day, except for the purpose of signing the treaty, he desired on behalf of himself and his colleagues to express their high appreciation of the manner in which Mr. Fish and his American colleagues had, on their side, conducted the negotiations. It had been most gratifying to the British commissioners to be associated with colleagues who were animated with the same sincere desire as themselves to bring about a settlement, equally honorable and just to both countries, of the various questions of which it had been their duty to treat, and the British commissioners would always retain a grateful recollection of the fair and friendly spirit which the American commissioners had displayed.

Mr. Fish, in behalf of the American commissioners, said that they were gratefully sensible of the friendly words expressed by Lord de Grey, and of the kind spirit which had prompted them. From the date of the first conference the American commissioners had been impressed by the earnestness of desire manifested by the British commissioners to reach a settlement worthy of the two powers who had committed to this Joint High Commission the treatment of various questions of peculiar interest, complexity, and delicacy. His colleagues and he could never cease to appreciate the generous spirit and the open and friendly manner in which the British commissioners had met and discussed the several questions that had led to the conclusion of a treaty which, it was hoped, would receive the approval of the people of both countries, and would prove the foundation of a cordial and friendly understanding between them for all time to come.

Mr. Fish further said that he was sure every member of the Joint High Commission would desire to record his appreciation of the ability, the zeal, and the unceasing labor which the joint protocolists had exhibited in the discharge of their arduous and responsible duties, and that he knew that he only gave expression to the feelings of the commissioners in saying

that Lord Tenterden and Mr. Bancroft Davis were entitled to, and were requested to accept, the thanks of the Joint High Commission for their valuable services, and the great assistance which they had rendered with unvarying obligingness to the commission.

Lord de Grey replied, on behalf of the British commissioners, that he and his colleagues most cordially concurred in the proposal made by Mr. Fish that the thanks of the Joint High Commission should be tendered to Mr. Bancroft Davis and Lord Tenterden for their valuable services as joint protocolists. The British commissioners were also quite as sensible as their American colleagues of the great advantage which the commission had derived from the assistance which those gentlemen had given them in the conduct of the important negotiations in which they had been engaged.

Monday, the 8th of May, was appointed for the signatures of the treaty.

On May 25th, Secretary Fish writes to Mr. Schenck, the American minister at London, that, "the Senate having advised and consented thereto, the President has ratified the treaty between the United States and Great Britain for the settlement of pending questions between the two countries, signed at Washington on the 8th instant, and I now transmit to you by the hands of Mr. Bancroft C. Davis, of Massachusetts, the American ratification to be exchanged against that of her Britannic Majesty, with full power to enable you to effect that object."

On June 22d Mr. Schenck writes from London to Secretary Fish as follows:

I have the satisfaction to inform you that, having produced and exchanged powers from our respective Governments, the formal exchange of ratifications took place, as agreed between Lord Granville and myself, on Saturday, the 17th, at a quarter-past two o'clock, p.m., at the Foreign Office. I note the exact time and place as marking an interesting and momentous point in the history of the two countries and their Governments. Besides Lord Granville and myself, there were present and assisting, on our part, Mr. Moran, secretary of legation, and General Woodhull, assistant-secretary; and on the other side, Lord Tenterden and Mr. Bergne, of the Foreign Office. No particular ceremony was observed beyond the signing of the certificates of our action. There was, however, an interchange of hearty mutual congratulation that we had completed an act which has not only removed all present serious differences, but established, we hope, lasting peace and better understanding between the two countries.

Steps were immediately taken for the appointment of the arbitrators. The following is a copy of the joint note sent by the two Governments to the Emperor of Brazil, and *mutatis mutandis* to the King of Italy, and the President of the Swiss Confederation:

Differences having arisen between the Government of the United States and the Government of her Britannic Majesty, growing out of the acts committed by the several vessels which have given rise to the claims generally known as the "Alabama claims," the high contracting parties, in order to remove and adjust all complaints and claims on the part of the United States, and to provide for the

speedy settlement of such claims, have agreed, by the first article of the treaty signed at Washington on May 8, 1871, of which a copy is annexed, to refer all the said claims growing out of acts committed by the aforesaid vessels, and generally known as the "Alabama claims," to a tribunal of arbitration, to be composed of five arbitrators, to be appointed in the following manner, that is to say: One shall be named by the President of the United States; one shall be named by her Britannic Majesty; his Majesty the Emperor of Brazil shall be requested to name one; his Majesty the King of Italy shall be requested to name one; the President of the Swiss Confederation shall be requested to name one.

The high contracting parties, therefore, reposing entire confidence in the spirit of justice and impartiality which distinguishes his Majesty the Emperor of Brazil, the common friend of the two states, have agreed, in pursuance of the said treaty, to address themselves severally to his Majesty, and to request his Majesty to be pleased to appoint an arbitrator, to form, with the arbitrators to be named by the other powers above named, the tribunal of arbitration, to which reference agreed upon in the first article of the treaty shall be made.

The undersigned, envoy extraordinary and minister plenipotentiary of the United States, having received the orders of his Government to communicate to his Majesty the Emperor of Brazil the agreement thus made on the part of the United States, has been further charged to express the earnest wish of the President of the United States that his Majesty the Emperor will be willing to afford his good offices on the present occasion, and will be pleased to appoint an arbitrator to act in the premises.

The undersigned has the honor to request the [Minister of Foreign Affairs] to lay this communication before his Majesty, and to be pleased to make known to the undersigned his Majesty's determination with regard to the request therein set forth.

In August, Mr. Charles Francis Adams, of Massachusetts, was appointed arbitrator on behalf of the United States, with Mr. James S. Frazer, late of the Supreme Court of Indiana, as commissioner of claims. (For further proceedings, see GREAT BRITAIN.)

Charles Francis Adams is the only surviving son of John Quincy Adams, ex-President of the United States of America, and was born in Boston, August 18, 1807. While still an infant, he was taken by his father to St. Petersburg, where, with unusual precocity, he, prior to his sixth birthday, had acquired a practical knowledge of the Russian, German, and French languages. In the year 1815 (a period when the "Grand Tour" was a work of considerable danger and difficulty, from the disturbed state of Europe generally), he accompanied his father to Paris, and thence to England, where he became an inmate of one of its public schools. At that time the prejudice of the English against Americans and American institutions pervaded every section of English society, the popular feeling running so high as to amount almost to persecution of the few American citizens who visited its shores. This was more especially observable in the educational institutions, and young Adams found it necessary to vindicate the honor and reputation of his country by repeated pugilistic encounters, in which his patriotic feeling and physical prowess uniformly procured for him the victory. His father, who had for some time been engaged

on a special mission to the British court, as the representative of the United States, having accomplished the object for which he was sent, returned to America, accompanied by his son, in the year 1817, when he resumed his studies in the Latin college at Boston, and subsequently at Harvard University, where he graduated in 1825. His father was soon afterward elevated to the presidential chair, and Charles Francis removed to Washington, where he received his first lessons in diplomacy through the medium of an appointment on the executive staff. Eventually deciding upon the legal profession as his future scene of action, he entered the office of Daniel Webster, in New Hampshire, where he practised until he was admitted to the Boston bar in 1828, but he has never since been actively engaged as a member of the legal fraternity. In 1829 he became connected by marriage with one of the most influential families of the State, espousing the youngest daughter of Peter O. Brooks, an eminent merchant of Boston, thereby becoming a brother-in-law of Edward Everett. Shortly afterward he entered the Massachusetts Legislature as the representative of Boston, which position he held for upward of two years, and was subsequently transferred to the Senate. His rigid legal training and his practical knowledge of State affairs rapidly paved the way to still more honorable and responsible positions. Having conscientious objections to the policy of the Whig party (with whom he had hitherto been associated), he separated from them, and assumed an independent position in the political arena. His sincerity, active usefulness, and keen intelligence had, however, so forcibly commended him to the good opinion of his fellow-citizens, that in the year 1848 he was selected by the Free-soil party as their candidate for the vice-presidency on the Van Buren ticket. In December, 1859, he was sent to Congress, representing the third Massachusetts district; was appointed member on the most important committees, and was looked up to with respect and confidence by all with whom he was associated. The perilous condition of the country, the virulence of party politics, and the imminence of civil war at this time, brought Mr. Adams at once to the front as the champion of the Republican party; and the memorable harangue which he addressed to the House on May 31, 1860, in vindication of their policy, placed him in the foremost rank of American statesmen, and marked out for him a career which may probably find its climax in the presidential chair. In the interval between the first and second session of the Thirty-sixth Congress, he, in company with Mr. Seward, made a tour of the Northwestern States, strenuously supporting Lincoln's candidature both by his speeches and personal influence, and, when, on the opening of the session, a special committee of delegates from each State was appointed to take into consideration the state of the country, Mr. Adams was unanimously chosen as the

representative for Massachusetts. The result of that convention of delegates was the adoption of a series of resolutions denying the right or power of the free States, individually, or of the United States Government, to interfere with the internal economy of the slave States, or to adopt any coercive or prohibitory measures toward them; which resolutions were accompanied by the draft of a bill for the admission of New Mexico into the Federal Union, leaving the question of the admission or exclusion of slavery to be decided by the Mexican citizens alone; and also amendments to the Constitution embodying the principles contained in the resolutions, so framed that, when passed, they could at once be acted upon, and relieve the country from those dilemmas into which it had been drawn by this *veata questio*. The amendments were unanimously adopted, but the bill for the admission of New Mexico was rejected. In all these documents, the statesmanship and legal acumen of Mr. Adams were distinctly traceable, whose persistent and courageous advocacy of the non-intervention policy, forbidding the interference of Congress with the local government of individual States (especially in reference to the slavery question), and his reasons for pursuing that course (as given in a speech delivered January 31, 1861), are now a matter of history. Shortly afterward (May, 1861) he succeeded Mr. Dallas as minister to England, and for seven years maintained with unswerving fidelity the honor of his country, and administered the arduous and delicate duties of his high office with such equity and moderation as to secure the cordial approval and hearty encomiums of both British and American citizens. His familiarity with all the intricacies of international law, his conciliatory and yet firm method of treatment of every matter brought under discussion, his high character as a statesman, his genial social qualities, and his inflexible honesty of purpose, won for him the esteem and personal regard of every man who had been brought into official relations with him, or had had an opportunity of watching his conduct. From the year 1868 to 1871 he lived in comparative retirement, declining all active participation in administrative affairs; but, on the ratification by England and America of the Treaty of Washington, he was appointed by the President as arbitrator for America for the settlement of the claims under that treaty; and departed for Geneva, to fulfil the duties devolving upon him, in November, 1871. His principal contributions to literature are: "A Discourse on American Neutrality," delivered before the New York Historical Society, and a number of contributions to the *North American Review* and the *Christian Examiner*. He also edited the collected writings and life of his grandfather, published in ten volumes; and for four years edited a daily paper in Boston. It is his intention, we believe, to collect and publish his father's biography and literary productions.

William D. Sewall

DISCIPLES OF CHRIST. The General Christian Missionary Convention of the Disciples of Christ was organized at Louisville, Ky., in October, 1869. Its second annual meeting was held in Cincinnati on the 20th of October, 1871. Nearly all the States were represented. The board reported the entire receipts for the year past \$48,123.33, against \$36,699.03 received the previous year. The number of additions to the church, the result of missionary work, was 5,611 against 3,340 the previous year. By a table appended to the report of the board, it appears that the greater part of the contributions to the treasury came from the States of Ohio, Missouri, Kentucky, New York, Indiana, Illinois, Mississippi, Pennsylvania, Iowa, West Virginia, Michigan, Nebraska, Georgia, and Kansas, in the order in which they are named. The greatest numbers added were in the States of Missouri, Illinois, Ohio, New York, Kentucky, West Virginia, Mississippi, Indiana, Georgia, Kansas, Michigan, Pennsylvania, and Nebraska. For the mission which the board had undertaken to establish in Jamaica nothing was done during the past year. There were no funds with which to aid the work, and the board had refrained from giving the show of help when they could not afford the substance. Attention was called to appeals from Mississippi, Alabama, and Georgia, in regard to the evangelization of the colored race. The Mississippi Coöperation partly support one colored preacher, who is laboring successfully. Statistics were presented in the report showing that a large majority of the preachers are dependent upon secular pursuits for support. From a partial summary of facts from States and parts of States, it appears that the ratio of preachers devoting themselves wholly to the ministry is only about one to fourteen churches. Measures were taken for the circulation of tracts, and for the publication of a missionary monthly.

In October, 1870, a delegation from the Ohio Christian Missionary Society (Disciples of Christ) visited the Ohio Baptist State Convention with messages of fraternal sympathy. The message was cordially responded to, and a committee were appointed by the Convention to visit the Missionary Society at its next meeting. The meeting took place on the 25th of May, 1871. The Baptist committee presented an address which included a clear statement of the belief of the Baptists, noting the points on which the two denominations were supposed to agree, and those on which they were supposed to differ. The address was kindly received, and responded to, by the Missionary Society, who appointed a committee to visit the next State Convention of the Baptists, and make a suitable response to their communication. Their address of response was prepared in time to be laid before the Christian Missionary Society for approval at its October meeting. It is the clearest and most definite statement of the belief of the Disciples that has

been given to the public. It notices only the points in which a difference had appeared between them and the Baptists:

1. *The Deity and Personality of the Holy Spirit.*—The Disciples admit what is meant by this doctrine, but "object to propounding any dogma concerning the Holy Spirit in any uninspired terms whatever as a test of faith or of fellowship," that regeneration is the work of the Spirit using the word of truth as an instrumentality. But, while Baptists believe that the Spirit directly influences the mind and the heart of both sinner and saint, Disciples limit His direct influence to Christians, through whom the Spirit acts upon the unregenerate.

2. Regeneration, in the view of the Disciples, "includes all that is comprehended in faith, repentance, and baptism," and, so far as it is expressive of birth, it belongs more properly to the last of these three than to either of the former. The Disciples hold to a change of heart as antedating baptism, and attach no importance to the latter except as the former has taken place. Baptism consummates the change from an uncovenanted to a covenanted state.

Nevertheless (3 and 4), the act of baptism is an essential condition to the remission of sins. While those who believe and are baptized are saved, those who are not baptized are not saved, though they believe.

5. The Disciples hold conversion as essential to church-membership; but they deem "the deliberate and voluntary abandonment of the world and open confession of the Son of God credible evidence of conversion," when there is no opposing testimony.

6. *As to the True Basis of Church Fellowship.*—The disciples do not accept the distinction made by the Baptists between "Ecclesiastical" and "Christian" fellowship. To be in the church scripturally is to be "in Christ," and to be out of the church, or body of Christ, is to be out of Christ. But, while they withhold recognition from sects as churches of Christ, they do not mean to deny the Christian character of many in these sects. Hence they do not forbid these Christians joining them in singing and prayer, or reject them from the Lord's table.

This statement is regarded as placing the Disciples more nearly in accord with the Baptist and with the Orthodox Churches in general than they had been supposed to be.

A correspondence of similar character and tenor, with a nearly similar result, took place during the year between the Baptists and the Disciples in Iowa.

DISEASE, GERM-THEORY OF. The supposed fungoid origin of cholera has been made the subject of a careful report by Assistant-Surgeon Lewis, of the British Army, who undertook the inquiry in India, pursuant to instructions from the Army Sanitary Commission. It is limited to facts bearing on the cholera theories of Hallier and Pettenkoffer. The sub-

jects of examination are divided into three classes, cysts, spores, and micrococcus, the three elements of Hallier's theory. Mr. Lewis took direct observations of choleraic discharges, in comparison with observations on other media, partly by the use of reagents, time, and temperature, and partly by cultivation experiments. In 1866 Hallier discovered in choleraic discharges yellowish-colored cysts of spherical or oval forms, inclosing yellowish shining spores various in size, also groups of swollen spores surrounded by minute molecular matter (so-called micrococcus), proceeding apparently from the breaking up of the spores. These molecules were seen to adhere to various objects in the fluid on which they appeared to feed, exhibiting signs of germination, groupings, filamentary arrangements, and finally branching filaments. The resulting fungus, and polycystus, were considered by Hallier to resemble the rye-fungus of Europe, and probably to be present in the diseased rice of India; and he held that this, introduced into the intestinal canal and then passing through the various stages of its existence, caused the phenomena of cholera by its action on the intestinal epithelium. *Nature*, summing up Mr. Lewis's labors, says:

As regards Hallier's cysts, Mr. Lewis states that he has never met with any in fresh cholera discharges, but that he had repeatedly developed them. The other cyst-like bodies proved to be either fragments of tissues or ova, none being peculiar to cholera. Cultivation experiments with cholera discharge containing cyst-like bodies yielded branching fungi with macroconidia, which gave place to aspergillus; in other cultivations, however, the only products were penicillium and aspergillus. Mr. Lewis admits that cysts distinctly resembling those of Hallier may be developed by cultivation from cholera discharges, but that he had found them only three times in more than a hundred cultivations.

Their development is therefore not a constant phenomenon, and Mr. Lewis further shows that cysts of the same character can be developed in discharges not choleraic. Bodies resembling spores are very common in cholera discharges, and Mr. Lewis bestows much pains in demonstrating their true nature. He illustrates every step of the inquiry by slides, and classifies the bodies under the four following heads: 1. Globules, of a fatty nature. 2. Altered blood-cells. 3. Corpuscles, embedded in a tenacious substance. 4. Globular condition of certain infusoria. The corpuscles in class 3 are amoeboid in character, and are probably due to effused blood-plasma. There is no evidence of the presence of spores of fungi.

The last subject inquired into was the so-called micrococcus, the supposed "germ" of cholera, which in Hallier's view might pass into the human body in water or air, and then give rise to cholera by developing itself at the expense of nitrogenous material, especially intestinal epithelium.

Mr. Lewis shows that minutely-divided matter is not more prevalent in cholera than in other discharges, indeed, less so, but that attempts to produce micrococcus by cultivation had entirely failed, possibly on account of the many sources of fallacy in such experiments.

He gives the results of a number of observations made with infusions and decoctions of animal matter, including cultivations with cholera discharge, and shows that, in spite of every care in the manipulations, very different forms of life will make their

appearance in substances derived from the same source, and under apparently identical conditions. His general conclusions on this first stage of the inquiry are—

1. That no cysts exist in choleraic discharges which are not found under other conditions.
2. That cysts or "sporangia" of fungi are very rarely found under any circumstances in alvine discharges.
3. That no special fungus has been developed in cholera discharges, the fungus described by Hallier being certainly not confined to such.
4. That there are no animalcular developments, either as to nature or proportionate amount, peculiar to cholera, and that the same organisms may be developed in nitrogenous material even outside the body.

Lastly, that the supposed *debris* of intestinal epithelium is not of this origin, but appears to result from effused blood-plasma.

Unless these conclusions are materially modified on subsequent inquiry, they must be considered as disposing of Hallier's theory of cholera. Should, however, Mr. Lewis's further investigations prove that Hallier's fungus is present in choleraic discharges and in diseased rice as a constant, we should still require scientific proof that cholera was caused by the action of this fungus and by nothing else.

Pettenkoffer's theory of cholera connects the prevalence of the disease with certain conditions of damp subsoil and subsoil water, besides the presence of a "germ." Little has been done as yet in this portion of the cholera inquiry. What has been done is very interesting, although it does not support the theory. Observations regarding it have been made at Allahabad, Cawnpore, Lucknow, Fyzabad, Agra, Morar, Meerut, and Peshawur. The subsoil-water experiments do not appear to sustain Pettenkoffer's views.

Dr. Bastian, in a lecture before the University College of London, attacked the germ-theory of disease. He said that the advocates of the theory have always rested their belief in it because they considered that it offered a ready explanation of the virus of the contagious diseases within the body of the affected person. This they suppose is not otherwise to be explained. But all considerations adduced in support of the theory are explicable by another supposition. Dr. Bastian admits that there are certain diseases which do undoubtedly depend on the presence and multiplication of organisms in the blood, and throughout the tissues generally. Such is the epidemic and highly-contagious disease among cattle, called in England "the blood," and shown to be dependent on the presence and multiplication of living organisms, closely allied to "vibriones," in the blood of the animals affected, and that similar organisms are also locally most abundant in the contagiously-incited "malignant pustule" of man. Pasteur's researches on silk-worms also establish the cause of the fatal epidemic, from which those creatures suffer, to be a peculiar corpuscular organism, which he terms *psorospermia*, in all the tissues of the body. But these, says Bastian, are rare and peculiar cases, and he grants that there may be other parasitic diseases among animals; but, in all the specific diseases to which man is liable, the author has invariably failed to discover any traces of organisms in the blood. He says:

The experience of many other observers has been similar to my own in this respect. But if living

things were really present as causes of these maladies, then most assuredly ought they to conform to that fatal type which is almost inseparable from the notion of a general parasitic disease, and which we find exemplified by the course of "pebrine, the "blood," and "malignant pustule." The fact, then, that the general tendency in the acute specific diseases is undoubtedly toward recovery rather than toward death, speaks strongly against the resemblance supposed to exist between them and the parasitic affections alluded to, and also against the hypothesis that they are dependent upon the presence of self-multiplying germs within the body. Such germs, when present, would be sure to go on increasing until they brought about the death of their host.

These considerations alone should suffice to inspire grave doubts as to the truth of the "germ-theory." And such doubts may be reinforced by many others. Thus, the several affections being distinct from one another, this theory demands a belief in the existence of about twenty different kinds of organisms never known in their mature condition,

but whose presence as invisible, non-developing germs is constantly postulated, solely on the ground of the occurrence of certain effects supposed to be otherwise incapable of occurring. That, if existent, they are no mere ordinary germs of known organisms is obvious, because the presence of these has again and again been shown to be incapable of producing the diseases in question. Mr. Foster says: "There is not, perhaps, on the face of the earth, a human creature who lives on coarser fare, or to a civilized people more disgusting, than a Calmuck Tartar. Raw putrid fish, or the flesh of carrion—horses, oxen, and camels—is the ordinary food of the Calmucks, and they are more active and less susceptible to the inclemency of the weather than any race of men I have ever seen." It has, moreover, been frequently demonstrated that the organisms of ordinary putrefactions may be introduced even into the blood of man and animals without the production of any of these specific diseases.

Dr. Bastian tabulates the whole of the communicable diseases as follows:

PARASITIC DISEASES AFFECTING :

COMMUNICABLE DISEASES.	<p>Many of them capable of arising "de novo."</p> <p>A. Diseases of Internal Formed Tissues and of Mucous Membranes.</p> <p>All inoculable, and capable of arising "de novo."</p> <p>B. Diseases of the Blood (principally).</p> <p>All contagious, and capable of arising "de novo."</p> <p>Contagiousness, either absent, little marked, or more or less virulent; all probably capable of arising "de novo."</p>	<p>External (cutaneous) surface.</p> <p>Internal (mucous) surfaces.</p> <p>Closed (serous) cavities.</p> <p>Tissues of organs or parts. (<i>Psorospermia</i>, <i>Cysticerci</i>, <i>Nematoda</i>, etc.)</p> <p>Blood. (<i>Bacteridia</i> in "Malignant Pustule," <i>Psorospermia</i> in "pebrine," etc.)</p>	<p>Caused and propagated by the presence and self-multiplication of living units.</p>
		<p>TISSUE DISEASES.</p> <p>Fibro-plastic growths.</p> <p>Cancerous growths.</p> <p>Tubercular growths.</p> <p>Glanders.</p> <p>Syphilis.</p> <p>Gonorrhœa.</p> <p>Purulent ophthalmia.</p> <p>Diphtheria and croup.</p>	
		<p>Erysipelas.</p> <p>Puerperal fever.</p> <p>Surgical fever.</p> <p>Pyæmia.</p> <p>Hospital gangrene.</p> <p>Rabies.</p> <p>Rheumatic fever.</p> <p>a. Dengue.</p> <p>b. Sweating-sickness.</p> <p>Intermittent fever.</p> <p>a. Remittent fever.</p> <p>b. Yellow fever.</p> <p>Summer diarrhœa.</p> <p>a. Choleraic diarrhœa.</p> <p>b. Cholera.</p> <p>Dysentery.</p> <p>Influenza.</p> <p>Mumps.</p> <p>Relapsing fever.</p> <p>Typhoid fever.</p> <p>Typhus fever.</p> <p>a. Cerebro-spinal meningitis?</p> <p>b. Plague.</p> <p>Varicella.</p> <p>Whooping-cough.</p> <p>Measles.</p> <p>Scarlet fever.</p> <p>Small-pox.</p>	<p>Principally sporadic.</p> <p>Principally endemic.</p> <p>Often epidemic.</p>
			<p>Caused and propagated by chemo-physical agencies, and not by the multiplication of living units.</p>

DOMINION OF CANADA. Since we last wrote of this important Confederation of British Provinces, it has been further enlarged by the admission of British Columbia, a colony of not more than 12,000 inhabitants—exclusive of Indians and Chinese, who probably amount to nearly twice that number—but of large re-

sources, especially in its fisheries and minerals, and so situated as, we are told, to be adapted to command, not only the trade of the western side of the continent, and the islands of the Pacific, but also that of the trans-Pacific countries. Hitherto, its isolation was such as to render development to any large extent scarce-

ly possible. For communication with England, a sea-voyage of 150 days was necessary; on its eastern boundary it was walled in by the Rocky Mountains, preventing intercourse with the kindred provinces; while on the south lay the United States, through which immigrants to the country had to pass. The leading condition upon which this colony entered the Canadian Union was, an engagement on the part of the Dominion Government to construct a railroad from Ontario to the Pacific coast, thereby affording British Columbia means of active communication with Canada, and, comparatively, with the world at large. It is computed that this railroad—the Canadian Pacific—will be at least 2,500 miles long, extending from Lake Nipissing, north of Lake Superior, and 200 miles from Toronto, to Victoria, the capital of British Columbia; and it is stipulated that it shall be built in ten years, means to be provided by grants of land of twenty miles extent on each side of the road, and by such subsidy as to the Parliament of the Dominion may seem fit. The estimated cost of the road is \$100,000,000; and it is understood that the “subsidy” will not be less than one-fourth of that amount (\$25,000,000). The proposed gauge is 4 feet 8½ inches. Over this extension of the Dominion, and the prospective greatness, Canadian writers are not a little jubilant. They rejoice that, “from the Atlantic to the Pacific, from the forty-sixth parallel to the north pole, is the fitting description of this new Dominion.” Apart from this latter enterprise, the railways of Canada are increasing in number and value. Those already in operation exceed 3,000 miles in length; in process of construction are more than 1,000 miles; and charters have been granted for an additional 800 miles. The principal of the works not yet completed—the Intercolonial—is rapidly advancing; the force employed on it in a given month, recently, was 133,694 men, 11,960 boys, 29,426 horses, and 324 oxen; the approximate expenditure to the present time is more than \$7,000,000; the total cost will be not less than \$17,000,000. It is expected that this railway—the direct and chief result, so far, of confederation—will be in full operation in 1873. Its importance as a national work may be judged of from the assurance given, *that it will convey freight and passengers from Halifax to Sarnia without transshipment, a distance of 1,357 miles*. The official tables of railway traffic returns show a steady increase. The total receipts in 1869 were \$12,921,861; in 1870, \$13,451,299; and the first six months of 1871 show \$6,734,423, to compare with \$6,279,425 for the same period of the previous year. Still more direct evidence of increasing prosperity of the country is afforded by the amount of the revenue of the past year; it exceeded \$19,000,000, and was in excess of that of 1870 nearly \$3,000,000. There has been a steady increase of receipts since the date of confederation, a fact attributable, we

are told to that measure. Official accounts given of banking progress show an increase in paid-up capital of 37 per cent. in three years. Of floating capital, “or money of the people deposited in banks,” a great increase is also noted. The total deposits of the last month of the fiscal year were \$55,764,076, against \$51,528,231 in the first month. The amount of money in post-office and other savings-banks, and in building-societies, of which imperfect returns show nearly \$11,000,000, is further proof of the prosperity of a large proportion of the people. An authorized statement of the liabilities of the Dominion also tells that “the cost in interest of the magnificent public works which Canada possesses, and which so much increases its wealth, is not more than \$1.25 per head per annum; and there is a prospect of a rapid increase of population to divide even this small burden.” The particulars of the census just taken do not, however, encourage this anticipation as to population. It was computed, according to established ratios, that a Dominion population would be shown of more than 4,500,000. The official figures just published are, 3,575,577, fully 1,000,000 less than was—not unreasonably—expected, and showing an increase in ten years in the old provinces of the Dominion of not more than 395,265, or, in Ontario of 16.09 per cent.; Quebec, 7.18; New Brunswick, 13.88; Nova Scotia, 17.21. Judging from statements by the Dominion press generally, an impression exists that serious errors were committed by enumerators; that, in fact, the enumeration altogether was conducted on a wrong principle. The explanation, however, of a well-informed Ottawa journal is, that “immigration was balanced by emigration.” The leading public men of Canada are evidently much concerned by the question of supplying the large extent of territory recently acquired with the heads and hands necessary for making it more than of nominal value. The continued possession of Manitoba by the French half-breeds is not a pleasant prospect; while the fisheries, forests, and coal-fields, with “minerals of almost every description, and a very large quantity of valuable land” (according to the accounts of Mr. Trutch) of British Columbia, call for more means of development than can possibly be furnished by its present sparse population of white people. The Dominion Cabinet, as well as the respective local governments of Ontario and Quebec, have been boldly attacked for neglect in this matter; but the truth would appear to be, that immigrants by the St. Lawrence route are irresistibly attracted elsewhere. It is shown by official statements that, in the short period of five years, ending in 1870, the number of 248,905 passengers from Europe thus entered the territory of the United States. The Dominion Parliament opened on the 15th of February, and closed on the 14th of April, the number of general acts passed during the

period being 30; of private or local acts, 28. A uniform currency for the several provinces was established by chap. 4; by other enactments the criminal law, as laid down in old statutes of Canada, before confederation, was extended to the new Province of Manitoba, and the militia law made to apply to this and the other recently-incorporated Province of British Columbia. The independence of Parliament was provided for by an act which says that "the holding of any office, commission, or employment, permanent or temporary, at the nomination of the crown, to which any salary or other emolument is attached, disqualifies a person from being elected to or sitting in the House of Commons." A law affording facilities to aliens for becoming "duly naturalized" was also passed.

A measure, "to render permissive the use of the metric or of the decimal system of weights and measures," was introduced by the Minister of Inland Revenue and became law. This system is already allowed in Great Britain; and it is stated that it goes into operation in Prussia this year (1872). It is apprehended that its adoption, either in England or Canada, will not be immediate. In addition to the difficulty of accustoming a population to any change of standard, there is in this case a strange and a not very euphonious nomenclature. It has been recommended, as the best means of meeting this difficulty, that the system be taught in all schools receiving public aid, so that its superiority, being impressed upon the minds of the youth of one generation, would lead to its adoption by the next.

An attempt was made early in the session to force upon the Dominion Cabinet the settlement of the question of debt—referred to at some length in our article of last year—between the governments of Ontario and Quebec. Several resolutions to this effect were successfully opposed by ministers and their supporters in the House, the former indicating it to be their opinion that a joint reference of the case to the Judicial Committee of her Majesty's Privy Council would be the proper course.

Preliminary steps in this direction have been taken, and it is not improbable that a decision from the tribunal referred to will be obtained. But it is doubtful whether more can be secured by such a movement than a certain or uncertain extent of delay. In all likelihood, the question will be finally disposed of in Canada, and from a political point of view.

The Treaty of Washington is regarded as an historic event in Canada—fraught, possibly, with momentous consequences. Articles 18 to 25 are regarded by many, probably a large party, as an utter abandonment of the fisheries, and the sovereignty of the St. Lawrence; and this view—as well as the feeling that the whole policy of the treaty on the part of England was peace at any price with the United

States—is much strengthened by the admission of the London *Times* (9th of June last) thus expressed:

"Little ingenuity would be required to represent this (the surrender of the fisheries) as a sacrifice of small communities to the convenience of powerful States. There was certainly no intention on the part of the commissioners of this country to make any portion of our empire a scape-goat for the peace of the whole. But it was never disguised that something the maritime Provinces hitherto have possessed had been bartered away by the treaty."

Sir John A. Macdohald, the Prime-Minister of Canada, having acted as one of the British commissioners at Washington, will have a delicate duty to perform in the forthcoming session of the Parliament at Ottawa, in defining his peculiar position in this important business and in establishing, as he will be called upon to do, that neither the material interests nor the *amour propre* of his country were disregarded in these memorable negotiations.

The opening of the "European and North American Railway," on the 18th of October last, was an occasion of much interest. This work is the joint enterprise of the British maritime Provinces and of the State of Maine; and is not only calculated to increase profitable business intercourse between their respective populations, but places St. John, N. B., in direct railway communication with Montreal by the Portland branch of the Grand Trunk. President Grant and the Governor-General of Canada, Lord Lisgar, fittingly took part in the ceremonies of this international "opening," and exchanged words, kindly and polished, of fraternal greeting.

The death-roll of Canada for the past year presents to view a name long and most honorably associated with her history, LOUIS JOSEPH PAPINEAU. On September 23d, at the venerable age of eighty-five years, this illustrious patriot peacefully breathed his last at his beautiful residence known as Montobello, in his own seignior of *Petite Nation*, on the left or north bank of the river Ottawa. Among the many incidents related which mark the high character of M. Papineau, the following deserves a lasting place in history: A conciliatory policy, deemed necessary by Sir George Prevost to secure the fealty of the French Canadians during the War of 1812, and continued by his immediate successors, allayed political asperities that had nearly driven these Canadians to be the rebellious spirits that Sir James Craig represented them to be, and they proved sturdy defenders of the British flag. Among those enrolled was M. Papineau, as a captain of militia. It is related of him that, when conducting a portion of Hull's army prisoners from Lachine, a regimental band of the regulars struck up "Yankee Doodle," to shame the unfortunates, on

which Captain Papineau wheeled his company out of line, declaring he would not countenance such insult. When reported, instead of reprimanding the captain for insubordination, the Governor commended him for his humane consideration.

DONELSON, ANDREW JACKSON, LL. D., an American politician, editor, and diplomatist, born near Nashville, Tenn., August 25, 1800; died in Memphis, Tenn., June 26, 1871. He completed his studies at Nashville College, and in 1817 was appointed a cadet at the United States Military Academy. He graduated second in his class in 1820, and received a commission as brevet second-lieutenant in the corps of engineers. Soon after, he was appointed aide-de-camp to General Jackson, and went with him to Florida. Having resigned his lieutenantcy in 1822, he attended law lectures at Transylvania University, Lexington, Ky., and was admitted to the bar in 1823. In 1829 he accompanied President Jackson to Washington as his confidential adviser and private secretary. After the conclusion of the President's second term, he continued in private life till 1844. The Texas question, then the great issue of the country, brought him again before the public. The treaty of annexation of that republic to the United States, of April 12, 1844, having been rejected on the 8th of June of that year by the Senate, President Tyler sent a messenger to General Jackson, urging him to induce Mr. Donelson to undertake new negotiations. He accepted the appointment September 16, 1844, as *chargé d'affaires* to the Republic of Texas, and entered at once upon the discharge of the delicate and

intricate duties devolving upon him. With great diplomatic tact and signal ability he accomplished the object of his mission, which terminated, December 27, 1845, with the annexation of Texas to the Union. In 1846 President Polk appointed him envoy extraordinary and minister plenipotentiary to the court of Berlin, and in 1848 to the Federal Government of Germany. Soon after his return in 1849 he enlisted in the effort to secure the settlement of the slavery agitation, caused by the acquisition of territory from Mexico. He was sent as a delegate to the Southern Convention, which met May 6, 1850. On this occasion he delivered one of his ablest and most earnest speeches, taking a determined stand against all nullification and disunion. In 1851 he assumed the editorship of the *Washington Union*, but relinquished it the following year. After the accession of President Pierce in 1853 he entirely abandoned the Democrats and joined the "American Party." When the convention of that party met in Philadelphia, February 22, 1856, he was nominated for the vice-presidency on the ticket with Mr. Fillmore. After his defeat in the political campaign that followed, he withdrew from public life, and devoted himself to the management of his extensive estates. The last years of his life were spent in retirement on his plantation, near Australia, Miss. It was well said of him that, in every position in which he was placed, he sought, earnestly and faithfully, to do his duty. Of any of our public men, even those most gifted and in the highest station, could this be said with more perfect truth.

E

EARTHQUAKES. A severe earthquake occurred at the Hawaiian Islands, February 19th, about 10 A. M. At Honolulu, the walls of a number of storehouses were cracked, and crockery and glassware thrown down, and clocks stopped. There were several violent shocks, each lasting about thirty seconds. No lives were lost. Crews on vessels in the harbor experienced a sensation as though the ships had suddenly gone on a reef. At Lahaina, the shocks were the most severe that had been remarked in that place for thirty-five years, though but little injury was sustained by buildings. At Lanai, greater damage ensued, to natural scenery principally. Bluffs and rocks were stricken off into the sea, and the ravines filled with boulders, trees, and slides of earth torn from the mountain-tops. Several great clefts were opened up in different parts of the island. The same earthquake shook down the belfry of the Catholic church at Ewa, sweeping off the four massive pillars that supported it like pipe-stems.

The north of England was treated to the

rare sensation of an earthquake, March 17th, about 11 P. M. An observer at Penrith says that the day had been remarkably calm, and he noticed a heavy suffocating feeling in the atmosphere. The first sign of the earthquake was a loud rumbling noise as if a heavy wagon were passing over the pavement; then windows and chandeliers were violently shaken, and beds, in some cases, rocked like a ship at anchor. The vibrations were apparently horizontal, and in a direction from north to south, lasting three or four seconds. Poultry and cage-birds showed signs of distress by the noise and fluttering which they made. The temperature, which on the previous Tuesday night had fallen as low as 17°, suddenly changed, and the minimum of Friday night was 40°. Saturday morning (following the earthquake) was remarkably warm, the black-bulb thermometer *in vacuo* reading 92°. The shocks were felt from the south of Scotland as far as to the north of Derbyshire.

M. C. E. De Rance, of the Geological Survey, writing of this earthquake to *Nature*, says:

The tract over which it was felt, as far as at present known, would be comprised within a circle, with a centre about ten miles due east of Sedburgh, the diameter of which would be a line drawn from Duffries to Doncaster, the farthest limits to the northwest and to the southeast, respectively, to which the earthquake extended. The greatest effects appear to have been experienced in a belt, about thirty miles broad, running inside this circle, the inner margin running along the towns of Scarborough, New Malton, York, Leeds, and Bradford, Preston, Longridge, Kendal, Penrith, Carlisle, Newcastle, and Sunderland, and thence probably passing out to sea and curving round to Scarborough. The outer margin, or circle before mentioned, runs by the Humber, Doncaster, Manchester, Salford, Roby, Huyton, Seaforth, Southport, and probably for some distance out to sea, Blackpool, west of Ulverston and Coniston Lake, Duffries, by the north of Tyneside, to the sea. If this belt be drawn on a map, it will be seen that that segment of the circle which occurs from Sunderland to Scarborough, falls entirely out to sea, and up to the present time the earthquake is not known to have been felt on that coast between these points. It would, therefore, appear probable that this earthquake traversed the country in a circular belt, the entire northeastern segment and the outer margin of the Lancashire portion being beneath the sea; that the area of greatest intensity was near the inner margin, but especially at Preston, Lancaster, Ulverston, and Blaydon, near Newcastle; that the area in Yorkshire, within this belt, was not entirely free from the shock, as it was slightly felt in Wensleydale and Swaledale, on the eastern slopes of the Pennine chain.

At Preston, where the earthquake occurred at 11.4 P. M., Greenwich time, the motion I observed to be from southeast to northwest; the oscillation was considerable, and the hollow noise, which commenced and ceased with the vibration, resembled express-trains running in underground tunnels. The air was close and oppressive, the wind southwest, the night starless and hazy, and the sky from the northwest to the northeast covered by a peculiar glare, resembling an incipient aurora, which lasted until 1.30 A. M.

In several places more than one shock is reported to have occurred: thus at Singleton Brook, Manchester, the first shock occurred at 10.56; the second, lasting two seconds, at 11.5; and the third, lasting four seconds, half a second after. Two shocks near together were also felt at Leeds, the second being the sharpest, which was felt at Armley, Headingley, Woodhouse, New Leeds, Chapeltown, and Westbar. Two shocks also occurred at Kendal, the first at 6.20 P. M.; the second, which was the most severe, at 11.15, lasting twelve seconds, that experienced by myself at Preston lasting about seventeen. From Grasmere also three shocks are reported, the first being at 6.40, and the second and worst at 11 P. M. At Ambleside, the first shock was also felt at 6.30, the true time probably of the two noted above, the second being at 11.3 P. M. At Coniston, a slight shock was felt at 7.0 P. M. on the 17th, and another at 6.3 A. M. on the 18th.

At Hexham, the chief shock is recorded as taking place at 11.15; Ambleside, 11.3; Ulverston, 11.5; Preston (by myself), 11.5; Bowdon, Manchester, 11.4; Singleton Brook, Manchester, 11.4; Newcastle, 11.30; Leeds, 11.15; Penrith, 11.4; Liverpool, 11.15; Kendal, 11.15; from which it will be seen that localities, comparatively near together, often differ more as to the time of occurrence than some of those far apart, and thus there is, therefore, strong reason to believe that these various observations (from 10.30 P. M. to 11.30 P. M.) represent one shock, occurring practically at the same moment over the whole area about 11.5 P. M.

In the year 1786, on August 11th, an earthquake which extended over nearly a similar area to the recent one, and like it, slightly displaced the waters of

Windermere and the Lake District, was felt; and the same district was also visited by an earthquake on February 22, 1867, which was particularly felt on the north shores of Morecambe Bay. It is curious to observe that the *northern* margin of the area of the earthquake, which was felt over the greater part of Central and Southern England, in 1863, exactly coincides with the *southern* margin of the recent one, and that the latter, in its course to the northwest, directly crossed the Pennine chain in two places.

March 2d, Eureka, California, experienced a brief shock from an earthquake. Chimneys were thrown down in the vicinity of Rohnerville; the light-keeper's house at Cape Mendocino was badly damaged, though the tower was uninjured. At Petrolia, all the chimneys were thrown down. Oscillations lasted about twenty minutes.

The island Camiguin, of the Philippine group, was the scene of terrific earthquake-shocks in the latter part of April, and on the 1st of May, about 5 P. M., the earth burst asunder, and an opening was formed 1,500 feet long. Smoke and ashes, earth and stones, were thrown up, and covered the ground far and near. At about seven o'clock, as darkness was coming on, this crater burst into activity with a loud explosion, followed by a shower of lava and ashes. About 150 persons were destroyed. The eruption of the new volcano has since been so tremendous that the inhabitants have forsaken the island, and, of the 26,000 previously there, not 300 are left. Camiguin is only about thirty-six miles in circumference, and was very productive in *abaca* (the Manila hemp), yielding annually from 30,000 to 40,000 piculs, or more than a tenth of the produce of the world. There is little hope of the island ever being again reoccupied or cultivated.

Togolanda, a small island in latitude $2^{\circ} 20'$ north and longitude $125^{\circ} 20'$ east, suffered terribly from earthquakes between March 24th and March 29th. Part of the island was submerged to the depth of twenty-five fathoms, and 400 of the inhabitants perished.

Earthquake-shocks were felt at times during the year in different parts of the Atlantic States; but none of them were worthy of mention, excepting the disturbance throughout New Jersey, Delaware, and Pennsylvania, October 9th. The vibrations were very marked, causing persons in houses to run to their doors to see what had happened. Some described the noise as resembling the dragging of heavy furniture over the upper floors of houses.

Particulars of the great earthquake in Batang, a remote province of China, in 1870, did not reach this country till June of last year. It is officially reported that government houses, temples, and buildings of all descriptions, were thrown to the ground, and most of the inmates killed. Flames burst out in four places, setting the ruins of the structures on fire, and destroying what the earthquake had spared. During this time the earth rocked and rolled, and a terrible sound as of thunder was heard.

The grain-collector at Bathang says that for several days before the earthquake the water had overflowed the dike, but after it the earth cracked in many places, and black, fetid water spurted out in a furious manner. If one poked it, the spurting instantly followed, just as is the case with the salt-wells and firewells (in the eastern part of the provinces), and this explains how it happened that fire followed the earthquake in Bathang.

As nearly as is ascertained, there were destroyed two large temples, the offices of the collector of grain-tax and the local magistrate, the Ting-lin temple, and nearly 700 fathoms of wall around it; six smaller temples, numbering 221 rooms, besides 1,849 rooms and houses of the common people. The number of people, soldiers, and lamas, killed by the crash was 2,298, among whom were the local magistrate and his second in office. The earthquake extended from Bathang eastward to Pang-chah-muh, westward to Nan-tun, on the south to Lin-tsah-shih, and on the north to the salt-wells of A-tumtsz, a circuit of over 400 miles. It occurred simultaneously over the whole of this region. In some places steep hills split and sunk into deep pits; in others, hills on level spots became precipitous cliffs, and the roads and highways were rendered impassable by obstructions.

EASTERN CHURCHES. A spirit of opposition has begun to exhibit itself in the Russian Church against the old teachings and usages, to which the Holy Synod itself has contributed by certain of its acts. A system of annual conferences, having in view the elevation of clerical life, has been introduced by the synod within the last two years. These conferences are now held in all the orthodox dioceses. In them the uncultivated old clergy, who adhere to the routine of the old usages, find themselves quite effectively opposed by the younger clergy, who have received their education in the newer and later schools, and at the Academy. The latter insist with more or less determination upon a thorough reform of the arbitrary canons of the Church, upon a higher culture for the clergy, and an improvement of their material condition. In justification of their propositions, they expose without mercy the many abuses which the ecclesiastical authorities have allowed to grow up.

The Holy Synod is said to contemplate publishing a complete collection of the decrees and ordinances in reference to the orthodox faith in Russia.

According to the statistical exhibit of the Holy Synod, there are now 35,000 churches—31,000 parochial churches, and 4,000 under-churches—attached to the Russian State Church. Connected with these are 37,718 priests, 11,227 deacons, and 65,952 attendants, choir-singers, etc. The annual grants from the state for the support of the churches and the clergy amount to 5,163,363 rubles. The subject of increasing the resources of the clergy, to a sufficient sum to assure them an adequate, comfortable support, is actively discussed, both among their own body and in some of the Russian journals.

According to the new plans devised by the Russian Government for the appointment of the lower clergy, their consecration will not

hereafter be wholly in the hands of the diocesan bishops, but candidates will be required, previous to receiving an appointment, to pass an examination regarding their fitness for the office.

The Russian Ministry of the Interior has made plans for the building or rebuilding in the Baltic provinces, by the end of 1873, of 33 orthodox churches, 50 parsonages, and 27 school-houses. The sum of 800,000 silver rubles is appropriated to defray the expense of these erections, besides which 100,000 silver rubles are appropriated for the ornamentation and furnishing the interiors, the purchase of pictures and service-sets.

The adherents of the sects are said to have increased in the department of Moscow to such an extent that there is hardly a village in which there are not five or six different religious communities strongly distinct from each other, but equally fanatical and uncanonical in doctrine and usage. The most prominent sect at present appears to be that of the so-called Anabaptist, who, however, differ in many respects from the Baptists of Western Europe. They reject the baptism of infants, but, unlike other Baptists, they consider celibacy a necessary condition for reaching the kingdom of heaven. The extent to which the sects have spread in the country is shown by the fact that a careful calculation makes the number of Rascolniks, or dissenters, about fifteen million.

The Russian Bishop of Kamchatka reports very favorably as to the success of the efforts of the missionaries to convert the Corean immigrants in that country to Christianity. It appears that since the year 1865 there has been a pretty constant flow of emigration from Corea to the South Oussouri district in Kamchatka, owing to the dearth of provisions in the former country, and that, as, by the Corean law, the refugees would render themselves liable to the penalty of death if they returned, they expressed a wish to become Russians, both in order to enjoy the privileges of Russian subjects, and to protect themselves against the Corean Government if it should go to war with Russia. They have accordingly cut off their long cues, are learning the Russian language, and have for the most part become Christians. The Russification and Christianization of the Coreans," writes one of the missionaries, the Archimandrite Palladius, "is proceeding with great rapidity. Our greatest difficulty is the Corean language, which is a mixture of Chinese and local dialect, and is very hard to understand."

A commission of Bulgarian bishops and nobles, appointed by the Sultan, February 26, 1870, to meet in Constantinople and assist in preparing a draft for the organization of a separate Bulgarian Church, also drew up an act for the election by the communities of clerical and lay deputies, to meet in Constantinople in April, 1871, for the rectification of

the Church statute. An active discussion took place in this assembly between those who advocated the application of the regulations of the old Greek Church to the new Church and the "Young Church" party, who favored the introduction of an evangelical Presbyterianism. The principal journals of "Young Bulgaria," the *Macedonia*, of Slavejkor, taking the lead, supported the party of progress. After a long debate, measures were agreed upon for the participation of the laity in the administration of the affairs of the Church, the establishment of the salaries of the higher and the lower clergy, and the exclusive application of all surplus of ecclesiastical taxes to the elevation of popular instruction and the establishment of higher schools. It was decided also, by a vote of 28 to 15, that the Exarch should be appointed, not for life, but for a term of five years. The place where he should reside was left an open question, almost equally strong reasons being presented in favor of his residence at Constantinople, and in one of the large towns near the centre of the exarchate. The ratification of the Church statute was completed on May 26, 1871, and was delivered to the Grand-Vizier, Aali Pacha, by a committee of three members of the National Assembly, Hadschi Ivantschov, Pentschov Gjordaki, and Dr. Tschomakov.

But the Greek Patriarch, incited by Russian influence, had come forward in opposition to the Sultan's well-intended measures for his Bulgarian subjects, with the demand that the Bulgarian-Greek Church conflict should not be regarded as an administrative question, but as one of canon law, and that it should be left to the exclusive decision of an œcumenical council. He protested against all the acts of the Bulgarian National Assembly as uncanonical and unconstitutional. The patriarchate would be sure of a majority in the contemplated œcumenical council. The Bulgarian ecclesiastical dignitaries would be easily silenced by the numerous Hellenic bishops of the Greek Churches of Constantinople, Jerusalem, Alexandria, Antioch, and Cyprus, and the continued Hellenization of the Bulgarian people would receive the canonical approbation of the council, against which, as the Patriarch had said to Aali Pacha, there is no appeal. In the mean time, the Patriarch Gregory VI. had laid himself open to censure by his undissembled animosity against the Slavic people and his opposition to the commands of the court. Attacked both from Belgrade and Constantinople, he had no alternative but to accept the suggestion of Aali Pacha, and resign the patriarchate. Antim Kutulianus succeeded him on the 18th of September. Being of a more conciliatory disposition than his predecessor, he sought as early as October to engage in negotiations with influential Bulgarians for a compromise of difficulties. These negotiations have been quite frank in their character, but, from what has transpired respecting them,

they do not seem likely to allay the long-increasing division in the Church. Antim insists upon giving the patriarchate control of the appointment of the Bulgarian Exarch, upon the levy of a tax of a plaster upon each Bulgarian household, and upon the repeal of the tenth section of the Sultan's firman which permits districts with a mixed population of Greeks and Bulgarians to be attached to the Bulgarian exarchate upon the vote of two-thirds.

The opposition of the patriarchate to this paragraph is easily explained, since it violates a principle and threatens it with a serious loss of moral and material power—which it is not well able to bear, since the Servian and Roumanian churches have been cut off from their dependence. On the other hand, it is natural that the Bulgarians should insist upon its being retained, as its operation will be to promote the continual growth of their exarchate in territory and power. Members of the Bulgarian National Assembly, among them the deputies from Adrianople, Rutchuk, etc., and the Bulgarian community at Constantinople, have protested earnestly against further continuance of the negotiations with the Patriarch on this basis, to which he adheres obstinately. The decision on the whole subject, however, rests solely with the Porte.

The adjustment of this apparently irreconcilable conflict between the Greeks and the Bulgarians will require the most skilful efforts of the ablest diplomats of the Porte; or it may have to be put off to some future time.

The movement which was started a few years ago, with much zeal, for the union of the Bulgarian and Roman Catholic Churches, remains confessedly in an incomplete state. It in fact made no real progress, after the signing of the act of union near the end of the year 1860. The Catholic bishop, Sofoloski, and the majority of the congregations which went over, have withdrawn from the union; those which yet hold out do not promise much steadfastness in the face of the persuasions and the pressure to which they are subjected. Besides the small unionist congregation in the city of Adrianople, there are in the adjoining province only a few scattered communities which adhere to Rome, and the missions of the Lazarists, Passionists, etc., in the neighboring provinces, are able to present only the scantiest evidences of success. At present there are not, in all, more than 60,000 Roman Catholic, or united Bulgarians, to 5,000,000 disunited Bulgarians.

An awakening to new life is reported in the Greek churches at Athens. Sunday-schools have been organized in the various parishes; and the synod has requested theological students to preach whenever and wherever they have the opportunity. The *Orthodox Review*, a semi-monthly periodical, edited by one of the theological professors in the University of Athens, has undertaken the advocacy of advance, and has announced as the principles for

which it will contend: 1. The clergy must be educated and salaried. 2. The Gospel must be preached regularly in the church. 3. Worship must be refined, and church music reformed.

The Theological Department of the University of Athens had, during the year 1871, thirty students, and sent out four graduates. It had six professors and one adjunct professor. The course of study embraces an introduction to the Holy Scriptures, Hebrew archæology, interpretation of the Scriptures, Hebrew language, ecclesiastical history, history of doctrines, symbolics, patrology, dogmatics, ethics, pastoral theology, liturgics, and homiletics. The number of law-students in the same university is six hundred. The principal theological school in the kingdom of Greece is the Rizareion School. It sent out five graduates in the full course. In this seminary the course consists of sacred history, catechesis, introduction to the Scriptures, interpretation of the Scriptures, ecclesiastical history, dogmatics, ethics, homiletics, and liturgics. Most of the professors teach also in the University School. The *Orthodox Review* recommends that the revenues of monasteries be devoted to the improvement of the theological schools. This would give from Attica alone a fund of about \$33,000.

The Old Catholic Congress at Munich was attended by several Russian clergymen. One of them, Dr. Overbeck, afterward declared, in the *Gloss* of St. Petersburg, that he had come to the conclusion that the best settlement the Old Catholics could make of the question of their church organization would be to join the Church of Russia; but he acknowledged that Dr. Döllinger had received his proposition, when it was made to him, very unfavorably.

According to the *Orthodox Review* of Athens, the first steps toward friendly intercourse of the Greek and Anglican Churches were taken by the late Patriarch Gregory, when he sanctioned the burial of English dead in the consecrated cemeteries with the customary rites of the Greek Church. The courtesies offered to the Bishop of Syros, during his late visit to England, confirmed the good feeling which grew out of the Patriarch's concession. Afterward the English Bishop Harris, of Gibraltar, visiting Athens, accepted an invitation of the archbishop, who is the Primate of Greece, to assist, in full canonical robes, at one of the national religious festivals in the cathedral church. More recently, Bishop Harris has received similar episcopal recognition from the Bishop of Vama, in Bulgaria. The *Review* hopes for a continued advance in friendship, but cautions the members of both Churches against supposing that any union yet exists, and calls attention to many points in the Thirty-nine Articles of the English Church which are at variance with the fundamental doctrines of the Greek Church. Among them

are the affirmation of Luther's doctrine of original sin, the doctrine of justification by faith alone, the acceptance of Calvin's doctrine of unconditional foreordination, the rejection of five of the sacraments, while only two (baptism and the Lord's Supper) are accepted, and the condemnation of the worship and invocation of the saints.

The Archbishop of Syros, returning from a visit to England, addressed to the Greek Synod an extremely flattering account of the reception he met and the honors he received from the bishops and clergy of the Established Church, but concluded by expressing his belief that "the union of the two Churches (the English and the Greek) cannot be the work of the present day."

The Committee of Bishops of the Protestant Episcopal Church of the United States, in accordance with a resolution passed by the Triennial Convention, addressed, in 1869, a letter to the Russian Church, expressing a desire for a closer intercommunion. The following reply to this letter was received early in the year:

To the Well-beloved in Christ, and the Right Reverend Committee of the Court of Bishops of the Protestant Episcopal Church in the United States of America:

Your letter, addressed to His Excellency, the Procurator-General, Count Tolstoy, having been offered by him to the consideration of the Most Holy Governing Synod of Russia, together with the report and the decision of the Court of Bishops, approved by the Chamber of the Ecclesiastical and Laical Deputies, in reference to the establishment upon a true catholic basis of a spiritual fraternity between the American and Orthodox Churches, especially in the Territory of Alaska, was received by the Most Holy Synod of all the Russias with the utmost gladness, as a new proof of respect shown by the representatives of the Episcopal Church, and of their estimable purpose concerning the union of the Churches. The Most Holy Synod, on their part, will make it an object of their constant care that a spirit of Christian tolerance and fraternal love and esteem, in accordance with the precepts and usages of our Church, should continue to pervade all the relations between the members of the Orthodox and those of the Protestant Episcopal Church in America, and particularly in the Territory of Alaska.

As to the hypothesis of a reciprocal participation in the solemn performance of the Sacrament, the Eastern Church, firmly adhering to the principles and convictions so clearly stated in the messages sent in 1723 by the Orthodox patriarchs of the East in reply to the Anglican bishops, considers a previous agreement in faith as preeminent indispensable before the practical mutual participation in the sacraments, inasmuch as the first is the only possible groundwork or basis for the last.

In order to attain this most desired end, a thorough study and investigation of the differences in the doctrine of both Churches would be absolutely requisite, and, to promote this, a great principle of cooperation will undoubtedly be found in the spirit of peace and charity which animates both Churches—the Orthodox as well as the American—and in those prayers for the peace of the whole world, and for the union of the holy Churches of the Lord, which arise to the God of truth and mercy from the Orthodox churches, and which are most certainly shared by the American churches.

Having been authorized by the Most Holy Govern-

ing Synod, I assume the duty of presenting their answer to the Court of Bishops of the American Episcopal Church, and beg you to accept the assurance of the highest esteem of your brother and co-servant in Christ Jesus.

ISIDORE,

First Presiding Member of the Governing Synod of all the Russias, and Metropolitan of Novgorod and St. Petersburg.

In response to this communication, the General Convention of the Protestant Episcopal Church, which met at Baltimore in October, adopted the following resolutions:

1. That this Convention cordially reciprocates the expressions of fraternal regard so frequently received within the past three years from the Most Reverend the Patriarch of Constantinople, the Most Reverend the Patriarch of Jerusalem, the Most Reverend the Metropolitan of Athens, and the Holy Governing Synod of the Orthodox Church of Russia, by dignitaries of the Church of England, and by members of this Church, both of the clergy and laity; that it takes grateful recognition of the generous action by which the administration of holy rites for the burial of the dead of our communion has been provided for by the authorities of the Holy Orthodox Church; and that it earnestly desires the countenance and increase of such brotherly intercourse and mutual good offices of love.

2. That the Joint Committee on the subject of intercourse with the Russo-Greek Church be continued, and be charged with the communication of the foregoing resolution to the venerable authorities of the several branches of the Holy Orthodox Church.

3. That the said Joint Committee be also charged with the duty of taking further steps for the acquisition and communication of such information as may be mutually important and interesting to this Church and to the Holy Orthodox Church in Constantinople, Greece, and Russia, with such publications thereof from time to time as may be deemed needful and prudent.

The Committee consists, on the part of the House of Bishops, of the Bishop of Maryland, W. R. Whittingham, D. D., LL. D.; Bishop of Illinois, H. J. Whitehouse, D. D., LL. D.; Bishop of New Jersey, W. H. Odenheimer, D. D.; Bishop of Western New York, A. Cleveland Cox, D. D.; Bishop of Florida, J. Freeman Young, D. D., LL. D.; Bishop of Long Island, A. N. Littlejohn, D. D.

On the part of the House of Clerical and Lay Deputies it consists of the Rev. John Fulton, D. D., of Alabama; the Rev. R. M. Abercrombie, D. D., of New Jersey; the Rev. Charles R. Hale, of Central New York; Hon. S. B. Ruggles, LL. D., of New York; Mr. Edward Stanley, of California; Mr. Henry C. Pierrepont, of Long Island.

The Bishop of the Russian Greek Church in America recently made a tour in Alaska to ascertain for himself the social, moral, and spiritual condition of the Aleuts, the results of which are thus summarized: "In his journeyings, Bishop Joannes was everywhere received as the Prince of Peace and the Prophet of God. The faithful surrounded him in flocks, humbly kissing his hand, and prostrating themselves before him with the deepest devotion. In return, they were consoled and comforted by the performances of all the sacred rites and ceremonies which the Greek Church

dispenses to its enthusiastic devotees, and, wherever the bishop found suffering and want, he gave generous relief. A large number of the better classes of the Aleuts are very eager to have their children educated in San Francisco, where they can learn the English language, and become better acquainted with the customs and habits of the American people. In compliance with the request, it is intended to establish a school and seminary in San Francisco, under the direction of the bishop and co-laborers, for the education of Aleutian youth.

The first building, in the United States designed expressly for a Greek church was erected in the city of New York, during 1871. It is on Lexington Avenue, between Fifty-first and Fifty-second Streets. The cost, about \$250,000, is defrayed by the Russian Treasury in St. Petersburg. The church is attached to the Russian legation in the United States, but is directly under the supervision of the Metropolitan at St. Petersburg, and is not in any way connected with the diocese of the resident Greek bishop at San Francisco.

EASTERN QUESTION. In December, 1870, the Government of England invited the great powers of Europe to a conference on the Eastern question, which was to be held in London on January 15, 1871. In the mean while, the exchange of diplomatic notes and diplomatic negotiations was continued. Count von Beust, in a note to Gortchakoff, dated December 10, 1870, undertook to refute the assertions of the latter, and remarked that Austria joined the Conference without preconceived plans, and only in the hope to secure for Turkey a peaceful development, and to bring on a solution which would be apt to spare national sensibilities without weakening the necessary guarantees. The Russian reply was couched in conciliatory language. On the part of England, the exchange of notes with St. Petersburg had not terminated when the invitations to the Conference were issued.

In the mean while, negotiations took place between Russia and Turkey, which it was thought would lead to the drafting of a new special convention and to the consent of Russia to certain modifications of the "agreements," the repeal of which had long been wished for by Turkey. It also appeared that the Ottoman Porte itself no longer attributed so great an importance to the neutralization of the Black Sea as some European diplomatists, for one of its organs, the *Turquie*, of Constantinople, published in December, 1870, several articles which represented the abolition of the neutralization as a measure involving no danger for Turkish interests. When, therefore, the London Conference met, on January 17th, considerable preparations for a peaceful settlement had been made by the two parties chiefly concerned in it. After the introductory formalities, the ambassadors of Turkey, Russia, Germany, Austria, and Italy, expressed the wishes of their

several Governments for the preservation of peace in the East. The Conference several times adjourned, partly on account of the indisposition of its president, partly because Lord Granville wished to await the arrival of the French ambassador. Unofficial negotiations were, however, continued, and every thing prepared for the public sessions. The hope of the English minister, that the Conference would get through its work before the opening of Parliament (February 9th) was not fulfilled. Lord Granville had invited Jules Favre, the French Minister of Foreign Affairs, to come to the Conference. Favre, in a note to the diplomatic agents of France, declared that he could not leave his place in Paris as long as the bombardment of the capital continued. He would nevertheless have gone to the Conference, if Count Bismarck had not refused to give a passport to him as a member of the Government, on the ground that the French Government of National Defence was not in a condition to act in the name of France, as long as it was not recognized by the French nation. The military authorities would have been justified in giving the passport; for it was not their business to inquire into the objects of the intended journey of Favre, but the official application of Favre, which expressed his desire to represent France at the Conference, prevented the adoption of this expedient. The influence of France in the Conference had, however, been considerably diminished when it became known that Bismarck positively refused to allow the French-German War to be brought before the Conference, and that the Prussian ambassador in London, Count Bernstorff, was instructed to leave the Conference as soon as an attempt to discuss the war was made.

As France was not represented at all at the Conference, and as Austria was too weak to bring a sufficient pressure to bear upon the Conference in support of its view, England had, from the start, but little hope of making to the schemes of Russia an unflinching resistance. Russia, on the other hand, appeared to be determined to adhere to her plans, and was greatly strengthened in this design by the enthusiastic manifestations of public opinion of the Russian people. When, therefore, Austria proposed a declaration that no power is at liberty to abolish the treaties or to withdraw from them, England regarded this as a welcome bridge for her retreat.

The demand of the Government of Servia, to have an official representative in the Conference, was not granted. The Conference also declined to take up the Rumanian question, as the Turkish Government protested against it on the ground that it was a purely internal question, which could not be discussed unless a proviso was adopted guarding the sovereign right of the Porte. On February 27th the Duke de Broglie, who had been appointed by Thiers as ambassador of France in England, arrived in London. He took part in

the Conference, which, however, in the mean while had nearly finished its business.

As Turkey had adopted the modern view that the continued limitation of the navigation in the mouth of the Danube afforded to her no protection, the other governments had no occasion to oppose the opening of this passage to international commerce. On the other hand, the Conference resolved, on motion of the Porte, to continue the existence of the Commission for the Navigation of the Danube, to which all the treaty powers send one deputy.

On March 13th the following new treaty was adopted and signed by the representatives of Prussia, Austria, France, England, Italy, Russia, and Turkey :

ARTICLE I. Arts. XI., XIII., and XIV., of the Treaty of Paris of the 30th of March, 1856, as well as the Convention between Russia and Turkey included in the said Art. XIV., are revoked and are to be replaced by the following articles :

ART. II. The principle of closing the Dardanelles and the Bosphorus, as set down in the separate treaty of March 30, 1856, is upheld, as well as the power of his Imperial Majesty the Sultan to open the said straits in times of peace to the ships of friendly and allied powers, if the execution of the stipulations in the Treaty of Paris of March 30, 1856, should require it.

ART. III. The Black Sea is open, as heretofore, to the commercial navies of all nations.

ART. IV. The commission appointed under Art. XV. of the Treaty of Paris, in which each of the treaty powers is represented by a delegate, and who was intrusted with the planning and execution of the work to be done below Isaktscha, namely, of clearing the mouth of the Danube as well as the neighboring parts of the Black Sea of sand-banks and other obstructions, in order that this part of the river and the said parts of the sea be put in best order for navigation, remains in its present composition. The duration of this commission is fixed for a further term of twelve years, to wit, from the 24th of April, 1871, to the 24th of April, 1883. The limit for the redemption of the loan contracted by this commission under the guarantee of the Governments of Germany, the Austro-Hungarian monarchy, France, Great Britain, Italy, and Turkey.

ART. V. The conditions of the reassembling of the river commission, created by Art. XVII. of the Treaty of Paris, shall be determined by a previous agreement of the river powers, without prejudging the clause referring to the Danubian Principalities; and, wherever a modification of Art. XVII. of said treaty may be involved, it shall be made the subject of a special convention between the undersigned powers.

ART. VI. The powers which possess the banks of that part of the Danube where cataracts and the iron gates cause obstructions to navigation, while reserving for themselves the right of coming to an understanding with regard to the removal of these obstructions, recognize the right of the high contracting powers to lay a tax on ships of all nations which derive a benefit from it, until the loan contracted for that purpose shall have been repaid, and they declare that Art. XV. of the Treaty of Paris of 1856 is not applicable to this part of the river for the time which is required for the repayment of the debt.

ART. VII. All buildings and establishments erected in consequence of the Treaty, of Paris of 1856, or of the present treaty, by the European commission, shall continue to enjoy the same neutrality which has protected them heretofore, and which shall, in the future, under all circumstances, be respected by the high contracting powers in the same manner. The advantages of the privileges arising therefrom shall

be extended to the entire administrative and engineering department of the commission. It is, however, understood that the provisions of this article shall in no wise affect the right, belonging to the Sublime Porte as sovereign, to send as heretofore her men-of-war into the Danube.

ART. VIII. The high contracting powers renew and ratify all stipulations of the treaty of the 30th of March, 1856, as well as their appendixes, which are not cancelled or modified by the present treaty.

ART. IX. The present treaty shall be ratified, and the ratifications shall be exchanged, within six weeks, or sooner, if possible.

EGYPT, a dependency of Turkey, in Northern Africa. The ruler bears the official title of Khedive,* the Arabic equivalent for Viceroy. This dignity is now hereditary in the family of Mehemet Ali. The present Pacha of Egypt is Ismail (born in 1816), who followed, on January 18, 1863, his brother Said as the fifth Viceroy of Egypt. A Council of State (created in 1856) is at the head of the administration. It consists of the princes of the ruling family, four generals, and four dignitaries. Its president is Sherif Pacha.

The area of Egypt is 659,000 English square miles. It has about 8,000,000 inhabitants, 5,215,065 inhabiting Egypt proper. The chief cities are—Cairo, 313,383 inhabitants; Alexandria, 238,888; Damietta, 60,000; Tintah, 55,000.

The total receipts for the year ending April 2, 1870, according to the official budget, amounted to 1,469,000 purses, and the total expenditure to 1,177,811 purses (500 piastres = 1 purse, 20 piastres = 1 American dollar). The public debt amounted, in January, 1871, to £31,575,000. The navy in 1870 consisted of 12 steamers, 13 yachts, 2 frigates, 2 corvettes, 4 screw gunboats, and 1 aviso. The value of the commerce of Alexandria with foreign countries was, in 1870: imports, 485,200,000 piastres; exports, 742,000,000.

The imports and exports of Egypt from September 9, 1869, to September 10, 1870, were as follows:

CUSTOM-HOUSES.	Imports.	Exports.
Alexandria.....	366,000,000	861,900,000
Damietta.....	304,000	59,100,000
Port Said.....	11,000,000	11,100,000
Suez.....	20,100,000	80,600,000
El Arich.....	2,400,000	3,600,000
Kossier.....	100,000	34,300,000
Snakin.....	100,000	45,800,000
Masowah.....	100,000	22,900,000
Total.....	400,100,000	1,119,900,000

The movement of shipping, in 1870, was as follows:

TOWNS.	Vessels.	Tons.	Passengers.
Alexandria.....	2,886	1,403,393	64,328
Damietta.....	480	38,955	296
Port Said.....	1,294	739,249	47,724
Suez.....	726	524,537	56,573

On January 1, 1871, the length of the railroads in operation amounted to 711.5 miles; that of the roads in the course of construction

to 148 miles. Of these roads, 286 miles have double tracks. The only private road is that from Alexandria to Ramle. The line from Cairo to Suez has been abandoned.

The Egyptian mail, in 1870, forwarded 888,581 letters, and 91,240 newspapers, to places in Egypt, and 132,461 letters and 47,989 newspapers to foreign countries. The Austrian mail brought 161,212 letters from Europe, and 12,360 from the Levant. The Italian post brought 160,000 letters and 172,000 newspapers, books, and pamphlets, from Europe, and forwarded 121,000 letters, and 10,700 newspapers, etc., to Europe.

The receipts of the Suez Canal, from November, 1869, to December 31, 1870, were 6,707,115 francs; the receipts during the first seven months of 1871, 7,682,807 francs. The movement of shipping in the Suez Canal, in 1871, was as follows:

VESSELS.	Number.	Tons.
English.....	329	298,230
French.....	74	81,979
Egyptian.....	33	21,430
Austrian.....	26	19,623
Turkish.....	16	9,882
Italian.....	12	8,252
Other.....	12	4,314
Total.....	502	443,709

The relations between the Khedive and the Sultan during the first months of the year were any thing but friendly. The Khedive was suspected of making extraordinary preparations for achieving his entire independence. According to a report published in the *Augsburger Zeitung* of March 11th, the fortifications along the coast were nearly completed. Besides several fortifications west of Alexandria, great care had been bestowed upon the defence of the bay of Aboukir, where two large and strong forts have been erected, which are to be brought into connection by railroad with the interior of the country. The American officers, who, in 1870, were engaged (about 25 in number), are all the time occupied with drilling the army. Besides the divisions which have to guard the coast from Alexandria to the east, and besides advanced posts near El Cantara, on the road to Syria, and near Ismailia, the bulk is concentrated on the coast not far from the Sweet-water Canal and from the railroad to Ismailia, where a camp had been established in a very favorable strategical position. A railroad, which can only serve for strategical purposes, has been begun, in the direction of El Cantara, and was to be completed by the beginning of June. It was believed that the Khedive was not altogether innocent of the insurrection of the Arabic tribes in Yemen. The Porte, on the other hand, had concentrated a large force in Yemen, which, it was inferred, might at some future time be easily employed against Egypt.

In the progress of the negotiations, the Porte sent a special commissioner to Cairo to make five complaints. The first charge referred to the increase of the army above the number of

* See ANNUAL CYCLOPEDIA for 1869.

18,000 men, as fixed by the firman of the Sultan; the second to the exclusive fortifications on the coast, and other warlike preparations; the third to the oppressive taxes; the fourth to the Armstrong cannon which the Khedive, in 1870, while giving up his iron-clad vessels, had retained. In the fifth place, the Turkish Government demanded that the Khedive for several weeks should receive on the isthmus a Turkish force, the number of which was not specified. In his reply, the Khedive expressed a strong wish to remain at peace with the Sultan, and asserted that on most of the above points the Turkish Government was misinformed; the number of his troops was not larger than was indispensably necessary for maintaining public order; the fortifications were necessary for the defence of the coast; the new loans and taxes had become necessary in consequence of the extensive public works. With regard to the last Turkish demand, the reply was evasive.

Later in the year both Turkey and Egypt showed a more peaceable disposition. The Khedive in August sent his aunt to Constantinople to assure the Sultan that her nephew would strictly fulfil all his duties. The Porte, on the other hand, deemed it best to disclaim for the present any intention to reduce Egypt to a condition of greater dependency than before. In October the Khedive, in compliance with the wish expressed by the Turkish Government, considerably reduced the taxes, and announced his purpose to consolidate the entire floating debt.

The session of the Egyptian Chamber of Representatives was closed by the Khedive on August 7th. The speech assured the representatives that the propositions and suggestions made by them had greatly pleased the Government. The president of the Chamber thanked the Khedive for the kind attention he had given to their wishes, especially as regards the new institution of the Interior.

ELECTRICITY. *Duration of the Electric Spark.*—Prof. Ogden D. Rood makes a second report to the *American Journal of Science* with regard to his experiments to determine the duration of the discharge of a Leyden jar, connected with an induction coil. His first paper on the subject was noticed in the *ANNUAL CYCLOPEDIA* for 1869. The later experiments were conducted with a jar having a coating of 11 square inches only, instead of about 114 square inches, used on the former occasions. For the mirror he employed silvered glass, half an inch square, the polished silver side reflecting the light. The mirror was made to revolve 300 times in a second, the apparatus used being essentially like that introduced in the former experiments. With zinc points and a striking distance of 1 millimetre, the duration of the spark varied between .000001 and .000025 of a second, a duration as long as 2½ millionths of a second being somewhat rare. With zinc points and a striking distance of 2

millimetres, two careful experiments gave respectively a duration of .0000022 and .0000019 of a second. Although with the improved micrometric method, adopted by Prof. Rood, an interval of time as small as one millionth of a second could be directly measured, yet he says he could never detect any sign that the "duration of the great body of the spark was other than absolutely instantaneous;" as, however, all the light of the spark is due to incandescent particles, we must suppose that an infinitesimal portion of time is required for attaining its maximum brightness, and, owing to the same reason, its disappearance demands another distinct period of time, however minute. With the mirror revolving 340 times a second, and platinum points at a striking distance of 3 millimetres, the observed duration of the discharge was .000000094. Prof. Rood narrates his further experiments with this difficult problem, as follows:

Before finally abandoning the attempt to determine the actual duration of the discharge, another effort was made; a second lamp-black plate was prepared, in which the breadth of the image of a line, black or white, on the observing plate was $\frac{1}{4}$ of a millimetre. These lines were viewed with the terrestrial eye-piece of a small telescope; it enlarged them ten diameters, and care was taken with all the adjustments, so that a good clear image should be produced. Platinum wires $\frac{1}{8}$ of an inch in diameter were used, with a striking distance of five millimetres. By gradually increasing the weight, it was proved successively that the duration was less than eighty, sixty-eight, fifty-nine, fifty-five billionths of a second; and, finally, the lines, after growing fainter and fainter, entirely disappeared, giving as the result a duration of forty-eight billionths of a second. In a large number of observations I could detect no discharge lasting during a smaller interval, though the apparatus was now fully capable of making evident much smaller periods of time.

When the striking distance was reduced to one millimetre, the duration was shorter; in the case of $\frac{1}{2}$ of the sparks, the duration was slightly greater than forty-one billionths of a second, the remaining $\frac{1}{2}$ being slightly less than this figure.

With a striking distance of three millimetres, the duration was between forty-one and forty-eight billionths; and, when the striking distance was increased to ten millimetres, it was between forty-eight and fifty-five billionths of a second.

An effort was made to make a corresponding set of measurements with brass balls instead of platinum points; and it would seem probable that the duration of the discharge is somewhat increased by their use (or that many of those with shorter durations are suppressed). With brass balls not nearly so many discharges take place in a given time as with points; hence, the work becomes tedious and less certain. The evidence from twenty-six observations, gathered in not less than three hours, went to show that the duration, with a striking distance of five millimetres, was between forty-eight and fifty-five billionths of a second.

It has thus been shown that the duration of the first act of the electric discharge is in certain cases only forty billionths of a second, an interval of time just sufficient to enable a ray of light to travel over forty feet.

The author has succeeded with this apparatus in measuring intervals as small as .000000028; and he hopes to reduce that as low as .000000010.

Magnetic Experiments.—Some singular experiments in magnetism have been made by Lord Lindsay with a very powerful magnet. The poles of the magnet were $2\frac{1}{2}$ inches square in sections, and the magnet was excited by a 30-cell Grove battery. The poles were kept $\frac{1}{8}$ of an inch apart, and a half-crown piece placed between them. When the magnet was not excited, the coin dropped instantly through; but, when the magnet was charged, the half-crown was 6 seconds in falling the distance of $2\frac{1}{2}$ inches. In a second experiment, a small India-rubber tube, filled with mercury, was placed between the poles, and an electric current passed from the battery through the mercury. The moment the magnet was excited the tube was set in motion, getting away from between the poles, and assuming the shape of the letter S. On reversing the current the shape of the curve was instantly reversed. After this, a coil of copper wire was placed round the vertical pole of a magnet, and when the magnet was charged, and a current of electricity sent through the copper coils in one direction, the ring of fine copper wire stuck fast in the magnet. On reversing the electric current, the ring jumped off the pole of the magnet to some distance in the air. In order to show the diamagnetic properties of warm air, a lighted taper was passed through a hole bored along the poles of the magnet, the light being brought to the space of $\frac{1}{8}$ inch wide between the two poles. So long as the magnet was excited, the light burned brilliantly, the smoke coming out at the extreme ends of the poles, and not rising up directly off the flame. As soon, however, as the magnet was discharged, the smoke rose straight up and extinguished the flame.

Dynamo-Electric Light.—The London Times gives an interesting account of a series of experiments, conducted toward the close of the year, at Sheerness, with a view of ascertaining the applicability of Siemens's dynamo-electric light to torpedo-service in time of war. The light is produced by excessively rapid motion generated from the fly-wheel of a steam-engine, and operating on a powerful set of ordinary galvanic coils in connection with soft iron magnets. The leather strap from a four-horse-power engine, encircling a small gun-metal pinion, causes it to revolve with the extreme velocity of 1,600 times a minute, inducing motion in an electric bobbin at the side of an apparatus consisting of several sets of strong insulated coils. A stream of electricity consequently passes through them. This stream is conducted to a second series of coils, larger and more powerful than the first, which are also in combination with a pinion revolving 800 times a minute, thus intensifying the stream as it passes through them to a very considerable degree.

Both negative and positive currents are now alternately given off from another "bobbin" at the side of the second series of magnetic coils, to the train of in-

sulated wires, which conveys them to the position from which the dynamo-electric light is to be exhibited. Here there is a delicately-contrived apparatus for containing the carbon-points, between which the light is to be generated, adjusted at the top of a tripod somewhat similar in construction to that of a surveying-instrument. At the back of the two carbon-points, and "slotted" vertically to admit of their holders passing through it, is a concave reflector of white polished metal, which collects the rays of light into a focus, and transmits them in any required direction by means of an adjusting hand-wheel below. A minute aperture in the centre of the reflector, precisely behind the junction of the two carbon-points, throws a representation of the flame upon a piece of opal glass in a frame fixed at the back of the reflector; and, through the agency of another small hand-wheel, which causes the carbon-points to approach or recede from each other, the flame can be reduced or intensified at pleasure, by simply turning the wheel, care being taken at the same time to keep a watchful eye upon the picture produced, as the withdrawing of the points to too great a distance from each other will extinguish the light. It should have been remarked before that ample means are taken, by lubricating the electrical apparatus, to counteract the evil effects which might otherwise arise from the excessive friction consequent on the rapidity of motion in the several parts.

The object of instituting the series of experiments was to ascertain if it was possible to throw such a stream of light upon an enemy's working-parties, engaged in interrupting communication with a line of torpedoes at night, as would render them sufficiently conspicuous to be fired at, and, consequently, driven off. The place selected was the new fort at Garrison Point, Sheerness. The engine and "coils" were erected in the enclosure of the fort, while the instrument itself was placed in one of the massive embrasures piercing its sides. No sooner was steam got up and the order given to turn ahead, than the burring noise of the machine indicated that electricity was being rapidly generated, sparks and stars of vivid blue light being given off at the various joints. Another instant, and a vivid stream of light shot across the sea to a number of ships lying in the offing at a distance of about two miles, lighting them up with the brilliancy and distinctness of broad moonlight. The effect was magnificent. Clouds of mists, rendered visible by the intensity of the rays shooting through them, rolled across the broad field of bright light from time to time, not, however, interrupting the view in their progress. By shifting the direction of the rays laterally, each object in turn came within the compass of the portion of horizon rendered clear. In fact, it was sufficiently apparent that no objects of any appreciable size, such for instance as an enemy's boats, could come within a mile or more of one of Siemens's dynamo-electric instruments in operation without being rendered conspicuous to any battery in the vicinity, and, consequently, involving to themselves the most imminent danger. Hence the result of the experiments may be pronounced a success; whether, however, a corresponding effect might not be obtained by a succession of parachute-lights thrown from a rocket or mortar is quite an open question.

Electric Railway-Signals.—Robinson's system of electric railway-signals, recently introduced, works automatically, and, it is said, effectively. A train approaching a switch or drawbridge in either direction, when distant half a mile, presses on a lever in proximity to the track. This lever controls an electric circuit, which, being closed by the train, remains closed. When a switch or drawbridge is in place, and safe, a white flag is brought

into view on a signal-box placed by the side of the track, a short distance in advance of the lever, thus notifying the engineer that he can go ahead without danger. But when the switch or drawbridge is out of place, the pressure of the wheel on the same lever as before brings into view in the same signal-box a red flag or danger-signal, and rings two bells loudly at the same time—one at the signal-box and the other at the drawbridge. These bells keep up a continuous alarm until the wheels pass another lever, which operates a circuit-breaker, located at a short distance from the switch or drawbridge. The bells can be heard at the distance of a mile.

A new plan of electric signals for brake-men is thus described: "An electro-magnetic telegraph, worked by a small battery, extends from the cab of the locomotive through the whole length of the train. There is an alarm-bell in the cab and upon each car. Two wires pass between the cars, covered with tarred twine. One end of this 'cable' is securely fastened to the car, while at the other end is a copper link, which is placed on a spring-hammer on the other car. This link, when in its proper position, keeps the connection open. It is so arranged that, should a part of the train become detached, the link is pulled off, the circuit is broken, and the bell on the locomotive and on each car is kept ringing until the circuit is again closed. Besides automatically indicating the breaking of a train, the apparatus is useful in signalling between the engineer and his brakemen. Instead of blowing the whistle to notify them to apply or let off the brakes, the engineer simply touches a little knob that rings the bell on each car almost instantly. By this method the brakeman on the rear car is notified as surely as though on the first, which is not the case by the present arrangement, for it frequently happens that the sound of the whistle does not reach the end of a long train. If there is trouble in any car, the conductor or brakeman touches a little knob, the signal is given, the engineer and the other brakemen are warned, and the train is stopped."

Thermo-electric Action of Metals in Liquids.

—In an investigation of the development of electric currents of unequally-heated metals in liquids, Mr. George Gore found that hot platinum was electro-negative to cold platinum in liquids of acid reaction, and positive to it in alkaline ones, provided in all cases chemical action is completely or sufficiently excluded. In a later series of experiments he endeavored to ascertain what electrical changes are produced in cases where chemical action more rarely occurs; and in those experiments he employed copper plates, which are more easily corroded than platinum. The following are some of the general results arrived at:

The results show that hot copper was positive to cold copper in the following liquids: hydrochloric, hydrocyanic, boracic, and tribasic ortho-phosphoric

acids; chloride of copper (weak solution); chloride of cobalt; chloride of manganese; chromic acid; chloride of chromium; sulphate of zinc (weak solution); sulphate of magnesia; chloride of calcium; nitrate and chloride of strontium; chloride of barium; nitrate of sodium (strong solution); chloride, iodide, carbonate, and bichlorate of sodium; sulphate of sodium (strong solution); tribasic phosphate of sodium; nitrate, chloride, and chlorate of potassium; bromide of potassium (strong solution); iodide of potassium (strong solution); carbonate, acid carbonate, and bichromate of potassium; aqueous ammonia; chloride of ammonium; cyanide and ferrocyanide of potassium; acetate of zinc; and acetate of sodium. And negative in the following ones: nitric, chloric, hydrobromic, hydrofluosilicic, and sulphuric acids; ferrous sulphate; chloride of copper (strong solution); sulphate of copper; sulphate of zinc (strong solution); nitrate and iodide of sodium (weak solutions); bromide and iodide of potassium (weak solutions); iodate of potassium; chrome alum; nitrate of ammonium; oxalic, acetic, tartaric, and citric acids. The number of liquids in which hot copper was positive was thirty-six, and those in which it was negative was twenty.

In several instances where the hot metal was negative with a weak solution, it became positive with a strong one; for instance, with sulphate of zinc, nitrate, iodide, and sulphate of sodium, bromide, and iodide of potassium; but with chloride of copper the reverse occurred. These results may be connected with the fact that in weak neutral solutions the chemical action is generally the most feeble, and therefore interferes the least with the direct influence of the heat in producing electric currents.

The influence of free hydrochloric, hydrocyanic, boracic, ortho-phosphoric, and chromic acids, was to make the hot copper positive; while that of nitric, chloric, hydrobromic, hydrofluosilicic, sulphuric, and some of the organic acids, was to make it negative.

The results also show that the quantity of the current obtained with any given liquid generally increases with the number of molecules of the substance contained in the solution; in some cases, however, as with sulphuric acid, carbonate of potassium, chloride of ammonium, and acetate of zinc, there was a limit to this increase; and beyond that limit the quantity of the current decreased up to the point of saturation of the liquid.

In the great majority of cases the value of the deflection increased much more rapidly than the strength of the solution, particularly with solutions of sulphate of magnesia, and also of hydrochloric acid and of chloride of sodium, probably because two causes operated, viz., increased strength of solution and diminished resistance; in a very few cases, however, the opposite result took place, as with solutions of chloride and nitrate of strontium.

Inversions of the direction of the deflection, by difference of strength of the liquid, occurred with solutions of chloride of copper, sulphate of zinc, nitrate, iodide, and sulphate of sodium, bromide and iodide of potassium.

In certain acid liquids, viz., nitric, chloric, hydrobromic, hydrofluosilicic, and sulphuric acids, the hot copper was strongly negative (notwithstanding the chemical action upon it was distinct, and in some cases even strong); this is similar to the electrical behavior of platinum in such liquids, and may be attributed either to the more direct influence of the heat alone (such as occurs with platinum plates), or to a different influence of the chemical action produced by the heat. Both these causes probably operate in such cases.

It is probable that, in all cases where the hot copper was positive in liquids of strongly acid reaction, the positive condition was due to chemical action alone.

With some liquids, especially with solutions of hydrocyanic, boracic, acetic, tartaric, and citric acids,

the deflections were very feeble, and the chemical action on the plates not perceptible; while with others, such as nitric and chloric acid, solutions of the chlorides of strontium, sodium, potassium, and ammonium, and of carbonate, acid carbonate, and cyanide of potassium, the deflections were considerable, and the chemical action distinct, and in some cases strong. In none of the liquids (except hydrobromic and chromic acids) did the hot plates appear to be less stained or corroded than the cold one; probably, in all cases, it was the most corroded, although in some cases the corrosion was not perceptible.

The amount of deflection was not always proportionate to the amount of chemical action; for instance, with solutions of chloride of copper, and iodate of potassium, there was considerable corrosion, but only feeble currents, probably because the plates became covered with a badly-conducting film, while with hydrochloric acid, chloride of cobalt, chloride of manganese, and nitrate of potassium, the reverse occurred.

The electric currents produced by the direct influence of unequal temperature or friction of platinum or copper electrodes, in conducting liquids which do not act chemically upon those metals, have their origin in temporary changes of cohesion of the layers of metal and liquid which are in immediate and mutual contact, and may be considered as a very delicate test of the kind and amount of temporary molecular movements produced by those causes.

Resistance and Temperature.—Mr. C. W. Siemens read a paper before the Royal Society, in April, recounting his investigations into the ratio of increase of resistance in metallic conductors with increase of temperature. He suggested various forms of apparatus for measuring with great accuracy the temperature at distant and inaccessible places, including the interior of furnaces where metallurgical or other smelting operations are going on.

In measuring temperatures not exceeding 100° Cent., the instrument is so arranged that two similar coils are connected by a light cable containing three insulated wires. One of these coils, the "thermometer-coil," being carefully protected against moisture, may be lowered into the sea, or buried in the ground, or fixed at any elevated or inaccessible place whose temperature has to be recorded from time to time; while the other, or "comparison-coil," is plunged into a test-bath, whose temperature is raised or lowered by the addition of hot or cold water, or of refrigerated solutions, until an electrical balance is established between the resistances of the two coils, as indicated by a galvanoscope, or by a differential voltmeter, which balance implies an identity of temperature at the two coils. The temperature of the test-solution is thereupon measured by means of a delicate mercury-thermometer, which at the same time tells the temperature at the distant place.

By another arrangement the comparison-coil is dispensed with, and the resistance of the thermometer-coil, which is a known quantity at zero temperature, is measured by a differential voltmeter, and the temperature corresponding to the indications of the instrument is found in a table, prepared for this purpose, in order to save all calculation.

In measuring furnace-temperatures the platinum wire, constituting the pyrometer, is wound upon a small cylinder of porcelain contained in a closed tube of iron or platinum, which is exposed to the heat to be measured. If the heat does not exceed a full red heat, or, say, 1000° C., the protected wire may be left permanently in the stove or furnace whose temperature has to be recorded from time to time; but, in measuring temperatures exceeding 1000° C., the tube is only exposed during a measured interval of, say, three minutes, to the heat, which time suffices for the thin protecting casing and the wire immediately exposed to its heated sides to acquire within a determinable limit the temperature to be measured, but is not sufficient to soften the porcelain cylinder upon which the wire is wound. In this way temperatures exceeding the welding-point of iron, and approaching the melting-point of platinum, can be measured by the same instrument by which slight variations at ordinary temperatures are told. A thermometric scale is thus obtained, embracing, without a break, the entire range.

The leading wires between the thermometric coil and the measuring instrument, which may be under certain circumstances several miles in length, would exercise a considerable disturbing influence if this were not eliminated by means of the third leading wire before mentioned, which is common to both branches of the measuring instrument.

Another source of error in the electrical pyrometer would arise through the porcelain cylinder, upon which the wire is wound, becoming conductive at very elevated temperatures; but it is shown that the error arising through this source is not of serious import.

Magnetic Spectra.—Mr. Alfred M. Mayer recommends the annexed plan to preserve the magnetic spectra or the figures produced by iron filings, when these are set in momentary vibrations on a surface placed over a magnet. The ordinary process of "fixing" them, so that they can be exhibited and studied, is to press upon them a sheet of paper, coated with mucilage, to which the filings adhere; but in the operation of the transfer many particles are disarranged from their position, and the figures yet more distorted by the shrinking of the wet paper. Mr. Mayer's process is thus given:

My process is as follows: A clean plate of thin glass is coated with a firm film of shellac, by flowing over it a solution of thin substance in alcohol, in the same manner as a photographic plate is coated with collodion. After the plate has remained a day or two in a dry atmosphere, it is placed over the magnet, or magnets, with its ends resting on slips of wood, so that the under surface of the plate just touches the magnet. Fine iron filings, produced by "drawing" Norway iron, which has been repeatedly annealed, are now sifted uniformly over the film of lac by means of a fine sieve. The spectrum is then produced on vibrating the plate, by letting fall vertically upon it, at different points, a light piece of copper wire. The plate is now cautiously lifted vertically

off the magnet and placed on the end of a cylinder of pasteboard, which serves as a support in bringing it quite close to the under surface of a cast-iron plate (1 foot diameter, $\frac{1}{4}$ -inch thick), which has been heated over a large Bunsen-flame. Thus the shellac is uniformly heated, and the iron filings, absorbing the radiation, sink into the softened film and are "fixed."

I generally allow the heat to act until the metallic lustre of the filings has disappeared, by sinking into the shellac, and the film appears quite transparent. This degree of action is necessary when photographic prints are to be made from the plate, but when they are to be used as lantern-slides I do not carry the heating so far. After the plate has cooled, it is allowed to fall upon its ends, on a table, so that any filings which have not adhered may be removed.

By this process many plates have been produced, showing the action of single magnets of various forms and of juxtaposed bars, as well as the effects of electric currents led by wires through holes drilled in the plates. Those exhibiting the inductive action of magnets on bars of soft iron and the interaction of magnets and electric currents are peculiarly interesting. An approximate representation of the resultant lines of the terrestrial magnetic action has been obtained by magnetizing equally-tempered steel disks of from 2 inches to 3 inches, and even more, in diameter. The magnetic axis or axes of these disks are predetermined by making them the continuations of the axes of very powerful electro-magnets, terminated with cones of soft iron with slightly-rounded apices. The arcs of the great circles, including the terrestrial magnetic poles, having been calculated, the axes of the electro-magnets are inclined to that angle, while the steel disk is held close to their poles. On passing the current the disk is magnetized, and we have an approximate representation of a section of the earth's magnetic effect.

Electric Clocks.—Improvements in the electric clock are claimed to have been made by Messrs. Bonhomme and Mildé, of Paris, by which time is indicated with great accuracy, and the hours are struck under all conditions of the weather, while any number of clocks and striking motions may be made to work simultaneously, and in perfect unison, when connected with the regulating or primary clock. The primary clock, worked solely by electricity, is situated in any desirable place, and put in electric communication with the other clocks, and transmits its precise motion to them. The clocks are each provided with electro-magnets, which act on armatures, and cause the latter to vibrate through a limited space (controlled by an adjusting screw), whenever the electric pulsations take place. This is effected by making and breaking the electric circuit. To these vibrating armatures, or to arms and levers connected therewith, are attached ratchet-clicks, which act on a central ratchet-wheel, and every time they are moved forward they pull round the ratchet to a certain extent, and thus act upon a central toothed wheel, which is mounted on the same shaft and gears into and actuates the clock-work which carries round the hands. The escape-ments are acted on in like manner, and the time is controlled by a pendulum, which is insulated by means of ivory blocks.

Improved Telegraph-Cables.—In manufacturing the Dublin and Holyhead cable, it was

desired to make it of unusual strength and working capacity. There were seven conducting wires, each one being made of a strand of seven copper wires, one of which formed the centre round which the other six were stranded. Each one of the stranded wires, when completed, averaged 107 lbs. to the nautical mile, and was so well insulated that, when the conductivity of the wire was compared to that of the insulating or non-conducting material, it stood as 4,350,000 to 1, indicating a core of a highly superior character, and a most perfect preparation of the insulatory material. The latter was a series of coatings of "hot compounds," and plastic gutta-percha, each put on three times alternately. The diameter of the completed main cable is $2\frac{1}{4}$ inches, and its weight per knot 13.75 tons. It was safely submerged, and, upon testing, showed highly-satisfactory results, the mean connection of the seven wires being 700 megohms per knot, reduced to the standard temperatures of 75° F., the mean temperature of the sea-bottom being proved by the electrical tests to be 46° F. This was the first cable laid by the English Post-office Department after its acquisition of the telegraphic lines of the kingdom.

Electric Torpedoes.—By an invention due to Captain A. Noble, of England, any number of submarine torpedoes may be exploded with only one wire. Formerly, it had been necessary to connect each torpedo with the firing battery by means of a distinct insulated wire or cable. On Captain Noble's plan, the main insulated cable is connected with a number of branch insulated wires corresponding to the number of torpedoes to be laid down. These torpedoes are constructed so that any one of them is exploded by a passing ship by the completion of an electric circuit through the insulated wire. Upon the explosion of any one of the torpedoes, it is at the same moment disconnected from the electrical arrangement, so that its explosion in no wise interferes with the liability of any other of the torpedoes to be subsequently exploded by collision with a vessel. In practice, Captain Noble makes the electrical communication between each torpedo and the insulated wire through an Abel fuze, which, together with the joints that connect it with the torpedo and the insulated cable, is enclosed in a water-tight casing. When the torpedo is exploded by completing the electric circuit, the fuze enclosed in the insulating box is simultaneously exploded thereby, and the electric communication of that particular torpedo with the insulated wire is instantaneously severed. The same result he also obtains with a platinum or fine iron wire, or any other electrical fuze, in place of the before-mentioned kind.

Electric Signals in Mines.—In Silesia, Westphalia, and the basin of the Saar, the use of electric signals for mines is becoming very general. The *Mechanics' Magazine* describes

the operation of these signals in the Graf-Beust mines at Essen. Their characteristic is, that the voltaic circuit is closed by the earth. Along the circuit are interposed alarms, visible at every stage of the mine; the current is constantly closed; the alarms sound when the working of the manipulator interrupts the current; the pile is composed of twenty elements of brass-zinc, plunged in a solution of sulphate of magnesia. At the Rhein-Elbe mine the system is different. In the transmission of signals from the bottom to the surface, a complete circuit is made between the two points. The manipulator is composed of a wooden fork, the teeth of which are covered in the interior with two sheets of copper in contact with the conducting wires; at the lower extremities of the sheets there are two metallic pendants which are brought into contact at the moment of interrupting the current, by closing the teeth of the fork, when the passage of the current sounds the bells placed at the surface. To transmit signals from the surface to the bottom, it is necessary, of course, to have a manipulator at the surface and bells at the bottom, but a single conductor only is required to connect them. The circuit is closed by the wire attached to the bells. The pile used at Rhein-Elbe is composed of six elements of zinc-charcoal plunged in a stratum of mercuric sulphate, renewed every two months. The wires are protected by a wooden sheath. The erection in a wooden shaft of 220 yards deep costs almost £40, in which sum are comprised the expense of materials required for a year, and two spare elements. In a dry shaft the conducting wire can be covered simply with gutta-percha, in which case the cost is reduced.

Electric Time-Guns.—The *Mechanics' Magazine* gives an interesting account of the practical working of the electric time-guns, now regularly fired at a given hour at Edinburgh, Newcastle, and North Shields; true mean time is given for those points from Greenwich. At Edinburgh an electric current is passed direct from the Royal Observatory clock to the castle-clock, which works directly in perfect unison with the former. Attached to the movement of the castle-clock is a detent and lever arrangement, which is liberated by the mechanism of the clock at the precise moment necessary for the discharge of the gun (1 p.m.). This is accomplished by the fall of a lever, pulling a cord attached to a friction-tube placed in the touch-hole of the gun. The daily gun alike controls the accuracy of railway, church, and watch time-pieces, and is relied on for miles around when the flash can be seen. The sound travels over a radius of ten miles, and, by allowing as a correction for the sound one second for each quarter of a mile, the signal becomes equally available for all points within its hearing. At Newcastle the gun is fired by a direct current from the Edinburgh Observatory clock, 120 miles off, the

charge being ignited by the passage of the electric spark direct into the fuze. Practically, the interval of time taken from the passing of the current to the ignition of the powder and the discharge of the gun is found to be about one-tenth of a second only, a time so small as to be virtually of no importance.

Nature of the Luminous Arch.—In passing a current of electricity through highly-rarefied atmosphere in a sealed tube, placed between the poles of an electro-magnet, a luminous arch is produced which follows the course of the magnetic rays. As the electro-magnet is magnetized, the tube, which before was full of a luminous cloud, is seen gradually to exhibit a change: the magnet gathers up this diffused cloud, and builds up the arch. Mr. C. F. Varley, in a paper read before the Royal Society, details as follows the results of his experiments to explain these phenomena. He says: "To endeavor to ascertain the nature of this arch, a special tube was constructed. A piece of talc, bent into the form U, had a fibre of silk stretched across it; on this fibre of silk was cemented a thin strip of talc, 1 inch in length, $\frac{1}{16}$ th inch broad, weighing about $\frac{1}{16}$ th of a grain. The tube was sealed up and exhausted; carbonic acid and potash were used to get a high vacuum. When the magnet was not magnetized, the passage of the current from wire to wire did not affect the piece of talc. When the magnet was charged, and the luminous arch was made to play upon the lower portion of the talc, it repelled it, no matter which way the electric current was passing. When the tube was shifted over the poles of the magnet so as to project the luminous arch against the upper part of the talc, the upper end of the talc was repelled in all instances; the arch, when projected against the lower part of the talc, being near the magnet, was more concentrated, and the angle of deviation of the talc was as much as 20°. When the upper part of the arch, which was much more diffused, was thrown upon the upper part of the talc, it was repelled about 5°. This experiment, I think, indicates that this arch is composed of *attenuated particles of matter projected* from the negative pole by electricity in all directions, but that the magnet controls their course, and these particles seem to be thrown by momentum on each side of the negative pole, beyond the limit of the electric current. This arch requires time for its formation, for, when a charged condenser is discharged through the tube, no arch is produced. The arch from the negative pole is a hollow cylinder; the little talc tell-tale against which the arch was projected cut out the light, and a corresponding dark space existed throughout the remainder of the course of the arch. There was on the talc, at the spot where the arch struck it, a little bright luminous cloud, as though the attenuated luminous vapor was condensed by this material obstruction. Great care had

been taken not to let the arch strike the single filament of silk which suspended the tale. Having demonstrated that the tale was repelled as described, the arch was allowed to play against the silk fibre, which the author expected would have been instantly burnt; such, however, was not the case. Even when a powerful induction coil replaced the battery, the fibre remained unhurt."

Platinum Plates.—In a paper read before the Royal Society, Mr. C. F. Varley notes the various electrostatic capacity of platinum plates immersed in acidulated water. With electric potentials of less amount than sufficient to decompose water, these plates can be charged and discharged like condensers. Mercury and mercurial amalgams, he likewise found, could be polarized with hydrogen. A vessel fixed on a board has within it two funnels, connected by tubes with two others outside. The four are so arranged that, when each is about one-third full of mercury, by tilting the board, the mercury, in regaining its equilibrium, diminishes its surface in one of the funnels inside of the vessel, increasing it in the other. The vessel is then filled with acidulated water, and, if the mercury is pure, no current takes place on altering the relative surfaces; but, if one surface is polarized with hydrogen and the battery removed, again augmenting the one surface, and diminishing the other, an electric current is set up. Mr. Varley could not succeed in polarizing mercury with oxygen. By careful measurement, he found that, with platinum plates, the charge increases directly as the potential up to 0.08 of a Daniell's cell, but beyond that, that the charge increased in a much greater ratio. He believes the variation is as the square root of the potential; and infers from his experiments the impracticability of working uninsulated telegraphic wires in the ocean. He estimates that an uninsulated solid conductor must be only 1,100 yards long to compete in speed of signalling with 2,500 yards of the same weight per mile of the same conductor when insulated.

Iron Electrotypes.—In experimenting on the production of iron electrotypes, M. Klein found that the best results were obtained by placing in the bath a plate of copper and uniting it with the iron. The deposits became much more uniform, and, on reducing the energy of the current, were highly satisfactory, until, finally, a microscopic examination failed to detect any porosity or irregularity in the deposits.

On leaving the bath the iron is as hard as tempered steel, and very brittle. Reheated to a dull-red heat, it loses much of its sharpness and hardness. Heated to a cherry-red, it becomes malleable, and may be engraved as easily as soft steel. If the deposits are produced in good condition, and annealed uniformly and with the necessary precautions, they are neither subject to warp nor bend. There is no contraction, but, on the contrary, a slight degree of expansion, almost imperceptible, however. Owing to the necessity of having bank-note and similar plates identical in every respect, it is of the first importance that they should not be distorted nor have

their dimensions altered in the process of annealing. It appears that the galvanic deposit of iron has not only permanent magnetism, but that, like soft iron, it receives the magnetism of position. By replacing plates of copper by those of iron, greater facilities will be afforded for producing publications, works of art, and especially bank-notes and checks. Iron electrotype-plates are found to be almost indestructible. They not only can be printed from an almost unlimited number of times, but they are better calculated than those of copper to withstand those inevitable accidents constantly occurring in printing-establishments. Printers are sometimes obliged to set aside as useless their best plates, which are often damaged by a grain of sand, or by a chance knot in the paper. These accidents not only involve the expense of renewing the plates, but sometimes occasion interruption and delays in works of a very pressing nature. These are some among the many which may be expected to accrue from the introduction of iron electrotypes.

Electrotyped Imitations of Leather.—The imitation of the choicest grains of leather—such as morocco and seal—is now achieved on a large scale, at a Birmingham factory, at a cost far below that of the actual skins. An ordinary machine-roller is fitted up with a mandrel, upon which is deposited by a new process (not disclosed) a copper fac-simile of the grain of leather to be imitated. The *Mechanics' Magazine* says that an ordinary skin can thus be impressed with the beautiful surface of morocco, even to the finest variations of grain, and several thousand may be copied from one deposit.

Dynamic Condensers.—M. Saint-Edme, in his new work on applications of electricity, speaks thus of the dynamic condenser invented by M. Garton Planté: "It permits, so to speak, of an accumulation of the powers of a battery of two or three elements, until a discharge equal to the force of fifty or sixty is obtained. In a jar made with lateral grooves is arranged vertically a series of parallel lead plates, very close to each other, and perfectly insulated. One series of pairs of plates is connected, and put into connection with one of the poles furnishing the current. The same is done with the other series. The jar is filled with acidulated water. The current of the battery decomposes the water gradually, accumulating hydrogen on one group of plates, and oxygen on the other. If the two groups of plates are put into communication, the oxygen and hydrogen combine afresh, and produce a current of great intensity. The action of the apparatus may thus be indefinitely maintained. This condenser is employed almost exclusively in surgery."

Operating a Railroad by Telegraph.—A Denver (Colorado) correspondent of the *New York Tribune* gives the following account of a novel method adopted for the running of trains by telegraph on the Denver and Rio Grande Railroad: "The engineer alone has charge of running the train. The conductor is an agent, and he is also a telegraphic operator. He carries a telegraphic apparatus with him, and stations are attached to telegraph-poles—being little more than shelves—and the agent com-

municates orders to the engineer. The poles are numbered in mile-sections, from one to twenty-six, and the miles are marked on the poles as if milestones. By this means the engineer, who keeps record of the condition of the track, can report to the master-mechanic, at the end of the trip, or sooner, any defect within one hundred feet, by naming the number of the pole and section where work is needed. The master-mechanic has charge of maintenance of way, and, having reports by telegraph, as above stated, he at once directs where work is to be done."

Improved Exciting Liquid.—The American *Journal of Science*, for April, contains an article from Mr. S. B. Sharples, recommending the Bunsen cell—substituting, however, for the nitric acid the mixture herewith described, which costs but little if any more than the nitric acid alone, and is entirely free from fumes:

To prepare the exciting liquid, sulphuric acid of 1.84 sp. gr. is mixed with nine times its volume of water and allowed to stand until the precipitated lead has all settled. The clear acid is then decanted and is fit for use. This plan of preparing the acid has been in use in this laboratory for some years, and gives very good results, local action being almost entirely prevented by the removal of the lead.

To prepare the absorbing fluid, ordinary commercial nitric acid is saturated with potassic bichromate; this should be done in a warm room, as it takes up much more when warm than when cold. The solution thus prepared is mixed with one-third of its volume of sulphuric acid, and enough water added to redissolve the chromic acid precipitated.

Two objects are gained by adding the sulphuric acid. The mixture is less expensive than if pure nitric acid is used, and the internal resistance is decreased. If the internal and external cells are properly proportioned, this battery will run until the exciting fluid is exhausted, without giving off any fumes of nitrous acid.

The Hooper Core and Wheatstone Apparatus.

—In a contribution to *Nature*, on "Deep Sea Baths," Mr. N. J. Holmes gives the preference to what is called the Hooper core over the gutta-percha core. Mr. Hooper's core is made as follows: The copper conductor, after being tinned, is coated with an insulation of pure India-rubber applied in the shape of a ribbon, lapped spirally round it. Next, two strips (one laid above and the other below) of India-rubber, chemically prepared to resist the action of sulphur, and called the "separator," are applied so as completely to surround the first rubber covering, as it were, with a tube; a pair of grooved die-wheels giving the contour, and at the same time regulating accurately the gauge of the core. Exterior strips are then similarly applied of a compound of rubber and a small percentage of sulphur. The whole is then lapped round with water-proof felt tape, and exposed for some hours in an oven to a heat of about 389° F. By this process the three successive coatings are welded into one solid, dense, homogeneous mass, having its distinctive features preserved as regards the individual character of the several

layers. Thus the heat, in driving off the sulphur from the outside coating, has converted that envelope into an indestructible vulcanized rubber jacket. The second layer, or "separator," has intercepted the passing of the sulphur by reason of its chemical properties, while at the same time it has allowed an infinitesimal trace of the sulphur to combine with the internal coating of pure rubber round the conducting wire, sufficient to change its character into an indestructible and non-liquefying material, without its becoming in any way vulcanized. It is by this beautiful chemical affinity between the several layers, each performing its special part toward the production of one individual whole, that the "Hooper insulation" has succeeded in establishing the durability of the preparation. The advantage of the Hooper core over the other is estimated by the author in the proportion of 180 to 100; that is, in a given time the former will transmit 80 per cent. more words than the latter. As regards apparatus for transmitting currents through submarine conductors, Mr. Holmes considers the Wheatstone automatic reading system the most successful. He says: "By this apparatus an average speed of over thirty words a minute is regularly maintained upon the Danish-English cable, a distance of 363 nautical miles, exclusive of a further land circuit of over 140 miles, making a total distance of about 500 miles. This speed must be compared with that of seventeen words per minute, the highest result recorded over the same circuit by the most improved Morse system. From the results of the 'Wheatstone' apparatus working over this circuit since September, 1868, it appears that, to obtain maximum speed, the currents through a submarine cable require to be transmitted of equal duration, at equal intervals, in alternate directions, and the line discharged to earth between each successive reversal or current to neutralize the charge, all of which conditions are fulfilled in the 'Wheatstone' Automatic Jacquard arrangement, which can only be compared to a loom weaving the currents into the line, the sequence of the currents representing the pattern on the cloth. This apparatus is now organized as the transmitting and recording register upon the vast system of submarine circuits belonging to the Great Northern Telegraph Company, and the extensions from Possiet Bay (Russian-Chinese frontier) to Nagasaki, Shanghai, and Hong-Kong."

Electric Novelties.—Messrs. Bailey & Co., of the Albion Works, Salford, England, have invented an ingenious contrivance for signalling the state of high or low water at reservoirs, to any distant point. The two places must be connected by telegraphic wires. A float is then placed on the water, and as this rises or falls it raises or depresses a lever, which brings a finger-point into contact with a platinized plate representing the line wire. The battery is always fixed at an intermediate

point between the bell to be signalled at the distant post and the earth connection, so that it is only necessary to place the line wire in contact with the earth—a simple arrangement that does away with what is ordinarily termed a “switch,” and requires personal attention only periodically. The action of this alarm is purely automatic.

The same firm manufacture Crossley's Electric Engine Recorder or Indicator. In this case the ordinary engine-counter is placed at any distance desired, instead of being worked by the engine direct. A simple contactor, which may be worked by the beam or shaft of the engine, causes a current of electricity to pass along the wire connecting with the distant end. Then it passes through two coils of wire surrounding soft iron cores, and these attract an armature as each current travels, the armature working a lever as in the Morse printing-telegraph. The indications are then made with as much regularity as if the recorder were in the engine-house, instead of being, as it may be, miles away.

Nickel-plating by Electrolysis.—A process of nickel-plating, which is said to combine cheapness with excellence, has been invented by Prof. F. Stolba. The salt which he uses may be the chloride or sulphate of nickel or double sulphate of nickel and potassium. It need not be chemically pure, but must contain no metals which are precipitated by zinc. In addition a solution of chloride of zinc is required, which may be obtained by dissolving commercial zinc in common chlorhydric acid. The process of plating may be effected in a vessel of porcelain or metal; the author prefers copper, which itself becomes plated with nickel. The articles to be plated may be of cast or wrought iron, steel, copper, brass, zinc, or lead. They must be completely immersed in the liquid used for plating, and their surfaces must be perfectly free from fat and rust. Iron vessels may be cleaned by treating with a solution containing three or four per cent. of chlorhydric acid. A sufficient quantity of a concentrated solution of chloride of zinc is now poured into the plating vessel, and from once to twice its volume of water added. The solution is then to be heated to the boiling-point, and chlorhydric acid added drop by drop until the precipitate, formed by diluting the chloride of zinc with water, is redissolved. As much zinc-powder as will cover the point of a knife is then added, by which the metal of the vessel becomes, in a few minutes, plated with zinc wherever it is in contact with this liquid. Enough nickel-salt is then to be introduced to color the liquid distinctly green, after which the articles to be plated, and with them some small cuttings of zinc, are to be put in, care being taken to afford a sufficient number of points of contact. The liquid is then to be boiled, when the nickel is soon precipitated, and the work is finished in about fifteen minutes. If particular parts of the articles are not plated,

the boiling must be continued, fresh pieces of zinc, and, if necessary, fresh nickel-salt, being added. It is important, if the coating of nickel is to be brilliant, that the liquid on boiling shall not be cloudy from basic zinc salt, or acid from free chlorhydric acid. The nickel-plated articles must be well washed with water and then cleaned with polishing-chalk. The author found that articles of copper, plated with nickel, after several months' exposure to the atmosphere of the laboratory, appeared scarcely tarnished. It is important to remark that the same liquid may be employed repeatedly for nickel-plating, especially when chloride of nickel is employed. The same process applies to cobalt, but the coating with this metal, besides its cost, possesses no practical value.

Cold Galvanization of Iron.—The metal is first cleaned by being placed in a bath made up of water 1,000 litres, hydrochloric acid 550 litres, sulphuric acid 50 litres, glycerine 20 litres. On being removed from that bath, the metal is placed in a bath containing 10 per cent. of carbonate of potash, and is next transferred to a metallizing bath, consisting of water, 1,000 litres; chloride of tin, 5 kilogr.; acid sulphate of alumina, 4 kilogr.; chloride of aluminium, 10 kilogr. The metal is left in this mixture for from three to twelve hours, according to the thickness of the layer of zinc to be desired.

Electrical Properties of Aluminium and Magnesium.—Mr. H. Highton communicates to the London *Chemical News* the following record of his experiments on this subject:

As a positive, I find aluminium about equal to iron; and as a negative, inferior, if the iron be skillfully used. For, if iron be skillfully used, it is nearly equal to copper; used as a negative it should always be in such a way as to form a black oxide on the surface. I have lately been trying experiments with magnesium as a positive; the great evil of it is the rapid local action which takes place, which, however, by a peculiar arrangement, I have succeeded in entirely overcoming. On the galvanometer I used, which presented considerable resistance, an ordinary Daniell's battery stood at 38°. With magnesium for the positive, and copper and sulphate of copper for the negative, the current rose to 55°. With magnesium as positive, and zinc for negative, I got a current of 35°; with iron for negative, 45°; the first being nearly equal to Daniell's battery, and the latter superior. With a different electrolyte, I got between zinc and copper, 46°; and magnesium and copper, 60°. With another specimen of magnesium, procured fresh, the current rose to 67°. I then took another galvanometer showing smaller numbers, with the following results:

Zinc and copper, in an arrangement of my own.....	15°
Magnesium and copper.....	26°
One of Grove's cells.....	22°
One of Bunsen's cells.....	26°
Magnesium, with carbon and nitric acid for negative.....	30°
With platinum and nitric acid.....	29°
Magnesium with bichromate of potass and carbon for negative.....	30°

Thus, magnesium with platinum and carbon is to zinc as about the tangents of 29° and 30°, respectively, to tangents of 22° and 26°; but, with iron and copper for negatives, it is to zinc nearly as 7 to 4. I think 22° for Grove's cell was rather too low, as the

porous cell was new and not thoroughly soaked with the acids, and it was some time before I could get any current at all through it. Thus, magnesium and copper was equal to a Bunsen's and superior to a Grove's cell. The magnesium, with carbon and nitric acid or bichromate for a negative, is, I think, the most powerful *practical* arrangement on record, and is very constant for a long time. Sodium or potassium is, no doubt, stronger, but is difficult in the use. Probably lithium would be very powerful.

Electro-Deposition of Aluminium.—Mr. J. B. Thompson, writing in the London *Chemical News* refutes the assertion that aluminium has never been deposited on other metals by the battery. He says that for more than two years he has been depositing aluminium daily on iron, steel, and other metals, and driving it into their surfaces at a heat of about 500° F., in the same way that he operates with silver and nickel. He has also been doing the same with the alloy called aluminium bronze, of various tints, from the palest lemon to the richest gold-color. Mr. Thompson does not describe his process.

The Electrical Shadow.—Prof. N. W. Wright, in a communication to the *American Journal of Science*, suggests the phenomenon of the electrical shadow to explain occurrences that are well authenticated, where men struck by lightning have had the images of certain objects (as trees) imprinted on their persons. Several cases have been reported by sea-captains, of the images of brass numbers attached to the rigging of a ship being printed by the lightning on the bodies of persons killed by it, and it was supposed, in those instances, that the brass numbers acted as a negative pole in respect to the person struck. Prof. Wright says:

But it is unnecessary to suppose that the discharge in such cases always proceeds from the object delineated, and many of the instances recorded forbid such a supposition. The experiments in the production of the electrical shadows show that it is merely necessary that the object should interrupt the lines of action of the electricity, and that it may be at a considerable distance from the electrified cloud, the chief and indispensable condition being that the latter should be negatively electrified. We should then have the body exposed to the lightning positively electrified by induction, and, as the tension became sufficient, the dark discharge accompanied by the glow would take place, followed by the lightning-stroke. If, then, any object should be in the path of the discharge, its image would be formed in the glow, and this might, in rare cases like those recorded, be sufficiently intense to leave a permanently visible impression. The fact that the image in many cases is very much reduced in size, shows, indeed, that the cloud, or other body serving as the negative pole, is much more distant from the object represented than is the body struck, for, in the experiments described in my former paper, it was found that the image of the paper grating grew much smaller as it approached the positive pole, and this effect would be likely to be still more marked where the negative body had a very extended surface, as would be the case were it a cloud.

In some experiments recently made, the negative pole of the machine was covered with several folds of woollen flannel, which prevented the formation of a jet. Instead of this, several square inches of the cloth were covered with a bright glow, somewhat

resembling that on the positive ball, but, unlike that, seemingly made up of innumerable minute points or patches of light, having a peculiar swarming motion, like that described by Neef in his researches upon the negative discharge as seen under the microscope. When the paper grating was placed between the poles, the image on the positive was not readily obtained with distinctness, but was generally much smaller than when the negative pole was not thus covered.

A similar effect, but much more brilliant, was produced when, the poles being separated nine or ten inches, the hand was placed upon the negative, and the arm was approached to the positive pole. The woollen sleeve exhibited a bright glow covering a large area, and appearing like a strongly phosphorescent powder sifted profusely upon it. When this was approached so near that the interval was only an inch and one half or an inch, the positive glow became much more intense, and took a delicate purplish tinge, and the whole space between the two was filled with a very faint auroral light, which appeared, unlike other forms of the discharge, to be perfectly continuous and steady. The dark discharge under these circumstances was evidently so much intensified as to become luminous and visible.

Subterranean Electrical Disturbances.—A few minutes before and after the earthquakes of March 17th, in England (according to a statement in *Nature*), powerful positive electrical currents were rushing toward England through the two Anglo-American cables, which were broken near Trinity Bay, Newfoundland. Mr. C. F. Varley, reflecting upon this fact, makes the suggestion that some earthquakes may be due to subterranean lightning. He imagines that, as the hot centre of the earth is approached, a layer of hot dried rock may be found which is an insulator, while the red-hot mass lower down is a conductor. If this conjecture be true—and there is plausibility in it—then the world itself is an enormous Leyden jar, which only requires charging to a very moderate degree, to be equal to the production of terrific explosive discharges. The French-Atlantic cable was disturbed at the same time, and so were many of the English land-lines, but the only observations as to the direction of the current were made by means of the Anglo-American telegraph cables. A number of Mr. Varley's charts about earth-currents were published in the Government Blue Book of 1859-'60, showing that the direction of these currents across England was in a very notable degree determined by the contour of the coast, and that the same auroral discharges would often produce currents at right angles to each other in direction, in different parts of Britain.

Coloring the Electric Spark.—The electric spark, as M. Becquerel shows, may be beautifully colored, of different tints, by passing it through saline solutions. If this spark from an inductive apparatus be made to pass into the extremity of a platinum wire suspended over the surface of the solution of a salt, the spark will acquire special coloration according to the chemical composition of the solution traversed. The saline solutions are best concentrated, and the platinum wire positive.

The experiment is readily performed in a glass tube. Salts of strontia will color the spark red; chloride of sodium, yellow; chloride of copper, bluish green, etc. The light from these sparks, analyzed by the spectroscope, furnishes a method for the determination of the nature of the salts contained in the solution.

ELLENBOROUGH, the Right Hon. EDWARD LAW, EARL OF, G. C. B., a British statesman, born September 8, 1790; died in London, December 21, 1871. He was the son of Lord Ellenborough, Lord Chief-Justice of the Court of Queen's Bench, and grandson of Right Rev. Edmund Law, Bishop of Carlisle in the latter part of the last century. He was educated at Eton, and at St. John's College, Cambridge, graduating M. A. in the latter part of 1809. In 1814 he was returned to the House of Commons for St. Michael's, a small Cornish borough, since disfranchised, which he continued to represent till he succeeded his father, as second baron, December 13, 1818. In the House of Commons he was not distinguished for great oratorical powers, nor did he give promise of eminence as a statesman. He was Lord Privy Seal, and afterward President of the Board of Control, in the Wellington administration of 1828-'30, and was reappointed to the latter office with a seat in the cabinet in Sir Robert Peel's first administration of 1834-'35. In October, 1841, he succeeded the Earl of Auckland as Governor-General of India. Soon after his arrival at Calcutta an expedition was organized against the Afghans, which resulted in their defeat and the destruction of the fortress of Ghuznee. Scarcely had this been carried into effect when the Emirs of Sind took up arms, but General Napier was dispatched against them; and, after one or two decisive victories, including the bloody battle of Miani, the territory of Sind was formally annexed to the British dominions. Doubts were, at that time, expressed as to the justice of the course pursued by his lordship in the Sindian war, and the invasion of that country was regarded by some as an unprovoked aggression. The Emirs had unquestionably provoked retaliation by violating their solemn treaty with Great Britain, and by attacking the British resident, and levelling his house to the ground. In 1843 Lord Ellenborough invaded the independent Mahratta state of Gwalior, in conjunction with General (afterward Lord) Gough, for the purpose of putting an end to the civil strife which raged there during the regency of the youthful rajah, Dhuleep Singh. The war had scarcely been brought to a close by the defeat of the Mahratta troops, when Lord Ellenborough was recalled by the Board of East-India Directors, by what the late Duke of Wellington characterized as "a most indiscreet use of authority," and contrary to the wishes of the government of Sir Robert Peel, who, almost immediately on his return to England, in 1844, appointed him to the post of First Lord of the Admiralty, and raised him

in the peerage as Earl of Ellenborough and Viscount Southam. His policy as Governor-General occasioned considerable controversy. The East-India Directors found fault with the alleged slights which he put upon the civil service, and his marked favoritism toward the military and the native troops, as well as with his showy progresses, and his extravagant proclamations in regard to the gates of Somnauth, which were brought to India after the reduction of the fortress of Ghuznee. Complaint was also made that he had in other proclamations apparently sanctioned idolatry. On the other hand, his friends defended him most zealously. Take the following extract from an Indian journal as an example: "After arriving in India, in February, 1842, Lord Ellenborough took two or three months to look about him. He soon found that the administration of his predecessor had been a '*secrétariat* administration,' and to that cause alone he attributed the fact that, after an experiment of five years, it had closed in dismay and defeat. He, therefore, resolved to take the executive power from the hands of his secretaries, and to wield it himself. Hence it was that the country which he found distracted, shaking to pieces, with an exhausted treasury, and a discontented army, he left in a condition to which it had never before attained; the coffers overflowing, the army enthusiastic, and the secretaries in their proper places. Hence, too, his unpopularity with the civil service." Having resumed office, in 1858, under Lord Derby, as President of the Board of Control, his lordship resigned, May 14th, on account of an attack made upon him for a dispatch which he had addressed to Lord Canning, then Governor-General of India, relative to the proper treatment of the insurgents of Oude, after the cessation of the mutiny. Though the views enunciated in what was termed the Oude proclamation were carried out, objection was taken to the publication in England of the dispatch. The vote of censure was rejected in the House of Lords by a majority of nine, and the motion was withdrawn in the House of Commons without a division; but, before the debate commenced, Lord Ellenborough resigned, and did not subsequently hold office, although he took an active part in the debates in the House of Lords, and was regarded as the most brilliant of the Conservative orators. He was a warm supporter of Italian unity.

EÖTVÖS, Baron Jozsef, a Hungarian statesman and author, and at the time of his death President of the Hungarian Academy, and Minister of Public Instruction, born at Buda, Hungary, September 3, 1813; died in Pesth, Hungary, February 2, 1871. He received his early education at home, and studied philosophy and law at the University of Pesth. Before the completion of his academical career, he translated into his native tongue Goethe's "*Götz von Berlichingen*," and published two

comedies and a tragedy, which met with success. In 1833 he adopted the profession of an advocate, which he relinquished, to travel in Germany, France, England, Sweden, and the Low Countries. On his return he took an active part in politics, becoming in 1838 editor of the *Budapesti Aroizskönyv*, a work in which the most eminent Hungarians took part. M. Eötvös contributed to its pages a novel entitled "The Carthusian," that raised him greatly in public estimation. A pamphlet from his pen on "Prison Reform" created considerable sensation, which was increased by his vigorous support of the proposal for emancipating the Jews. In 1841 he was one of the leaders of the opposition in the Senate of the Hungarian Diet, where his rank, his fine presence, his readiness in debate, and his literary attainments, gave him great influence. The commercial crisis of 1841 having severely crippled his means, he had recourse to literature, and the "Village Notary," a romance intended to expose the abuses of the nobles in the different counties, appeared in 1844. It has been translated into English by Count Pulszky. Baron Eötvös was a constant writer in a popular journal, the *Pesti Hírlap*, in which he became the antagonist of M. Kossuth, arguing in behalf of centralization, against the latter's scheme for autonomy of the counties. These articles were collected and published in one volume in 1846, under the title of "Reform." In 1847 he published another romance, "Hungary in 1514," a tale founded on the revolt of the peasantry in that year. This was an eloquent appeal to the nation for the emancipation of the serfs—an act which had at that time become an urgent necessity, and which was accomplished in 1848. Of his minor writings we may mention "Poverty in Ireland," "On the Emancipation of the Jews," and a very able defence of Kossuth, his former antagonist, against Count Széchenyi. His novel "The Carthusian," which gained him reputation beyond his native country, and his poetry, will live in Hungarian literature. It was particularly during the period of Austrian rule that the late baron developed an extraordinary literary activity. In reading his charming novel, "The Sisters," one would scarcely fancy that the same author produced at the same period a book so rich in philosophical inquiries as "The Influence of the Leading Ideas of the Nineteenth Century upon Government and Society"—a work known all over Europe, and much appreciated by such philosophers as Mr. J. S. Mill and M. de Tocqueville. On the breaking out of the revolution in 1848, he became Minister of Public Instruction in the administration of Count Batthyani, and resigned after the assassination of Count Lamberg, retiring to Munich until the close of the Hungarian insurrection. From that time until the close of 1859 he kept aloof from politics; but the ferment created by the promised concessions by the Emperor to his subjects, and the crea-

tion of the temporary Council of State in 1860, drew him from his retreat. In conjunction with M. Deak, with whom his name was for some time associated, he became a leader of the Moderate Liberal party, and, on the formation of the Hungarian ministry in 1867, was appointed Minister of Worship and Public Instruction. The indefatigable zeal with which he fulfilled his important functions, in the short period of three years, sufficiently proved how beneficial were his efforts for the advancement of culture in Hungary. But it was also the cause of his premature death.

EUROPE. The great war, which will assign to the year 1870 a prominent place in the history of Europe, was brought to a close in 1871. Its chief result is a considerable change of the territorial division of Europe. By the cession of Alsace and Lorraine, France saw her area reduced from 209,428 to 204,079 square miles, and her population from 38,067,094 to 36,594,875. The new German Empire, whose reconstruction was completed on January 18, 1871, when King William of Prussia assumed the title of Emperor, now exceeds France both in area and population; for, after the incorporation of the ceded provinces, it now embraces 39,888 square miles, and 40,106,900 inhabitants.

On February 12th the French Republic, after having been ruled for nearly six months by a self-constituted revolutionary government, found, in the National Assembly, which met at Bordeaux, on February 12th, an authority elected by the national vote. The Assembly contained a greater number of men of the highest social standing than any French convention since the Revolution of 1789. The aged statesman Thiers, who was elected by the Assembly as chief of the executive power, and later as President of the republic, gained to a high degree the confidence of the French people. He easily obtained the consent of the National Assembly for the conclusion of peace with Germany, but was unable to prevent the outbreak on March 18th, and the success of an insurrection of the radical party in Paris, which, for two months, established a reign of terror, and made the first attempt to carry through the principles of the socialistic party. After the occupation of Paris, May 21st, and the suppression of the insurrection, the question of the future form of government chiefly occupied public attention. In the National Assembly the monarchists had a decided majority, but they were divided among themselves. Count de Chambord, for the first time since 1830, returned to France, but the fusion between the Legitimists and Orleanists was, at the close of the year 1871, not completed.

The attention of the German Government and the German people was chiefly directed to the consolidation of the new empire. The German Reichsrath showed a strong desire to clothe the central government with greater powers, and to reduce the prerogatives of the states. Several of its resolutions are not likely

to receive very soon the consent of the Federal Council, which consists of the plenipotentiaries of the German governments. But, though there may be differences of opinion on the relative functions of the central power and the particular states, the political unity of Germany is a fact cordially welcomed by all parties. While thus the political history of Germany was one of unusual quiet, a new religious movement commenced which attracted some attention. It was the Congress which in September was held at Munich, for organizing throughout the Catholic Church an active opposition to the doctrine of papal infallibility.

The complication between Russia and Turkey, which, at the close of 1870, seemed to threaten Europe with a new Eastern war, was peaceably settled by the London Conference, at which the great powers agreed upon a new treaty regulating the Eastern question. (See EASTERN QUESTION.)

The success of the radical revolutionists in Paris convinced the statesmen of Europe that the International Society of Working-men had acquired a greater strength than has commonly been believed, and deserved more attention than had been heretofore bestowed upon it. (See INTERNATIONAL SOCIETY.)

The Germans of Austria entered upon the year 1871 in great despondency; for, although Bismarck and Beust had exchanged peaceable dispatches, the home policy of the empire appeared to be controlled by influences decidedly anti-German. On February 7th the Hohenwart ministry was formed, whose chief task was to satisfy the demands of the Slavic nationalists at the expense of the German centralists, and to strengthen the jurisdiction of the Diets of the several crown-lands at the expense of the general *cis-Leithan Reichsrath*. But, at the moment when the extensive demands of the Czechs brought matters to a crisis, the vacillating Emperor yielded to the earnest remonstrances and warnings of Beust and Andrassy, dismissed the Hohenwart Cabinet, and returned to a policy which has the joint support of the Germans and the Magyars. These two nations appear to be firmly united, and to resist in common the demands made by several Slavic tribes of the empire for an autonomy equal to that obtained by Hungary.

The English Government, at length, so far yielded to the persistent demands of the United States for a settlement of the Alabama claims as to conclude a treaty (signed on May 8th), which submits the American claims to a mixed commission. At home, the Government continued to pursue a reformatory policy, and created, in reality, quite a sensation by advising, in June, the Queen to sign a warrant cancelling the regulation price of purchasing offices in the army. The vote of censure on the Government, which the House of Lords, on this account, passed by a majority of 80, only revealed the anti-liberal tendency of this

House, and greatly strengthened the popular clamor for its radical reform. Even an outright republican organization appeared toward the close of the year to assume notable dimensions.

Italy has at length attained the goal so long aimed at by the national party. Rome has become the capital of the kingdom. The Government indulged the hope of reconciling the Pope with the new state of affairs by offering to him an entire independence in all matters purely ecclesiastical, and an ample dotation; but the Pope maintained, in the most decided manner, his protest against the annexation of the States of the Church to Italy, and refused all recognition of its acts.

The young King of Spain has been tolerated by a vast majority of the Spanish people; but he has been no more able than his predecessors on the throne to form a strong and stable Cabinet.

Switzerland has again revised the Federal Constitution, and, as in 1848, has strengthened the jurisdiction of the Federal authorities.

The Diet of Norway has rejected the new treaty for a union with Sweden; the Diet of Sweden, to the great dissatisfaction of the King, rejected the proposed reorganization of the army. Denmark is gradually recovering from the wounds which the war of 1864 inflicted upon it, and is still waiting for the restoration of Northern Schleswig. There are signs of an important change of public opinion as regards the relation to Germany, and prominent writers and newspapers strongly advise the people of Denmark, at any price, to establish friendly relations with Germany.

The following table shows the area and population of Europe, at the close of the year 1871, and also the number of inhabitants per square mile.

COUNTRIES.	Sq. Miles.	Inhabitants.
Belgium	11,874	5,021,326
Netherlands	12,680	3,688,387
Grand-duchy of Luxemburg
Great Britain and Ireland	121,115	31,817,108
Heligoland, Gibraltar, and Malta	145	157,500
Italy	114,295	26,775,000
Principality of Monaco	5	3,127
Republic of San Marino	22	7,303
Germany	210,226	40,106,900
France	204,079	38,599,545
Switzerland	15,992	2,009,095
Austria	240,380	35,634,358
Principality of Lichtenstein	3,320
Denmark	14,761	1,784,741
Farøe and Iceland	35,267	77,000
Portugal	34,501	3,995,153
Azores and Madeira	1,311	365,821
Spain	195,607	16,885,395
Canary Islands
Republic of Andorra	148	12,000
European Turkey	133,942	10,510,000
Roumania	46,709	4,434,961
Servia	16,517	1,306,694
Montenegro	1,709	100,000
Greece and Ionian Islands	19,353	1,948,522
Russia (inclusive of Finland)	2,132,126	71,195,394
Sweden	170,511	4,168,882
Norway	132,290	1,729,691
Total	3,816,400	300,900,000

According to the *Gotha Almanac* for 1872, the number of Roman Catholics, Protestants, and Jews, in the several countries of Europe, was as follows:

COUNTRIES.	Roman Catholics.	Protestants and other Christian sects.	Greek Catholics.	Jews.
Spain (and Andorra).....	16,838,000	3,000	6,000
Portugal.....	4,860,000	1,000	1,000
Italy.....	28,710,000	36,000	2,000	36,000
Belgium.....	5,000,000	20,000	2,000
Luxemburg.....	199,000	400	600
France.....	35,803,000	599,000	46,000
Austria (Cisleithan).....	18,741,000	368,000	463,000	822,000
Poland.....	4,634,000	311,000	17,000	744,000
Ireland.....	4,142,000	1,261,000	300
Hungary.....	9,163,000	3,203,000	2,590,000	553,000
Switzerland.....	1,085,000	1,577,000	7,000
Netherlands.....	1,331,000	2,228,000	71,000

California and Oregon.....	2	100	..	3
Total.....	655	76,191	1,820	977

Of the itinerant preachers, 49 are presiding elders, and 85 are probationary preachers. The number of local preachers is 479. The estimated total value of churches is \$2,144,444. The number of parsonages is 281, and their estimated value \$328,210. There are 1,165 Sunday-schools, with 13,080 officers and teachers, and 68,648 scholars. The one institution of learning is valued at \$117,000; the Orphan Asylum at \$72,765; and the Publishing-house at \$141,423.89.

The General Conference of the Evangelical Association met at Napierville, Ill., on the 12th of October. The delegation elected by the General Conference of 1867 to visit the General Conference of the Methodist Episcopal Church, with fraternal greetings and expressions of regard and reciprocity of feeling, reported that they had performed their duty, and had invited the Methodist Episcopal General Conference to send a delegation to this body. In accordance with this invitation, the Rev. Messrs. William Nast, Philip Kuhl, and R. Hanny, were present as fraternal delegates from the General Conference of the Methodist Episcopal Church. These representatives presented an address, in which the subject of the union of the two Churches was named, and which announced the purpose of the delegation to be not only to convey fraternal greetings, but to say to the General Conference:

Should you think the time has come when the Evangelical Association and the Methodist Episcopal Church should come closer to each other, we are here to say: The door is open, and our hand is held out to welcome you.

The following action was taken on the subject:

Whereas, The subject of a union of the Evangelical Association and the Methodist Episcopal Church, which has been agitated a number of years, has been presented anew by Rev. R. Hanny, Rev. Dr. Nast, and Rev. P. Kuhl, a delegation from the Methodist Episcopal General Conference; and—

Whereas, This Conference, through a committee consisting of a delegate from the different annual conferences, has consulted with said three delegates

concerning the probable basis and conditions of such a union, and through the report of the said committee the subject was brought before the Conference for consideration; and—

Whereas, It was decided that it would not be advisable to recommend said union, notwithstanding that such a union, under other circumstances, might be desirable, viz., if it could be accomplished with the general consent of our ministry and membership, but, as this does not seem probable for the present: therefore—

Resolved, That we hereby respectfully respond to the friendly greeting and fraternal recognition of the Methodist Episcopal Church, through its delegation to this Conference, and cherish the most hearty wish that we may ever labor in union of spirit and in peace, without hindering or discouraging one another, and unitedly as far as possible, and with the best success to the glorious cause of our common Lord and Master, in His vineyard, and with all the elect be finally crowned in His heavenly kingdom.

Resolved, That a delegation of three be elected by this Conference to convey to the General Conference of the Methodist Episcopal Church, at its session in Brooklyn, our brotherly greetings and congratulations, as also this rejoinder.

The delegation consists of R. Dubs, T. Bowman, and J. Young.

Several petitions were presented for such decided action to be taken against secret societies as would make the denomination essentially an anti-secret-society body. To these the General Conference responded with resolutions:

Resolved, That we cannot make any other conditions for membership than those that were and still are contained in our discipline, and can therefore not grant the prayer of the petitioners.

Resolved, That we advise all our preachers and members to keep aloof from *oath-bound* secret societies, especially for the sake of avoiding offence.

Resolved, That we declare the laying of corner-stones for churches by secret societies, according to their ritual, an offence against Christian propriety, a violation of our discipline, and is, therefore, objectionable and forbidden.

The time for which a minister may serve in the same field of labor was extended from two years to three years. The time for which a minister may serve on a foreign mission was made without limit. A recommendation was adopted that the bishops be chosen from among the elders, instead of from among the delegates to the General Conference. A plan was approved for the organization of a fire-insurance company, within the denomination, which shall insure only churches and parsonages. J. J. Esher was reelected bishop, and R. Yeakel was newly elected bishop.

Upon request of the Germany Conference, that body was accorded authority to publish books, without first referring them to the Board of Publication in America, and was granted the right of retaining the profits of the Book and Publishing Concern in Germany, on condition of its renouncing all claims to the dividends of the Publishing-house in Cleveland, Ohio.

The receipts for the home missionary cause, during 1871, were \$49,155.71; the total receipts for the four years, since the previous General Conference, were \$193,267.54. The receipts for the Germany mission were, for

1871, \$3,380.22; for the four years, \$14,039.66. The receipts for the heathen mission, for 1871, were \$1,584.81; for the four years, \$4,281.42. The heathen-mission fund now amounts to \$20,180.22. During the four years, since the preceding General Conference, there were expended on home missions \$175,544.34, and for the mission in Germany, \$31,215.59. The missionary operations in Europe are extended over Wurtemberg, Baden, Switzerland, and Alsace. A mission was established in Prussia, but it has been suspended.

EWING, THOMAS, LL. D., an American jurist and statesman, born in Ohio County, Va., December 28, 1789; died in Lancaster, Ohio, October 26, 1871. His father served in the American army during the Revolution. Afterward, meeting with pecuniary reverses, he removed his family, in 1792, to the Muskingum River, and thence into what is now called Athens County, Ohio. In this wild, unsettled district, young Ewing's education was necessarily imperfect. His sister taught him to read, and in the evenings he eagerly studied the few books at his command. He left home in his twentieth year, and worked in the Kanawha salt-works, prosecuting his studies by night by the light of pine-knots, as he watched his boiling salt-kettles, until he earned enough money to pay for his father's farm, and was qualified to enter the Ohio University at Athens. Having received, in 1815, the first bachelor's degree ever granted in Ohio, he next studied law in Lancaster, was admitted to the bar in 1816, and practised with success in the State courts and United States Supreme Court for fifteen years. In 1831 he was elected United States Senator from Ohio. He acted with the Whigs and became associated with Clay and Webster in their opposition to President Jackson. He supported the protectionist measures of Mr. Clay, and during the same session advocated cheap postage and a recharter of the United States Bank. He also took a prominent part in the debates on the removal of the deposits from that bank. In 1835 he introduced a bill for the settlement of the Ohio boundary question, which was passed the following year. In December, 1836, he introduced a bill to annul the instructions issued by Mr. Woodbury, Secretary of the Treasury, directing receivers in land-offices to accept payments only in coin or Treasury certificates, except from certain classes of persons during a limited time. The bill excited violent debate, and was defeated. Mr. Ewing's term expired in March, 1837, and he resumed the practice of his profession. In 1841 he became Secretary of the Treasury under President Harrison. His first official report, presented at the extra session of Congress in May, 1841, among other recommendations proposed 20 per cent. duties on certain articles, disapproved of the Independent Treasury Act, and urged the establishment of a national bank. He prepared a bill for a national bank, which was passed, with some alteration, but

was vetoed by the President. President Tyler then suggested a plan for a bank of moderate capital, and, at his request, Mr. Ewing helped to frame a charter, which was immediately passed, and in turn vetoed. Mr. Ewing, with all the other members of the Cabinet, except Mr. Webster, thereupon resigned. In 1849 President Taylor appointed him Secretary of the Interior, a department then recently created, and not fully organized. The leading measures recommended by him in his first report, December, 1849, were the extension of the public-land laws to California, New Mexico, and Oregon; the establishment of a mint near the California gold-mines, and the construction of a road to the Pacific. On the slavery question he differed from Mr. Clay and others, who urged the necessity of comprehensive legislation to settle the matter at once and forever, and agreed with the President in

thinking the action of Congress uncalled for. In June, 1850, upon the death of President Taylor, this division in the Whig party led to Cabinet changes. Mr. Corwin became Secretary of the Treasury under President Fillmore, and Mr. Ewing was appointed by the Governor of Ohio to serve during Mr. Corwin's unexpired term in the Senate. In 1851 he retired from public life, and resumed the practice of law at Lancaster. He was a delegate to the Peace Congress of 1860, and was also chosen a delegate to the National Union Convention in 1866. During the war he gave the Union cause an unflinching support. His son-in-law, General William T. Sherman, and his son, General Thomas Ewing, Jr., were, as is well known, among the most conspicuous of the Union generals. Of late years, in consequence of his great age and infirmities, he had lived in complete retirement.

F

FELICE, Rev. GUILLAUME DE, D. D., a French clergyman and author, Professor and Dean of the Theological Faculty at Montauban, born about 1803; died at Lausanne, Switzerland, October 23, 1871. He received his education at Strasbourg. He was at first pastor at Bolbec, a considerable town in the Department of Seine-Inférieure. In 1838 he was chosen Professor of Christian Morals and Homiletics, in the theological seminary at Montauban, Department of Tarn and Garonne. It was while holding this position that he accomplished his principal literary labors. For years he was an assiduous co-laborer of M. Adolphe Monod, in the editorship of the *Archives du Christianisme*. In 1830 he became correspondent for the *New York Observer*, and continued to send his frequent and always interesting letters until a short time before his death. His most remarkable works were: "Memoir upon Bible Societies;" "Appeal for the Immediate Emancipation of Slaves;" "Conferences in regard to Calvin;" "History of French Protestants;" "Appeal to Men of Letters;" "History of the National Synods of the Reformed Churches of France;" "Biography of William Allen." All his writings are pervaded by a spirit of profound attachment to evangelical truth and to the Reformed Church. Until the failure of his health, he often preached in the churches of Toulouse, Saverdun, Mézières, and Bordeaux, and always with great acceptance, from his eloquence both of matter and manner. He was a man of varied learning, of wide and careful observation, of fervent religious sentiment, and of broad charity and liberal views.

FÉTIS, FRANÇOIS JOSEPH, a Belgian musical composer, critic, and author, born at Mons, Belgium, March 25, 1784; died at Brussels, in March, 1871. He was the son of an organist,

and at nine years of age was himself appointed organist of Sainte Wanden. In 1800 he became a pupil in the Paris Conservatoire, Boieldieu, Pradher, and Rey, being his teachers. He established a musical journal in 1804. His first theoretical productions were the "Traité du Contre-Point et de la Fugue," "Graduale de Tempore ac de Sanctis," "Antiphonarium Divinorum Officiorum," the last two elaborate collections of chants of the Roman Church. In 1813 M. Fétis was appointed organist of St. Pierre at Douai, and Professor of Singing and Harmony in the municipal school of that town. He came to Paris, in 1818, to retrieve his fortune, which he had lost a few years before, and was a professor in the Conservatory of Music from that date till 1833, when the Belgian Government offered him the appointment of Director of the Conservatoire at Brussels, which post he held until his decease. He took an active part in the musical department of the Paris Exhibition. With astonishing vigor for his advanced age, he composed a symphony a few weeks before his death. There is a long list of instrumental compositions which could be cited indicative of his industry, if not of his imagination. It was M. Fétis who had charge of the score of "L'Africaine," after the death of Meyerbeer, in Paris. The learned author had to reduce his MS., in which there was sufficient music for two operas, into proportions for representation at the Grand Opera-House. That he performed his labor of love with tact and intelligence has been universally recognized. He was a very voluminous writer, not only of music, but of works of instruction on the theory and practice of music, and on the biography, bibliography, and philosophy of the science. About 1820 he published in Paris a "Treatise on Counterpoint and Fugue," which is still highly

prized. In 1827 he founded the *Revue Musicale* at Paris, which he edited till 1835, and which is still maintained, though discontinued during the siege of 1870-'71. He was the composer of seven operas, which were published in Paris, but did not meet with success at the *Opéra Comique*, and two, "*L'Amant et le Mari*," and "*La Vieille*," which were successful in Belgium, but the greater part of his musical compositions were intended for the church service. His other works of instruction were: "*Méthode des Méthodes de Piano*," which has been translated and adapted in this country with great success; "*La Science de l'Organiste*," "*Solfèges Progressifs*," "*Traité Complet de la Théorie et de la Pratique de l'Harmonie*" (1816); "*Méthode Élémentaire d'Harmonie et d'Accompagnement*" (1824); "*Musique mise à la Portée de tout le Monde*," a new and enlarged edition (the sixth) of his "*Traité Complet de la Théorie*," etc., above mentioned, with the addition of an essay containing the doctrine of the science and the art (1853). But he will be best known in the future by his critical, biographical, and historical works on musical subjects. Chief of these was his "*Biographie Universelle des Musiciens, et Bibliographie Générale de la Musique*," of which the first edition appeared in 8 vols. (1835-1844); and a revised one with considerable additions, in 1860-'64, in 4 vols., 8vo. To this he had added four volumes of "*The History of Music*," the last published just before his death. He had also completed, but not published, a "*Philosophie Générale de la Musique*," and had published in conjunction with Moscheles, "*Coup-d'œil sur les Qualités de la Musique des Pays Bas*," and a biography of Meyerbeer, in 1859. Personally he was much respected: he exercised a most wholesome influence on art advancement during his long career; and Belgium is deeply indebted to his good government of the Brussels Conservatoire.

FINANCES OF THE UNITED STATES. The general prosperity of the country during 1871 had a favorable effect upon the finances of the Government. Its revenues were largely increased both from direct and indirect taxation; about fifty millions of the principal of the public debt was paid, and a further reduction in the rate of taxation was anticipated, although the purpose to pay annually a portion of the public debt was maintained.

The revenue from customs for the fiscal year 1871 was greatly in excess of the estimates, amounting to \$206,270,408.05, against \$194,538,374.44, for the preceding year. The cost of collecting this revenue was \$6,560,672.61 for 1871, being three and eleven hundredths per cent., while the cost for the year 1870 was \$6,237,137.25, or three and twenty hundredths per cent.

The appropriation for the collection of the customs, with the additions derived from fines, penalties, and forfeitures, exceeded the expen-

ditures by the sum of more than eight hundred thousand dollars.

The reduction of the rates of duty on the 1st of January, 1871, under the act of July 14, 1870, diminished the importation of many articles during the last six months of the year 1870, but there was consequently a large addition to the revenues for the first six months of the year 1871.

A comparison of the first six months of the calendar year 1871 with the first six months of the calendar year 1870 shows an increase of fifty-five per cent. in the quantity of tea imported, twenty per cent. in the quantity of coffee, fifty-three per cent. in the quantity of brown sugar, one hundred and twenty per cent. in the quantity of pig-iron, one hundred and eighty-six per cent. in the quantity of melado, one hundred and thirty-nine per cent. in the quantity of spices, and a large increase in many other articles.

The receipts from internal revenue were \$143,098,153.63, being \$4,048,984.29 less than the estimates presented to Congress in December, 1870, for the fiscal year ending June 30, 1871. The estimates for the fiscal years 1871-'72 were \$126,418,000, and it is probable that the receipts will be equal to the estimates.

In the annual report of the Secretary of the Treasury, made December, 1870, there was presented a statement of the receipts and expenditures of the Government for the first quarter of the year ending June 30, 1871, and an estimate of the same for the remaining three-quarters of the year. The receipts and expenditures of the first quarter above mentioned, ending on September 30, 1870, were as follows:

Customs.....	\$57,729,473 57
Internal revenue.....	40,147,137 92
Lands.....	42,437 67
Miscellaneous sources.....	7,382,181.59
Total.....	\$114,901,230 75

The expenditures for the same period, excluding payment on account of the sinking fund, were as follows:

Civil and miscellaneous purposes.....	\$18,207,243 49
War Department.....	10,218,538 36
Navy Department.....	4,815,237 58
Indians and pensions.....	13,825,451 89
Interest on the public debt.....	39,496,450 51
Total.....	\$86,562,920 83

For the remaining three-quarters of the fiscal year, ending June 30, 1871, the estimated receipts were as follows:

Customs.....	\$128,000,000 00
Internal revenue.....	98,000,000 00
Lands.....	2,000,000 00
Miscellaneous sources.....	16,000,000 00
Total.....	\$344,000,000 00

The estimated expenditures for the same period are:

Civil and miscellaneous purposes.....	\$54,000,000 00
War Department.....	30,000,000 00
Navy Department.....	15,000,000 00
Indians and pensions.....	24,500,000 00
Interest on the public debt.....	80,000,000 00
Total.....	\$203,500,000 00

The net receipts, however, for the fiscal year ending June 30, 1871, were as follows:

Customs.....	\$206,270,408 05
Internal revenue.....	143,098,153 63
Sales of public lands.....	2,388,646 68
Miscellaneous sources.....	31,566,736 53
Total.....	\$333,323,944 89

The expenditures for the same period were:

Civil and miscellaneous purposes.....	\$69,498,710 97
War Department.....	35,799,991 82
Navy Department.....	19,491,027 21
Indians.....	7,426,997 44
Pensions.....	34,443,894 88
Interest on the public debt.....	125,576,565 93
Total.....	\$292,177,188 25

Receipts in excess of expenditures \$91,146,756.64.

The receipts and expenditures for the quarter ending September 30, 1871, which is the first quarter of the fiscal year ending June 30, 1872, were as follows:

Customs.....	\$62,239,329 37
Internal revenue.....	35,553,175 01
Sales of public lands.....	692,690 61
Miscellaneous sources.....	8,753,189 61
Total.....	\$107,198,374 60

The expenditures for the same period, excluding payments on account of the sinking fund, were:

Civil and miscellaneous purposes.....	\$16,579,792 46
War Department.....	12,590,653 05
Navy Department.....	6,513,040 93
Indians.....	3,404,133 42
Pensions.....	8,090,698 69
Interest on the public debt.....	26,725,124 37
Total.....	\$83,903,382 92

The estimated receipts for the remaining three-quarters of the year, ending June 30, 1872, are as follows:

Customs.....	\$148,000,000 00
Internal revenue.....	90,000,000 00
Sales of public lands.....	2,000,000 00
Miscellaneous sources.....	18,000,000 00
Total.....	\$258,000,000 00

The estimated expenditures for the same period, excluding payments on account of the sinking fund, are:

Civil and miscellaneous purposes.....	\$30,000,000 00
War Department.....	31,000,000 00
Navy Department.....	19,500,000 00
Indians.....	6,000,000 00
Pensions.....	24,000,000 00
Interest on the public debt.....	85,000,000 00
Total.....	\$209,500,000 00

These estimates show a balance applicable to the payment of the principal of the public debt, for the fiscal year ending June 30, 1872, of \$71,794,991.68.

The amount of the public debt, on July 1, 1870, was \$2,480,304,797.74; the amount of the same on July 1, 1871, was \$2,353,211,332.32, thus showing a reduction of the debt, during the fiscal year, of \$127,083,465.42.

The miscellaneous revenues of the Government for the year ending June 30, 1871, were derived from the following sources:

Premium on sales of coin.....	\$8,892,899 95
Fees from United States consuls.....	555,563 24
Storage, rent, labor, etc., at custom-houses, Fines, penalties, and forfeitures for violations of customs-laws.....	414,310 61
Fees on letters patent.....	952,579 86
Tax on circulation, deposits, etc., of national banks.....	620,319 11
Repayment of interest by Pacific Railway Companies.....	6,003,584 82
Homestead and other land fees.....	813,284 75
Steamboat fees and marine-hospital tax.....	645,933 17
Proceeds of sale of coin-interest on sinking and special funds.....	385,535 16
Judiciary—fines, penalties, and forfeitures, Tax on seal-skins.....	7,701,662 73
Reimbursement to the United States for salaries of store-keepers in internal revenue bonded warehouses.....	75,836 30
Direct tax.....	101,080 00
Emolument fees—refining gold and silver bullion.....	557,235 41
Parting charges—refining gold and silver bullion.....	580,355 37
Proceeds of Indian trust lands.....	585,887 69
Accrued interest on, and proceeds of sale of, Indian trust-fund stocks, and interest on deferred payments on Indian-trust lands.....	211,721 14
Reimbursements to the United States for moneys advanced to meet matured interest on non-paying stocks held in trust for various Indian tribes.....	1,140,130 28
One, two, three, and five cent coinage.....	387,921 01
Unenumerated.....	85,535 00
Total.....	\$31,566,736 53

The following is an official statement of the decrease of the public debt during the preceding month from March 1, 1869, to August 1, 1871:

DATE.	Debt of the United States, less cash in the Treasury.	Decrease of debt during the preceding month.	Decrease in annual interest charge.
1869.			
March 1.....	\$2,525,469,260 01
April 1.....	2,525,196,461 74	\$266,798 27	\$74,694 00
May 1.....	2,518,797,391 09	6,399,070 65	115,531 00
June 1.....	2,505,413,613 12	13,384,777 97	304,467 00

Nov. 1.....	2,341,764,355 55	5,129,296 73	9,768,311 04
Dec. 1.....	2,334,308,494 65	7,475,860 90	10,155,976 96
1871.			
January 1.....	2,332,067,793 75	2,240,700 90	10,661,026 44
Feb. 1.....	2,328,026,807 00	4,040,986 75	11,064,916 44
March 1.....	2,320,708,846 92	7,317,960 08	11,537,461 08
April 1.....	2,309,697,596 27	11,011,250 65	12,062,997 96
May 1.....	2,303,573,543 14	6,124,053 13	12,870,089 96
June 1.....	2,299,134,134 81	4,439,328 33	13,489,202 04
July 1.....	2,292,080,834 90	7,103,349 91	14,440,219 56
August 1.....	2,285,328,857 98	8,701,976 92	14,761,404 00

Total decrease, \$242,134,402.03.

The monthly decrease, to the close of the year 1871, was as follows:

September.....	9,206,297 60
October.....	13,458,620 51
November.....	8,950,491 84
December.....	3,463,080 18
January.....	4,412,956 00

The total decrease of the debt from March 1, 1869, to December 1, 1871, was \$277,211,-892.16; the reduction of the annual interest charge during the same period has been \$16,741,436.04.

The views of the Secretary of the Treasury on the relative value of gold and paper currency were thus expressed :

The average premium on gold for the year 1868 was 39.64 per cent.; for the year 1869 it was 32.66 per cent. premium; for the year 1870 it was 14.83 per cent. premium; and for the first eleven months of the year 1871 it was 12.1 per cent. premium. The value of the paper currency of the country during the years 1869 and 1870 was apparently appreciated by

the increased use of paper money in the South, but chiefly by the establishment of the credit of the United States upon a firm basis. On the first of January, 1871, the last-named fact was fully accomplished, and since that time the appreciation of the paper currency has been due wholly to the increased demand for it in the business affairs of the country. The difference between the value of paper money at the present moment and its value on the first of December, 1870, may be attributed to the latter cause, and furnishes the best means which the country has yet had, for ascertaining the quantity of paper currency which can be used, and its value kept at par with gold.

In the following table is given a statement in detail of the public debt on June 30, 1871:

STATEMENT OF THE PUBLIC DEBT OF THE UNITED STATES, JUNE 30, 1871.

TITLE.	Length of loan.	When redeemable.	Rate of interest.	Price at which sold.	Amount authorized.	Amount issued.	Amount outstanding.

The Pacific Railroad bonds are all issued under the acts of July 1, 1862, and July 2, 1864; they are registered bonds of the denomination of \$1,000, \$5,000, and \$10,000; bear 6 per cent. interest in currency, payable January 1st and July 1st, and mature thirty years from their date.

By the estimate of the Secretary of the Treasury, there would be a balance of \$71,794,991.68 for the fiscal year ending June 30, 1872. For the fiscal year ending June 30, 1873, he also estimated a balance of \$57,294,963.01, which might be applied to the payment of the principal of the public debt. Therefore, he suggested for the future that his previous policy of paying not less than fifty millions of the principal of the debt annually should be maintained, and such reductions be made in taxation as the margin remaining would permit. This margin, he estimates, will amount to thirty-six millions of dollars for the fiscal year commencing July 1, 1872. He would reduce the receipts of internal revenue sixteen millions of dollars by dispensing with those derived from all internal sources, except from stamps, spirits, tobacco, and malt liquors. These latter sources would furnish about one

hundred and ten millions of dollars. The receipts from customs he would reduce twenty millions of dollars by a reduction of certain duties. He says:

The revenue from customs under existing laws, and from lands and miscellaneous sources, would amount to about two hundred and thirty-three millions more, making a total revenue for that year of three hundred and forty-three millions of dollars.

The expenses of the Government, not including the amount payable on account of the sinking fund, are estimated at \$273,025,773.99.

If to this sum be added fifty millions of dollars for payments on account of the public debt, including the amount due on the sinking fund, there remains a balance of about twenty millions, within which reductions may be made in the revenue from customs. This amount, added to the reductions proposed under the internal revenue laws, gives a total reduction of thirty-six millions.

Under this view he recommends the reduction of the duties on salt to the extent of fifty per cent.; the duty on bituminous coal to fifty cents per ton; the reduction of the duty on raw hides and skins; and the removal of all duties from a large class of articles produced in other countries, which enter into the arts and manufactures of this country, and which are not produced in the United States, and the

revenue from which is inconsiderable. At the same time he suggests, as an important consideration to be regarded in making the reduction of duties, that nothing, as the consequence of legislation, could be more disastrous to the public prosperity than a policy which should destroy or seriously disturb the manufacturing interest of the country. Nevertheless, it is possible, by wise and moderate changes adapted

to the condition of business and labor, to reduce the rates of duties by benefit to every class of people.

The receipts from internal revenue sources, as already stated, for the year ending June 30, 1871, were \$143,098,153.63. The proportions of this amount yielded by spirituous liquors and the States in which the distilleries are located are shown by the following table:

Gallons.

The quantity of spirits in bond July 1, 1870, was 11,671,836
The quantity entered in bond for the year ending June 30, 1871, was 54,576,446
The quantity withdrawn from bond during last period, was 59,508,973
The quantity remaining in bond June 30, 1871, was 6,744,360
The quantity remaining in bond July 1, 1870, as per present report, less than quantity stated in the report for 1870, shown by corrected reports of collectors received subsequent to the publication of the report for 1870, was 10,572

The total quantity of spirits in the United States, not in internal revenue warehouses, on the 1st of May, 1871, was 41,185,713 proof gallons, showing a decrease in the quantity on the market since November 15, 1870, of 4,452,580 gallons.

The receipts from spirits for the fiscal year ending June 30, 1871, will be seen by the following enumeration:

Spirits distilled from apples, grapes, and peaches..... \$1,236,005 67
Spirits distilled from materials other than apples, grapes, and peaches..... 29,921,308 48
Distilleries, per diem tax on..... 1,901,602 93
Distillers' special and barrel tax..... 5,698,077 31
Rectifiers..... 959,800 18
Dealers, retail liquor..... 3,651,454 73
Dealers, wholesale liquor..... 2,151,251 06
Manufacturers of stills (special tax)..... 1,927 49
Stills or worms, manufactured..... 3,340 00
Stamps, warehouse, rectifiers', and wholesale liquor-dealers'..... 752,427 00
Excess of gaugers' fees..... 18,693 20

Total.....\$46,281,848 10

The amount of tax received on fermented liquors, at \$1 per barrel, was, for the years—

1866.....\$5,115,140 49 | 1869.....\$5,866,400 93
1867.....5,819,345 49 | 1870.....6,081,520 54
1868.....5,685,663 70 | 1871.....7,159,740 20

The increase from the year 1871, as shown in the above statement, is believed to be due, in part at least, to the greater attention given

to that subject by internal revenue officers during that year.

The total receipts from tobacco for the fiscal year ending June 30, 1871, were \$35,578,907.15, showing a total increase of \$2,228,199.30 over the total amount of receipts from the same sources for the preceding fiscal year.

The total amount of manufactured tobacco, represented by the amount of collections for the fiscal year ending June 30, 1871, was as follows:

	Pounds.
Chewing-tobacco, snuff, etc., class 32-cents...	64,617,868
Smoking-tobacco, scraps, shorts, etc., class 16-cents.....	30,517,686
Add to this the quantity exported.....	10,621,082
And excess remaining in warehouses June 30, 1871, over June 30, 1870.....	72,377
Giving a total product, for the year, of...	105,828,963

The total number of cigars, cheroots, etc., on which taxes were collected, was 1,332,844,357. There has been a steady and uniform increase, from month to month, in the revenues derived from manufactured tobacco, cigars, etc., since the present law went into operation, by which the mode of collecting taxes on these articles was changed from an assessment after removal from the manufactory and sale, to a prepayment, by means of suitable stamps, before the goods are removed from the place of manufacture.

Seizures of property for violation of internal revenue law during the fiscal year ending June 30, 1871, were as follows:

273,757 gallons of distilled spirits, valued at	\$339,395 70
1,366 bbls. of fermented liquors, valued at	9,569 00
2,907 pounds of snuff, valued at.....	837 10
281,283 pounds of tobacco, valued at.....	109,234 44
2,034,376 cigars, valued at.....	58,820 54
Miscellaneous property, valued at.....	397,333 36
Total value of seizures.....	\$915,240 14

An effort was made by the Secretary of the Treasury to change the character of the public debt by reinvesting it in bonds of a longer term of years, and at lower rates of interest. An act for this purpose, passed by Congress, was approved July 14, 1870. It provided for the issue of \$200,000,000 in bonds for ten years at five per cent.; \$300,000,000 for fifteen years at four and a half per cent., and \$100,000,000 at four per cent. for thirty years. (*See ANNUAL CYCLOPEDIA*, 1870, p. 288.)

An act of Congress approved January 20, 1871, provided that the amount of bonds bearing five per cent. interest, previously authorized to be issued, might be increased to five hundred millions, and the interest might be made payable quarterly. Books were opened for subscriptions in this country and in Europe, in March, 1871, and the conditions made known. All the national banks, and a large number of bankers, both in this country and in Europe, were authorized to receive subscriptions. The first preference was given to subscribers to the five per cent. bonds, with the limit of two hundred millions of dollars. On the 1st of August the subscriptions amounted

to sixty-five millions seven hundred and seventy-five thousand five hundred and fifty dollars, chiefly by the national banks.

Under date of July 14, 1871, a dispatch was received from William A. Richardson, Assistant-Secretary of the Treasury, then in London, stating that certain bankers in Europe proposed to take the remainder of the two hundred millions of five per cents. upon certain conditions. This proposition was considered and modified, and early in August an agreement was made, by the terms of which the parties represented had the right to subscribe for the remainder of the two hundred millions of said bonds, by giving notice thereof, at any time previous to the first of April, 1872, and by subscribing for ten millions at once, and for an average of at least five millions of bonds per month during the intervening time, subject to the right of the national banks to subscribe for fifty millions of dollars within sixty days from the 25th day of August.

Some other points were embraced in the agreement, and the books were opened, and subscriptions obtained for the amount near the close of August. One hundred millions of five-twenty bonds were called in, of which eighty millions had been received near the close of the year. But on August 1st the demand for the new bonds had nearly ceased. The agreement above mentioned, however, caused the necessary loss to the Government, incident to the refunding of the public debt, to be the means of securing subscriptions to the amount of about one hundred and thirty millions of dollars.

These transactions caused allegations to be made against the Secretary of the Treasury, that he had therein increased the bonded debt of the United States in defiance of law; and that he had expended more than one-half of one per cent., limited by law, in the expenses of funding said loan. At the commencement of the session of Congress, then close at hand, the subject was brought up in the Lower House, and referred to the Committee of Ways and Means. In their report in January, 1872, they say:

It appears that the Secretary can negotiate the bonds authorized by this act for the sole purpose of redeeming the outstanding indebtedness of the United States, known as five-twenty bonds, and it is expressly provided in this fourth section that he may lawfully apply to such purposes of redemption such moneys in the Treasury as "may be derived from the sale of any of the bonds the issue of which is provided for in this act." It is obvious that, in order to make this application, he must first negotiate the new bonds. He cannot take up the old bonds with the proceeds of the new bonds, unless he has sold the new bonds. He can first sell the new bonds without any process, but, while the act of obtaining and applying the proceeds is going on, he will increase the public debt to the amount of the bonds he first sells in order to obtain the proceeds with which to take up the old bonds. The committee knows no process by which this provision of law can be carried out without involving such a temporary increase of public debt; and, therefore, are of opinion that that

clause and law, which it is alleged the Secretary has in so doing violated, must be so construed as to permit the carrying out of the other requirements of the statute in this regard. No one can doubt that this salutary provision of the law, which, it is alleged, the Secretary has violated, was intended to take away from him the power of appropriating the proceeds of any of the bonds authorized by this statute to any other purpose than that of refunding the public debt; so that when the transaction was completed the public would be assured that the debt of the nation had not thereby been increased. * * * * In the opinion of the committee, this clause of the statute has no other scope and effect, and was not intended to embarrass or cripple the efforts of the Secretary to carry out every provision of the law, which simply provided that he should first negotiate the new loan, and after having done that should, with its proceeds, redeem a corresponding amount of the outstanding indebtedness of the United States. * * * *

The second allegation of the resolution is that the Secretary has exceeded the one-half of one per cent. allowed by the funding act for all expenses in placing said loan. There is no dispute as to the facts. It appears that, after deducting, from the aggregate sum which one-half per cent. of the loan would amount to, all the expenses thus far attending this negotiation, such as advertising, preparing, and printing the bonds, and that portion of it which had been paid to the national banks and their agencies for such negotiations of it as they had been able to make, the balance of said one-half per cent., and no more, was, by the arrangement with Jay Cooke & Co., to be paid to those parties who took the balance of the loan. If this statement is correct—and the committee see no reason to doubt it—then it is apparent that the limitation of one-half per cent. has not been exceeded thus far in the negotiation of the loans authorized by this act. But a part of the agreement by which the balance of the loan was taken was, in substance, this: That the national banks which took this loan for themselves, and those for whom they negotiated it, were to be designated as depositaries of public money, and proceeds of the bonds thus taken were to remain as deposits with said banks until used by the Secretary for the redemption of an equal amount of five-twenty bonds. But it is claimed that the use which the bank thus had of this money was a part of the expense incurred by the United States in negotiating the loan, and that thereby to the extent of that use the expense exceeded the one-half per cent. allowed by law. It was one of the stipulations of these agreements that these deposits should remain with such banks for the period of three months, and it is fair to conclude that such use of the money so deposited was of considerable value to the banks, and entered largely as an element into the inducement which finally led to their undertaking to place the bonds of the entire loan then offered. If, therefore, that use may be legitimately reckoned as a part of the expense of the United States of negotiating the loan, it must be added to the other expenditures, and the whole would exceed the one-half per cent. But the committee are of opinion that this advantage thus derived by the banks from their use of the money during the time which must necessarily elapse between the conversion of the new bonds into coin and the redemption of the old bonds with that coin, can, in no fair interpretation of the funding act, be counted a part of the expense which was limited by that act to one-half per cent. of the loan. It is given to such banks by the law that makes them depositaries; not by the contracts of the Secretary. If the Secretary had received into the Treasury and locked up in its vaults a large amount of coin derived from these bonds, it would have resulted in disastrous consequences to the commercial world.

The importance of a resumption of specie payment, and the manner in which it may be

brought about, have been the subject of much discussion. The methods proposed by which to effect it have been as numerous as the different views entertained of the state of the currency. By some persons it was assumed that the paper currency was redundant, or in excess of the healthy demands of trade, and the excess must be retired in order to bring the currency up to a specie standard. This redundancy has been attributed to the currency of the United States by a majority of those who have written and spoken on the subject since the year 1864, and the remedy prescribed has been "contraction."

So prevalent was this view of the case at one time that, in 1866, Congress, in obedience to what was regarded as a sound and correct principle of political economy, provided by law for a gradual withdrawal and cancellation of United States notes to the extent of four millions a month; but, owing to the funding operations of the Treasury, this provision was not carried into effect until the latter part of the year 1867, when the process of contraction was commenced. Just at this time, also, commenced a stringency in the money market, which increased in severity as contraction went on. To the people the stringency seemed to be produced by the contraction, though it is now evident that other causes conspired to aid in producing the result. The hard times, however, were generally attributed to the depletion of the money markets by the actual withdrawal of ten millions of currency in six months, and its continued reduction at the rate of four millions per month thereafter.

This opinion had all the force of conviction in the public mind, and found its appropriate expression in an act of Congress, which became a law in February, 1868, prohibiting any further reduction of the currency, and so the matter now stands. If there is a superabundance of currency, which must be retired before a specie basis can be reached, the first step toward specie payments must be the repeal of the act of February, 1868. If public sentiment will not permit or sanction such action by Congress, it will be because the people do not wish for resumption at the expense of contraction. The Comptroller of the Currency, in some remarks on this view of the subject, says: "If this is the only road to specie payments, it remains closed by the mandate of the people."

Another view, in direct antagonism to the demand for specie payments at all hazards, and without regard to consequences, has been entertained, which is, that the currency should be permanently divorced from a specie basis. It is urged that the convertibility of paper money into coin on demand has always been an unsound element of currency, because it has never been practicable when actually required. Under any system of currency of which credit forms a part, convertibility is but little

more than a name, satisfactory enough as long as the times are easy and confidence prevails, but exceedingly dangerous and mischievous when the money market is deranged, and distrust has taken the place of confidence. The conversion of paper is seldom demanded in any considerable amounts until credit is wavering, and every thing is looked upon with suspicion. Then, the demand is not limited to the 25 or 30 per cent. which the banks may have in reserve. Loss of confidence, and the knowledge that provision for payment is only partial, are precursors of panics, suspensions, failures, and all the disasters incident to such a state of affairs. The Bank of England may be regarded as furnishing the conditions most favorable to the convertibility theory, yet in every time of real need its charter has been disregarded, and the bank has been obliged to suspend. The history of the banks in the United States is but a series of suspensions, occurring as often as conversion was demanded. It is asserted that the welfare and progress of this country are due to the liberal, and not always judicious, use of credit, and especially during the last six or eight years in which there has been a currency based exclusively upon credit. It has held out no false promises, and therefore the country has been exempt from all currency panics or disturbances.

Those who urge this view maintain that the present currency system is the best and safest ever in operation here. They believe that the premium on gold may be gradually reduced in the next few years, as it has been in the past, until it shall become practicable to obtain coin for paper, in such reasonable amounts as may be required in trade *by exchange* at rates merely nominal. They make a distinction between "convertibility by redemption," which is the generally-accepted idea, and convertibility by exchange, which is their idea. This, they affirm, would bring all the benefits of resumption, without any of its attendant dangers. The plan involves the recognition of bullion-dealers, who shall be entitled to regular and legitimate commissions, premiums, or profits. The assent of the public to this proposition relieves the banks and the Government from the necessity and the burden of furnishing coin for nothing.

Another view which has found much favor during the last few years is, that "the currency should be maintained at its present volume until the industrial and commercial interests of the country shall recover from the effects of the war, and until the natural growth in population and wealth, the revival of enterprise, the increased facilities of trade, and the expansion of our borders, shall create a legitimate use for the whole amount of currency now outstanding." Just how long this will take has not been stated, and probably is not susceptible of demonstration. If the assumption is not correct, the whole proposition fails; for, without growth and increase in resources

and trade, the currency would forever remain in excess.

In the view of the Comptroller of the Currency, if it were possible to distinguish between circulation and deposits, making the former payable in specie, while the latter should be payable in kind, much of the difficulty and danger attendant on a return to specie payments would be removed.

If the banks in cities would agree to settle their balances, through their clearing-houses, in current funds, much of the difficulty of making deposits likewise payable in current funds would be obviated. Ordinarily those very banks pay all deposits in miscellaneous funds, and the obligation to pay specie or lawful money only recurs to plague them when they are least able to meet the demand.

It would be practicable to place the currency on a specie basis long before it would be possible to place the entire demand liabilities of the banks on a similar footing. In New York, provision could easily be made for thirty-four million bank-notes; but, according to established usage there, specie payments would involve provision for over \$200,000,000 deposits.

The currency of the country at different periods has been substantially as follows:

On January 1, 1862, the date of the suspension of specie payments, it was thus:

Bank circulation	\$183,792,079
Bank deposits	296,323,408
Specie in bank	102,146,215
Specie in Treasury, say	6,000,000
Specie in hands of the public, say	100,000,000
Treasury notes in circulation	83,460,000
Total	\$721,720,703

Deduct:	
Specie in bank	\$102,146,215
Bank-notes on hand	25,253,589
Cash items of banks	27,827,971
	155,227,775

Active circulation of the United States, January 1, 1862

At the close of the war, October, 1865, the currency of the country was about as follows, with the circulation confined almost entirely to the Northern or Union States:

National-bank circulation	\$171,321,903
State-bank circulation	78,867,575
National-bank deposits	549,081,254
State-bank do., not large and not easily obtainable.	
Specie omitted, as substantially out of circulation.	
Legal-tender notes in circulation (as given in report of the Comptroller of the Currency)	704,584,058
	\$1,503,855,390

Deduct:	
Bank-notes on hand	\$16,247,241
Bank cash items (checks not presented, etc.)	72,309,854
Legal tenders in bank	193,094,364
	281,651,459

Active circulation, October 1, 1865

The following is a statement of the banks and currency for the six years from 1866 to 1871 inclusive:

	Oct., 1866.	Oct., 1867.	Oct., 1868.	Oct., 1869.	Oct., 1870.	Oct., 1871.
National and State bank circulation.....	\$289,877,583	\$297,980,094	\$298,675,841	\$296,048,342	\$298,297,245	\$317,440,173
National bank deposits.....	596,911,946	565,670,423	601,890,278	523,029,491	517,598,331	626,774,021
Compound-interest notes.....	155,512,140	78,839,580	5,251,930
Greenbacks in circulation...	384,240,707	359,216,208	375,888,693	382,550,927	363,452,679	377,573,998
	\$1,426,541,776	\$1,301,706,305	\$1,281,346,742	\$1,201,634,770	\$1,179,848,255	\$1,321,787,587

Bank capital not invested in United States bonds.....	1,110,365	5,969,741	42,311,101	52,169,004	47,938,746
Bank loans (exclusive of governments).....	603,247,503	609,675,214	657,668,847	682,883,106	725,515,538	831,552,210

The statement of the capital and distribution of the banks for the year 1871 is herewith presented. There were in December, 1871, under the Bank Act of Congress, 1,786 national banks, with a combined capital of \$463,818,600. At the same time there were 424 banks

under special charters granted by the States at various dates between 1812 and 1871, making an aggregate banking capital of \$574,656,359. The following table will illustrate the relative amounts in each State at the close of the year 1871:

BANKS IN THE UNITED STATES, DECEMBER, 1871.

STATES AND TERRITORIES.	NATIONAL BANKS.		STATE BANKS.		TOTAL IN UNITED STATES.	
	Number.	Capital.	Number.	Capital.	Number.	Capital.
Maine.....	61	\$9,125,000	7	\$545,000	68	\$9,670,000
New Hampshire.....	42	4,889,000	5	405,000	47	5,294,000
Vermont.....	41	7,610,012	1	41	7,610,012
Massachusetts.....	207	88,073,000	1	500,000	208	88,573,000
Rhode Island.....	62	20,364,800	15	3,088,680	77	23,453,480

Returns for the fiscal year 1870-'71 show that the ocean commerce of the United States is passing rapidly into the hands of foreign merchants and ship-builders. In the year 1860 nearly seventy-one per cent. of the foreign commerce of this country was in American ships; in 1864 it had fallen to forty-six per cent.; in 1868, to forty-four per cent.; and in 1871 it is reported at less than thirty-eight per cent.

The following tables were compiled at the office of the *Financial and Commercial Chronicle*, New York, and show the monthly range of Government securities, and the comparative prices of leading articles of produce in the New York market, the prices of gold, stocks, etc.

MONTHLY RANGE OF GOVERNMENT SECURITIES, AS REPRESENTED BY ACTUAL SALES AT THE NEW YORK STOCK STOCK EXCHANGE BOARD DURING THE YEAR 1871.

FITCH, ELEAZAR THOMPSON, D. D., an American clergyman, theologian, and professor, born in New Haven, Conn., January 1, 1791; died there, January 31, 1871. He early evinced a decided taste for learning, being quiet and thoughtful in manner, and eager and diligent in study. He won distinction in college, both for punctuality and scholarship. His conversion occurred while an undergraduate, and it at once determined the character of his life-work. After graduation he was a teacher at East Windsor Hill, and subsequently of the New Haven Hopkins Grammar School. In 1812 he entered Andover Theological Seminary, where, after completing the regular course, he remained, pursuing advanced studies, giving assistance in instruction, and preaching, until his election, in 1817, to succeed President Dwight in the office of Professor of Divinity in Yale College. One branch of his work was to teach theology to graduates. In this he found his classes so increase that he was led to urge upon the corporation the founding of a theological department, which was organized in 1822. In this department he filled the chair of homiletics, at the same time being college preacher and pastor, and giving instruction in the academical department in natural theology and the evidences of Christianity. As preacher, he delivered to successive classes a series of sermons in systematic theology. Some of his doctrinal views thus presented becoming publicly controverted, he was compelled to defend them as publicly; and thus for truth and conscience' sake he was willing to appear in print, a thing which he was never prevailed upon to do on other grounds. In 1852 his growing infirmities (he scarcely ever enjoyed, even from youth, full bodily health) induced him to resign his office as professor; yet he retained his connection with the theological seminary as lecturer until 1861, and with the theological faculty as professor emeritus until his death. At his resignation he became a member of the "Circle of retired Clergymen and Laymen," in whose weekly meetings he always took an active part, and thus maintained his interest in all the living issues of the day even to the last. He was never a mere theologian, but pushed his researches into matters of science, literature, and taste, and of public and social order. He possessed a decided genius for music and its kindred fine arts, and in smaller matters displayed great versatility and ready inventive powers.

FLORIDA. The past year has been one of comparative quiet in Florida. The political disputes with which it opened concerning the results of the election of 1870 were soon settled by the confirmation of the right to office of the Republican claimants. The State officers then stood: Governor, Harrison Reed; Lieutenant-Governor, Samuel T. Day; Secretary of State, Jona. C. Gibbs (colored); Attorney-General, J. B. C. Drew; Comptroller, Robert

H. Gamble; Treasurer, Simon B. Conover; Superintendent of Public Instruction, Charles Beecher; Adjutant-General, John Varnum; Commissioner of Lands and Immigration, J. S. Adams. The returns of the election of November, 1870, as published by the Secretary of State, gave the total vote cast for Lieutenant-Governor as 24,278, of which Day received 12,446. The vote cast for member of Congress was 24,251, of which Josiah T. Walls (colored Republican) received 12,439. The Legislature was composed of 24 Senators, equally divided between the two parties, and 47 Representatives, 25 of them Republican and 22 Democratic. To obtain these results, the vote of nine counties was thrown out as illegal.

The Legislature met at Tallahassee on the 3d of January, and completed its work before the end of the same month. The provisions of the registration and election law relating to the canvassing of votes were repealed, and it was provided instead that—

On the thirty-fifth day after the holding of any general or special election for any State officer, member of the Legislature, or Representative in Congress, or sooner if the returns shall have been received from the several counties wherein elections have been held, the Secretary of State, Attorney-General, and clerk of the Supreme Court, or any two of them, with any other member of the cabinet whom they may designate, shall meet at the office of the Secretary of State, pursuant to notice to be given by the Secretary of State, and form a board of State canvassers, and proceed to canvass the returns of such election, and determine who shall have been elected to any office or as members of the Legislature, as shown by such returns. The said board shall make and sign a certificate containing, in words written at full length, the whole number of votes given for each office, the number of votes given for each person for each office or for member of the Legislature, and declare who shall have been elected thereto, which certificate shall be recorded in the office of the Secretary of State in a book to be kept for that purpose; and the Secretary of State shall cause a certified copy of such certificate to be published in one or more newspapers printed at the seat of government.

The Secretary of State is also required to prepare lists of the members elected to each branch of the Legislature and deliver them to the officers thereof.

An act was passed for the establishment and maintenance of a State-prison, to be under the control of the Commissioners of Public Institutions. The prisoners are to be required to work not over ten hours per day for six days in the week, and the Adjutant-General may let out their labor on contract "in such manner as he may deem most advantageous to the interest of the State, and with due regard for the health and safe custody of the prisoners." Encouragement to good conduct is to be granted in pursuance of the following provision:

SECTION 26. The warden shall keep a record of the conduct of each prisoner, and, for each month that a prisoner has not been subject to punishment for bad conduct, he shall deduct three days from the term of his sentence, and place the same upon a record to

be kept by him, in the form of a credit in favor of the prisoner; and the warden shall also record in favor of any prisoner who shall well and truly perform the labor allotted to him, either in the prison, or by contract for individuals, and shall not have violated any of the rules of the prison, a credit of five days for each month of the term of his sentence; and the Commissioners of Public Institutions shall, from time to time, consider the record of conduct of each prisoner, and they shall have authority to allow the said credits, and to recommend the Executive clemency in behalf of any prisoner so credited, and, upon the allowance by the commissioners, the total number of days specified in favor of the prisoner shall be deducted from his term of sentence.

An act was passed to "provide for the protection of the citizens of this State against defaulting foreign corporations," which requires all insurance companies formed in other States to deposit with the Treasurer \$30,000 in State bonds before doing business in Florida. Violation of this requirement by the officer of any foreign insurance company is made a felony, punishable by a fine of \$500. Any foreign corporation ceasing to transact insurance business in the State can withdraw these bonds on publishing notice of its application therefor once a week for twelve weeks, but the bonds will not be surrendered "on such application during the life of any insurance policy issued by such company to any person covering property in this State, or during the pendency of any action against such corporation or company in any court of this State upon any policy of insurance, or while any judgment recovered in this State shall remain unsatisfied against such company, if notice of the existence of any such policy, action, or judgment, with an affidavit of the truth thereof, shall have been filed with the Treasurer prior to the application to withdraw such bonds."

It is further provided that—

Whenever execution upon any final judgment against such corporation or company shall have been returned unsatisfied in whole or in part, and a certified copy of such execution and the return thereon shall be presented to the State Treasurer, it shall be his duty to advertise said bonds to be sold by him, at the capitol at Tallahassee, to the highest bidder, at a time to be named, not less than thirty days from the first publication of notice of such sale, so many only of said bonds being sold as may be necessary to realize the amount due upon said execution, with costs of advertising, and five per cent. upon said proceeds for the fees of the Treasurer for his services in making such sale.

An act was also passed authorizing counties, that have incurred indebtedness for the construction of railroads, to levy a tax upon the road-bed and personal property of such roads lying within their own limits, unless such property has been exempted from taxation in the charter of the roads.

Most of the other important legislation of the session related to the finances of the State. Besides the general act for raising revenue, there was an act for the equalization of taxation, an act to provide for the support of common schools, and "an act relating to the

finances of this State." The equalization act provides for a Board of Equalization, consisting of a joint committee of the two branches of the Legislature, three members being appointed by the President of the Senate, and five by the Speaker of the House of Representatives. It is to be the duty of this board to revise and determine the relative value of the real estate in different counties, and the Comptroller is required to apportion the taxes according to the valuation so determined. The same act imposes a tax of one dollar per mile on all telegraph-lines operated upon land within the limits of the State, and eight dollars per mile on submarine telegraph. The officers of telegraph companies are required to make an annual report of the length of lines under their control, in order that the tax may be assessed, and if they fail so to do, or neglect to pay the tax, their property is liable to be seized and sold.

A special tax of one-tenth of one per cent. on the assessed value of taxable property in the State is to be levied for educational purposes, and collected at the same time, and in the same manner, as other taxes. The interest on the common-school fund and the fund raised by this one-mile tax is to be apportioned among the counties in proportion to the number of children between the ages of four and twenty-one. The Board of Public Instruction in each county is required to prepare an itemized statement on or before the last Monday of May, in each year, showing the amount of money required for the schools during the ensuing year, and deliver the same to the clerk of the Circuit Court. This amount shall not be less than one-half that received from the State, nor more than one-half of one per cent. of the assessed value of taxable property in the county, and is to be collected with the other county taxes. Counties or school districts neglecting to maintain schools, at least three months in the year, forfeit their share of the school funds, and the same is to be distributed among the other counties.

The act "relating to the finances of the State" provides for the issue of thirty-year seven per cent. bonds for the purpose of funding the floating indebtedness of the State, equal in amount to the Comptroller's warrants and Treasurer's certificates outstanding, and to be issued from July 1, 1871, to January 1, 1872, provided the aggregate do not exceed \$350,000. Those bonds being dated July 1, 1871, are to be exchanged for the Comptroller's warrants and Treasurer's certificates, which are then to be cancelled. The payment of the interest on these bonds and the accumulation of one per cent. of the principal each year for a sinking fund are to be secured by an annual apportionment of the necessary amount among the counties, to be raised by taxation. The interest coupons when due are made receivable for all dues to the State, except for the school fund, and the Treasurer is required to cancel all coupons and warrants

coming to him. This act was passed over the veto of the Governor.

The Legislature of 1868 proposed five amendments to the constitution, which were to be approved by the Legislature elected in 1870, and ratified by the people before becoming part of the organic law. These were taken up by the last Legislature, and approved and submitted to a vote of the people at an election held on the 4th day of April. The first amendment reduces the salary of the Governor from \$5,000 to \$3,500; those of the Chief-Justice and his associates from \$4,500, \$4,000, and \$3,500, respectively to \$3,000; those of the circuit judges from \$3,500 to \$2,500; those of cabinet officers from \$3,000 to \$2,000, and provides for the payment of members of the Legislature by a certain sum *per diem*, and mileage, for travel, instead of an annual salary as heretofore; the second amendment consolidates the offices of Surveyor-General and Commissioner of Immigration under the name of Commissioners of Lands and Immigration; the third abrogates the requirement that testimony in civil and criminal cases shall be reduced to writing; the fourth and fifth provide for regulating the time of holding the terms of the Supreme Court, and for calling in a circuit judge to fill the place of a Supreme-Court judge disqualified or disabled for the time from performing his duties. The election resulted in the ratification of the amendments, the vote being very light, and about ten to one in favor of ratification.

The subject of finance and taxation occupied considerable attention outside of the Legislature as well as within that body. The constitutionality of two acts passed in 1870 was brought in question. One of these, an act "to decrease the expenditures of the State, and to regulate the fees of officers," was pronounced to be unconstitutional by several of the circuit courts, on the ground that it was passed at an extra session, and was not included among the subjects to which attention was called by the Governor. Its passage under such circumstances would be in violation of the constitution; but the Attorney-General published an opinion, in which he declared that the Governor had himself submitted the bill in a message, and that it was, therefore, constitutional. An act, entitled simply "In relation to State warrants," was declared to be unconstitutional by the Circuit Court of the Seventh Circuit at its fall session. This law provided that no warrants of the Comptroller, except those issued in payment of the members of the Legislature for 1870, and for other expenses of that body, should be receivable for taxes or other State dues. Suit had been brought to compel the collector to receive certificates issued by the clerk of a Circuit Court in payment of jurors and State witnesses, and a mandamus was granted on the ground that the "act in relation to State warrants" was null and void. This decision was based on the

fact that the title did not conform to the constitutional requirement that the subject of each law should be "briefly stated" therein; and, furthermore, that the warrants which it authorizes were of the nature of bills of credit, and therefore the State had no right to issue them. On the first point the judge said: "Why such an ambiguous and unmeaning title was annexed to a law to be made is too transparent to bear close scrutiny, examination, or investigation. The reason is obvious and apparent; the title could not be more deceptive, uncertain, or unmeaning. There could have been but one object in introducing a bill or act with such a title—that was to commit a fraud upon the credulous legislator, and accomplish indirectly what could not be accomplished directly; thereby evading a section of the constitution intended by the people to secure and protect them from injury and wrong, disregarding the landmarks of the people's great safeguard, by which the people's rights and privileges, liberty and property, are or may be frittered away by fraud and deception practised upon their representatives."

He decides that the warrants are bills of credit, on the ground that they were issued to be used as money, and to be redeemable at a future day.

He sums up his conclusions as follows: "The act of 18th February, 1870, not being constitutionally passed, being without a title, and attempting repudiation in a small way, is thereby rendered unconstitutional, repugnant to, and prohibited by the Constitution of the United States, the supreme law of the land. The act of the 18th of February, 1870, being without a title, attempts repudiation, was passed and approved for the express purpose and with the intention of providing for the issuing of a currency prohibited by and repugnant to the Constitution of the United States, is void *ab initio*, and without force or effect. The paper authorized to be issued by said act being illegal and void, a currency issued without the authority of law cannot be legally received in payment for the State taxes, which is a substantial demand against the citizen, and should be paid in a legal currency. The 42d section of the act entitled 'An act for the assessment and collection of revenue,' approved June 24, 1869, as well as the previous acts of the Legislature requiring the collectors of revenue to receive and accept juror and State witness certificates in payment for taxes assessed for the State, is still in force, not being repealed by any law. The collectors of revenue are required by the law to receive and accept jury and State witnesses' certificates, Comptroller's warrants and Treasurer's certificates, at their face value, for the taxes assessed for the State."

There was considerable discussion in the State as to whether there was any law in force providing for the collection of taxes, it being

claimed by some that the law of 1869 had been repealed by the "Equalization Act," and that that statute itself was unconstitutional. There was, however, no official or judicial decision on the subject.

All these questionings and discussions proceeded from a dissatisfied feeling that the burden of taxation was unnecessarily heavy, and that something should be done to relieve the citizens from its weight. This sentiment found vent in a convention held at Lake City on the 6th of September, made up of delegates from nearly all the counties of the State. There was a good deal of discussion on the finances and taxation of the State, and a Central Financial Committee was appointed, and a series of resolutions and an address to the people adopted. It was made the duty of the Central Financial Committee to "examine and from time to time report upon the financial condition of the State," and they were also directed to urge upon the Governor the "necessity of Executive interference to save the people from impending ruin." The counties were also called upon to choose financial committees who should report to the Central Committee on the financial condition of their several counties. The resolutions adopted by the convention were as follows:

When, in the judgment of citizens of free-constitutional government, it becomes necessary to adopt measures to preserve existing constitutional rights, and representative republican government, or to effect legislative or other reforms, a proper respect both for themselves and for their fellow-citizens requires an explicit declaration of the principles which impel to action, and a definite statement of the particular object they propose to accomplish. We hold, therefore, that all men are equal before the law, and entitled to the protection of life, liberty, and property, and the pursuit of happiness; the right of the people to publicly assemble and confer upon any question in which they are interested, freedom of speech and freedom of the press, public and free schools, the right of every man to worship God according to the dictates of his own conscience, impartial trial by juries, the writ of *habeas corpus*, the civil power above the military, free, fair, and untrammelled elections, the elective precincts to be established convenient to the people, so that their ballots may be cast without annoyance and hindrance from their business for an unreasonable length of time, and every precaution made to preserve the integrity of the ballot-box and the honest and impartial counting the result of every election, are the cardinal principles to preserve American civil liberty, and the fundamental principles of our government. And, *whereas*, The deplorable condition of the State, as well as county finances and affairs, is a consequence of the loose and reckless legislation of men forming into government cliques, "rings and caucuses," banded to sustain such organizations, independent and destructive of the cardinal principles of American free government, it is our judgment, from past experience, that there can be no hope for relief from excessive taxation and amelioration of the condition of the masses of the people only in the determination of the whole people, representing the interests of the laborer, agriculturist, mechanic, manufacturer, merchant, and capitalist, all having mutual interests growing out of and depending one upon the other, to sustain no man for office or promotion whom we do not know to be honest, capable, and industrious to perform his duties as a public employé, free from personal bias,

when the great interests of the people are concerned; for their recovery; therefore—

Resolved, That the increased and increasing expenditures of the State and county governments require an expression of those interested in the economical administration of their officers.

Resolved, That the present exorbitant rate of taxation is not only detrimental to the prosperity of the State, but an injustice to a large mass of the citizens who are compelled to bear the burdens of its payment, and which must from necessity militate against the poor as well as the rich, and especially upon the laboring and producing classes of our citizens.

Resolved, That we believe the consummation of so desirable an object requires the most scrutinizing discretion in the appointment of officers, both State and county, and that we pledge ourselves to use all honorable means, for State officers hereafter to be elected, that they shall be men who will not be ruled by a "ring" or caucus independent of their own judgment of what is right and just for the interest of the whole people.

Resolved, That the Governor of the State, having large discretionary and appointing power, we hereby respectfully recommend and demand that, in making appointments, a careful scrutiny should be observed, that none but honest, capable, and industrious men be hereafter appointed to office.

Resolved, That we, the people of the counties by their delegates here assembled in convention, respectfully say to His Excellency the Governor, that we are indifferent to what past political party the officers hereby appointed shall belong—we only requiring the test of honesty, and capability, and industry, to serve the people, not as rulers, but as public employés, fulfilling all the requirements of the law.

In the address to the people the following statements are made:

To instance particulars in evidence of these general statements, the convention submits to the people of the State that the bonded and floating debt, including interest and excluding the four millions already issued to a railroad corporation, as near as they can ascertain, is about \$1,550,000, having increased over one million dollars since July, 1868. They find that the taxable property of the people has been arbitrarily assumed, for purposes of revenue only, to be \$34,439,053, and that upon this arbitrary valuation there has been assessed a sum amounting in the aggregate to \$471,811.51, exceeding \$2.50 *per capita* of our entire population; that the greater portion of the above stated nominal valuation of property represents real estate, which is not convertible into money; leaving the entire amount of the tax of one million dollars annually to be paid out of the personal property, which amounts to the sum of \$11,721,521, being nearly one-eleventh part of all the personal property in the State. Included in these large amounts, to be collected from the people, are appropriations by the Legislature which the exigencies of the public service do not require to be collected. * * * If to the enormous amount required by the State there be added the county and municipal taxes, it is manifest that, without relief in some way, wide-spread distress will be inevitable. The county and municipal taxes will equal, if they do not exceed, those imposed by the State, and thus there will be wrung from the people, during the present year, a sum nearly or quite one million dollars. Such a sum, collected in a year like the present, when the productions of the soil present no prospect of remuneration for the labor bestowed, will fall with crushing weight upon all classes of industry. From their knowledge of the condition of the producing interests, the delegates here assembled give it as their deliberate opinion that, after deducting the actual cost of production, there will not remain in the hands of producers a sufficient amount to pay the taxes upon their property, thus leaving them without the

means of support for their families and employes for the ensuing year. * * * The delegates further submit that, in their opinion, formed from a careful consideration of former expenditures, the State government can be administered efficiently, and all its necessary functions performed, for a sum not exceeding one hundred and fifty thousand dollars. That to establish the government upon this basis of expenditure, many of its present superfluous offices will have to be abolished, and its legion of officeholders dismissed. They respectfully submit that this necessary measure of reform may perhaps require amendments to the constitution at the hands of the people.

The "grievances which oppress the people" are summarily stated as follows:

1. A law which places the immense power of taxation in the hands of a few men unacquainted with the character and value of property except in their own immediate locality.
2. A rate of taxation imposed upon an assumed valuation of property which is without a parallel in any other State, and which cannot be borne without great distress and peril to the best interests of the people.
3. Forcing the people to pay taxes to meet appropriations which are not necessary, and may be dispensed with without injury to the public service.
4. Paying out to the people two descriptions of obligations or scrip, one character of which is received by the State, while the other is repudiated for public dues, thus making a large class of the paper of the Commonwealth, based upon the property of all, worthless for the only purpose for which it can have any value to the tax-payer.
5. In leaving nothing exempt from sale for taxes, neither the agricultural implements, nor the horse of the laboring-man, nor the bed upon which his family rest after their day's toil, nor the food on which they make their daily meal.
6. In the provision of the law which permits the collection of the entire tax from the personal property of the citizen.
7. In exacting this large amount of tax at a time when it is unnecessary for the due administration of the State government, and when it can serve no other purpose than to enrich the officers of the government and those charged with its collection.

It is then resolved—

That the Governor be requested to suspend the collection of the taxes, both State and county, until the meeting of the next General Assembly; but if in his opinion it is beyond his constitutional power so to do, then that he convene the Legislature in special session—first, to repeal the act equalizing taxation, approved January 27, 1871; second, to so modify the act of February 18, 1870, as to authorize the receipt of every description of State scrip for public dues; third, to reduce the taxes, State and county, and limit them to such an amount as is within the reasonable ability of the people to pay.

After this convention had adjourned, action of a similar nature was taken in some of the counties, and the discussions were more excited than ever. Finally, on the 6th of November, the Governor issued the following proclamation:

Whereas, It is evident that agitators in the State are imperilling the public peace through their evil counsellings, and that men of high standing and influence in the estimation of certain classes of the people are seeking to bring the laws into contempt, thereby inciting to a disturbance of the tranquillity of society and to civil commotions, under the constitutional obligations resting upon me "to see that the laws are faithfully executed," it becomes my

duty to take special notice of these dangerous proceedings and seductive artifices with which the public mind is assailed, and to warn citizens against the bitter consequences in which they may thus become involved, violating the laws, subverting order, and convulsing society.

The immediate occasion seized upon by those disaffected toward the government and seeking to engender agitation, disquieting the public mind, is associated with the enforcement of the collection of the taxes, under the "Equalization Act," passed by the Legislature of the State at its last session, in accordance with the imperative requirements of the constitution. Taking advantage of the diminution in the cotton crop and other products of the soil, by reason of the unfavorable seasons, causing a more than usual monetary pressure, and rendering the burden of the taxes under the Equalization Act apparently oppressive, and seeing the opportunity thus presented for stirring up opposition to the administration of the laws and encouraging seditious sentiments toward the government, it is pretended that certain constitutional formalities were not observed by your representatives in the Legislature in the passage of the Equalization Act, and therefore that the act itself is null and void, and cannot be rightfully enforced, leaving citizens to infer that there is really no obligation upon them, under the law, to pay their taxes. To this it is only necessary to say that, were the fact as alleged, *the taxes must still be paid*; for an act of the Legislature, approved by the Executive, as this act has been, and recorded in the State Department among the archives of the Government, *is absolute law*, binding upon every citizen, and is not to be infringed or opposed in its execution with impunity, nor will it be while I hold the executive power of the State, until, by a case legitimately arising and brought before the Supreme Judiciary, it shall have been declared unconstitutional, or until repealed by the law-making power itself. * * * Until citizens shall forego the rancor and hate associated with the past, and agree by general consent to unite for the public good, yielding up, on the altar of the country, old prejudices, there can be no redemption from the woes that afflict society and jeopard the public security, while suppressing the prosperity and happiness of the people. It is my duty to enjoin upon all this course, so elevating to the heart of man and commendable in the light of Christianity.

Now, therefore, I, Harrison Reed, Governor of Florida, under and by virtue of the constitution of the State, and the laws made in pursuance thereof, do solemnly command all citizens to abstain from the infraction of the laws, and from all and every act whatsoever that through opposition to the laws, or otherwise, tends to a breach of the public peace; and I imperatively enjoin it upon every one duly to pay to the proper collectors, when called upon, the taxes imposed and levied upon them under appropriations made by the Legislature for the current year, and as assessed against them through the force of the provisions of the act of January 27, A. D. 1871, styled the "Equalization Act."

Done at the city of Tallahassee, this sixth day of November, in the year of our Lord eighteen hundred and seventy-one, and of the Independence of the United States of America the ninety-sixth.

HARRISON REED, Governor.
By the Governor: Attest,
JONATHAN C. GIBBS, Secretary of State.

The finances of the State, according to the official reports of January, 1872, are gradually becoming settled upon a satisfactory basis. The liabilities and resources on the 31st of December, as stated by the Governor, were as follows:

LIABILITIES.	
Bonded debt	\$747,945 08
Floating debt	563,524 89
Total	\$1,311,469 97
RESOURCES.	
Revenue uncollected	\$604,672 45
Amount due from United States...	220,000 00
	<u>\$824,672 45</u>
Total debt, January, 1872	\$486,797 52

The following are particular items of the State debt:

Total bonded debt, January, 1872	\$747,945 08
Add amount of accrued interest, as stated by Comptroller	157,606 09
Amount due on 421 hypothecated bonds in New York	120,000 00
Warrants and Treasury certificates	285,918 80
Total bonded and floating debt.....	\$1,311,469 97

There are 6,656,817 acres of land in the State, having an average value of \$2.60, making the aggregate value \$16,843,542. The value of city and town lots is \$5,873,940, and the aggregate value of personal property \$11,781,571. The total value of real and personal property, as determined by the Board of Equalization, is \$34,673,753; the State tax proper amounts in the aggregate to \$301,661.44; the general sinking fund and interest tax is \$104,021.07; special sinking fund and interest tax, payable in coupons of bonds of 1871, or in currency, \$34,673.58; total State tax, \$475,029.67, or about \$1.37 on every \$100 of property. The county tax amounts to about \$1.00 on every \$100 of property.

The receipts of the Treasury for the year 1871 amounted to \$275,005.59; the expenditures to \$410,491.19. There were warrants and Treasury certificates outstanding at the beginning of the year amounting to \$276,325.28, and \$227,924.27 had been redeemed during the year. This leaves \$458,892.20 outstanding on January 1, 1872.

Very encouraging progress has been made in public education during the year. In 1870 there were 15 counties which failed to levy a school tax, 13 in which there were no organized boards of education, and 11 which had no superintendents; the whole number of schools then was 250, and the number of pupils 7,500. This year only four counties failed to raise a school tax, one had no board of education, and two were without superintendents; the number of schools had increased to 331, and the number of pupils to 14,000. The whole number of youth in the State, between the ages of four and 21, is 62,869, only about one-fifth of whom attend school. The average duration of the schools was 4½ months, and the average salary of teachers was \$30 per month. There are two seminaries in the State, one at Tallahassee, under the charge of the Leon County Board of Instruction; the other at Gainesville, entirely independent of the State system. The university which the constitution of the State makes it the duty of the Legislature to provide for has not yet been founded. In his message to the Legislature

of 1872, Governor Reed commends to its consideration the policy of combining the Agricultural College Fund with such other means as can be afforded, and devoting the whole to the organization of a single strong State Agricultural College, where thorough instruction shall be given not only in the classical, mathematical, and philosophical branches usually taught in colleges, but also in mechanics, modern languages, the physical sciences, and practical agriculture. "Then," he says, "we may have a State university worthy the name."

Florida has never built up any creditable system of charitable and penal institutions. An old United States arsenal at Chattahoochee has been granted to the State by Congress for a penitentiary, and has been occupied for that purpose.

The railroad system of Florida, which was begun on a very comprehensive plan in 1855, has not been altogether fortunate. The Florida road, 154 miles in length, was sold by the board of trustees in 1866 for \$116,000, leaving \$232,000 in mortgage bonds, the interest of which was guaranteed by the State. There was a large amount of accumulated interest, for the payment of which suits have been begun. The Central road, from Jacksonville to Lake City, 60 miles, was sold by the board in 1868 for \$111,000, leaving a large amount of accrued interest for the State to pay. The Pensacola & Georgia and the Tallahassee roads were forfeited by the companies, with \$1,424,000 of bonds outstanding, and have been sold for about the par value of the bonds, leaving no encumbrance on the State except for unpaid interest. Since 1869 the State aid has been given for the completion of railroads by a grant of \$16,000 per mile in bonds. The State holds the roads as security for the payment of principal and interest.

The Legislature assembled at Tallahassee for its annual session of 1872 on the 3d of January. With regard to the general condition of the State, the Governor says in his message:

Among the reconstructed States of the South none started upon a more truly conservative basis than Florida, and none have progressed more successfully in the scale of social, political, and industrial improvement.

Florida, upon the whole, may be said to have been distinguished among the Southern States for general peace and quiet, and obedience to law, notwithstanding reports to the contrary which have prevailed, much to the detriment of the State.

Still, disturbances, breaches of the peace, infractions of the law, and scenes of fatal and disgraceful violence, have occurred in many localities within our borders. This I have attempted to correct by the exercise of all the power vested in me by the constitution, and by the use of all the means bestowed for that purpose by the Legislature. But at times all efforts have failed, and all the means at my command have seemed to be ineffective.

Looking upon the suspension of the civil law as an experiment always full of danger, and entirely opposed to all the principles of free popular government, I have hesitated and refused to take a step so fraught with manifold dangers, except as the very last resort, even at the risk of incurring the enmity

and hostility of my own political friends. And, while my heart has bled for the violence and suffering inflicted upon the more helpless classes of the community, I have steadily relied upon the civil law and the good sense and latent patriotism of the general citizenship.

I have remonstrated, admonished, and entreated, with little apparent avail. The power granted me in the detective law of 1868 was rendered almost nugatory through the restrictions and want of means imposed, I fear, by the jealousies and personal animosities of so-called political friends; I still have earnestly

endeavored, through the aid of special detectives, employed at my own expense, to ferret out and bring to justice the perpetrators of violence and crime, for whose detection and punishment the ordinary enforcement of our criminal laws seemed inadequate. And at last these persistent efforts seem likely to be crowned with some measure of success. A large amount of useful information has thus been obtained, and a mass of testimony, the nature and extent of which it is improper to disclose till the entire safety of the witnesses is effectually secured, is at my disposal.

CENSUS OF 1870.

Of those attending school 4,524 were colored; 66,238 persons ten years old and over cannot read. Of those 21 years old and over who cannot write, 3,876 are white males, and 5,600 white females; 16,806 are colored males, and 18,052 colored females. The public debt, county, town, city, etc., amounts to \$897,141. Value of farm productions, including betterments, and additions to stock, \$8,900,746; 37,562 pounds of wool were produced. True value of property, \$44,163,655. There are 500 tribal Indians in Florida.

FLOYD-JONES, DAVID R., a political leader of New York, born at South Oyster Bay, Long Island, in 1812; died there, January 8, 1871. He was the eldest son of the late General Thomas Floyd-Jones, the proprietor of the

Jones Manor, and inherited a great landed estate. He received a very thorough early education, graduated from Union College in 1832, studied law, and was admitted to the bar in 1835, and opened an office in New York City. In 1841 he was chosen a member of the Assembly from New York City, and re-elected in 1842 and 1843. In 1844 he entered the Senate and served there two terms (four years). From 1848 to 1851 he was clerk of the Superior Court of New York City. In 1857 he was sent to the Assembly from Queens County. Chosen Secretary of State in 1859, he served in that capacity during the two following years. In the fall of 1862 he was elected Lieutenant-Governor on the ticket with Governor Seymour, and served during

$\frac{d}{dt} \left(\frac{1}{\rho} \right) = - \frac{1}{\rho^2} \frac{d\rho}{dt}$, $\frac{d}{dt} \left(\frac{1}{\rho} \right) = - \frac{1}{\rho^2} \frac{d\rho}{dt}$, $\frac{d}{dt} \left(\frac{1}{\rho} \right) = - \frac{1}{\rho^2} \frac{d\rho}{dt}$

$$f(x) = \frac{1}{2} \left(\frac{1}{x} + \frac{1}{x^2} \right) = \frac{1}{2} \left(\frac{x+1}{x^2} \right) = \frac{x+1}{2x^2}$$

A. T. MOORE.

W. C. Cury

1863 and 1864, after which he held no-office. Mr. Jones was a firm and consistent Democrat of the old school of Jefferson and Jackson. During the feuds occasioned by the antislavery agitation he sided with the Barnburners and Free-soilers, and in the war of the South he was ardent and patriotic in his support of the Government; and his counsels at the close of the war tended most powerfully to keep the Democratic party in this State true to its allegiance to the national cause. In social intercourse Mr. Jones was singularly amiable and unassuming, the model of an American country gentleman. For about a year he had been in ill health, and had recently returned from a tour in Europe.

FRANCE, a republic of Europe. President, Adolphe Thiers, elected August 31, 1871 (*see* THIERS). General Secretary, Barthélemy St. Hilaire. The ministry, at the close

of the year 1871, was composed as follows: Minister of Justice, Dufaure; Minister of Foreign Affairs, Charles de Rémusat; Minister of the Interior, Casimir Périer; Minister of Finances, Pouyer-Quertier; Minister of the Navy, Vice-Admiral Pothuan; Minister of Public Instruction, Worship, and Arts, Jules Simon; Minister of Public Works, De Larcy; Minister of Agriculture and Commerce, Victor Lefranc; Minister of War, General de Cissey.

The National Assembly consists of 738 members, elected on February 8 and on July 2, 1871. President, Jules Grévy; Vice-Presidents, Vitet, Benoist d'Azy, M. S. M. Girardin; Secretaries, Bethmont, Vicomte de Meaux, Johnston, Baron de Barante, Marquis de Castellane, De Rémusat; Questors, Baze, General Martin des Pallières, and Princeteau.

The budget of the ordinary and extraordinary expenditures in 1871 was as follows:

	Ordinary.	Extraordinary.
1. <i>Public Debt and Dotations:</i>		
Public Debt.....	\$132,136,558
Dotation for the Legion of Honor.....	
Salary and Household of the President.....	
National Assembly.....		\$132,886,584
2. <i>Civil Service:</i>		
(a.) Ministry of Justice.....	\$6,457,540
(b.) Ministry of the Interior.....	33,907,744
General Government of Algeria.....	4,322,271
(c.) Ministry of Foreign Affairs.....	2,398,381
(d.) Ministry of Finances.....	36,600,208
(e.) Ministry of Public Instruction, Public Worship, and Fine Arts.....	17,460,191
(f.) Ministry of Agriculture and Commerce.....	11,386,314
(g.) Ministry of Public Works.....	48,751,439
		161,264,088
3. <i>Military Service:</i>		
(a.) Ministry of War.....	\$229,586,351
(b.) Ministry of the Navy.....	39,175,042
		268,761,393
4. <i>Expenditures for collection of taxes and sundries.....</i>		48,522,287
5. <i>Allowances and reimbursements.....</i>		1,913,885
Total.....		\$608,348,297
BUDGET OF REVENUE, 1871.		
(a.) <i>Ordinary Budget.</i>		
1. Direct Taxes (including the Special Budget).....		\$110,253,143
2. Indirect Taxes and Revenue.....		229,251,881
3. Various Revenue.....		2,285,460
4. Former Administration Budget.....		12,484,300
Total Ordinary Budget.....		\$356,224,784
(b.) <i>Extraordinary Budget.</i>		
1. Indemnification of Cochin China (1,080,000 fr.), payable Rents of the Austrian Debt (Mont de Milan, 250,000 fr.) etc.....		\$305,000
2. Contribution of the Departments and Communities for the equipping of the National Guards.....		6,562,500
3. Sale of Rents of the Dotations Funds of the Army.....		4,050,060
4. Loan from the Bank of France.....		108,962,170
5. New Advance from the Bank.....		38,100,000
6. Part of the Loan of Two Milliards.....		85,714,300
Total Extraordinary Budget.....		\$243,697,970
Total Ordinary Budget.....		356,224,784
Grand Total.....		\$599,922,754

At the close of the year 1871 it was not possible to give a detailed statement of the public debt. It was supposed that, after paying the expenses of war, and the indemnification to Germany, the principal would exceed two thousand million francs. According to the budget of 1870, the principal of the national debt amounted to 12,923,718,073 francs, while

the expenditures required by it were fixed at 490,462,297 francs. In the revised budget of 1871, 143,572,395 francs were allowed as a supplementary payment on account of the national debt.

The revenue and expenditures in the corrected budget (financial law of September 16, 1871) are given as follows:

	Receipts.	Expenditures.	Deficit.
1. Regular Budget.			
Original.....	\$354,339,434	\$320,477,352	
Additional.....	1,233,224	64,997,085	
Total.....	\$355,672,658	\$385,474,467	\$29,801,809
2. Extraordinary.			
Original.....	\$3,888,888	\$32,374,320	
Supplementary..	239,797,659	192,167,441	
Total.....	\$243,686,547	\$224,471,761	19,214,786
			Surplus.
			Deficit.
Grand total....	\$599,359,205	\$609,946,228	10,587,023

The following is a summary of the annulled credits in the budget of expenditures :

Civil List, Apanages.....	\$5,300,000	
Senate.....	1,206,000	
Pensions.....	18,000	
Council of State.....	358,000	
Justice.....	28,000	
Foreign Affairs.....	110,000	
Interior.....	294,000	\$260,000
Algeria.....	136,000	3,578,000
Finances.....	16,000	490,000
War.....	184,000	20,000
Marine, Colonies.....	1,352,000	704,000
Public Instruction, Worship,		
Arts.....	260,000	570,000
Agriculture, Commerce.....	458,000	
Administration, etc., expenses	3,292,000	
Returns of Payment.....	388,000	
Public Works.....	2,488,000	6,912,000
Total.....	\$15,888,000	\$12,474,000

In a military point of view, the country was divided as follows:

Territorial divisions.	Commanding Generals.
1. Paris.....	De Ladmirault.
2. Rouen.....	Letellier-Balazé.
3. Lille.....	De Salignac Fénelon.
4. Châlons.....	
5.....	
6.....	
7. Besançon.....	Picard.
8. Lyons.....	Bourbaki.
9. Marseilles.....	Espeyvet de la Villesboisnet.
10. Montpellier.....	Conseil-Dumesnil.
11. Perpignan.....	Lapasset.
12. Toulouse.....	Tourcet.
13. Bayonne.....	Lefort.
14. Bordeaux.....	D'Aurelle de Paladines.
15. Nantes.....	Grandchamp
16. Rennes.....	Genestet de Plauhol.
17. Bastia.....	Liebert.
18. Tours.....	Fauvert-Bastoul.
19. Bourges.....	De l'Abadie d'Aydein.
20. Clermont.....	Corrad.
21. Limoges.....	De Lartigue.
22. Grenoble.....	Micheler.

At the head of the French Navy were, in 1871, the following officers: Admiral, Charles Rigault de Grenouilly (January, 1864); Vice-Admirals, Tréhouart (February, 1869); M. Fourichan (1859); L. Comte de Gueydon (1861); J. P. E. Julien de la Gravière (1862); G. L. E. Larrien, Reynaud, P. V. Touchard (1864); P. P. M. de la Grandière (1865); A. E. L. Laffont de Ladébat, F. E. de Poncques d'Herbington, C. A. M. Baron de la Rancière de Noury, A. Bosse (1868); J. B. L. Mazères, P. A. Roze (1869); Saisset, Jaureguiberry (1870); Vicomte de Fleuriot de Langley, Pothuau, Baron Didot, Penhoat, De Dampierre d'Hornay (1871).

The territorial division of France, after the cession of Alsace and Lorraine to Germany, was as follows:

DEPARTMENTS.	Square Miles.	No. of Deputies.	Inhabitants.
Ain.....	2,237	7	371,643
Aiene.....	2,839	11	565,025
Allier.....	2,822	7	376,164
Alpes (Basses).....	2,685	3	143,000

Six deputies are elected by Algeria, two each by Martinique, Guadeloupe, Réunion, and one each by Guyana, Senegambia, French India; total, 738 deputies.

The French army was, in 1871, in a process of radical reorganization. The contingent of 1870 was by a law of September 11th fixed at 120,000; the National Guard was dissolved by a law of August 29, 1871. The fleet was likewise to undergo great changes, and accurate information on its condition at the close of the year was wanting. Later dates than those published in the preceding volume of the *AMERICAN ANNUAL CYCLOPEDIA* are also wanting concerning the movement of commerce and of shipping.

The length of the railroads in operation amounted in September, 1871, to 9,073 miles.

At the beginning of the year 1871 the seat of the Provincial Government of France was at Bordeaux, to which city it had been removed on December 10, 1870. Toward the close of December, Gambetta had gone to Lyons in order to put a stop to the anarchy which then threatened to gain a firm footing. The Reds of that city, after complaining, in an address to the Government, of the weakness of the authorities, and demanding the election of officers who would be directly responsible to the people, had proceeded so far as to have sentences of death pronounced by revolutionary courts, and, in some instances, even executed. Gambetta succeeded in reestablishing quiet; he did not dare, however, to remove the red flag from the city hall. While pursuing a policy of compromise with regard to the Reds, he continued to make the utmost efforts for the maintenance of the republic. The teachers had previously been instructed to point in their schools to the republican form of government as the only one from which the salvation of the nation could be expected; now he caused addresses to be sent from all parts declaring that the delivery of the country was possible only through the republic, and that, though it would require considerable sacrifices, and the employment of extraordinary measures, the great task could be done. One of the most important of these measures was, the dissolution of the General Councils and other elective bodies of the provinces. The General Councils were to be replaced by committees appointed by the prefects. This measure, which was not approved by the colleagues of Gambetta, was called forth by the fear that the General Councils might resist the extraordinary measures adopted for raising money. The peasants refused in many places to pay extraordinary taxes, and to make contracts for the war. A decree of the Government, dated January 2, 1871, by which the people were called upon to pay the taxes one year in advance, was not heeded. The dissolution of the General Councils produced a wide-spread dissatisfaction; numerous protests were entered against the measure, and the speedy convocation of a National Assem-

bly was more loudly demanded. Gambetta continued to appoint departmental committees; and at the same time he instructed the prefects to be more cautious in the collection of taxes. With regard to the Reds, he showed himself conciliatory, and, when the majors of the National Guard of Lyons resolved by a vote of eighteen against nine to retain the red flag, he quickly gave his consent.

The city of Paris was in a most unhappy condition. As it was found to be impossible to collect the rents, a delay of three months in their payment was granted to the tenants, and a provincial credit of twenty million francs was opened for the support of the National Guard. The prices of meat were again reduced, and the mortality rapidly increased in consequence of the general want, the scarcity of fuel, and the severe cold. Nevertheless, the war party remained in the ascendancy. Trochu issued a proclamation in which he pledged himself never to surrender, and admonished the population not to be deceived by fraud and slanders. The proclamation was chiefly directed against the Reds, the clubs of whom violently denounced the Government, and demanded that Trochu be replaced by a more daring leader, who would break through the German lines. Gambetta opened a new credit of 52½ million francs, and devoted 30 millions of it to the further purchase of arms and ammunition. On the other hand, a decree which dissolved the corps of *Franc-tireurs*, or embodied them with the regular army, was regarded by many as an indication that even Gambetta began to despair of the final issue. A last attempt to bring on an intervention of foreign powers in favor of France was made when a conference was called in London for settling the Eastern question (*see EASTERN QUESTION*). By refusing to send a plenipotentiary to take part in the revision of the Peace of Paris of 1856, the Government hoped to dispose some of the neutral powers to use their influence in behalf of France. When this hope was disappointed, public opinion seemed to regard a further resistance as useless. The situation of Paris in the mean while had become still more desperate. Armed bands, on January 23d, freed Flourens, who since October 31st had been in prison, and then made a violent attack upon the Hôtel-de-Ville, in which the authorities were in consultation. The movement was suppressed by the Guards Mobile, but it induced the Government to hasten the surrender. On January 28th an armistice was signed and a three-weeks' truce concluded. The terrible distress, which had increased the mortality in the last week of January to 6,000 souls, now became fully apparent, and the supply of the city with fresh provisions was considerably delayed, as the French had destroyed all the railroads of the neighborhood. Gambetta at first seemed disposed to recognize the acts of the Paris delegation of the Government; but, when the radicals in Bordeaux,

Lyons, and Toulouse, remained in their former warlike attitude, he declared himself to be determined to carry on the war to the last, and ordered new regiments to be levied. In accordance with the conditions agreed upon in the armistice, he ordered the elections to be held for members of a National Assembly, and declared at the same time that all persons related to the sovereign families, the ministers, senators, councillors, and prefects, and the official candidates of the empire, should be ineligible. This led to a conflict between Gambetta and Favre. Bismarck called the attention of Favre to the article of the armistice which stipulated for a National Assembly freely elected, and Favre promised that this stipulated condition should be fulfilled. Gambetta therefore represented the members of the Government of Paris as allies of the Prussians, and added that he could not possibly accept orders from such a Government. But Favre could not be intimidated; although even some divisions of the troops threatened to side with Gambetta, he issued a proclamation, in which he severely censured his conduct, and advised the people to take the condition of France into sober consideration. The most influential papers of the country vigorously seconded his efforts, and it soon became apparent that the majority of the people sided with him. On the other hand, Gambetta was abandoned even by the extreme wing of his own party, who declined to vote at all, as in their opinion the National Assembly was only called to conclude a treacherous peace. On February 4, 1871, a decree of the Government in Paris annulled the electoral decrees of Gambetta of January 31st and of February 5th. Pelletan, Garnier-Pagès, and Arago, were sent to Bordeaux. As the negotiations between them and Gambetta led to no result, the latter, on February 6th, tendered his resignation, which was at once accepted. In his place Arago was appointed Minister of the Interior, and Minister of War *pro tem*. A proclamation by Napoleon, issued on February 4th, in which he declared that he would only recognize a Government which had proceeded from universal suffrage, did not produce any effect.

On February 8th the elections took place throughout the country, without any serious disturbance. A majority of the members-elect were of moderate opinions, and favorable to the conclusion of peace; in Paris, the Reds had a majority, though Thiers was also elected, with a number of Blue Republicans, i. e., Republicans of the sentiments of Favre and Picard. On February 12th the Moderate Republican Grévy was elected President, by 519 out of 533 votes; for Vice-Presidents, the Liberal Bonapartist Martel, the Legitimist Benoist d'Azy, and the Orleanists Vitet and Malleville, were elected. Thiers was elected President of the Provisional Executive Power, with the right of appointing the ministers. Thus the whole Government was in the hands of the

friends of peace. The Radicals, however, and the party favorable to the continuation of war, made several more efforts to carry out their plans. Keller, an ultramontane deputy of Alsace, presented a protest against the cession of Alsace and Lorraine. The session of February 16th had a very stormy character, as one speaker reproached the deputies of Paris for being stained with the blood of civil war, and called on them no longer to disturb the freedom of the deliberations. Before the hall of the Assembly a violent tumult was provoked by the speech of Victor Hugo, and all the approaches to the hall were consequently on the next day lined by soldiers. Thiers announced his cabinet as consisting of Favre for Foreign Affairs, Dufaure for Justice, Picard for the Interior, Simon for Education, Lambrecht for Commerce, Pothuan for the Navy, Lefo for War, De Larcy for Public Works, and, later, Pouyer-Quertier for Finance. The programme submitted by Thiers and Favre was as follows: Negotiations shall be opened for the purpose of freeing France from foreign invaders, and to secure to her an honorable peace; a committee of fifteen members shall go to Paris, where it will be kept acquainted with the progress of the negotiations; as soon as a definite result, positive or negative, shall have been reached, a report will be made to the Assembly; the question of the future constitution shall be adjourned until the country may be free from the invaders; but the electors shall have repeatedly an opportunity to express their opinion at the reelection of general and municipal councils. The members of the committee were, like the ministry, elected from all parties of the Assembly. While Thiers and Favre, on February 19th, went to Paris to resume the negotiations for peace, the National Assembly resolved that henceforth no expenditure be made without a vote of the Chamber; and, on motion of Daru and Pouyer-Quertier, decided to form a committee for the examination of the military resources of the country. On February 26th the negotiations about the preliminaries of peace were ended at Versailles. Thiers, Favre, and the Committee of Fifteen, at once went to Bordeaux, to obtain a ratification by the National Assembly, which took place on March 1st. In Paris, in the mean while, the Reds had kept up a lively agitation to support the Radicals in Bordeaux in their opposition to the conditions of peace which had been agreed upon. The Parisians were enraged at the condition that the German troops would enter the capital and occupy it until the ratification of the preliminaries. On February 26th the excitement assumed a dangerous character; a riotous crowd of the suburb La Villette freed the prisoners of St. Pelagie, soldiers and the National Guards plundered its powder-magazine, and carried the artillery of the National Guards from the Place Wagram to Montmartre. Vinoy, the chief commander of the army and

of the National Guards, admonished, in an order of the day, the National Guards and all citizens not to disturb the peace, as every violation of the convention would entail incalculable evils on all France; and the official journal announced that military justice would find out the authors of the crimes of the 26th, and that "the Government would protect its agents against the return of these crimes." The demonstrations continued on February 27th and 28th, without, however, leading to open violence; large numbers of soldiers and members of the Garde Mobile took part in the procession of the masses through the streets. During the occupation of the city by the German troops on March 1st, the peace was not seriously disturbed; but the fermentation on the right bank of the Seine was steadily increasing. In Bordeaux the members of the Left declared the conditions of peace to be disgraceful and inadmissible, and tried to postpone the final vote on them as much as possible. But when Thiers earnestly reminded the Assembly that the armistice terminated on March 3d, and that it could not escape the responsibility of a decision, the treaty was ratified by a four-fifths majority. The deputies of Alsace and Lorraine, among them Gambetta, resigned, and informed the Assembly that they regarded a treaty disposing of them without their consent as null and void, and they considered themselves entitled to demand their rights in such a form and to such a degree as their consciences would dictate. In the name of the Left, Louis Blanc moved to call the ministry to account, and Delecluze even moved their impeachment and arrest. These extreme motions were rejected; yet they prevented the organization of a liberal middle party. The violent scenes between the Right and the Left continued. The Left, in particular, was excited against Thiers for refusing to make Paris the seat of the Parliament. But their opposition was fruitless; the transfer of the Parliament to Versailles was agreed upon, and on March 11th the last session was held at Bordeaux. The Government issued a proclamation, in which it declared that it "regarded it as a matter of honor to establish the republic, and that it would protect it;" it would be a crime to attack the republic by means of intrigues and violence, and the greatest patriotism would consist in a due obedience to social discipline and to law.

In Paris the agitation of the Radical party continued to be so violent that on March 12th six of their organs were suppressed. General Aurelle de Paladines, the commander-in-chief of the National Guard, announced that he would energetically suppress every thing that could be injurious to the city. Nevertheless the opposition organized itself more and more firmly. The *Comité Fédéral Républicain* and the *Comité Central* concluded to fuse on the basis of the following statutes: "The republic

is the only possible and rational government; the National Guard reserves to itself the absolute right to choose its chiefs, and to revoke their commission as soon as they may lose the confidence of those who chose them." The organization was to consist of the *Assemblée Générale* of Delegates, of the *Cercle de Bataillon*, of the *Conseil de Legion*, and the *Comité Central*. Placards of the Reds called on the National Guard not to fight against the people. An attempt made by the Government, on March 16th, to take from the riotous crowds the cannon which they had planted on the Place des Vosges, brought matters to a crisis. The National Guard removed the threatened cannon to Belleville, while excited crowds of the people traversed the streets, shouting, "*Vive la république!*" Thiers again issued a proclamation in which he once more assured the Parisians of the devotion of the Government to the republic, urgently recommended moderation and order, and concluded with the words: "If this warning should remain unheeded, we shall know, if necessary, how to enforce quiet." On March 18th the Government deemed it necessary to have recourse to force. Montmartre was surrounded with troops, access to the hill forbidden, cannon planted on it, and a number of prisoners made. But the troops allowed the people to surround the cannon, and soon joined them. Other bodies of troops which were summoned followed this example. On the Place Pigalle a number of soldiers who offered resistance were massacred by the people. Generals Lecompte and Thomas, after having been abandoned by their troops, were made prisoners and shot. About noon the National Guard was in the undisputed possession of the insurgent districts, as the gendarmes, being too weak, had been withdrawn. The Government in new proclamations called on all those "to whom the honor and the interest of France are dear" to separate from the insurgents, and enjoined upon all authorities, upon penalty of deposition, to receive orders only from Versailles. On the other hand, the Central Committee of the National Guard also issued two proclamations. The former declared that only the attempt to destroy the republic had caused this rising of the people. In the second, the committee claimed to be commissioned by the citizens of Paris, and to have performed the task by expelling the Government "which betrayed us." Its mission having been fulfilled, it announced that communal elections would soon be held, to which it was ready to render an account; its reward it would find in the restoration of the republic. The insurgents, who had arrested and maltreated General Chanzy on his arrival in Paris, were completely masters of the city, from which the better classes of the population began to flee in large numbers. Trade and commerce were at a stand-still. The red flag was hoisted on the Hôtel-de-Ville; the

mairies and the bureaux of the ministers and of the telegraph were in the hands of the insurgents, who through the maires demanded the recall of Generals d'Aurelle and Vinoy, and the Prefect of Police, Valentin. The Government gave its consent to the removal of the latter, who was replaced by Ferry; but the insurgents did not recognize the successor of D'Aurelle, Langlois. During the following days no further acts of violence occurred; but among the people now and then the cry "On to Versailles!" was heard. The insurgents occupied the forts of Vanvres, Bicêtre, and Issy, and fortified all the approaches to the city, in order to guard themselves against being surprised from Versailles. The funds in the mairies and in the Hôtel-de-Ville were seized, and all the documents in the office of the Prefect of Police were destroyed. The municipal elections were fixed for March 22d, and the provinces were called upon to join the republican alliance. The courts which might show themselves "partial" were threatened with dissolution.

On March 20th the National Assembly met at Versailles, and appointed a committee to make propositions concerning the measures to be adopted against Paris. On the next day Picard informed the Assembly that all the authorities of the provinces had offered armed aid to the Government. A proclamation by Thiers, on March 22d, announced that the attempts made in the provinces to call forth disturbances had everywhere failed, and that the Government, having at its command an army of 47,000 men, was master of the situation. In Paris the party of order began to muster courage. The maires protested against the elections which had been ordered by the Central Committee, and the chiefs of the battalions of the National Guard garrisoned in the second arrondissement adhered to this protest, as well as to the protest of the National Assembly against the whole movement. In the evening of March 22d blood was again shed. A large number of unarmed citizens proceeded to the Place Vendôme and demanded admission to the districts which were held by the insurgents. When their demand was not complied with, they began to attack the guard, who, in turn, fired upon the crowd and drove it back. While the attempt of the party of order proved a complete failure, the loyal National Guard gradually gained ground. On March 24th they held all the places between the Rue Richelieu, the Boulevard, and the Rue Montmartre, the Rue des Halles, du Pont Neuf, Saint-Germain l'Auxerrois and Rivoli. The insurgents, on the other hand, fortified their position on the Place Vendôme, and occupied, without encountering any resistance, Fort Vincennes. The National Assembly, on March 22d, authorized the Government to enlist a battalion of volunteers from every department. At a meeting of the maires and assistant-maires Admiral Saisset was appointed

commander-in-chief of the National Guard, Langlois chief of the staff, and Victor Schölcher chief of the artillery. The negotiations which had been carried on between Paris and Versailles remained without result. On March 26th the communal elections took place, at which the insurgents obtained a complete victory, as a very large portion of the other parties abstained from voting; only in three arrondissements the candidates of the Central Committee were defeated. The Central Committee now abdicated its powers, transferring them to the new municipal administration. The insurrectionary attempt which, in the mean while, had been made in Lyons, had failed; but in Paris the situation became very critical. The prominent members of the new municipal administration were Flourens, Blanqui, Pyat, Delecluze, and Gambon. The place of the Central Committee was taken by a Subcentral Committee, which, on March 28th, ordered the organization of twenty battalions of infantry, twenty batteries of reserve artillery, and fifteen mitrailleuse batteries. The National Guards daily received, besides their rations, 2½ francs. The Bank of France, from which previously a forced loan of 1,000,000 francs had been made, was called on for 500,000 francs. Generals Duval and Bergeret, who were to organize the new forces, were authorized to procure the necessary articles by way of requisition. Menotti Garibaldi was invited to take the chief command, but he declined.

Vigorously pressed by the moderate journals, many of which had been removed to Versailles, the Government declared, in a new proclamation, that thus far, in order to avoid the shedding of blood, it had not resorted to extreme measures against the insurgents; but now its patience was exhausted, and it was determined to put an end to the rebellion in some way or other. Bismarck declared his readiness to coöperate with the French Government to this end, by allowing the latter to increase the army of Paris to 80,000 men; but, on the other hand, the withdrawal of the German troops from France was arrested, and an increase of the troops left before Paris taken into consideration. A decree of the Government announced the abolition of the conscription, and compelled all able-bodied citizens to enter the National Guard. Another decree forbade to collect any arrears of the rents due from October, 1870, to April, 1871, and ordered that for the future only monthly payments of rents were to be made. The sale of unredeemed pawned objects was prohibited, and all authorities, upon penalty of removal, ordered to receive no instructions from Versailles. The clergy received orders to desist from saying prayers in the prisons. All these measures caused the wealthy classes of the population to leave the city in large numbers; it was estimated that within ten days nearly 160,000 left. But though the fear now became general that the Reds would inaugurate a reign of

terror in Paris, it was at the same time hoped that their rule would not be of long duration, as the country remained quiet and the movements in large cities, as Marseilles, Creuzot, St.-Etienne, Toulouse, Narbonne, and Perpignan, were easily suppressed. The attitude of the country induced the Commune to assume the aggressive. On April 2d an encounter between the troops of the Government and the insurgents took place near the bridge of Neuilly, between Courvois and Pultaux; the insurgents were driven back into the city, where the excitement reached its climax, and extensive preparations for a march upon Versailles were made. On April 3d the insurgents, under Flourens, Bergeret, and Duval, set out before sunrise. The chief divisions attacked the troops of the Government north and west of Fort Mont Valérien, near Nanterre, Rueil, Bougival, Besons, Chatou, and Croissy. Before the break of day the fort opened fire upon them, yet without any notable effect, as they were protected by the villages. Their attack, however, was repulsed, and when the cavalry of General Vinoy prepared to attack them they hastened back to the city, leaving behind many dead and wounded. The other divisions, which had advanced beyond Meudon and Châtillon, suffered the same fate. An official dispatch from Picard announced to the departments that the insurgents had suffered a crushing defeat; that the redoubt of Châtillon had been captured with 2,000 prisoners, among whom was General Henry, and that Flourens and Duval had been killed. The battles of April 4th turned out even more unfavorable to the insurgents. The troops of the Government remained in possession of Châtillon, and from there sustained an efficient fire against the forts of Issy, Vanvres, and Meudon, which were held by the insurgents. The Commune, from which twenty-one members had already withdrawn, did not, however, give up all hope: large reinforcements were sent to the combatants, and a proclamation promised a speedy victory over the royalists. The chief administration of military affairs was confided to General Cluseret, who appointed the Pole Dombrowski commander of the forces of the Commune; Bergeret, who thus far had filled this place, was arrested because he had not executed the orders of the delegates for war. The chief command of the army of Versailles was given to Marshal MacMahon; under him, General Admiral commanded on the side of Mont Valérien, General de Cissey on the side of Châtillon. Vinoy received the command of the reserve army. On April 6th and 7th there was severe fighting in Courbevoie and Neuilly, with heavy losses on both sides. On the first day the battle was undecided, and the insurgents succeeded in silencing the battery of the Versailles on the Rond Point de Courbevoie. On the next morning the battle took a favorable turn for the troops of the Government, and, when the heavy ord-

nance of Mont Valérien began to play, the barricade which defended the bridge of Neuilly was taken after a brave resistance. The troops of the Government occupied a part of Neuilly, the Bois de Boulogne and the village of Levallois; their main forces were concentrated on the Longchamps between the Seine and the Bois de Boulogne. Thus some of the most important positions outside of the walls of the city, except the above-mentioned forts on the left bank of the Seine, had been snatched from the insurgents. The battles of the next two days did not bring a decision; the destruction of the drawbridge of the Porte Maillot on April 10th, and the opening of a breach on this place by the Versailles, proved, however, of considerable importance. On the next day, the battle was hottest around the Porte Maillot; Neuilly became more and more like a heap of ruins. On the left bank of the Seine there was also severe fighting; the forts of the insurgents, in particular Vanvres and Issy, had to suffer severely from the fire of the redoubt of Châtillon.

In Paris, in the mean while, the breach between the Commune and the Government had widened. A proclamation of the Commune, of April 5th, complained that "the bandits of Versailles every day throttled or shot their prisoners," and threatened that it would reply to it by executions of an equal or double number of prisoners. Everywhere they began to search for suspected persons and to imprison them. None had to suffer more from this policy than the clergy; among others, Archbishop Darboy was arrested as being suspected. The churches were laid under contributions, and forced loans taken from the large moneyed institutions and corporations, in order to obtain the means for continuing the struggle. The communication by railroad was interrupted, and thus the prices of provisions greatly rose; mortality considerably increased; the men were absolutely forbidden to leave the city, and to women and children the permission to do so was only given after the payment of a considerable sum of money. All able-bodied men had to enroll, and a systematic search was instituted against those who endeavored to escape the general duty. Thiers, Picard, Favre, and others, were impeached, and their property confiscated. Thirty-four papers which were opposed to the Commune were suppressed; the publication of new ones prohibited. The Radicals were, however, by no means agreed among themselves. Not only was there a very pronounced dissension between the Commune and the Central Committee, but the individual leaders also were engaged in an unceasing conflict with each other. The most radical elements more and more attained the ascendancy, although at the same time the passive resistance of the wealthy classes, so far as they had remained in Paris, began to consolidate itself. The elections of April 16th were regarded as a failure,

for so many had abstained from voting, that only minority elections were effected, which, nevertheless, were declared to be valid by the Commune. This situation of affairs encouraged the hope for compromises. The City Council sent peace commissioners to Thiers, but their mission failed, as the Council demanded the highest degree of self-government for the city, while Thiers insisted upon an unconditional recognition of the authority of the Government and the adoption of the town law, which had been voted by the National Assembly. Subsequent attempts at mediation made by the Paris merchants, the *Ligue de l'union républicaine des droits de Paris*, and the Freemasons, were equally unsuccessful. The Commune, in a manifesto of April 19th, declared that the conflict between Paris and Versailles was 'one of those which could not be ended by illusory compromises. The demands of the Commune and the new town law were in fact irreconcilable. The National Assembly had at first shown a disposition to leave the election of maires to the town councils; but, when Thiers declared that in this case he would resign, a compromise was agreed upon, according to which the Government received the right to appoint the maires in all towns with more than 20,000 inhabitants. The Commune, on the other hand, demanded for every town of France the most absolute independence of the Commune, which should have no other limit than the same right of other communes, the association of which must secure the unity of France. As rights belonging to the Commune, the following were claimed: "The vote on the communal budget, receipts, and expenditures; the assessment of taxes; the direction of all the branches of local administration; the organization of the courts, of the police, and education; the disposal of goods belonging to the Commune; the appointment of the communal magistrates, or officers of every degree; an unlimited guarantee of personal liberty; freedom of conscience and of labor; constant participation of the citizens in communal affairs, by the free expression of their ideas and the defence of their interests; guarantee for these expressions of opinion to be given by the Commune; the organization of the defence of the city, and of the National Guard, which elects its leaders, and which alone watches over the maintenance of order in the city. In the exercise of her freedom of action, Paris reserves to herself the right to carry through within her limits all the administrative and economical reforms which the population demands; to found such institutions as she may regard as fitted to develop and extend education, production, exchange, and credit; to generalize the power of Government, and the right of property, according to the exigencies of the moment, the wishes of all the parties interested, and the light gained by experience. The political unity demanded by Paris is the

voluntary association and coöperation of all individual forces for a common aim—the well-being, freedom, and security of all. The communal revolution of March 18th opens an era of experimental, positive, and scientific politics; it puts an end to the old governmental and clerical world, to the military and administrative hierarchies, to the reign of monopolies and privileges to which are due the servitude of the *proletariat* and the misfortune and defeat of the country." Thiers, on the other hand, confined himself to the renewed assurance that he would not act in opposition to the republic, and to the demand that the authority of the national Government be recognized by Paris as well as by the remainder of the country.

The military operations against Paris made but slow progress. Thiers, in a proclamation of April 16th, declared that the Government delayed an attack, as it desired to collect so large a force as to make a further resistance impossible, and also to give time to the misled Parisians to listen to the voice of reason. Public opinion suspected that the Government did not trust a large portion of the troops, and was waiting for the return of the prisoners of war from Germany. At all events, Marshal MacMahon proceeded with the utmost caution. The transfer of his headquarters to Fontenay-aux-Roses was regarded as the beginning of an assault upon the outside, the former attacks having been confined to the west and south-west. The first successes were, however, obtained on the west side. On April 15th, Castle Bécon was captured, where the insurgents shortly before had successfully repulsed an attack. The position was of great importance, because it commanded Asnières, where Dombrowski had concentrated the main force. On April 18th Asnières also fell into the hands of the Government, and the insurgents were driven back upon the other bank of the river. The forts on both sides maintained a constant fire, which, on the whole, cost but few lives, but caused an immense damage to property. Repeated assaults of the troops of the Government upon the forts of the insurgents were repulsed, and the former began the regular siege of Fort Issy. The sorties of the insurgents likewise failed; occasionally they gained a little ground, but they were too weak to act vigorously on the offensive. A part of their troops could not be relied upon, and the Commune found it necessary to disarm several battalions. Fort Issy became more and more the centre of the battle. The insurgents defended themselves with great obstinacy; but, on the afternoon of April 30th, they had to leave it, because it had suffered too much from the unceasing fire. The troops of the Government, however, did not dare to occupy it, partly because they feared the fire of the batteries of Vaurigard, partly because they believed the fort to be undermined. Thus the insurgents found it possible to return to the fort. As

PARIS AND ITS FORTIFICATIONS.

General Cluseret was blamed for this reverse, and as he was, moreover, charged with plotting against the Commune, he was arrested and locked up in the Conciergerie. He was succeeded by Colonel Rossel. Simultaneously a Committee of Public Safety, consisting of five members (Arnaud, Meillet, Kanvier, Pyat, and Gerardin), was formed. On the same day on which the insurgents evacuated Fort d'Issy, the communal elections took place throughout France. In most places the Conservative Republicans remained victorious. On April 25th, the maires, adjuncts, and communal officers of the places around Paris presented an address to Thiers, in which they demanded an armistice, a complete restoration of the communal liberties, with the election of all maires and adjuncts by the councils, and the final establishment of the republic, and protested against the bombardment as well as against all reprisals. Thiers replied: "The republic is in existence. The Assembly actually maintains the republic. Although the majority seems to have received from the electors a monarchical mandate, it has the wisdom to see that the republic to-day has become the best form of government." At the same time, however, he also declared: "No way of a possible compromise is sought between a government proceeding from elections so free as they have been in France during the last forty years, and between criminals who only represent disorder and rebellion, and three-fourths of whom are foreigners." He guaranteed life and freedom to all who would lay down their arms, excepting the murderers of Generals Thomas and Lecompte, and declared himself ready to leave for several days one gate open, "in order to give the revolutionists an opportunity to leave Paris, and to seek a refuge outside of France." The Commune declared this to be an absolute refusal of reconciliation, "which, however, can take place only through a recognition of the rights which we defend, and which we have received the mission of defending by means of arms, if we are unable by means of a compromise." A decree of the Commune ordered the establishment of a new line of defence within the limits of the city. Montmartre and the Trocadero were to be fortified more strongly, and to be garrisoned with the heaviest cannon; besides, the plateau of the Panthéon was to be made a citadel. The liability to military service was extended to the fifty-fifth year of age, and severer measures were adopted against those who tried to evade it. At the same time, however, internal dissensions increased. A considerable minority of the Commune had opposed the appointment of a Committee of Public Safety; the discharge and arrest of military commanders became more frequent every day. In the first days of May the troops of the Government occupied the railroad depot at Clamart, which commands Fort Issy, and by a nightly surprise the redoubt of Moulin Saquet. Clamart had

been defended by the insurgents with the utmost obstinacy. The massacre in Moulin Saquet had been very bloody; as the position was too much exposed to the enemy's fire, the Versaillists had soon to abandon it, and to leave it again to the insurgents. The castle of Issy had three times been occupied, and only after they had taken it for the fourth time could the Versaillists maintain themselves in its possession. The troops of the Government gave no quarter in this battle, and on several other occasions prisoners were immediately shot by them. Thiers, in a letter to the imprisoned Archbishop Darboy, denied the truth of this charge, but many foreigners living in Versailles declared the complaints of the Communists not to be unfounded, though exaggerated. At all events, the combat on both sides assumed a more savage character. The successes of the Versaillists isolated the Fort of Issy to such a degree that its speedy fall was regarded as certain. In the night of May 8th the garrison began to attempt to escape in small detachments, in the direction of Paris. On May 9th, it was surprised and the fort captured. The insurgents soon abandoned a further resistance; but, when the victory of the troops of the Government was fully decided, a bloody conflict arose between them and the insurgents, a large number of whom were massacred.

The operations of the Government were greatly aided by the progress of the internal dissensions in Paris. On the same day on which Issy had been taken, Rossel resigned, and asked the Commune to give him a cell in Mazas. This step he declared to have been caused by the weakness of the Commune, and of the Central Committee, who deliberated when it was necessary to act, and by the petty caprices of the commanders of the legions who hindered the mobilization of the troops. A decree of the Commune announced that religious instruction must cease in the Parisian schools; the teachers must remove all the crucifixes, Madonnas, and other symbols, their exhibition being a violation of religious liberty. Several churches were closed, and their valuables confiscated; one church was destroyed. It was also resolved to destroy the works of art glorifying periods which, in the opinion of the Commune, were disgraceful to France: thus, on May 16th, the column of Vendôme was destroyed. Public placards and articles in newspapers declared that the Parisians would rather convert the whole city into a heap of ruins than allow it to be occupied by the Versaillists.

The measures of the Commune increased the irritation of the remainder of France against it. At the same time, however, the opposition of the Right against Thiers gained strength in the Assembly. It was commonly believed that a fusion between the Legitimists and the Orleanists had been effected. A manifesto of the Count de Chambord, in which he declared his

desire, at the head of "the whole house of France," to establish the prosperity of the country, greatly strengthened the belief in the report. When, however, the Right made a feigned attack upon Thiers, on account of his conduct toward the insurgents, Thiers made his continuance in office dependent upon a vote of confidence; and, as the Right did not dare to bring on a change in the Government before the insurrection was overpowered, the vote of confidence was given by 495 against 10 votes. The insurrection now seemed to approach its end. A few days after the occupation of Issy, the Forty-sixth Regiment, after a terrible massacre, took the Convent of Oiseaux. In consequence of this victory, the insurgents had also to evacuate Fort Vanvres. From this place at once a new trench was opened against the walls of Paris. The batteries of the insurgents from Point du Jour to Porte Vaurigard had nearly been silenced (May 14th), but from Porte Maillot to Saint-Ouen they still displayed great vigor. On May 19th a new battery in the Château des Puces near Courbevoie opened an effective fire against the bridge of Asnières, the Porte Maillot, and the Porte des Tarnes. The reconnaissances were extended as far as the island of Genevilliers, and on the south side Arcueil and Cachan were taken. Lagrange-Ory and la Maison Plichon fell likewise, after a violent battle, into the hands of the troops of the Government. Between Porte Maillot and Point du Jour the insurgents withdrew from the wall, but under the protection of stone parapets they continued to maintain an effective fire. On May 21st it was ascertained that Porte St.-Cloud had been almost wholly abandoned by the insurgents. A sudden attack made upon this point by Lieutenant Trèves was completely successful. After the first surprise, the insurgents endeavored to continue their resistance in the houses of Auteuil, and behind the large barricades which obstructed the bridge; but they were soon overpowered by the troops of the Government, which were with remarkable rapidity reënforced. This victory was followed up with great energy, and soon other parts of the city were in the hands of the Government. General l'Admirault took the gate of Passy, and, by a skilful turn of his operations, brought the Arc de Victoire into his power. General Vinoy entered at the Point du Jour, crossed the Seine, and at the same time opened the gate of Sèvres to General Cissey, who took possession of the Faubourg St.-Germain. The troops at first met with but little resistance; but the farther they advanced, the more desperately every barricade and every street was disputed by the insurgents. Delescluze, who now acted as Minister of War of the Commune, issued a last appeal, in which he declared the military rule to have passed, and the hour of revolution to have come. The Committee of Public Safety, which had been radically reorganized, issued proclamations of the same tenor. Arch-

bishop Darboy, with sixty-four priests, and a number of other hostages, was shot. Powder and petroleum were put into the most important buildings, in order to prepare them for sudden destruction. The Tuileries, the Library of the Louvre, the Ministry of Finance, the Hôtel-de-Ville, the palaces of the Council of State, the Legion of Honor, the Théâtre de la Porte St.-Martin, the Entrepôt, the Grenier d'Abondance, the Salpêtrière, the Convent of the Magdalenes, and many other buildings, soon were actually destroyed. The women in large numbers took part in the fight, and seemed to exceed the men in fury; many of them were seen busy in feeding the flames with petroleum. The troops of the Government, on their part, were inflamed to the utmost rigor. All who were caught in incendiary work, or with arms in their hands, were shot on the spot and without trial. Thus the combat assumed a more and more terrible character, in particular on the right bank of the Seine; the left bank had to suffer severely from the batteries of the insurgents in the forts of Ivry and Bicêtre. At first, the fighting centred in the region near the Tuileries, the Louvre, the Hôtel-de-Ville, and the Prefecture of Police. The insurgents defended themselves so obstinately that the troops of the Government employed artillery before they dared to storm the positions. The Quartier Montmartre had likewise to be attacked by heavy pieces of ordnance before the infantry could advance against it; and, although the attack was skilfully executed, the insurgents maintained themselves some time in a part of it. With extraordinary severity the battle raged all night around the barricade in the garden of the Tuileries, and, when the insurgents in the morning retired through the Rue St.-Honoré to the halls, the fight was resumed there with undiminished fury. With equal bravery the insurgents defended the barricades of the Rue Auber, and the neighborhood of the Madeleine. Here the insurgents were finally driven back into the church itself, where they were massacred to the last man. The generals of the Government operated with great caution, turning those positions of the insurgents where they met with a vigorous resistance. They steadily gained ground, until at last the adherents of the Commune were confined to the suburb St.-Antoine, the Buttes Chaumont, one part of Belleville, the Quartier Mouffetard, and the Forts of Bicêtre and Ivry. But even here they could not maintain themselves. On May 29th the insurrection was entirely put down, the last two bands of insurgents having been overpowered in Vincennes and in the Père la Chaise. The leaders of the Commune, with only a few exceptions, had either been killed like Delescluze, or taken prisoners; a number of the latter class were at once shot. The number of prisoners who were immediately executed was considerable; in the Théâtre du Châtelet, a council of war was in session; on one side,

those were led out who were to be immediately put to death; on the other, those who were to remain in prison. The number of dead was estimated at 20,000; that of prisoners at 30,000.

In the mean while, the definitive peace between France and Germany had been concluded. The negotiations in Brussels threatened to remain without result, as the French endeavored in every possible way to obtain a modification of the conditions which had been agreed upon in the preliminary peace. As the civil war in Paris made it desirable for both parties to hasten the conclusion of the definite peace, Bismarck, Jules Favre, and Pouyer-Quertier, met in Frankfort, in order to bring the negotiations to a speedier close. The deliberation began on May 6th, and on May 10th the definite peace was signed. The conditions of the preliminaries were in some points modified, though not mitigated, in favor of France.

The ratifications of the treaty were to be exchanged within ten days. On May 12th the treaty was laid before the French National Assembly. The committee moved that it be ratified. General Chanzy spoke against the ratification of the proposed exchange of territory; but, when Thiers showed that the proposed exchange was by no means unfavorable to France, the Assembly ratified it by a vote of 440 to 98, and subsequently the whole treaty by a large majority.

As soon as the army had overpowered the insurrection, the question of the future form of government was pushed into the foreground of political agitation. The Legitimists, who for some time had assumed a hostile attitude with regard to Thiers, displayed a remarkable activity. They declared the fusion of the Bourbons and the Orleanists to have been virtually accomplished, and they carried on their agitation in behalf of "the house of France." But, notwithstanding their positive declaration, it was found that the fusion had not been accomplished, and the execution of the other points of their programme was equally unsuccessful. The cabinet was partly reconstructed, as Lambrecht became, in the place of Picard, Minister of the Interior, Cissey Minister of War, and Lefranc Minister of Agriculture; but Jules Favre remained Minister of Foreign Affairs, and the position of Thiers was not only not shaken but notably confirmed. The Duke d'Audiffrey-Pasquier, the leader of the Legitimists, moved in the National Assembly the abrogation of all laws of expatriation directed against members of "the house of France." This was met by another motion brought in, in the name of the Left, by Deputy Brunet, for repealing the laws of expatriation against all the former sovereign families of France. The Assembly, on June 2d, voted as urgent the latter motion. Public interest, for a time, was wholly absorbed by this question, and by the election of the Duke d'Aumale and the Prince de Join-

ville to the National Assembly. After delaying the decision for a few days, Thiers, on June 2d, declared, in an elaborate speech, that he approved the repeal of the laws of expatriation, and was also willing to have the elections of the princes declared valid, if the latter would resign their seats. He admonished the Assembly to extend the "truce" between the parties, as France would be plunged into the worst anarchy, if the conflict between them was at once to be decided. In conclusion, he declared that he would deceive nobody. The motion for abrogating the laws of expatriation was adopted by 484 against 103 votes; and the election of the two princes of Orleans was declared valid by 448 against 113 votes. The princes submitted to the compromise proposed by Thiers, and left Versailles, after a long interview with the President. Not in harmony with this report was, however, an official declaration of the Prince de Joinville, who declared that, among the two places which had elected him deputy, he chose the former. The Orleanists, like the other parties, seemed to hope that the supplementary elections to the National Assembly would give to the latter a more definite complexion. The adherents of the Commune continued to issue proclamations, threatening placards, and explanatory declarations. A great activity was also displayed by the Catholic party. The Bishops of Evreux, Bayeux, Coutances, Seez, and the Archbishop of Rouen, addressed a petition to the National Assembly, in which they demanded the restoration of the temporal power of the Holy See. The demonstrations in favor of the Pope were numerous, and were frequently coupled with others in favor of Henry V. (Count de Chambord). During these conflicts of parties, the practical questions which demanded a speedy solution were, however, not neglected. Paris was divided into four military districts, the public places were ordered to be closed at a certain hour, the theatres subjected to a strict superintendence, and a number of other measures taken which gradually restored order. The National Assembly began to discuss the reorganization of the army; the system heretofore in use was rejected by all the members of the committee, which recommended the introduction of universal military duty. The financial question was regarded as still more urgent than the reorganization of the army, because the time when the first half milliard of the war indemnification had to be paid was near at hand. The National Assembly, in compliance with a proposition made by the Minister of Finance, Pouyer-Quertier, resolved to contract a loan of two milliards. The subscriptions to this loan exceeded all expectation—a much larger sum being subscribed than the Government had asked for. The favorable result of the loan, and the success of the grand review of the French army in Paris, on June 29th, filled the Government and people of France with new

hopes. The supplementary elections, which were held on July 24, in many departments were also highly favorable to the Moderate Republican party. Of one hundred and seventeen deputies elected, one hundred were adherents of a republican form of government. The radicals gained five departments; but in Paris only five radicals were elected, against sixteen members of the party of order, a league of the anti-radical parties. Two of the delegates elected for Paris were Bonapartists. Gambetta was elected in three districts. A speech which he had made on June 26th, at Bordeaux, in which he ascribed the misfortune of France in the late war to the ignorance of the masses, and recommended a thorough reorganization of public instruction, had everywhere made the most favorable impression.

A manifesto to the French nation published by the Count de Chambord, on July 5th, made a painful sensation. He announced that he would soon leave the castle of Chambord, and France, as he did not wish to furnish a new pretext for the political excitement of the country. But he expected that the people would soon call him back to the throne, in which case he promised to maintain universal suffrage, administrative decentralization, and local autonomy. But, at the same time, he would not abandon the white banner of Henry IV., Francis I., and the Maid of Orleans, which had established the national union, and which would restore to France order and freedom. The manifesto greatly increased the breach between the Legitimists and the Orleanists, and even many of the former loudly declared their disapprobation of the sentiments expressed in it. At the close of the month, the National Assembly had an excited debate on the petitions for the restoration of the temporal power of the Pope. Thiers declared that he had always been opposed to the national unity of Italy, which had been the "mother of German unity;" but, if the Government were to act in accordance with the petitions for the restoration of the temporal power, it would bring on a war with Italy—a result which the majority would hardly wish for. The majority was then willing to give to Thiers a vote of confidence by adopting the order of the day; but, when Gambetta ostentatiously supported this motion, the Right preferred to refer the petitions to the Minister of Foreign Affairs. This motion was adopted by 431 against 82 votes. Thiers voted with the majority, while Barthélemy St.-Hilaire, the chief of his cabinet, and Jules Favre, voted with the minority. A few days later, on August 2d, the resignation of Favre as Minister of Foreign Affairs was accepted, and Charles de Rémusat appointed as his successor.

The committee of the National Assembly on the reorganization of the army showed itself favorable to the adoption of the principle of universal and compulsory military service.

The first paragraph in its report, which was made on August 19th, provided that every Frenchman from his twentieth to his fortieth year might be called into service; it abolished the privilege of furnishing substitutes, deprived the standing army of the right of voting, and demanded the abolition of the National Guard. The last-mentioned measure had also been independently moved by 164 members of the National Assembly. General Chanzy, who on August 19th made also a report on this motion, concluded with the words: "We submit to you in the first place a law which takes from the soldiers the ballot, and secondly a law which takes from the voters the bullet." On this point Thiers was, however, not in agreement with the majority of the Assembly. In a speech made on August 24th, he admitted the present organization of the National Guard to be bad; but this was not the case with the fundamental principle of a national guard, which they had inherited from the first revolution. As there were also good national guards, the principle of their dissolution should not, in general, be sanctioned. He was also opposed to the unconditional demand for an immediate dissolution. Irritated by frequent interruption, he left the hall of the Assembly, and threatened his resignation. This disposed the majority to consent to a modification of the law, and, when Thiers after a quarter of an hour returned to the hall, the following compromise was adopted by 488 against 149 votes: "The National Guards are dissolved. Their disarmament shall take place as soon as possible under the responsibility of the Government. The National Guards are dissolved in all communes of France in proportion as the progress of the reorganization of the army on the basis of the law of 1868 allows it."

After long and animated discussions, the National Assembly, on August 30th, adopted a resolution which declared the present Assembly to be a Constituent Assembly. On the following day, a motion was adopted by 480 against 93 votes, appointing Thiers "President of the French Republic" for a term of three years. The text of this motion was as follows:

ARTICLE 1. The chief of the executive power assumes the title of President of the French Republic, and retains the powers which have been conferred upon him by the decree of February 17, 1871, subject to the authority of the Assembly as long as the latter has not completed its labors.

ART. 2. The President of the Republic promulgates the laws which are transmitted to him by the President of the National Assembly. He secures and superintends the execution of the laws. He resides in the place where the National Assembly has its seat. He appoints and dismisses the ministers; the ministry is, however, responsible to the National Assembly. He may address the National Assembly whenever he regards it as necessary, and after he has notified the President of the Assembly of his wish. Every act of the President of the Republic must be countersigned by a minister.

ART. 3. The President of the Republic is responsible to the Assembly.

On September 1st, President Thiers sent a message to the Assembly, expressing his thanks for the honor conferred upon him. The ministry remained unchanged, and Dufaure was appointed its Vice-President. On September 6th, the National Assembly ratified a loan of 350,000,000 francs for the city of Paris, and adopted a law providing that the damages caused by the invasion of the Germans should be paid for by the whole nation. On September 13th a message of President Thiers was read in the Assembly, in which he recommended an adjournment from September 17th to December 4th. On the day before the adjournment, the Assembly authorized the President to conclude a treaty with Germany, to hasten the evacuation of several departments by the German troops in exchange for reducing the duties on exports from Alsace-Lorraine into France. The treaty was concluded on October 12th.

On October 8th the election for the Councils General took place throughout France. The cities and towns generally elected republican or radical candidates, while in the rural districts the conservatives had a majority. The Bonapartists met with less success than any other party. The Duke d'Aumale was elected in the district of Clermont, and Prince Napoleon in Corsica. A majority of the councils declared themselves in favor of compulsory military service and compulsory instruction.

Three of the Paris insurrectionists, Rossel, Ferré, and Bourgeois, were shot on November 28th. The death of Rossel, for whose character even his judges professed profound respect, was generally lamented, and great efforts were made to save his life. Thiers himself was willing to pardon him, but yielded to the remonstrances of the Minister of War and the committee on pardons, who regarded the death-penalty in his case as indispensably necessary. On the next day, Gaston Crémieux, one of the leaders of the radical party in Marseilles, was shot. His execution created even greater discontent than that of Rossel. Among the four communists of Marseilles who had been sentenced to death, he was the only one who was executed.

The excitement of the French people against the Germans led repeatedly to the assassination of German soldiers. A jury in Paris acquitted one of these assassins, by the name of Tonnelet, though he fully admitted that he had pledged himself to murder the first German whom he might meet. But few of the French papers dared to censure this verdict; but President Thiers, in his message to the Assembly, expressed his decided disapprobation of such acts. Count Bismarck, in a dispatch of December 7th, earnestly remonstrated with the French Government against these assassinations. (See BISMARCK.)

The new session of the National Assembly was opened on December 4th. M. Grévy was

reelected as President by 511 out of 521 votes; the former Vice-Presidents and Secretaries were also reelected. On December 7th President Thiers presented his message to the Assembly, which was read by himself. The message begins with referring to the daily progress of the peaceful character of the foreign relations of France, and of its internal reorganization. The relations to Prussia were fully regulated. The dissolution of the National Guard had nowhere called forth resistance. The condition of the country was as good as it could be expected after so unfortunate a war. The independence of the Holy See must be strictly maintained. The message then spoke of the financial condition of the country under the empire. The budget had reached the amount of 2,200,000,000 francs; the public debt was not reduced; the army was neglected. France had no more than 200,000 men to oppose to the 700,000 of the hostile armies. The measures adopted for the reorganization of the army were dwelt on at length. The President declared himself against the compulsory military service of all Frenchmen in time of peace, which would disorganize civil society, and ruin the finances of the country. He was, however, willing to accept it in the time of war. The Government proposed in time of peace to recruit annually 90,000 men, who would have to remain in active service for five years, and would belong to the army afterward for three years. On December 19th the princes of the house of Orleans who had been elected members of the Assembly (the Duke d'Aumale and the Prince de Joinville) took their seats, contrary to the promise which they had formerly given. In letters addressed to their electors, they explained their reasons for this step, and the National Assembly by an almost unanimous vote declared that the promises given by the princes were an entirely private affair in which it was not concerned. The draft of a new law for public instruction, consisting of twenty-two articles, was submitted to the National Assembly by Jules Simon, the Minister of Public Instruction. It proposed compulsory education from the seventh to the thirteenth year, but permitted each family to choose between the state-schools, free schools, and private instruction at home. After finishing the course of instruction, the pupils must pass an examination before a committee, and receive a certificate, which, on reaching the twenty-first year of age, they must present before their names can be enrolled in the lists of electors. Fines will be imposed upon all parents, guardians, and employers, who fail to send children to school. On December 26th President Thiers, in an elaborate speech, addressed the Assembly against the income-tax which had been proposed by Wolowski, and on the next day the Assembly, by a large majority, repealed it.

(For a biography of the President of the

French Republic, *see* THIERS.) The most prominent man, next to Thiers, in the history of France in 1871, especially in the former part of the year, was JULES FAVRE.

Jules Gabriel Claude Favre was born at Lyons, March 23, 1809. His family were of Savoyard descent. He was brought up piously. At school he showed much promise. When seventeen years old, he went to Paris to study law. When the Revolution of 1830 broke out he shared its spirit and attached himself to the Republican party. He was grievously disappointed when the Duke d'Orleans was made governor-general of the kingdom, and it became evident that the revolution would result only in the substitution of one monarchy for another. He gave vent to his feelings in two articles in the *National*, the organ of the *doctrinaires*, in which he advocated the abolition of the monarchy and the chambers, and the formation of a National Assembly, like that of the first revolution. His views found no favor. But they placed him in unpleasant relations with the Government, and he returned to Lyons, and engaged in practice in the local courts. He continued as ardent a republican as ever, and had become a bitter partisan. When some persons in Lyons had been condemned to imprisonment for political intrigues, Favre defended them, criticised the judgment of the court, and castigated the judges in the journal *Le Précurseur*. The publisher of the paper was enjoined. Favre went from a sick-bed to the court-room, and acknowledged the authorship of the obnoxious articles. Being brought to trial, he made a sturdy attack on the system of the Government, and a vigorous defence of republican institutions and the rights of the press, by which he gained great popularity. In 1834 he defended the members of the Society of the *Mutualists*, when they were tried for provoking a strike, and the disturbances which resulted from it. A riot occurred during this trial, in consequence of which the military were put in control of the city, and Favre was exposed to imminent personal danger on account of his connection with the indicted persons. This and other disturbances occurring in different parts of the kingdom were brought before the Chamber of Peers, which was organized as a court for their investigation. The Republicans made a party matter of the affair, and appointed a committee of 124 persons for the defence of the prisoners. Dr. Pasquier, president of the court, refused to recognize this committee, and made out another list of counsel, from whom the prisoners were required to select their defence. The Republicans insisted that, rather than submit to a limitation of their right to choose their own counsel, the prisoners should refuse to be defended. Favre thought it would be better for them to take such counsel as would be allowed them, by selecting from the Government list. He was overruled by his colleagues, but refused to be bound by their de-

cision. He afterward, though against the views of the Republican leaders, himself engaged in the defence. He made an unequivocal republican speech, and bitterly denounced the Government as responsible, by reason of the severity of its measures, for all the difficulties. Notwithstanding the misunderstanding in which Favre was involved with the Republican committee-men, and although the prosecution carried the cases, Favre's action gave him great favor with the friends of the prisoners. His exertions brought on a fever, from which he nearly died. He afterward removed to Paris, where he gained a very extensive practice, and formed confidential relations with Ledru-Rollin.

Under the Provisional Government he was appointed Minister of the Interior. He made his influence felt in the policy of the Government. He resigned, to accept an election as deputy from the department of the Loire, but a few months afterward accepted office again under Bastide, Minister of Foreign Affairs. While he was in the National Assembly, an authorization was demanded by Crémieux, Procurator-General, for a prosecution against Louis Blanc, for his action in relation to the *émeute* of the 15th of May, 1848. Favre was a member of the committee to whom the subject was referred by the Assembly, and was assigned the duty of presenting the report, which was favorable to the prosecution. He executed this function with such an appearance of animosity against Louis Blanc, that the impression was created that he was seeking revenge for the manner in which Blanc, in the "*Histoire des Dix Ans*," had spoken of his conduct in the case of the trials before the Peers. The authorization was denied in his report, although it was afterward granted upon a report presented by another member. In January, 1849, Favre replied to the attacks of Râteau and Frenan against the Assembly and the ten organic laws with such vigor and clearness as to fully restore himself in the sympathy of his fellow-republican members.

After the *coup d'état* Favre withdrew from politics. He was engaged in many important law cases, the most noted of which was the defence of the Red-republican conspirator Orsini. Orsini remembered him in his will, by directing the presentation to him of a suitable memorial for his services.

In his fiftieth year M. Favre was again returned to the Chambers, and was one of the five members of whom the opposition at that time consisted. When his party became more numerous, he was tacitly recognized as its leader. His speeches were very strong, and were aimed at the foundations of the imperial throne. His party were called the *irréconcilables*. He denounced the Italian War in 1859 as undertaken for dynastic purposes. In January, 1868, he was one of the speakers against the new press law, which imposed onerous regulations on the press, under the guise that they were liberal concessions.

When news arrived of the surrender at Sedan, Favre moved the deposition of the Emperor and his dynasty. He was appointed Minister of Foreign Affairs in the Provisional Government. In a circular to the diplomatic agents, he charged the responsibility for the war upon the Imperial Government, and declared that France would yield no territory. In a second circular, he admitted the right of Prussia to demand an indemnity, but protested against "unacceptable conditions." He held two interviews with Bismarck, in September, 1870, regarding the terms on which the war could be closed. But they were without result. His position till the conclusion of peace under the authority of a newly-elected National Assembly was extremely difficult and embarrassing. But he succeeded in retaining the confidence of his countrymen, and in commanding the respect of the world. When Thiers was elected chief of the executive power, Favre was again appointed Minister of Foreign Affairs, and as such took a prominent part in the government of the country. A full account of his labors during the year 1871 is given in the historical part of this article.

Gambetta, Léon, was born at Cahors, October 30, 1838. He studied law, went to Paris in 1859, and was enrolled there as an advocate. His first appearance in politics was in 1863, when he took a prominent part in the electoral discussions, distinguishing himself by the nervousness and keenness of his speeches. He supported the party of which Jules Favre, Crémieux, Pelletan, and others, were the distinguished leaders. He attained no especial prominence, however, either as an advocate or as a partisan till 1868, when a single event gave him a world-wide notoriety. This was his defence of Delecluze, the editor and publisher of *Le Réveil*, for the part he had taken in assisting the subscription for the erection to Baudin of a monument. Baudin was one of the leaders in forcible resistance to the execution of the *coup d'état* on December 3, 1851, and was killed during the fight. The movement of the Democratic party in honor of his memory, of which the subscription for a monument was a part, was provoked by the political discussions of the later years of the Third Empire, and was intended in part to signify disapprobation of the imperial policy. The first demonstration occurred on November 2, 1868; a few days afterward the lists of subscriptions began to appear regularly in *Le Réveil*, *La Tribune*, and *La Revue Politique*. A number of those participating in this movement, together with the editors of these journals, were arrested and brought to trial for exciting sedition. Gambetta distinguished himself above all his associate counsel in the defence—Crémieux, Arago, and Laurier—by the power and incisiveness of his speech. He reviewed the course of the Imperial Government from the *coup d'état* down, dwelling especially upon the crimes of the days of De-

cember, and uttered denunciations of Napoleon of startling boldness. His title to fame rests principally on this defence. Gambetta took a prominent part in the elections of 1869, made several speeches of an extremely radical character, and was chosen deputy as the candidate of the "irreconcilables" from both Paris and Marseilles. In the same year he appeared at Toulouse, to defend the journal *L'Emancipation* before the correctional tribunal, and received there a brilliant ovation from the students of the law-school. A disease of his eyes prevented his taking his seat as a deputy until a short time before the surrender at Sedan. Upon receiving news of this event, he promptly offered a decree of *déchéance* in the Chambers; then proclaimed the republic from the steps of the legislative chamber, and with his republican associates adjourned to the Hôtel-de-Ville, where the Provisional Government was formed. In this Government he was assigned the Department of the Interior. For a short time after the Government was divided by the removal of a part of its members to Tours, he remained in Paris, but after the city became completely invested he escaped in a balloon, and joined his colleagues, Crémieux and Glais-Bizoin, at Tours. He exerted himself actively to arouse the French people to a desperate defence, hurried the organization of armies for the relief of Paris, and assumed the general direction of movements outside of the capital. He was the author of the boastful and mendacious bulletins which the Tours Government issued almost daily to keep up the spirits of the people.

FRENCH, Rev. JOHN W., D. D., an Episcopal clergyman and Professor of Ethics, born in Connecticut, about 1810; died at West Point, N. Y., July 8, 1871. He was educated at Washington (now Trinity) College, Hartford, Conn., graduating in 1831; studied theology at the General Protestant Episcopal Theological Seminary, New York City; was admitted to holy orders in 1835, and the next year chosen a professor in Bristol College, Pennsylvania. After the failure of this institution he was called to be rector of a church in Portland, Me., and in 1848 he became rector of the Church of the Epiphany, Washington, D. C. In August, 1856, he was appointed Chaplain of the Military Academy at West Point, and Professor of Geography, History, and Ethics, and entered upon his duties in the following autumn. Constitutional and international law were subsequently added to his professorship. This position he held till a short time before his death, when he resigned in consequence of impaired health. He received the degree of D. D. from Trinity College during his residence in Washington. He had a good reputation as an instructor, and was popular with the cadets as chaplain.

FRIENDS. No formal presentation of the statistics of the Society of Friends has been made until recently. It has only been within

a few years that the yearly meetings have taken the annual census of their members. But full particulars have always been collected of the number of children between five and twenty-one years old, from which an estimate of the entire numbers at any time may be computed by the application of a ratio between the whole number and the number of children as obtained from a census in which both are reported. William H. S. Wood, of New York, has carefully compiled the reports of the yearly meetings of the Orthodox Friends, which he has compared with estimates of the numbers in past years. His computations give the following exhibit of the present state of the society:

YEARLY MEETING.	When established.	Present Numbers.	Gain since first (estimated) Census.	Loss since first (estimated) Census.
New England....	1661	4,403	2,026
New York	1695	2,858	6,280
Canada.....	1867	1,641	118
Philadelphia.....	1681	5,500	3,500
Baltimore.....	1671	600	200
North Carolina..	1708	4,000	No change.	No change.
Ohio.....	1812	2,855	345
Indiana.....	1821	17,300	10,737
Western.....	1857	9,749	1,211
Iowa.....	1863	8,599	845
Total.....	57,405	1,329	12,933

The losses shown in this table are for a great part only apparent, many of them having been occasioned by the setting off of new meetings. The Eastern meetings have been depleted by the emigration of their members westward into the newer meetings. The North Carolina meeting especially has lost thousands of members from this cause, yet it has held its own. The ratio of adults to children is, in New York, 7.05; in New England, 4.98; in Philadelphia, 5.15; in Ohio, 3.56; in Indiana, 3.65; in Iowa, 3.93.

The statistics of the Unitarian Friends have not been reported.

A religious awakening has taken place during the year among the Orthodox Friends. At the National Yearly Meeting, which was held in New York City, in June, a communication was received from the Farmington (N. Y.) Quarterly Meeting, expressing the desire that the Friends, to regain the zeal of their forefathers of 200 years ago, should hold public meetings. The suggestion was approved, and a committee was appointed, who prepared a plan for holding a series of such meetings in various parts of the United States. At Farmington, where one of the first meetings was held, the attendance was so large that it was divided into three congregations. The Friends were invited to preach during the meeting in the churches of the surrounding villages. At Brooklyn the meetings attracted general attention. Ministers and people of other denominations participated in them; several churches were gladly opened to the Friend speakers. The object of the meetings was not to make proselytes to the society, so much as to infuse greater spiritual activity into it.

A proposition was presented to the National Yearly Meeting, for holding a general conference, to which all the ten yearly meetings in America should send delegates; the conference was not to have power over the yearly meetings, but to be simply an advisory body. This proposition was referred to a committee. A day's session of the National Yearly Meeting was devoted to the interests of First-day schools, the importance of which has been recognized by the society only within a few years.

A more thorough consideration of the subject of Sunday (or First-day) schools was given at the sixth biennial conference of teachers and delegates from the Friends' First-day schools in the United States and Canada, which met at Wilmington, Ohio, on the 22d of November. The proceedings show that the interest in these schools has increased.

In October, 1870, the society had twenty-four freedmen's schools in operation.

The Orthodox Friends have the care of the uncivilized Indians of the Central Superintendency, embracing Kansas and the Indian Territory. The number of Indians is estimated at 20,000. About forty Friends are connected with this work. They have established Sunday and day schools, upon which two hundred and ninety-seven children attend. The report of the Executive Committee of Indian Affairs speaks encouragingly of the success of their efforts to control the savages by peaceful measures. A number of children in the schools have learned to read the English version of the New Testament.

The Unitarian Friends also make favorable reports of their management of the Indians in Nebraska. The children in the schools improve fairly; many adults are settling down to agricultural life and building houses. The Winnebagoes have removed their old chiefs, who are opposed to civilization, and have adopted a code of rules to aid them in cultivating civilized habits.

The First-day school movement also is making progress among the Unitarian Friends. Meetings are held quarterly in the interest of this cause.

The English Friends, as well as those of the society in the United States, are giving increased attention to First-day or Sunday schools.

The Friends' (English) Foreign Missionary Society was formed in 1868, and held in 1871 its fourth meeting. The work of the Association is as yet confined to India and Madagascar. During the year the Friends in India had left Benares, and settled at Jubbulpoor. In Madagascar the Friends still remain in or near the capital, on terms of mutual support and close coöperation with the missionaries of the London Missionary Society. Mr. Sewell, one of the missionaries in Madagascar, has prepared a series of school-lessons and a grammar of the Madagascar language. The Association has ten missionaries under its charge;

six from the English Yearly Meeting, and four from the Indiana Yearly Meeting. Two members of the society have spent a part of the year in France, distributing religious address-

es, Bibles, and tracts, and coöperating in the dispensation of relief to the afflicted. They consider that a fair field is opening there for evangelical work.

G

GANNETT, REV. EZRA STILES, D. D., an American clergyman and author, born in Cambridgeport, Mass., May 4, 1801; killed by the railway collision at Revere, Mass., August 26, 1871. He was educated at Phillips Academy, Andover, and at Harvard College, graduating from the latter in 1820, and receiving the degree of A. B. also from Yale College the same year. From 1820 to 1823 he studied theology in the Cambridge Divinity School, and was ordained June 30, 1824, as colleague with the famous William Ellery Channing, then pastor of the Federal Street Unitarian Church, Boston. By the death of Dr. Channing, in 1842, Dr. Gannett was left alone in his charge, having been, for some years, in consequence of Dr. Channing's failing health and preoccupation with reformatory and general theological topics, practically the sole pastor. He continued to minister to this congregation till his death, his only continued absence being a vacation of two years in Europe. The demands of business enterprises in that vicinity compelled the removal of the Society from Federal Street to Arlington Street, farther to the "South End," where a new edifice was built a few years since. Dr. Gannett was one of the editors of the *Christian Examiner*, the principal periodical of the Unitarian denomination in the United States, and, from 1844 to 1849, was editor of the *Monthly Miscellany*. He had also published many occasional sermons, addresses, and orations, at the earnest solicitation of his people. He received the degree of D. D. from Harvard University in 1843. He was eminent for his devotion to pastoral duty, and was foremost in all the benevolent and religious enterprises of the day. No man was more highly respected or more tenderly loved, and he passed through life with apparent pleasure in doing good and aiding the distressed. As a deep thinker and a conscientious theologian, Dr. Gannett had few equals, and his reputation will long survive him.

GASPARIN, AGENOR ÉTIENNE, Count DE, a French statesman, philanthropist, and author, born at Orange (Vaucluse), France, July 10, 1810; died at Geneva, Canton de Vaud, Switzerland, May 14, 1871. He was the son of Count Adrien de Gasparin, a Minister of the Interior, in Guizot's Cabinet, under Louis Philippe. He was educated at Paris, graduating in 1830, and was soon after assigned the position of Master of Requests to the Council of State by his father. While in this position he had occasion to investigate the subject of slavery and the slave-trade, and, alike from

conviction and from motives of philanthropy, he ranged himself promptly with the advocates of emancipation and the enemies of the traffic. He seconded warmly and efficiently the efforts of the Duke de Broglie to abolish the slave-trade, and to emancipate the slaves in the colonies, and in 1838 published an able and eloquent treatise on the subject. In 1842 M. de Gasparin was elected a member of the Chamber of Deputies, as representative of Bastia, Corsica. Speedily he became famous for his eloquent and vigorous speeches on all subjects affecting human liberty. He labored especially to remove certain legal obstructions in the way of the freedom of the Protestant churches, and to secure parliamentary reform. His independence did not please the Government, neither were his Protestant convictions relished in Corsica, and in his candidature at Bastia, in 1846, he was defeated. From this time he abandoned political life, but did not cease to labor for all those causes which he believed would benefit humanity, and was especially occupied for some years with the effort to increase the efficiency and spirituality of the French Protestant or Reformed Church. Finding the rationalistic tendencies predominating in it, he withdrew from its communion in 1847, and united with the Free Church. He made an extensive tour in Egypt and the East in 1847-'48, and did not hear of the Revolution of February, 1848, until some months after its occurrence. He sent forward his protest against the overtures made to him to coöperate under the new constitution of France. When he returned to Europe the policy of Louis Napoleon began to be developed, and he with great sorrow decided not to reënter France, but established himself in the Canton de Vaud, Switzerland, where he had ever since resided. Here, with his accomplished and excellent countess, he busied himself in pursuits of literature, religion, and philanthropy, taking a deep interest in all matters which concerned the improvement of mankind. He was accustomed to pass the winter near Geneva, and to hold, at the request of his friends, a series of conferences each year. At these, which were largely attended, he discussed, with great eloquence and fulness of knowledge, a variety of topics, historical, ethical, philosophical, politico-economical, and religious. Most of these discussions have been published. He was greatly distressed on account of the Franco-German War, and the dismemberment of France, and when, at its close, Bourbaki's army was driven into Switzerland, he received

large numbers of the sick into his chateau, and he and Madame de Gasparin cared for them with the utmost tenderness and devotion. His exertions at this time contributed materially to break down his health, already feeble, and, when the news of the outrages of the Communists was added to his other cares and troubles, he sank rapidly, and, though brought to Geneva in the hope of improvement to his health, he did not rally. His principal published works were: "A Treatise on Mortgages" (1834); "Slavery and the Slave Trade" (1838); "The General Interests of French Protestantism" (1843); "A Defence of the Scriptures" (1854); "The Turning Tables," 2 vols. (1854), a work on the table-tipping excitement, in which, while admitting the reality of the phenomenon, he attributed it to an unknown but purely physical force; "The Question of Neuchâtel" (1857); "The Uprising of a Great People, or the United States in 1861" (1862); "America before Europe" (1862); "Moral Liberty" (1868); five or six volumes of the discussions already mentioned (1865-'70); and "An Appeal to Patriotism and Good Sense" (1871), addressed to the French people, urging them not to continue the war with Germany.

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1871. Notwithstanding the meagre promise of the previous year, and the small number of geographical enterprises then known to be in progress, the year 1871 has been one remarkable for the fruitful results of previous discoveries; and these not in the old and beaten track of geographical explorations, so much as in new and hitherto unexplored or but imperfectly-explored regions. It has been rather in the heights of Central Asia, in the region of the Pamir Steppe, the cities of Yarkand and Kashgar, the deep cañons of the Upper Himalaya and Kuen-lun ranges, the lakes that not more than three or four Europeans have ever visited, and in that secluded region where the boundaries of China, Thibet, Burmah, and Cambodia join, and where all the large rivers of Southern Asia have their source, that the great Asiatic discoveries of 1870-'71 have been made. In Africa, while there has been much anxiety to hear more definitely from Dr. Livingstone, and to learn something of the progress of the Anglo-Turkish pacha, Sir Samuel Baker, and his army in the region of the Albert Nyanza, it has been from neither of these that the freshest geographical knowledge of the interior of Africa has been received, but from Dr. Schweinfürth, a German explorer who has penetrated into the country of the cannibal Nyam-Nyams, the men whose caudal appendages have been thought so signally to illustrate the theories of Lord Monboddo and Mr. Darwin. In South America, the explorations have been far up among the tributaries of the principal affluents of the Amazons, and in the interior of the hitherto almost unknown region

of British Guiana. In our own country the repeated reconnoissances into the region about the head-waters of the Yellowstone, the Madison, and the Gallatin, and the second exploration of that fearful cañon of the Colorado, have revealed wonders unsurpassed on the surface of our globe. So, too, in Polynesia, it has not been the old and tolerably well-known groups of islands which have been revisited and newly explored, but the comparatively unknown New Caledonian group which has commanded our attention. In arctic exploration, though the "Great Polynia," or Open Polar Sea, is not yet discovered, nor perhaps been proved to exist, yet lesser Polyniæ on the eastern coast of Greenland have been opened up to the view of explorers, with an unexpected wealth of animal life; the eastern islands of the Spitzbergen group have been re-discovered, and their mountains climbed, and once again under more favorable circumstances than of old. Spitzbergen itself has been occupied this time as a scientific station, whence to make the effort for further polar discoveries.

But, before proceeding to give the details of these and other geographical discoveries of the year, it is proper that we should notice the ravages made by death in the ranks of the geographers. For the last thirty years no name has been more illustrious, alike in geographical and geological science, than that of Sir Roderick Impey Murchison (*See MURCHISON*, in this volume), the founder and for many years the President of the Royal Geographical Society of London. He passed away at the ripe age of eighty, in the full possession of his great intellectual powers, on the 22d of October, 1871. Hardly less illustrious, in his particular department as a cartographer, was Dr. Alexander Keith Johnston, whose maps, atlases, and works on physical and political Geography, had entitled him to the highest renown. He received from the Royal Geographical Society, on the 22d of May, 1871, the Patron's or Victoria Medal for his contributions to geographical science (Sir Roderick Murchison being awarded at the same time the Founder's Medal), but died on the 11th of July following (*see JOHNSTON*, A. K., in this volume). Other names distinguished in geography and its kindred sciences, who died during the year, were: *WILHELM RITTER VON HADINGER*, an eminent German geographer and geologist, who died on the 19th of March, 1871 (*see HADINGER*); *SIR WILLIAM THOMAS DENTSON*, who had been Governor of Madras and temporarily Governor-General of India; *M. GUILLAUME LEJEAN*, an eminent French geographer and explorer, and for some years secretary of the *Société de la Géographie* of Paris, who died in April; and, of those who were engaged in geographical explorations, *MR. GEORGE W. HAYWARD*, the intrepid explorer of the Pamir Steppe, who was murdered July 17, 1870, at Darküt, in Eastern Toorkistan, but the intelligence of his death

did not reach England till the winter of 1871. Mr. Shelverton and Captain Melville, two of the ablest officers connected with the geographical surveys of India, succumbed to the deadly malaria to which they were exposed in their labors, in the early part of 1871.

Turning, now, to the subject of geographical discovery, we notice that at the meeting of the Royal Geographical Society, January 9, 1871, Dr. William B. Carpenter, widely known as perhaps the most eminent of living physiologists, and also distinguished as a physical geographer, read before the Society a paper "On the Gibraltar Current, the Gulf Stream, and the General Oceanic Circulation," in which he combated with great plausibility, but on theoretic grounds mainly, the idea that the Gulf Stream exercised any considerable influence in modifying the temperature of Western Europe, or that the Kuro-Siwo (the Gulf Stream of the Pacific) performed any similar office for the western coasts of America. He attributed these modifications of temperature, if they existed, to the influence of the oceanic circulation generally. The paper was one indicating profound and protracted researches, but its conclusions will not be hastily accepted, and have, indeed, already provoked considerable debate. It is obvious that the question thus evolved can only be settled by long and patient experiments and observations in all the principal seas and oceans of the world.

Late in the autumn of 1871, Prof. Peirce, the Superintendent of the Coast Survey, having occasion to send a new steamer, the Hassler, for the coast-survey service, around Cape Horn to operate henceforward on the Pacific coast, gave an invitation to Prof. Agassiz and a company of naturalists, to make the voyage in the interests of science, and return either by the overland or Panama route. Prof. Agassiz, who had long desired to examine the ichthyology of the South Atlantic and Pacific with reference to their bearing on fossil ichthyology, at once accepted the offer, and a corps of naturalists was organized and sailed in December. This expedition, though primarily undertaken in the interests of zoology, may be expected to accomplish much also for geography. Indeed, the reports already returned from the expedition show that it has made a good beginning in this direction. In addition to oft-repeated soundings with a new apparatus, which revealed to the observers the depth and the character of the ocean-bed along their route, the expedition spent several days in a very careful examination of the Sea of Sargasso, and not only ascertained, more satisfactorily than had previously been done, the botanical relations of the marine plants that constitute that vast bed of ocean vegetation, but discovered many specimens of a nest-building fish which makes its home among this congeries of sea-weed. They also made observations on the delta of the Amazons, and in the bays of Pernambuco and Rio Janeiro.

While speaking of the world of waters, we may, with propriety, allude to the very careful survey and soundings made, by order of the British Admiralty, across the English Channel and the Straits of Dover at different points, to ascertain the character of the bed of the channel, and the practicability of laying a tubular subway or of constructing a tunnel across the straits to connect England with France. The result of their observations was that the bed of the channel and straits was, to a very considerable depth, composed of chalk, and that the sea-bottom was in some places quite soft, in others hard and rough from the chert or flints which were mingled with the chalk, and which, in some places, had made sharp and rough ridges from the working out of the chalk. This condition of the bed was deemed unfavorable to the laying of a tubular subway, though not to a tunnel.
